A numerical solution by complex Hermitian matrix diagonalisation is made for the spin eigenvalues and interpolated ESR transitions for an orthorhombically sited vanadium(II) ion in lithium fluoride crystal. It is concluded that vanadium(II) ions associate with a single cation vacancy in the nearest-neighbour cationic shells of lithium and sodium fluoride crystals as do manganese(II) ions in lithium fluoride crystals. Manganese(II) ions in sodium fluoride associate with cation vacancies in the next-nearest-neighbour cationic shell, and, in the presence of hydroxide anion, combine with the hydroxide anion in their first co-ordination shell. X rays induce vanadium(II) and manganese(II) migration by a triple process of oxidation by trapping $V_k$-centres ($F_2^-$), migration and then reduction back to their original oxidation state by combining with F-centres ($e^-$). The hydroxide anion in $NaF:OH^-:Mn^{2+}$ inhibits this process. Thermal annealing restores the doped crystals to their original condition. (auth) (UK)

**56385** BINDING ENERGIES OF TRANSITION-METAL ATOMS ADSORBED ON A TRANSITION METAL. Cyrot-Lackmann, F. (Institut Laue-Langevin, Grenoble, France); Ducastelle, F. Phys. Rev., B; 4: No. 8, 2406-12(15 Oct 1971).

The binding energies of transition-metal atoms of the 5d series adsorbed on a 5d transition metal are calculated in the tight-binding approximation. The general features of the variation of the binding energy with the number of adatom 5d electrons are similar for all the substrates. It shows a parabolic behavior with a maximum of the order of the cohesive energy for the substrate, and a subsequent sharper decrease as the number of adatom 5d electrons is increased. The maximum is always located close to tungsten, as in the case of a tungsten substrate, where it is between tungsten and rhenium. (auth)

**56386** NATURE OF THE CHEMICAL-BOND FORCES IN COMPOUNDS FORMED BY d-TRANSITION METALS. Markhasev, B. I. Izv. Akad. Nauk SSSR, Metal.; No. 5, 170-3(Sep-Oct 1970). (In Russian).

Factors affecting the formation of chemical bonds between d-transition and other metals as in the phases $ZrV_2$, $ZrMo_2$, $HfW_2$, etc. are discussed. The main factor determining the chemical forces in such cases is the tendency for the d-shell electrons to be redistributed in accordance with the Hund "least-energy" rule (electron configurations with the maximum number of parallel spins). However, a number of Laves phases infringe this rule. Reasons for this anomaly are considered. (Metals Abstr.)

**56387** MODEL POTENTIAL FOR Zn, Cd, AND Hg. Shaw, R. W. Jr. (Bell Telephone Labs., Murray Hill, N. J.); Appapillai, M. Phys. Lett.; 36A: No. 5, 365-6(27 Sep 1971).

A simple procedure for modeling the l = 2 component of the potential in Zn, Cd, and Hg is suggested. The model accounts explicitly for the near resonant behavior of the d-states. (auth)

**56388** ELECTRONIC STRUCTURE OF THORIUM METAL: ROLE OF THE 5f ELECTRONS. Koelling, D. D. (Northwestern Univ., Evanston, Ill); Freeman, A. J. Solid State Commun.; 9: No. 16, 1369-72(Aug 1971).

Symmetrized Relativistic Augmented Plane Wave calculations for thorium, using Kohn–Sham–Gaspar exchange, demonstrate that the 5f states must be considered as band states, unlike the 4f states in the rare-earth metals which are localized states. (auth) (UK)

The history of the work accounting for phenomena discovered by Vavilov and Cherenkov is given. Some problems related to this theory are considered. (auth)

**56390** (LYCEN-7104, S5.1-53) RESOLUTION OF THE N-BODY PROBLEM IN THE HYPERSPHERICAL FORMALISM. Fabre de la Ripelle, M. (Paris Univ., Orsay (France). Institut de Physique Nucleaire). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The problem of N bodies is analyzed in a 3-N-dimensional coordinate system. Instead of studying the motion of N points in a 3-dimensional space, the system is solved by studying the motion of a point in a 3-N-dimensional space. The symmetry and invariance properties of the quantum states may be more easily determined. (France)

**56391** REDUCTION OF THE DIRAC EQUATION TO A NONRELATIVISTIC FORM. Moss, R. E. (Univ. of Southampton, Eng.). Amer. J. Phys.; 39: No. 10, 1169-72(Oct 1971).

The positive and negative energy solutions of the Dirac equation for a free electron are completely decoupled using the method of small components. It is shown that this separation is formally equivalent to that obtained with the Foldy–Wouthuysen transformation but that the separation is achieved much more economically with the method of small components. The method may also be used to relate operators in the relativistic and nonrelativistic representations. (auth)

**56392** PHENOMENOLOGICAL QUANTUM THEORY OF THE EXTERNAL CHERENKOV EFFECT. Agudin, J. L. (International Atomic Energy Agency, Vienna. International Center for Theoretical Physics, Trieste, Italy). Lett. Nuovo Cim.; 2: No. 12, 583-6(18 Sep 1971).

The emission of electromagnetic radiation from a charged particle that moves freely in vacuum and in close proximity to a dielectric surface—external Cherenkov effect—was observed by Danos et al. (1953). Although adequate classical explanations have been given, it was thought to be of interest to look at the experiment from a phenomenological point of view by considering the emission of evanescent photons by the charged particle. (W.D.M.)

**56393** MOTION OF CHARGED PARTICLES WITH RADIATION REACTION. Sen Gupta, N. D. (Tata Inst. of Fundamental Research, Bombay). Indian J. Pure Appl. Phys.; 9: No. 4, 201-3 (Apr 1971).

It is pointed out that the equation of motion with radiation reaction contains two parameters e/m and $e^2/mc^3$, and the physical solutions are those that admit the passage of the parameter $e^2/mc^3$ to the limit zero. It is shown that, in order to obtain the physical solutions of the equation of motion with radiation reaction, the initial acceleration has to be obtained from the equation of motion corresponding to the given initial velocity and position. (auth)

**56394** ELECTRONS IN A STRONG COULOMB FIELD. Sen Gupta, N. D. (Tata Inst. of Fundamental Research, Bombay). Indian J. Pure Appl. Phys.; 8: No. 12, 765-8(Dec 1970).

The nature of the Sommerfeld orbits is investigated for an electron in a strong Coulomb field when $\alpha Z > n_\varphi$. Further, it is shown that relativistic wave equations in a similar case lead

XUM

to non-steady decaying states. The decay time corresponds to the time of fall for the spiral inward orbit. The non-steady states lead to average radial current. This is shown to be the case with both the Klein-Gordon and the Dirac equations. (auth)

**56395** DYNAMICAL APPLICATIONS OF BARGMANN SPACE. III. ANGULAR MOMENTUM. Robinson, J. M.; Trubatch, S. L. (California State Coll., Long Beach). Amer. J. Phys.; 39: No. 10, 1190-4(Oct 1971).

The coherent state representation is developed for angular momentum operators. As an example, the one-boson Lee model is analyzed with its Fermi operators in Bargmann space. Finally, a synthesis is achieved by analyzing the three-level system with all operators in Bargmann space. (auth)

**56396** BOUND STATE AND CONTINUUM CONTRIBUTIONS TO THE TWO-BODY PARTITION FUNCTION. Gigson, W. G. (Univ. of Sydney). Phys. Lett.; 36A: No. 5, 403-4(27 Sep 1971).

The expression for the partition function in terms of the Jost function gives a unified description of bound state and continuum contributions. It demonstrates continuity as new bound states are introduced, and cancellation between bound state and continuum parts at high temperatures. (auth)

**56397** COLLECTIVE STATES AND STATISTICS OF SYSTEMS OF IDENTICAL ATOMS. Kruglik, G. S. (Inst. of Physics, Minsk). Teor. Mat. Fiz.; 8: No. 1, 130-9(Jul 1971). (In Russian).

Assuming the violation of the symmetrization postulate, the author suggests the generalization of the secondary quantization method in the quantum-mechanical approach and obtains the formula for the equilibrium distribution of atoms into the states (the formula of the generalized statistics). The well-known Bose, Fermi, and Boltzmann distributions follow from this formula as its particular cases. (auth)

**56398** REDUCTION OF THE MULTI-DIMENSIONAL SCHROEDINGER EQUATION TO A ONE-DIMENSIONAL INTEGRAL EQUATION. Rosenthal, C. M. (Univ. of Wisconsin, Madison). Chem. Phys. Lett.; 10: No. 4, 381-6(15 Aug 1971).

A method is proposed for reducing the multidimensional Schrödinger equation to a one-dimensional integral equation. The reduction is exact; the resulting integral equation, although complicated, may be treated for any of a number of numerical methods. Two 2-dimensional problems, the harmonic oscillator and the S-limit for helium, and one 3-dimensional problem, the helium ground state, are treated in this way. (auth)

**56399** METRIC EVALUATION IN THE SPACE OF EXPONENTIAL AND GAUSSIAN FUNCTIONS. Silver, D. M. (Johns Hopkins Univ., Silver Spring, Md.). Chem. Phys. Lett.; 10: No. 2, 227-9(15 Jul 1971).

A computational procedure is presented for the numerical evaluation of integrals having both gaussian and exponential functional dependence in the integrand: $\int_0^\infty dr\, r^k \exp(-\alpha r^2) \exp(-\beta r)$. On the basis of the parameter values, $\alpha$, $\beta$, and k, three ranges are distinguished, and in each one an appropriate evaluation method is suggested. (auth)

**56401** INVARIANTS IN THE MOTION OF A CHARGED PARTICLE IN A SPATIALLY MODULATED MAGNETIC FIELD. Dunnett, D. A. (Univ. of Liverpool); Laing, E. W.; Taylor, J. B. pp 49.1-8 of Computational Physics. Vols. I and II. London; Her Majesty's Stationery Office (1969).

From Conference on computational physics; Culham, England (28 Jul 1969). See CONF-690706-(Vols.1 and 2).

The effect of a spatial modulation in the magnetic field on invariants such as the magnetic moment $\mu = V^2/B$ is studied. Particular interest was taken as to whether an invariant still exists when the wavelength of the modulation is comparable to the gyro radius of the particle. In an axially symmetric magnetic field, with a square-wave modulation, the orbit equations reduce to algebraic relations convenient for numerical study. It is found from such studies that orbits are of two types: regular orbits that generate an invariant and orbits that are quasi-ergodic. An invariant was calculated by perturbation theory with the depth of modulation of the field as a small parameter. For this, a modified form of perturbation theory which overcomes the difficulty of infinities arising at resonance between the perturbation and the cyclotron period was developed. This difficulty in fact corresponds to a change in topology of the invariant curves. The invariant calculated from this theory shows very good agreement with the numerically computed orbits of the first type. The transition to quasi-ergodic behavior cannot be predicted analytically, but some indication of it may exist in the complex topology of the invariant curves in the ergodic regions. (auth) (UK)

**56402** MODIFICATION OF THE COULOMB LAW IN A STRONG MAGNETIC FIELD. Loskutov, Yu.; Skobelev, V. (Moscow State Univ.). Phys. Lett.; 36A: No. 5, 405-6(27 Sep 1971).

Corrections to the static field of a point electric charge in the presence of a constant and homogeneous magnetic field are found in the lowest-order perturbation theory. (auth)

**56403** SEARCH FOR 4e/3 CHARGED QUARKS IN THE COSMIC RADIATION AT 2750 METERS. Beauchamp, William Thomas. Tucson, Ariz.; Univ. of Arizona (1971). 65p. University Microfilms Order No. 71-18,116.

Thesis.

A scintillation counter telescope consisting of eight liquid scintillation counters and four wide-gap spark chambers was arranged to detect single particles with electric charge ±4e/3 which might be present in the cosmic radiation at 9000 feet above sea level. The apparatus was operated for a total running time of 1520 hours, and two events were found out of a total of 30,000 event triggers. This number of events is consistent with background and sets an upper limit on the vertical flux of 4e/3 charged quarks of $\varphi_q = 4.13 \times 10^{-10}$ cm$^{-2}$ sr$^{-1}$ sec$^{-1}$ if $M_q \gg 1$ GeV/c$^2$ or $\varphi_q = 6.45 \times 10^{-11}$ cm$^{-2}$ sr$^{-1}$ sec$^{-1}$ if $M_q \approx 0.4$ GeV/c$^2$ at the 90% confidence level. **56404** (CONF-701121-8) ELECTROPRODUCTION OF PIONS. Note No. 299. Amaldi, Edoardo (Rome Univ. (Italy). Istituto di Fisica). 11 Jan 1971. 53p. Dep. NTIS (U. S. Sales Only).

From Meeting on electron synchrotron; Frascati, Italy (5 Nov 1970).

The aim is to summarize the experimental and theoretical knowledge on electroproduction of positive and neutral pions at very low energy, in particular near threshold. After an introduction of kinematical nature, the general expression for the cross section—derived under the assumption of a single photon exchange—is given, and the main lines of the various theoretical approaches are summarized. The coincidence experiments made until now and the result of their analysis are considered. (auth)

**56405** (DESY-71/33) EXCITATION OF THE Δ (1236) RESONANCE ON BOUND STATE NEUTRONS. Bleckwenn, J.; Klein, H.; Moritz, J.; Schmidt, K. H.; Wegener, D. (Deutsches Elektronen-Synchrotron, Hamburg (West Germany)). Jun 1971. 18p. Dep. NTIS (U. S. Sales Only).

The cross sections for inelastic electron–deuteron scattering were measured for invariant masses $W \leq 1.4$ GeV of the final hadronic state and momentum transfers of $0.1(\text{GeV/c})^2 < q^2 < 0.5(\text{GeV/c})^2$. The cross section for inelastic electron–neutron scattering was obtained by subtracting the contribution of electron–proton scattering. The cross sections for inelastic electron–neutron and electron–proton scattering are shown to be equal. (auth)

**56406** (DESY-71/35) ELECTROPRODUCTION OF π-MESONS ON PROTONS ABOVE THE SECOND RESONANCE. Heinloth, K. (Deutsches Elektronen-Synchrotron, Hamburg (West Germany)). Jun 1971. 55p. Dep. NTIS (U. S. Sales Only).

Previous experiments on the electroproduction of pions on protons are discussed. Also future work on the electroproduction of pions is mentioned. (J.F.P.)

**56407** FURTHER RESULTS ON THE INTERFERENCE BETWEEN THE $\pi^0\pi^0$ DECAY OF $K_L^0$ AND $K_S^0$. Wolff, B. (Laboratoire de l'Acclerateur Lineaire, Orsay, France); Chollet, J. C.; Repellin, J.-P.; (and others). Phys. Lett.; 36B: No. 5, 517-20(4 Oct 1971).

The experiment of Chollet et al. was continued with a similar set up. The analysis of these new data leads to 56 free decay events $K_L^0 \rightarrow \pi^0\pi^0$ and 1481 interference events $K_{S,L}^0 \rightarrow \pi^0\pi^0$ behind a 20 cm thick copper regenerator. The results are $\varphi_{00} = 38^0 \pm 25^0$ and $|\eta_{00}|/(|f\text{-}\bar{f}|/k) = (1.13 \pm 0.12) \times 10^{-3}$ where $|f\text{-}\bar{f}|/k$ is the regeneration amplitude for copper at 2 GeV/c in fm$^2$. (auth)

**56408** MEASUREMENT OF THE $K_L \rightarrow \pi e \nu$ FORM FACTOR. Bisi, V. (CERN, Aachen); Darriulat, P.; Ferrero, M. I.; (and others). Phys. Lett.; 36B: No. 5, 533-6(4 Oct 1971).

The $q^2$-dependence of the vector form factor $f_+$ was measured with a wire chamber magnetic spectrometer. Decays were identified by kinematics and gas Čerenkov counters. The vector form factor can be expressed as $f_+(q^2) = f_+(0)(1 + \lambda_+ q^2/m_\pi^2)$, with $\lambda_+ = 0.023 \pm 0.005$. (auth)

**56409** ANALYSIS OF $K_{e3}^+$ DECAY X2 COLLABORATION. Steiner, H. J. (Technischen Hochschule, Aachen); Natali, S.; Romano, F.; (and others). Phys. Lett.; 36B: No. 5, 521-4 (4 Oct 1971).

A study was made of 2700 decays of the type $K^+ \rightarrow \pi^0 e^+ \nu$ in the CERN 1.1 m$^3$ heavy liquid bubble chamber. The four-momentum transfer dependence of the form factor $f_+(q^2)$ was determined. The usual linear parametrization $f_+(q^2) = f_+(0)(1 + \lambda_+ q^2/m_\pi^2)$ gives $\lambda_+ = 0.027 \pm 0.010$. (auth)

**56410** ANALYSIS OF $K_{\mu 3}^+$ RADIATIVE DECAY. Romano, F. (Istituto di Fisica, Bari, Italy); Renton, P.; Aubert, B.; Burban-Lutz, A. M. Phys. Lett.; 36B: No. 5, 525-7(4 Oct 1971).

The branching ratio of $K^+ \rightarrow \pi^0 e^+ \nu\gamma / K^+ \rightarrow \pi^0 e^+ \nu$ was determined and is compared with theoretical predictions. (auth)

**56411** SPARK CHAMBER EXPERIMENT OF THE BETA DECAY OF $\Xi^-$ HYPERONS. Duclos, J.; Freytag, D.; Heintze, J.; (and others) (CERN, Geneva). Nucl. Phys.; B32: No. 2, 493-512 (1971).

A counter-spark chamber experiment to measure the β-decay rate of $\Xi^-$ hyperons is described. The $\Xi^-$ hyperons were produced by $K^-$ of 1.65 GeV/c in a polyethylene target, and their decay observed in an optical spark chamber. A focusing gas Čerenkov counter with cellular structure discriminated between π's and electrons from $\Xi^-$ decay. On the basis of $17 \pm {}^{5}_{4}$ observed β-decay events and 374 observed $\Xi^- \rightarrow \pi\Lambda^0$, $\Lambda^0 \rightarrow \pi^-$p decays representing 1% of the $\Xi^-$ decaying through this channel within the spark chamber during the run, a branching ratio $\Gamma(\Xi^- \rightarrow e\nu\Lambda^0 + e\nu\Sigma^0)/\Gamma(\Xi \rightarrow \pi\Lambda) = (6.8 \pm 2.2) \times 10^{-4}$ is obtained. From a Cabibbo fit to the other baryon leptonic decays, the branching ratio $R_{Cab} = 6.0 \times 10^{-4}$ is expected. As a test of the experimental method, the rate of $\Lambda \rightarrow e\nu p$ decay of Λ's originating from $\Xi \rightarrow \pi\Lambda$ decay is evaluated and found to be in agreement with published values. (auth)

**56412** (CEA-R-4193) POLARISATION PARAMETER MEASUREMENT IN THE PROTON–PROTON ELASTIC SCATTERING FROM 0,5 TO 1,2 GeV. Ducros, Yves (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1971. 136p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis. Submitted to Paris Univ., Orsay (France). Faculte des Sciences.

The angular distribution of the polarization parameter was measured in the proton-proton elastic–scattering at seven energies between 0.5 and 1.2 GeV. A polarized proton target was used. The results show a maximum of the polarization parameter of 0.6, at 0.73 GeV. This maximum is due to the important increase of the total cross section between 0.6 and 0.73 GeV. At 1.2 GeV the angular distribution of the polarization shows a minimum for a momentum transfer value of $-1$ (GeV/c)$^2$. A phase shift analysis was done at 0.66 GeV, using all available experimental data at this energy. There is no evidence of a dibaryonic resonance in the $^1D_2$ phase. (auth)

**56413** (INP-756) MEASUREMENTS OF ENERGY AND FLUX OF COSMIC RAY HADRONS USING AN IONIZATION SPECTROMETER. Massalski, J.; Mistygacz, Z.; Suszycki, L.; Warczewski, J. (Institute of Nuclear Physics, Krakow (Poland)). Feb 1971. 20p. Dep. NTIS (U. S. Sales Only).

A method for determining the energy of cosmic ray hadrons was elaborated. In this method besides the development of electromagnetic cascades, which is a dominating process, also other processes such as disintegrations of the nuclei of the absorber and charged π-meson ionization are taken into account. Particles escaping through the bottom of the apparatus, the transition effect: lead-brass (chamber wall), and the geometry of the absorber and detectors are also considered. The method is applied to the determination of energy and flux of cosmic-ray particles registered in an ionization spectrometer installed at the Mount Aragac Laboratory in Armenia (3250 m above sea level). (auth)

**56414** (INP-757) INELASTICITY COEFFICIENTS FOR PION–Fe AND NUCLEON–Fe COLLISIONS. Massalski, Jerzy;

XUM

Suszycki, Leszek; Warczewski, Jerzy (Institute of Nuclear Physics, Krakow (Poland)). Mar 1971. 22p. Dep. NTIS (U. S. Sales Only).

Nucleon-Fe interactions at energies above 1.5 TeV were studied, using the ionization spectrometer method. An analysis of 126 such events is presented. The average energy transferred to neutral pions in nucleon-Fe collisions is found to be 18.3% of the primary nucleon energy. The average total inelasticity for nucleons and $\pi^{\pm}$ mesons is 0.5 ± 0.6 and 0.8 ± 0.9, respectively. The main difficulties in determining inelasticity coefficients by the ionization spectrometer method are discussed. (auth)

**56415** (NP-18888) NEUTRON–PROTON CHARGE EXCHANGE AT 8 AND 19 GeV/c. Horn, Klaus (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Nov 1970. 93p. (In German). Dep. NTIS (U. S. Sales Only).

Thesis. Submitted to Univ. of Karlsruhe, Ger.

The differential effective cross sections for the neutron–proton charge exchange for primary momenta of 8 and 19 GeV/c were measured for scattering angles (in the laboratory system) from 0 to 48 mrad or 0 to 28 mrad (corresponding to a square of the momentum transfer $0 < |t| < 0.15$ or $0 < |t| < 0.27$ $(GeV/c)^2$). There were 3500 charge exchange events for 19 GeV/c and 2600 for 8 GeV/c taken in the wire spark chamber under the on-line control of a process computer. The differential effective cross section agrees in the t dependency for both primary momenta. It shows the characteristic sharp increase for $|t| < (m_\pi/c)^2 = 0.018$ $(GeV/c)^2$ and a flat pattern for $|t| > 0.05$ $(GeV/c)^2$. The results for 8 GeV/c agree with those of Manning et al. In the momentum spectrum of the forward-scattered protons the resonances Δ(1236) and N(1518) can be clearly detected. (tr-auth)

**56416** (USIP-71-1) ANNUAL REPORT, 1970 [ON] PARTICLE PHYSICS. (Stockholm Univ. (Sweden). Inst. of Physics). 44p. Dep. NTIS (U. S. Sales Only).

Research projects on particle physics at the Institute of Physics, University of Stockholm, are summarized. They consist of experiments using bubble chamber technique (proton–proton and proton–deuterium experiments), technical development of an on-line system for measuring machines, automatic registration for scanning tables, experiments at CERN, Geneva, using counter technique, and planning and preparations for experiments at the Intersecting Storage Rings (ISR) at CERN. A list of publications is included. (KK) (Sweden)

**56417** (USIP-71-4) TWO PRONG SAMPLE FROM PROTON–PROTON INTERACTIONS IN A HYDROGEN BUBBLE CHAMBER AT 19 GeV/c. Danielsson, O.; Granstroem, L. (Stockholm Univ. (Sweden). Inst. of Physics). Apr 1971. 52p. Dep. NTIS (U. S. Sales Only).

The scanning, measuring and hypothesis selection procedures of a sample of 12,500 two-prong proton-proton interactions at 19 GeV/c in the CERN 2m hydrogen bubble chamber are described. The total, elastic, $pp\pi^0$ and $pn\pi^+$ cross sections were determined. (auth)

**56418** (USIP-71-6) STUDY OF THE REACTION PROTON + PROTON → NUCLEON + NUCLEON + PION AT 19 GeV/c. Danielsson, Ove (Stockholm Univ. (Sweden). Inst. of Physics). Apr 1971. 69p. Dep. NTIS (U. S. Sales Only).

A bubble chamber experiment was performed to study inelastic three body reactions from proton–proton collisions at an incident momentum of 19 GeV/c. Scanning and measuring procedures and the program chain are described. Special attention is given to a method of automatic selection of kinematical hypotheses, which resulted in improvements in collecting the sample. An investigation of errors is made, and the error estimate of the Coulomb scattering is improved. The energy variation of the cross sections are shown for $pn\pi^+$, $pp\pi^0$ and $\Delta^{++}n$. Analysis of isospin states is done leading to information about the nature of exchangers. A method for distinguishing between the final state nucleons is presented. Finally longitudinal phase space analysis is given. (KK) (Sweden)

**56419** POLARIZATION IN PROTON–PROTON ELASTIC SCATTERING AT 10, 14, AND 17.5 GeV/c. Borghini, M. (CERN, Geneva); Dick, L.; Olivier, J. C.; (and others). Phys. Lett.; 36B: No. 5, 501-3(4 Oct 1971).

Data on the polarization parameter in pp elastic scattering in the $|t|$-range from ~0.1 to ~2.9 $(GeV/c)^2$ and at 10, 14 and 17.5 GeV/c are presented. (auth)

**56420** MEASUREMENTS OF SMALL ANGLE PROTON–PROTON ELASTIC SCATTERING AT THE CERN INTERSECTING STORAGE RINGS. Amaldi, U. (Istituto Superiore di Sanita, Rome. INFN, Rome); Biancastelli, R.; Bosio, C. Phys. Lett.; 36B: No. 5, 504-8(4 Oct 1971).

Proton–proton elastic scattering was measured over the angular range 7 to 16 mrad at center-of-mass energies of 31, 45 and 53 GeV using the CERN Intersecting Storage Rings. The results indicate that the diffraction peak has continued to shrink with increasing energy, but not as fast as suggested by the results at lower energies. (auth)

**56421** NEUTRON TOTAL CROSS SECTIONS ON PROTONS AND NUCLEI IN THe 10 TO 30 GeV/c MOMENTUM RANGE. Jones, L. W. (Univ. of Michigan, Ann Arbor); Longo, M. J.; McCorriston, T. P.; (and others). Phys. Lett.; 36B: No. 5, 509-12(4 Oct 1971).

The results of a recent AGS measurement of the total cross section for neutrons on protons, deuterons and other nuclei in the momentum range 10 to 30 GeV/c are presented. The standard good-geometry transmission technique was used with a total absorption spectrometer to detect the transmitted neutrons. Biasing the spectrometer towards high neutron momenta together with the strongly-peaked momentum spectrum of the beam gave relatively good momentum resolution. Measurements were made at mean momenta of 12, 13, 18 and 26.5 GeV/c. Results are presented and the cross sections for nuclei are compared with theoretical predictions. (auth)

In Spring school on pion interactions at low and medium energies.

The review of $\pi$p elastic scattering at 0 to 300 MeV covers the interest of measurements in this region, total cross sections, calculation of the Coulomb barrier effect, and the total charge-exchange cross section. (J.F.P.)

**56423** (COO-1195-217) A STUDY OF K-PLUS NEUTRON CHARGE EXCHANGE SCATTERING USING THE REACTION K-PLUS DEUTERON GOES TO PROTON PROTON K-ZERO AT 3.8 GeV/c. Moninger II, William Ringland (Illinois Univ., Urabana). 1971. Contract AT(11-1)-1195. 146p. Dep. NTIS.

Thesis.

Data are presented from 431 examples of the reaction $K^+d \to K^+pp_s$ at 3.8 GeV/c. The total and differential cross sections are presented. The total cross section is 498 ± 32 μb; the slope of the forward peak in the differential cross section is 4.1 ± 0.3 $(GeV/c)^{-2}$. The total cross section is compared to cross sections for this reaction at other energies. It is found that $\sigma(K^+d \to K^+pp_s) \sim P_{Lab}^{-2.09\pm0.04}$. The differential cross section for this reaction is compared to the prediction of Rarita and Schwarzschild and to $K^-p$ charge exchange. Total and differential cross sections $K^+n \to K^0p$ are inferred from the $K^+d$ data. The forward amplitude for $K^+n \to K^0p$ is found to be predominantly real. (auth)

**56424** (COO-1428-280) ANNUAL PROGRESS REPORT [ON HIGH ENERGY PHYSICS], TASK A, JUNE 1, 1970–MAY 31, 1971. (Purdue Univ., Lafayette, Ind. Dept. of Physics). Contract AT(11-1)-1428. 30p. Dep. NTIS.

Experimental research on strong interactions is summarized. A list of publications is included. (J.F.P.)

**56425** (COO-1428-294) DIFFRACTIVE $\pi\pi$ SCATTERING IN $\pi N \to \pi\pi N$ AT 13.1 (GeV/c). Gaidos, J. A.; Gutay, L. J.; Kramer, S. L.; Barton, H. R. Jr.; Miller, D. H.; Tebes, J. (Purdue Univ., Lafayette, Ind.). [1971]. 11p. Dep. NTIS.

Data on diffractive $\pi\pi$ scattering in the reactions $\pi^+p \to \pi^+\pi^0p$, $\pi^+p \to \pi^+\pi^+n$, and $\pi^+n \to \pi^+\pi^-p$ are presented and discussed in terms of a factorized double exchange model involving OPE and Pomeranchuk plus exchange-degenerate $\rho$, f contributions. The calculated relative diffractive cross sections, spectral distributions and Pomeranchuk-Regge pole interference terms are in excellent agreement with the data. (auth)

**56426** (FRNC-TH-53) INVESTIGATION OF THE STRANGE MESON RESONANCES PRODUCED IN ASSOCIATION WITH A NUCLEON IN 3 GeV $K^-$NUCLEON INTERACTIONS. Rouge, Andre (Paris Univ. (France). Faculte des Sciences). 1969. 123p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

The strange meson resonances produced in 3-GeV $K^-N$ collisions were studied. The four-pronged events in a $K^-p$ experiment

were measured, and the results from a bubble chamber experiment on 3-GeV $K^-d$ collisions were analyzed. The mechanism of $K^*$ (890) production and the properties of $K^*$ (1400) (quantum numbers branching ratios) were studied. Some information was obtained about K pion pion systems with masses lower than 1.4 GeV and the K pion interaction in the S-wave. The upper limits for the production cross sections of possible K with $\frac{3}{2}$ isospin are given. (France)

**56427** (IFA-HE-73) ΛK PRODUCTION IN FOUR-PRONG $\pi^+p$ INTERACTIONS AT 8 GeV/c. Balea, E.; Balea, O.; Mihul, A.; Sabau, M. (Institutul de Fizica Atomica, Bucharest (Romania)). 1970. 14p. Dep. NTIS (U. S. Sales Only).

Investigations on five- and six-particle final states with ΛK production in $\pi^+p$ interactions at 8 GeV/c are reported. C.m.s. momentum and angular distributions of secondary particles are discussed. Results on invariant mass distributions and the cross sections for resonance production are presented. (auth)

**56428** (IFA-HE-75) $K\bar{K}$ PRODUCTION IN FOUR-PRONG $\pi^+p$ INTERACTIONS AT 8 GeV/c. Balea, E.; Balea, O.; Mihul, A.; Sabau, M. (Institutul de Fizica Atomica, Bucharest (Romania)). 1970. 17p. Dep. NTIS (U. S. Sales Only).

Results on five and six-body final states with $K\bar{K}$ production in four-prong $\pi^+p$ interactions at 8 GeV/c were presented. Cross sections for various channels are given. The kinematical behavior of secondary particles was discussed as well as the resonance production. (auth)

**56429** (INP-754) LOW-ENERGY PROTONS GENERATED IN NUCLEAR INTERACTIONS AT PRIMARY ENERGIES 60 GeV AND ~1000 GeV. Babecki, J.; Furmanska, B. (Institute of Nuclear Physics, Krakow (Poland)). 1971. 9p. (CONF-710437-1). Dep. NTIS (U. S. Sales Only).

From International symposium on high energy physics; Dresden, Germany (19 Apr 1971).

Taking into account the effect of secondary interactions in the nucleus and the effect of elastic scattering of the recoil proton on nucleons of the nucleus the fraction of the interactions with a single nucleon in the samples of jets from the Serpukhov accelerator and from cosmic rays selected by means of the criteria: $N_h \leq 5$, $n_s \leq 20$ was estimated as $(70 - 80)\%$. (auth)

**56430** GENERAL REMARKS ON EXPERIMENTS MEASURING PARTICLE WIDTHS AND THE WIDTH OF THE ω. Coyne, D. G.; Butler, W. R.; Fang-Landau, G.; MacNaughton, J. (Univ. of California, Berkeley). Nucl. Phys.; B32: No. 2, 333-65(1971).

The measurement of the width of a resonant state and the associated error depend in a complex way on the number of events, the resolution function and its error, and the background. Because of these dependences, the best result may not necessarily be from the experiment with the best resolution. Some simple approximation for these dependences, avoiding the errors of Gaussian formulae, are given. This enables the experimenter to determine where a more precise treatment is demanded and useful. Our application is to the problem of the width of the ω meson as seen in the reaction $\pi^+p \to \pi^+p\omega^0$. The data are taken from 180000 pictures in the LRL 72 inch hydrogen bubble chamber, incident momentum 3.7 GeV/c. The simple formulae indicate that for this experiment a precision in the ω width comparable to the world average value may be obtained. A near-optimal method of unfolding the true ω signal is described and justified. Application to these data yields $m_\omega = 784.7 \pm 1.0$ MeV, and $\Gamma_\omega = 9.5 \pm 1.0$ MeV. (auth)

**56431** STUDY OF $\pi^-p \to \pi^0n$ AND $\pi^-p \to \eta n$ REACTIONS IN NUCLEI AT 7.82 GeV/c. Guisan, O. (CEN, Saclay, France); Bonamy, P.; Le Du, P.; Paul, L. Nucl. Phys.; B32: No. 2, 681-90(1971).

$\pi^-p \to \pi^0n$ and $\pi^-p \to \eta n$ differential cross sections were measured in nine nuclei ranging from hydrogen to lead at a 7.82 GeV/c beam momentum and in a range of t going from 0 to $-2$ $(GeV/c)^2$. The results can be understood in the framework of the Glauber theory which allows in addition a determination of the $\pi^0$ and $\eta$ total cross sections on nucleons. (auth)

**56432** REGGE ANALYSES OF $\rho^0$ PRODUCTION IN πN CHARGE EXCHANGE CHANNELS AT 7 GeV/c. Matthews, J. A. J. (Univ. of Toronto, Ont.); Prentice, J. D.; Yoon, T. S.; (and others). Nucl. Phys.; B32: No. 2, 366-80(1971).

2380 events in the $\pi^+\pi^-$ mass interval $0.68 < m(\pi^+\pi^-) < 0.88$ GeV from $\pi^+d \to pp\pi^+\pi^-$ and $\pi^-p \to \pi^+\pi^-n$ experiments at 7 GeV/c have permitted an analysis of $\rho^0$ production to be made for momentum transfer, $|t| < 1.0$ $(GeV/c)^2$. The data were found to be in good agreement with a Regge $\pi + A_2$ model including absorption, but were not well described by a Regge $\pi$ model plus absorption. The data and the Regge analyses were consistent with the absence of a nonsense wrong signature zero in the pion Regge amplitude for $|t| < 1.0$ $(GeV/c)^2$. The $\pi + A_2$ Regge analysis of the $\rho^0$ data was compared with similar analyses used to describe $\pi^+$ photoproduction data, and was found to be in agreement with the predictions of vector dominance. (auth)

**56433** ENERGY DEPENDENCE OF $\pi^-$, $K^-$, AND $\bar{p}$ TOTAL CROSS SECTIONS ON PROTONS IN THE MOMENTUM RANGE UP TO 65 GeV/c. Denisov, S. P.; Dmitrevskii, Yu. P.; Donskov, S. V.; (and others). (Inst. for High Energy Physics, Serpukhov, USSR). Phys. Lett.; 36B: No. 5, 528-32(4 Oct 1971).

$\pi^-p$, $K^-p$ and $\bar{p}p$ total cross sections are measured at momenta up to 65 GeV/c with statistical accuracy 0.3 + 0.6% and systematical (scale) error ≈0.4%. (auth)

**56434** EVIDENCE FOR STRUCTURE IN THE Kπ MASS SYSTEM NEAR 1.85 GeV. Firestone, A.; Goldhaber, G.; Lissauer, D.; Trilling, G. H. (Univ. of California, Berkeley). Phys. Lett.; 36B: No. 5, 513-16(4 Oct 1971).

Evidence is presented for structure in the Kπ system at a mass near 1.85 GeV in the reaction $K^+n \to K^+\pi^-p$ at 12 GeV/c. One interpretation of the observations is the production by pion exchange of a $J^P = 3^-$ $K^*$ resonance at about this mass, which interferes strongly with other processes. (auth)

**56435** RESONANCES PRODUCED FROM $K^+p$ INTERACTIONS IN BUBBLE CHAMBER. Huq, S. S. (Univ. of Rajshahi, India). Nucleus (Karachi); 8: No. 1-2, 27-31(Jan-Jun 1971).

This review is concerned principally with the resonances produced from $K^+p$ interactions in liquid hydrogen bubble chamber. $K^*$ and $N^*$ resonances produced in the inelastic reactions are mainly discussed from the various $K^+p$ experiments carried out up to the incident K+ momentum of 10 GeV/c. (auth)

**56436** $A_2^-$ PRODUCTION IN THE CHANNEL $\pi^-$ + NEUTRALS NEAR THRESHOLD. Binnie, D. M. (Imperial Coll., Eng.); Camilleri, L.; Duane, A.; (and others). Phys. Lett.; 36B: No. 5, 537-40(4 Oct 1971).

The mass spectrum of the $A_2$ meson was studied in the reaction $\pi^- + p \to A_2^- + p$, $A_2^- \to \pi^-$ + neutrals near threshold. In contrast to a previous study of the channel $A_2^- \to \pi^+\pi^-\pi^-$ there is some evidence for structure within the resonance. (auth)

**56437** MEASUREMENT OF THE POLARIZATION PARAMETER IN $\pi^+p$ ELASTIC SCATTERING AT 10, 14, AND 17.5 GeV/c AND FOR $|t| \lesssim 2$ $(GeV/c)^2$. Borghini, M. (CERN, Geneva); Dick, L.; Olivier, J. C.; (and others). Phys. Lett.; 36B: No. 5, 493-6(4 Oct 1971).

Results on polarization in $\pi^-p$ and $\pi^+p$ forward elastic scattering at 10, 14 and 17.5 GeV/c are presented. (auth)

**56438** POLARIZATION PARAMETER IN $K^+p$ AND $\bar{p}p$ ELASTIC SCATTERING AT 10 AND 14 GeV/c. Borghini, M. (CERN, Geneva); Dick, L.; Olivier, J. C.; (and others). Phys. Lett.; 36B: No. 5, 497-500(4 Oct 1971).

Results on polarization in $K^-p$, $K^+p$ and $\bar{p}p$ forward elastic scattering at 10 and 14 GeV/c are presented. (auth)

**56439** ESTIMATION OF THE CROSS SECTION OF $\pi^- + {}^{12}C \to {}^{12}N + \pi^- + \pi^-$ REACTION AT Pc = 4 GeV. Abdullaeva, K. N.; Azimov, S. A.; Grishin, V. G.; (and others) (Inst. of Nuclear Physics, Tashkent). Dokl. Akad. Nauk Uzb. SSR; No. 12, 17-18(1971). (In Russian).

The cross section of the $\pi^- + {}^{12}C \to {}^{12}N + \pi^- + \pi^-$ reaction was estimated using a 24-liter propane ($C_3H_8$) bubble chamber irradiated with a π-meson beam at Pc = 4 GeV. The upper limit of the reaction cross section was found to be: $\sigma \leq (4 \pm 2.8)$ μ barn. (R.V.J.)

**56447** RELATIVISTIC WAVE EQUATIONS FOR MASSLESS PARTICLES OF SPIN ½. Simon, M. T. (Univ. of Madras). Lett. Nuovo Cim.; 2: No. 12, 616-18(18 Sep 1971).

It is pointed out that relativistic wave equations of the Dirac form can be derived by a uniform procedure developed by Mathews (Phys. Rev., 143: 978(1966)) for massless spin-½ particles. (L.B.S.)

**56448** PHASE SPACE, FIBRE BUNDLES, AND CURRENT ALGEBRAS. Hiley, Basil J. (London Univ.). Int. J. Theor. Phys.; 4: No. 4, 247-65(Aug 1971).

A previous cellular description is extended into phase space and it is shown how this may help to give an understanding of the current algebra approach to elementary particle phenomena. This cellular structure in phase space is investigated in some detail and it is shown how certain features of the structure may be described in terms of the mathematics of fiber bundle theory. The frame bundle is discussed and compared with the Yang-Mills theory. As a result of this discussion we are able to introduce generalized currents which are related to the duals of the curvature forms, and these are shown to span the Lie algebra of a subgroup of the structure group of the frame bundle. The implications of these results in terms of the cell structure are discussed. By assuming that the de Rham cohomology, defined by the curvature forms and their duals, reflects a cohomology on the integers defined on the original cell structure, it is shown that the currents and "curvature" can be given a meaning in terms of a discrete structure. In this case the currents only span a Lie algebra in some suitable limit, implying that a description using Lie algebras is only an approximation. (auth)

**56449** CURRENT AMPLITUDES IN THE DUAL RESONANCE MODEL. Sato, Hikaru (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1592-1606(May 1971).

Current amplitudes satisfying the conditions of (1) duality, (2) factorization and (3) current algebra are constructed. As an application of our model, one-loop dual amplitudes including one or two currents are investigated. After renormalizing the one-loop function, finite expressions are obtained for the current loop amplitudes. It is shown that the form factor has a good high current mass behavior and that the Fubini-Dashen-Gel-Mann sum rule is satisfied by our current amplitude. (auth)

**56450** SEMI-CLASSICAL MODEL FOR ELEMENTARY PARTICLES. Bess, L. (Rutgers-The State Univ., New Brunswick, N. J.); Chandler, L. Progr. Theor. Phys. (Kyoto); 46: No. 1, 235-55(Jul 1971).

An elementary particle model is described which involves a point charge with a variable mass moving in quasi-circular orbits about the mass center. It is possible to derive a mean proton radius whose value compares well with the one measured by Hofstadter. (auth)

**56451** SOME PROPERTIES OF COHERENT SPIN STATES. Radcliffe, J. M. (Univ. of Sussex, Brighton, Eng.). J. Phys., A (London); 4: No. 3, 313-23(May 1971).

Spin states analogous to the coherent states of the linear harmonic oscillator are defined and their properties discussed. They are used to discuss some simple problems (a single spin in a field, a spin wave, two spin ½ particles with Heisenberg coupling) and it is shown that their use may often give increased physical insight. **56452** (CALT-68-313) REGGE MODELS OF FORWARD PION AND ETA PHOTOPRODUCTION. Worden, Robert (California Inst. of Tech., Pasadena). [1971]. Contract AT(11-1)-68. 92p. (CONF-710816-1). Dep. NTIS.

From International symposium on electron and photon interactions; Ithaca, N. Y. (23 Aug 1971).

A Regge model of forward pion photoproduction should satisfy three separate criteria; it should fit the extensive high energy data, it should agree with all possible constraints on the Regge residues, and it should fit the finite energy sum rules. A Regge absorption model of pion and eta photoproduction is presented which satisfies all these conditions. The model uses poles with nonsense wrong-signature (NWS) zeroes, and uses a black disc form of absorption in which all low partial waves are completely absorbed and high partial waves are unabsorbed. The absorbed Regge amplitudes show remarkable $\rho-A_2$ and $\pi-B$ exchange degeneracy. The model agrees well with the FESR, which are given in terms of regularized s-channel helicity amplitudes, in order to examine their absorptive zero structure. Then models are examined using a conventional form of absorption, and models in which the poles do not have NWS zeroes. It is found that models without NWS zeroes are unable to fit the sum rules. Since Regge absorption models do not fit the distinctive large-t behavior of the cross sections, fixed-pole models are discussed as a possible explanation of these data, and it is shown that even in fixed pole models, some Regge cuts are necessary. The predictions of the various models for some new experimental quantities which can be measured using simultaneously polarized targets and beams are presented, and a test for $A_1$ exchange is suggested. (auth)

**56453** (ORO-3992-42) BLACK-BODY RADIATION AND GENERALIZED THEORY OF PHYSICAL DIMENSIONS. Recami, E. (Texas Univ., Austin. Center for Particle Theory). May 1971. Contract AT(40-1)-3992. 14p. (CPT-92). Dep. NTIS.

The Straneo's generalized theory of "physical dimensions" (valid for the whole classical physics) is used. In that theory, the "universal constants" have dimensions such that some linear relations hold, between the exponents of the fundamental quantities. For the physical laws obeying the conservation principles of thermodynamics, in those linear relations a variable n appears. The undulatory and the corpuscular aspects correspond to n = 1 and n - 2, respectively. This fact clarifies the classical dichotomy between these two theories. It is shown that: no "classical" law—besides the Wien's one—may be written for the black-body radiation density; the Rayleigh-Jeans formula is not consistent with classical physics, as it was derived in a wrong way; the previous statements are independent of any detail of the mathematical models (even recently explored). (auth)

**56454** THEORY OF REACTION BETWEEN POLARIZED PARTICLES AND GAMMA-QUANTA. Ritus, V. I. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 3-101(1971). (In Russian).

The structure of the scattering amplitude and of differential cross section was investigated for polarized particle-$\gamma$-quantum reactions, the latter being dependent upon invariance of interaction of rotation, repulsion, conversion of time and charge conjugation. The scattering amplitude was expanded by an invariant spin operator or angular operator, and the polarized structure of differential cross section and its simplification for invariance interaction of rotation, repulsion conversion of time and charge conjugation was accordingly found. The proposed method for the reaction with not too large a spin is simpler and more obvious than the previous fundamental methods. (tr-auth)

**56455** INTERACTION OF A SYSTEM OF PARTICLES WITH AN ELECTROMAGNETIC FIELD. II. Khokhlov, Yu. K. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 157-66(1971). (In Russian).

An advanced exposition is offered of an earlier proposed special calibration of potentials and a calculation of multipole moments. The special calibration is characterized by the fact that the effective scalar potential is expressed by electric field intensity whereas vector potential is expressed by magnetic field intensity. In the result the "relative" Hamiltonian of interaction is shown to be composed of two components-electric and magnetic- each of which has a closed form. A novel application of the theory is the field interaction with a free system and the scattering amplitude of a photon. The use of a special calibration avoids the appearance in the scattering amplitude of conventional unphysical components and permits immediate detection of the transition to Thompson limits. (tr-auth)

**56456** DISTURBANCE OF SECOND-ORDER COHERENCE BY INTERACTION. Bulla, Wolfgang (Technische Hochschule, Graz). Z. Phys.; 246: No. 4, 302-11(1971). (In German).

A definition of the disturbance of the second-order coherence of a photon field, scattered by an electron, is formulated within the framework of quantum electrodynamical coherence theory. As a special case forward scattering is considered, thus yielding a simple relation with the matrix element for one-photon-scattering. The scattering on a free polarized electron is treated as an example. (auth)

**56457** HIGH ENERGY PRODUCTION OF HADRONS IN THE COULOMB FIELD OF A NUCLEUS. Gourdin, M. (CERN, Geneva). Nucl. Phys.; B32: No. 2, 415-28(1971).

The one-photon exchange contribution to coherent production processes at high energy is computed. The Primakoff effect gives a measurement of total photo-absorption cross section and the integrated cross section is found to increase with energy like log s. Some discussion of inclusive reactions is given in particular for proton-proton colliding beam experiments. (auth)

**56458** COMPARISON OF THE HIGH ENERGY MODELS FOR NEUTRAL MESON PHOTOPRODUCTION AND THE RELATED HADRONIC PROCESSES. Gault, F. D. (Univ. of Durham, Eng.); Martin, A. D.; Kane, G. L. Nucl. Phys.; B32: No. 2, 429-52(1971).

To critically compare the Michigan and Argonne models simultaneous fits are made to the high-energy data for $\pi^0$ and $\eta$ photoproduction together with that for the related hadronic vector meson production reactions, in particular that for $\pi^+n \to \omega p$. Thus all constraints on these models are considered simultaneously. Particular attention is given to the strength of absorptive cuts in both models, and to the role of the B-meson exchange in filling dips in the Argonne model. It is found that the $\rho$-Pomeron cuts (i.e. cuts associated with large helicity flip at the $N\bar{N}$ vertex) are essential to introducing unnatural parity exchange in the Michigan model, and that the B-meson contribution is incapable of filling unwanted dips which appear in any model with nonsense wrong signature zeros as required by exchange degeneracy. The flip and non-flip $\rho$ and $\omega$ coupling strengths at the $N\bar{N}$ vertex are determined. Predictions are made for various polarization asymmetries for $\gamma p \to \pi^0 p$ and $\gamma p \to \eta p$. The differential cross section for $K_L^0 p \to K_S^0 p$ is calculated and compared with the existing data. (auth)

**56459** ANNIHILATION OF ELECTRON–POSITRON PAIRS TO PSEUDO-SCALAR MESONS. Yakh'yaev, R. Sh. (Azerbaidzhan State Univ., Baku). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 5, 48-52(1971). (In Russian).

The production of pseudoscalar mesons by the collision of polarized electron and positron beams, taking account of form factors of all participating particles is described. An equation was obtained for the angular and energy distributions of the produced pairs. Equations are also developed which give the angular and energy distribution of the mesons in a laboratory system. (tr-auth)

**56460** PRODUCTION OF PION PAIRS IN ELECTRON COLLIDING BEAMS. Cheng, Hung (Massachussetts Inst. of Tech., Cambridge); Wu, Tai Tsun. Nucl. Phys.; B32: No. 2, 461-85(1971).

Pionization in electron-electron (or electron-positron) colliding beams is studied in detail for the dominant case where the produced pions have nearly equal but opposite transverse momenta. Accurate measurements in this case, without detecting the outgoing electrons, can be used to determine all amplitudes and phases for $\gamma\gamma \to \pi^+\pi^-$. The results are obtained directly from Feynman diagrams and thus inaccuracies due to Weizsäcker-Williams approximation are avoided. All the formulas are equally applicable to the production of any pair of spinless bosons in electron-electron (or electron-positron) colliding beams. (auth)

**56461** GENERALIZED WEINBERG SUM RULES IN DEEP INELASTIC CURRENT–HADRON SCATTERINGS. Morita, K. (Nagoya Univ., Japan); Fukui, I. Lett. Nuovo Cim.; 2: No. 13, 661-4(25 Sep 1971).

A chiral symmetry on the light cone was previously proposed for the disconnected part of the matrix elements of the vector–vector and axial-vector–axial-vector current commutators, thereby obtaining the modified second Weinberg sum rule in addition to the first one. It was also remarked that the chiral symmetry on the like-cone applied to the connected matrix elements of the current commutators would lead to the equality of scaling functions for the vector and axial vector matrix elements. This is shown to be the case under certain assumptions. (L.B.S.)

**56462** RADIATION FROM AN ELECTRIC CHARGE MOVING ALONG A SPIRAL PATH IN A TRANSPARENT MEDIUM. Kukanov, A. B.; Lavrova, G. A.; Orisa, B. D. (Moscow Univ.). Vestn. Mosk. Univ., Ser. III. Fiz. Astron.; 12: No. 1, 111-13 (Jan-Feb 1971). (In Russian).

An attempt was made to adapt a general method of describing polarized properties of a light beam to the case of radiation by a charge moving on a spiral path. Such motion and radiation was investigated in a transparent isotropic medium with given dielectric and magnetic permeability. The formulas developed are in harmony with analogous studies by other authors. (K.S.W.)

**56463** FINITE-ENERGY SUM RULES AND THE REACTIONS $ee \to ee\epsilon$ (750) AND $ee \to eef$ (1260). Schrempp-Otto, B. (Univ., Hamburg); Schrempp, F.; Walsh, T. F. Phys. Lett.; 36B: No. 5, 463-6(4 Oct 1971).

The $\epsilon\gamma\gamma$ and $f\gamma\gamma$ coupling constants are calculated from finite-energy sum rules for $\gamma\pi \to \pi\gamma$. The cross sections for $\epsilon$ and f production in colliding electron beam reactions are found to be significant. There is reasonable agreement with the tensor meson dominance estimates for the $f\gamma\gamma$ couplings. (auth)

**56464** COMMENT ON SPIN ONE THEORY. Goldman, T.; Tsai, W. (Harvard Univ., Cambridge, Mass.). Phys. Lett.; 36B: No. 5, 467-9(4 Oct 1971).

A way to explain the inconsistency of the spin one theory with anomalous magnetic moment couplings observed by Tsai and Yildiz is proposed. By suitably adding infinitely many non-minimal coupling terms which are tensor functions of the field strength $F_{\mu\nu}$, the square of the energy eigenvalues can become positive definite. A particular model of replacing $\kappa$ by $\langle H^2 \rangle = \kappa'(1 + \frac{1}{4}\kappa'^2 e^2 H^2 m^{-4})^{-1}$, where no restriction is imposed on $\kappa'$, is discussed. (auth)

**56465** SCALE INVARIANCE AND RELATIVISTIC COMPOSITE NUCLEON. Sato, Atsushi; Fujii, Kanji; Kokuyama, Shigeru; Murota, Toshiyuki (Hokkaido Univ., Sapporo, Japan). Progr. Theor. Phys. (Kyoto); 46: No. 1, 341-3(Jul 1971).

The momentum distribution function for deep inelastic electron scattering is considered when the target nucleon is regarded as a composite state described by a relativistic wave function. The conditions for scale invariance are examined. (L.B.S.)

**56466** BHABHA SCATTERING ANOMALOUS INTERACTION OF MUON. Ng, S. H. (Dalhousie Univ., Halifax, Nova Scotia). Progr. Theor. Phys. (Kyoto); 46: No. 1, 211-19(Jul 1971).

It is suggested that high energy muon Bhabha scattering at large angles may distinguish the various forms of possible anomalous interaction of the muon. (auth)

**56467** DIRECT PAIR PRODUCTION BY CHARGED PARTICLE AT 4 GeV/c IN A PROPANE BUBBLE CHAMBER. Boehm, J.; Matlova, A.; Zacek, J.; Grishin, V. G. (Charles Univ., Prague). Nucl. Phys.; B32: No. 2, 632-44(1971).

The direct electron pair production by pions, muons and electrons at 4 GeV/c was investigated in a propane bubble chamber. The experimental results were found within the 30% in agreement with the cross sections calculated by Bhabha and Murota, Ueda and Tanaka. A special method of the background subtraction was developed. The method is very convenient for the investigation of the production of electron pairs by electrons in a hydrogen bubble chamber. (auth)

## Weak

**56468** (FRNC-R-1) WEAK INTERACTIONS AND THE VECTOR DOMINANCE MODEL. Lopes, J. Leite (Centre National de la Recherche Scientifique, Paris (France)). Jun 1971. 12p. Dep. NTIS (U. S. Sales Only).

It is suggested that, in the same way that the electromagnetic form factors of hadrons are dominated by the neutral hadronic vector mesons in interaction with the photon, the weak reaction form factors of hadrons are correspondingly dominated by the hadronic charged vector and axial-vector mesons coupled to the intermediate W-bosons. A relation is obtained, between the coupling constants involved and Cabibbo's angle. A cancellation of dominant axial-vector pole terms in the matrix element of the nucleon axial current between neutron and proton states gives a better approximation for the Goldberger–Treiman relation. (France)

**56469** KOSMICHESKIE MYUONY I NEITRINO. (Cosmic Muons and Neutrinos). Bugaev, E. V.; Kotov, Yu. D.; Rozental, I. L. Moscow; Atomizdat (1970). 320p.

XUM

Contemporary knowledge of the characteristics and behavior of the muon and the neutrino is summarized. The electromagnetic-nuclear interaction of muons, electron-positron pair formation, and muon–muon pairs are discussed. The passage of muons through matter, the absorption and other losses of muons, and their mean free path are considered. Two chapters focus attention on high-energy muons and muons in atmospheric showers. The second half of the book introduces the neutrino, giving its theoretical implications, interaction cross sections, and its role in accelerator experiments. Recent research on origins of the neutrino in the Sun's interior, neutrino astrophysics, and experiments with the neutrino from cosmic rays are presented. 190 references. (K.S.W.)

**56470** URBARYON REARRANGEMENT DIAGRAM AND NONLEPTONIC HYPERON DECAYS. Noda, Hujio (Kyushu Univ., Fukuoka); Toyoda, Fumihiko. Progr. Theor. Phys. (Kyoto); 45: No. 5, 1634-45(May 1971).

Nonleptonic hyperon decays are investigated from the standpoint of urbaryon rearrangement diagram. It is shown that duality assures the Lee-Sugawara relation of both S-wave and P-wave amplitudes of nonleptonic hyperon decays under simple assumptions that the H-type diagram is dominant in S-wave decays and that the Z-type diagram is dominant in P-wave decays. The cluster model is discussed in connection with the assumptions for explaining the main dynamical properties of S-wave and P-wave decays. It is found that the characteristics of S-wave decays can be understood by setting a constraint to the t-channel and that those of the P-wave decays can be understood by setting the constraint to the s-channel. (auth)

**56471** IS THE LIGHTEST FRACTIONALLY-CHARGED PARTICLE STABLE? Verhaar, B. J. (Technische Hogeschool, Eindhoven, Netherlands). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1689-90(May 1971).

It is suggested that quark-like particles have escaped observation because of their instability. It is also suggested that a certain type of violation of the conservation laws of electric charge and baryon number is not in contradiction with experimental facts, but that it yields the decay of the lightest fractionally charged particle. A specific form for a weak interaction incorporating nonconservation of B and Q is described for the decay of fractionally charged to integrally charged particles. (L.B.S.)

**56472** SECOND CLASS CURRENTS IN HIGH ENERGY NEUTRINO REACTIONS. Okamura, Hiroshi (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1707-9(May 1971).

The existence of second-class currents is studied from polarization of the recoil proton in $\nu_\mu + n \rightarrow p + \mu^-$ interactions. (L.B.S.)

**56473** CROSS SECTION FOR THE PRODUCTION OF THE W BOSON BY HIGH-ENERGY NEUTRINOS IN THE ELECTROMAGNETIC FIELD OF A PROTON. Berkov, A. V.; Bunatyan, G. G.; Zhizhin, E. D.; Nikitin, Yu. P. (Moscow Engineering-Physics Inst.). Yadern. Fiz.; 13: No. 5, 1126-7(May 1971). (In Russian).

Calculation of the total cross section of formation of the W boson (the weak interaction vector quantum) at neutrino energies of E = 30 to 400 GeV and in the mass range from 3 to 10 GeV is of special interest for the current research at the Serpukhov accelerator and for work planned with the new large American accelerator. There is considerable divergence in the data published on this subject. Because of negligence, a previous work contained an exactly 10 times higher value than intended for the cross section of formation of W; even so, the value differs from that reported previously. Recalculation of the experimental data on a computer yielded results which agreed with previous data. It appears that the original data, as corrected subsequently, are reliable values, especially in the region far from threshold of generation of W bosons. (TTT)

**56474** (FRNC-TH-63) KINEMATIC STUDY OF A REACTION BETWEEN HADRONS (STABLE AND UNSTABLE). Keller, Jean-Pierre (Paris Univ., Orsay (France). Faculte des Sciences). 1970. 70p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

Certain aspects of the construction of a space with states corresponding to one or several particles are considered, a problem of particular interest being the statistics of identical particles. The principles governing the definition of the collision operator are presented together with the main consequences of these principles. Unstable particles are also considered. (France)

**56475** (RPP/C-24) REGGE CUTS AND RELATED TOPICS. Phillips, R. J. N. (Rutherford High Energy Lab., Chilton (England)). Jul 1971. 59p. (CONF-710609-8). Dep. NTIS (U. S. Sales Only).

From International conference on elementary particles; Amsterdam, Netherlands (30 Jun 1971).

A review is given of Regge phenomenology particularly Regge cuts. The discussion covers the general properties of Regge cuts, duality and geometry, cut models and modifications, t-dependence, cuts, extensions of the empirical rule for cuts, selection rules for cuts, Pomeron couplings, FESR for poles alone, complex Regge poles, and new data. (J.F.P.)

**56476** INCLUSIVE REACTIONS IN DUAL MODELS WITH SECOND SHEET RESONANCES. Olesen, P. (CERN, Geneva). Nucl. Phys.; B32: No. 2, 609-31(1971).

The effects of unitarity-like features in inclusive reactions are investigated by means of two dual resonance models with second sheet resonance poles and Mandelstam analyticity. The first model has recently been proposed by Cohen-Tannoudjii, Henyey, Kane and Zakrzewski (CHKZ). The second model (a modification of the CHKZ model) has the additional feature that it approaches the Veneziano model in the zero-width limit. It turns out that the unitarity-like features contained in both models influence the transverse momentum spectrum strongly in the central region. The second model gives a transverse momentum cut-off of the form $\exp(-a_1 p_T - a_2 p_T^q)$, where $q > 1$ and where $a_1$ and $a_2$ are (not necessarily universal) constants. In the zero-width limit the spectrum decreases much faster [like $\exp(-a p_T^q)$]. In the fragmentation region the unitarity-like features of the models are of less importance. (auth)

**56477** EXISTENCE OF THE PSEUDOVECTOR ISOSPINOR HEAVY BOSON AND A NEW MODEL FOR HADRONS. Kushnirenko, A. N. (Inst. of Materials Research, Kiev). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 5, 40-7(1971). (In Russian).

The construction of the new hadron model, its charge and symmetry are discussed. With these equations, and the laws of momentum addition and isotopic spins, a set of 15 tables are assembled which are based on the new model. An approximation of SU(3)-symmetry is discussed, starting with the binding energy between the nucleon and the anti-nucleon, and their relation to the boson and antiboson. Mass relationships for baryons are mathematically developed, for which SU(3) symmetry is not realized. (K.S.W.)

**56478** DETERMINATION OF THE COUPLING STRENGTH FROM DUALITY AND UNITARITY. Igi, K.; Eguchi, T. (Tokyo Univ.). Phys. Lett.; 36B: No. 5, 486-8(4 Oct 1971).

A method is proposed to determine the absolute strength of the coupling. The crucial point consists in the use of duality and unitarity. The predicted values of the elastic and total widths of meson resonances are in reasonable agreement with experiments. (auth)

**56479** EXOTIC EXCHANGE PROCESSES AND URBARYON REARRANGEMENT DIAGRAMS. Ghoroku, Kazuo; Myozyo, Yasuo; Noda, Hujio (Kyushu Univ., Fukuoka). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1694-6(May 1971).

The exotic quantum number exchange processes are classified into two groups in terms of urbaryon rearrangement diagrams (URD). It is pointed out that the s-dependence of URD is determined not only by the rearranged urbaryon lines but also by the spectator lines. It is shown that exotic mesons couple when the spectator lines exist on both sides in URD and that they lie on low-lying Regge trajectories. (L.B.S.)

**56480** CANONICAL QUANTIZATION OF THE PROPER TIME FORMALISM IN THE DUAL RESONANCE MODEL. Itoh, Chiaki (Meiji-Gakuin Univ., Tokyo); Kenmoku, Masakatsu; Minamikawa, Toshiyuki. Progr. Theor. Phys. (Kyoto); 45: No. 5, 1607-17 (May 1971).

The proper time formalism of the dual resonance model has been proposed. The proper time formalism is quantized to include diagrams of the general type such as loops, and diagrams of Feynman-like rule are obtained with a proper time propagator in place of the usual propagator. The minimal interaction in this formalism is discussed and currents and commutation relations among them are derived. (auth)

**56481** DUAL QUARK–PARTON MODEL AND HIGH ENERGY HADRONIC PROCESSES. Landshoff, P. V.; Polkinghorne, J. C. (Univ. of Cambridge, Eng.). Nucl. Phys.; B32: No. 2, 541-56 (1971).

The dual quark-parton model is extended to purely hadronic processes. An additional dynamical assumption then leads to the additive quark model for high energy cross sections, with naive quark model counting despite the more complicated character in fact possessed by the hadrons. Limiting fragmentation is also obtained. A further dynamical assumption leads to an approximation to the

differential cross section in terms of electromagnetic form factors of the form proposed by Wu and Yang. Conservation of s-channel helicity in pion-nucleon and nucleon-nucleon scattering is also deduced. (auth)

**56482** (COO-1195-224) PARTIAL WAVE ANALYSIS OF THE $3\pi$ SYSTEM IN THE MASS REGION 1.0 TO 2.0 GeV. Eisenstein, Laura (Illinois Univ., Urbana). Aug 1971. Contract AT(11-1)-1195. 6p. (CONF-710819-1). Dep. NTIS.

From fourth topical conference; Honolulu, Hawaii (2 Aug 1971).

A new partial-wave analysis is described for the $3\pi$ system in the reactions $\pi^+ + p \to p + \pi^+ + \pi^+ + \pi^-$ and $\pi^- + p \to p + \pi^- + \pi^+ + \pi^-$ between 5 and 25 GeV/c. For each spin and parity state of the $3\pi$ system, decays into $\pi\epsilon$, $\pi\rho$, and $\pi f$ with all possible orbital angular momenta allowed by parity and angular momentum conservation are considered. The production and properties in the $A_1$, $A_2$, and $A_3$ regions are discussed. (J.F.P.)

**56483** (JINR-E$_2$-6017) LADDER APPROXIMATION FOR VERTEX FUNCTION IN NONRENORMALIZABLE THEORY OF $\omega\rho\pi$ INTERACTION. Flippov, A. T.; Epifanov, Yu. N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 14p. Dep. NTIS (U. S. Sales Only).

The method for solving ladder-type equations for the vertex function in nonrenormalizable theories previously suggested is extended to the case of nonvanishing 4-momenta of all three particles. An expansion of the vertex function in a series of powers of the coupling constant $g_{\omega\rho\pi}$ and in $g_{\omega\rho\pi}$ is obtained, with the example of the particularly interesting applications for the $\omega\rho\pi$ interaction. The first nonvanishing approximation is compared with the estimate obtained by use of the "unitary cut-off" in usual perturbation theory. (auth)

**56484** (ORO-3992-10) TWO VARIABLE CROSSING SYMMETRIC EXPANSION OF THE $\pi\pi$ SCATTERING AMPLITUDE AND LOW-ENERGY PARAMETER SUM RULES. Maiella, G. (Texas Univ., Austin. Center for Particle Theory). May 1970. Contract AT(40-1)-3992. 23p. (CPT-51). Dep. NTIS.

A two-variable crossing-symmetric expansion of the $\pi$-$\pi$ scattering amplitude in the interior of the Mandelstam triangle is obtained. From this expansion, sum rules are derived for the low-energy parameters, assuming the "weakness" of the threshold unitarity cut. Finally, these sum rules are compared with experimental data and theoretical predictions. (auth)

**56485** (ORO-3992-66) COMMENTS ON ANALYSES OF $\bar{p}n \to 3\pi$. Gleeson, A. M.; Meggs, W. J.; Parkinson, M. J. (Texas Univ., Austin. Center for Particle Theory). [1971]. Contract AT(30-1)-875. 7p. (CPT-116). Dep. NTIS.

The analysis of the reaction $\bar{p}n \to \pi^+\pi^-\pi^-$ using the rising phase shift model is compared with attempts to explain the data with the Veneziano model. The fact that daughter trajectories are not parallel to the leading trajectory is emphasized. (auth)

**56486** $K\pi$ SCATTERING PHASE SHIFTS DETERMINED FROM THE REACTIONS $K^+p \to K^+\pi^-\Delta^{++}$ AND $K^+p \to K^0\pi^0\Delta^{++}$. Mercer, R.; Antich, P.; Callahan, A.; (and others) (Johns Hopkins Univ., Baltimore). Nucl. Phys.; B32: No. 2, 381-414(1971).

The $K\pi$ scattering was studied from threshold to $m_{K\pi} = 1200$ MeV using the Chew-Low extrapolation method in the reactions $K^+p \to K^0\pi^0\Delta^{++}$. In addition to an analysis using only the data at 5.43 GeV/c incident momentum, the results using the world data compiled from experiments with momenta from 3.0 to 12.7 GeV/c are also presented. The extrapolated cross section for the elastic $K^+\pi^- \to K^+\pi^-$ scattering exceeds the p-wave isospin-$\frac{1}{2}$ unitarity limit in the $K^*(890)$ region. The phase shift $\delta_1^1$ (notation $\delta_1^{3/2}$) shows the expected Breit-Wigner behavior which suggests that $\delta_1^1 \simeq 0$ in the mass region studied. Solutions for the s-wave phase shifts $\delta_0^1$ and $\delta_0^0$ are obtained from the extrapolated differential cross sections. A unique set of solutions for $\delta_0^1$ and $\delta_0^0$ is obtained by requiring the calculated cross sections to agree with those extrapolated from $K^+\pi^-$ elastic scattering and with those for $K^-\pi^-$ scattering obtained in other experiments. $\delta_0^1$ was found to increase slowly from $0^0$ at threshold, approaching $80^\circ$ at $m_{K\pi} \simeq 1150$ MeV with no evidence of passing through $90^\circ$ in the mass range studied. The phase shift $\delta_0^0$ decreases slowly from $0^0$ at threshold to $\simeq -30^\circ$ at $m_{K\pi} \simeq 1200$ MeV. (auth)

**56487** SINGLE-AND DOUBLE-PION PRODUCTION IN PROTON-ANTIPROTON NONANNIHILATIONS AT 2.2 GeV/c. Stringer, T. A.; Kwak, N.; Mall, G. H.; Manweiler, J. E.; Stump, R. (Univ. of Kansas, Lawrence). Nucl. Phys.; B32: No. 2, 486-92(1971).

The final states $p\bar{p}\pi^0$ and $p\bar{p}\pi^+\pi^-$ appear to proceed predominantly through single- and double-isobar production respectively. However, in the $p\bar{n}\pi^-$ final state the data indicates another mechanism at work. Several OPE models are applied to the production angular distributions, and the density matrices are determined for the double-pion production reaction. (auth)

**56488** COUPLING CONSTANTS IN THE $(A_1\rho\pi)$ SYSTEM AND HELICITY CONSERVATION. Ahmed, K.; Razmi, M. S. K. (International Atomic Energy Agency, Vienna. International Centre for Theoretical Physics, Trieste, Italy). Lett. Nuovo Cim.; 2: No. 13, 657-60(25 Sep 1971).

The s-channel process $A_1A_1 \to \pi\pi$ is examined and, applying t-channel helicity conservation, it is found that the s-wave coupling for $A_1 \to \rho\pi$ decay vanishes. (L.B.S.)

**56489** DUFFIN-KEMMER-LIKE WAVE EQUATION FOR DUAL FREE MESONS. Casalbuoni, R. (Istituto Nazionale di Fisica Nucleare, Florence). Lett. Nuovo Cim.; 2: No. 13, 641-6 (25 Sep 1971).

The Ramond equation is generalized to a Duffin-Kemmer-type equation for mesons in such a way that the meson states transform like $q\bar{q}$, and it is shown that such an equation is equivalent to the Bargmann-Wigner equations for the field. The wave equation is modified to obtain a mass splitting which is suitable to reproduce the physical $\pi$ and $\rho$ trajectories. The possibility of constructing a conserved vector current for the case of the Klein-Gordon-like equation is discussed. (L.B.S.)

**56490** ANALYTIC, CROSSING-SYMMETRIC, UNITARITY $\pi\pi$ AMPLITUDES WHICH SATISFY I = 1 SUM RULES AND THE INEQUALITIES OF MARTIN. Tryon, E. P. (Columbia Univ., New York). Phys. Lett.; 36B: No. 5, 470-4(4 Oct 1971).

A model for analytic, crossing-symmetric $\pi\pi$ amplitudes is exhibited which satisfy I = 1 sum rules and the inequalities of Martin. The S-waves and P-wave are unitary to excellent approximation up to energies exceeding 1 GeV. The model enables a small number of experimentally accessible parameters to be converted into phase shifts reliable up to 1 GeV. Predictions are made for the S-waves which lend support to certain analyses of $\pi N \to \pi\pi N$ data. Solutions are displayed which constitute counter-examples to the claims of Le Guillou, Morel and Navelet that the S-waves must possess Adler-like zeroes, and that the $\epsilon$ resonance must be broad. (auth)

**56491** AVERAGE PROPERTIES OF DUAL RESONANCES. Green, M. B. (Princeton Univ., N. J.); Veneziano, G. Contract AT(30-1)-2098. Phys. Lett.; 36B: No. 5, 477-9(4 Oct 1971).

As a consequence of the strong interaction (A.F.S.) scaling of dual amplitudes, it is found that the average total width of a high mass resonance approaches a constant which is less than $1/\pi$ $(GeV)^2$. A logarithmic increase of the average multiplicity coming from the decay of dual resonances is also obtained. (auth)

**56492** STRUCTURE IN S-WAVE $\pi\pi$ SCATTERING. Bennett, G. W.; Johnson, R. C. (Durham Univ., Eng.). Phys. Lett.; 36B: No. 5, 483-5(4 Oct 1971).

Phenomenological phase shift data and crossing sum rules clearly indicate the presence of zeros below threshold in both S-wave $\pi\pi$ amplitudes, just as predicted by current algebra. Some preference for a resonant I = 0 amplitude emerges. (auth)

**56493** REGGE POLES AND THEIR RESIDUES IN THE VIRASORO MODEL. Kawai, Toshiharu (McMaster Univ., Hamilton, Ont.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1578-84(May 1971).

The complex l plane structure of the Virasoro model for $\eta^0\eta^0$ elastic scattering is investigated in detail. Explicit expressions for the residue functions and the positions of their poles and zeros are given for both moving and fixed Regge poles. Contrary to some statements in an earlier literature, it is shown that the poles of Regge residues do not show up as poles of the full signature amplitude and that they are not in conflict with unitarity. Besides, the fixed Regge poles are additive and not combined multiplicatively with moving Regge poles. (auth)

**56494** LORENTZ POLE STRUCTURE OF THE VIRASORO MODEL. Kawai, Toshiharu (McMaster Univ., Hamilton, Ont.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1585-91(May 1971).

The Virasoro amplitude for $\eta^0\eta^0$ elastic scattering is projected on the irreducible representations of the Lorentz group. An infinite sequence of moving Lorentz poles is found, but no fixed Lorentz poles at all. The relation between the Lorentz poles and the Regge poles is discussed. It is pointed out that fixed Regge poles come from a kinematical factor which relates the partial

XUM

wave amplitude to the Lorentz amplitude. The results are compared with those of the Veneziano model. (auth)

**56495** LOW ENERGY PION–PION SCATTERING. Kuehnelt, H. (Univ., Karlsruhe, Ger.). Z. Phys.; 246: No. 5, 447-58 (1971).

Pion–pion s- and p-wave amplitudes are investigated by means of dispersion relations for the inverse partial wave amplitudes. Possible low-energy zeros of the s waves are taken into account, and their positions as well as other parameters are determined by the imposition of the Balachandran–Nuyts crossing constraints and Martin's conditions and by postulating the existence of the $\rho$ meson. Very narrow bands of solutions are obtained, where the $I = J = 0$ phase shifts reach 90° and the s-wave scattering lengths $a_0$ vary between 0.13 and 0.23 $m_\pi^{-1}$ and the ratios $a_0/a_2$ vary between –1.8 and –3.5. It is shown that inelasticity or the passage through 180° of $\delta_0^0$ near 1 GeV does not change the predictions in the low-energy region much. (auth)

**56496** (CERN–71-14, pp 101-54) PION–NUCLEON SCATTERING THEORY. Hamilton, J. (Nordisk Institut for Teoretisk Atomfysik, Copenhagen (Denmark)). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

The discussion of pion–nucleon scattering covers the low-energy $\pi$N parameters, Coulomb corrections, the use of fixed-t dispersion relations, the dynamics of low-energy $\pi$N scattering, and information on $\sigma$. (J.F.P.)

**56497** (FRNC-TH-33) REGGE POLES AND $\pi-$N SCATTERING AT LOW AND INTERMEDIATE ENERGIES. Tounsi, Ahmed (Paris Univ. (France). Faculte des Sciences). 1970. 101p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

The general $\pi-$N formalism is recalled and the form of the contributions of the Regge poles used is given. Recent ideas on overall and local duality and their applications to the dynamics of strong interactions are given. After describing the method used, it is applied to amplitudes recently used in the context of ideas on duality. The results obtained, both with respect to poles (resonances) and cross sections are compared with previous results obtained using the Argand diagram and also with experimental results. The unitarized Regge amplitudes are verified for medium and low energies. Problems concerning the introduction of inelasticity into this study and the asymptotic behavior of the modified Regge amplitudes are discussed. (auth)

**56498** (IFA-HE–76) CERENKOV MECHANISM AND RESONANCE PRODUCTION. Ion, D. B.; Nichitiu, F. Gh. (Institutul de Fizica Atomica, Bucharest (Romania)). 1971. 10p. Dep. NTIS (U. S. Sales Only).

The behavior of the cross sections for the reactions $\pi^- + p \to \pi^- + p(\Delta^{++}) + \rho^0(\pi^-)$ and $p + p \to p + \Delta^{++} + \pi^-$ interactions is analyzed using the Cherenkov mechanism. (J.F.P.)

**56499** (ORO–3992-8) INTERPRETATION OF ANGULAR DISTRIBUTION IN TERMS OF COMPLEX MASS PARTICLES. Gleeson, A. M.; Gundzik, M. G.; Sudarshan, E. C. G. (Texas Univ., Austin. Dept. of Physics); Pagnamenta, Antonio (Rutgers–The State Univ., New Brunswick, N. J. Dept. of Physics). Apr 1970. 14p. (CPT–47). Dep. NTIS.

The secondary maximum in the angular distribution of $\pi^-p \to \pi^0n$ is interpreted in terms of a negative mass squared resonance (NMSR). A consequence of the negative mass squared nature of this resonance is the natural appearance of a spin projection operator for a member of the principal series $j = -\frac{1}{2} + i\sigma$ of irreducible representations of the little group 0(2,1). A fit to the experimental data for laboratory momentum from 5.9 to 18.2 GeV/c requires an NMSR with $-m^2 = 1.0$ (GeV)$^2$, total width $\Gamma = 0.3$ GeV and $\sigma = 1.1$. (auth)

**56500** (ORO–3992-18) PHENOMENOLOGY OF COMPLEX SPIN TACHYONS. Gleeson, A. M.; Gundzik, M. G.; Sudarshan, E. C. G. (Texas Univ., Austin. Dept. of Physics); Pagnamenta, Antonio (Illinois Univ., Chicago. Dept. of Physics). Jun 1970. 14p. (CPT–65; CONF-700627–2). Dep. NTIS.

From fourth international conference on resonant particles; Athens, Ohio (15 Jun 1970).

A preliminary formulation of a phenomenology of negative mass squared resonances (NMSR) is described. The angular distribution of pion-nucleon charge exchange scattering is interpreted in terms of these objects. Negative mass squared resonances have as their spin projection operator a member of the principal series $j = -\frac{1}{2} + i\sigma$ of irreducible representations of the little group 0(2,1). A fit to the experimental data for laboratory momenta from 5.9 to 18.2 GeV/c requires a NMSR with $-m^2 = 1.0$ (GeV/c)$^2$, total width $\Gamma = 0.3$ GeV and $\sigma = 1.1$. (auth)

**56501** (RHEL/R-224) COEFFICIENTS FOR PARTIAL WAVE ANALYSIS OF THE REACTION $0^- + \frac{1}{2}^+ \to 1^- + \frac{1}{2}^+$. Brandstetter, A.; Deen, S. M.; Litchfield, P. J. (Rutherford High Energy Lab., Chilton (England)). Aug 1971. 91p. Dep. NTIS (U. S. Sales Only). UK Pound 1.00.

Coefficients for the Legendre polynomial expansion of differential cross sections and density matrices in terms of partial wave amplitudes are calculated. Tables for the reaction $0^- + \frac{1}{2}^+ \to 1^- + \frac{1}{2}^+$ are presented. (auth)

**56502** TOTAL EFFECTIVE CROSS SECTIONS FOR HIGH-ENERGY ACAUSAL PION–NUCLEON SCATTERING. Sekine, Matsuo (Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 1, 322-4(Jan 1971). (In German).

The possibility of the experimental observation of the nonlocality in microphenomena is investigated for the high-energy region. It is shown that in the high-energy range the total pion-nucleon scattering cross section is connected to the existence of an acausal length. (J.S.R.)

**56503** SOLUTION OF THE SU(3)-SYMMETRIC BARYON STRONG COUPLING BOOTSTRAP MODEL. Majewski, W. (Inst. of Physics, Warsaw). Bull. Acad. Pol. Sci., Ser. Sci., Math., Astron. Phys.; 19: No. 5, 407-14(1971).

The solutions have been obtained of equations on coupling constants between baryons and pseudoscalar mesons. These equations result from the algebraic formulation of the strong coupling model as well as from the static baryon bootstrap model. Both approaches lead to the dynamical noncompact group $G = K\square T$ for the one-baryon states spectrum, where K is the symmetry group. The solutions found in exact SU(3) symmetry case for mesons interacting with baryons in all partial waves are compared with experimental data on the low-energy baryon resonances. (auth)

**56504** BEHAVIOR OF THE DIFFRACTION MAXIMUM IN MESON–NUCLEON INELASTIC INTERACTIONS IN 2- TO 20-GeV/c RANGE. Andreescu, Ileana (Univ., Bucharest). Stud. Cercet. Fiz.; 23: No. 3, 249-85(1971). (In Rumanian).

The topics covered include the transfer distribution studies of recoil nucleons from the inelastic interactions up to 16 GeV, and at 20 GeV, transfer distribution analysis for two-body and quasi-two-body channels, analysis of theoretical hadron–hadron interaction models which could explain the diffraction maximum width behavior, and Regge-type models explaining the diffraction maximum width behavior. (J.F.P.)

**56505** REGGE CUTS AND HIGH ENERGY $\pi$N AND KN SCATTERING. Tuan, R. Hong; Kaplan, J. M. (Laboratoire de Physique Theorique et Hautes Energies, Orsay, France). Nucl. Phys.; B32: No. 2, 655-80(1971).

A phenomenological analysis of $\pi$N and KN elastic and charge exchange scattering is made in the framework of convolutions models. The pomeron trajectory is taken with a non-zero slope which allows one to describe high-energy total cross sections (without violating the Pomeranchuk conjecture) together with $d\sigma/dt$ and $P_0$. For the Regge contribution strong exchange degeneracy and Gell-Mann's ghost killing mechanism are used. A rather good fit to the data ($\sigma_T$, $d\sigma/dt$, $P_0$ for $|t| < 1.5$ GeV$^2$/c$^2$) is obtained. The slope of the pomeron is found to be the same as for pp scattering ($\alpha' p = 0.33$ GeV$^{-2}$/c$^{-2}$). In $\pi$p scattering no cut should be present in the helicity flip amplitude. (auth)

**56506** REGGE ANALYSIS OF THE REACTIONS $\pi^-p \to \eta n$ AND $K^- \to K\bar{K}^0n$ with $\rho$ and A2 DEGENERATE TRAJECTORIES. de Brion, J. P.; Derem, A.; Dronkers, J. (CEN, Saclay, France). Nucl. Phys.; B32: No. 2, 557-72(1971).

The results of a new analysis of the reactions $\pi^-p \to \eta n$, $K^-p \to \bar{K}^0n$ and $K^+n \to K^0p$ are reported. Data for the two first reactions range from 1.7 to 18.2 GeV/c, and the analysis extends to $t = -1.6$ GeV$^2$. It is found necessary to introduce four poles $\rho$, $\rho'$, A2 and A2', and a cut associated with the A2 pole. The Regge model is used when evaluating the spin correction to the reaction $K^+d \to K^0pp_s$ in order to obtain the charge-exchange distribution $K^+n \to K^0p$. The $\rho$ and A2 trajectories are practically degenerate, with a $t = 0$ intercept of 0.5. Polarizations expected from Regge models in $K^-p \to \bar{K}^0n$ and $K^+n \to K^0p$ are discussed. (auth)

**56507** HARMONIC OSCILLATOR ANALYSIS OF THE HYPERON SPECTRUM. Faiman, David (Department of

Theoretical Physics, Oxford). Nucl. Phys.; B32: No. 2, 573-608(1971).

By applying SU(3) symmetry to the quark-quark-meson vertex and ignoring any possible mass differences among the quarks, the harmonic oscillator quark model is generalized to include classification and decay properties of the hyperon resonances. This brings a very large number of two-body and quasi two-body decay processes within the scope of a basic two-parameter expression for partial widths. It is found that in situations for which configuration-mixing does not occur, nearly all measured rates (where these are available for comparison) fall within ±50% of the theoretically predicted values. For the low-lying negative-parity hyperons, configuration-mixing in threes is quantitatively discussed using an SU(6) formalism that could find useful application outside the quark model. (auth)

**56508** SECONDARY REGGE CONTRIBUTIONS IN CHARGE EXCHANGE REACTIONS AT t = O. Dronkers, J. (CEN, Saclay, France). Nucl. Phys.; B32: No. 2, 513-26(1971).

Second order contributions to Regge-pole exchange are analyzed in $\pi$N and KN charge-exchange reactions at zero angle, using recent experimental data. Models involving secondary trajectory exchange, contributions from cuts and complex Regge dipoles are compared. The breaking of the $\rho - A_2$ exchange degeneracy is found to be rather important for the residues; the second order corrections to pure $\rho$ and $A_2$ Regge-pole exchange are small, too small to account for the high-energy behavior of the total cross section $\Delta\sigma^{\pi} = \sigma_{tot}(\pi^-p) - \sigma_{tot}(\pi^+p)$ measured at the Serpukhov accelerator. It seems impossible to distinguish between second-order corrections from secondary trajectory exchange and cuts, at t = 0. The cut contribution to $\rho$ exchange predicted by a simple absorption model is very small in the forward direction; this is confirmed by the fit. (auth)

**56509** NOTE ON SURFACE (VOLUME) REACTIONS AND POLARIZATION IN $\pi^-$−p CHARGE-EXCHANGE SCATTERING AT HIGH ENERGY. Minami, S.; Tsujumura, T. (Osaka City Univ.). Lett. Nuovo Cim.; 2: No. 12, 587-91(18 Sep 1971).

In order to explain the characteristic features of high-energy $\pi^{\pm}$−p elastic polarization data, a model was suggested by Berlad et al. in which the scattering amplitude can be described in terms of the effects due to the surface and volume reactions corresponding to resonance scattering and diffraction scattering, respectively. A similar approach was suggested by Harari. The Harari model is discussed and the characteristic properties of the polarization of recoil nucleons in forward $\pi^-$p charge-exchange scattering at very high energy are predicted on the basis of the Berlad−Dar−Eilam model. (L.B.S.)

**56510** ADLER-WEISBERGER RELATION. Pajares, C.; Pascual, R. (Neuva Universidad Autonoma, Madrid). Lett. Nuovo Cim.; 2: No. 12, 598-600(18 Sep 1971).

A modification of the Adler−Weisberger relation using a once-subtracted dispersion relation is presented. The modified formula has two advantages over the usual relation: it is valid even if the Pomeranchuk theorem is violated, and it is much less dependent on the way in which the physical cross sections are extrapolated off the mass shell. (L.B.S.)

**56511** APPLICATION OF A VENEZIANO MODEL INCLUDING SPINS TO THE REACTION $K^+p \rightarrow K^{*+}(890)p$. Dibon, H.; Majerotto, W.; Markytan, M. (Institut fuer Hochenenergiephysik, Vienna). Lett. Nuovo Cim.; 2: No. 13, 621-6(25 Sep 1971).

A Veneziano-like model is applied to the reaction $K^+p \rightarrow K^{*+}(890)p$ by taking into account the spins of all the particles involved. For every invariant amplitude of this reaction a Veneziano four-point function is used in such a way that the whole amplitude has the correct Born terms and asymptotic behavior. The differential cross sections were fitted at 3.0, 3.5, 5.0, and 8.25 GeV/c. The spin-density matrix was calculated using the fitted parameters. The model was found to reproduce well the data. (L.B.S.)

**56512** MESONIC STRUCTURE IN THE NUCLEON. Galloway, K. F.; Mann, A.; Weiner, R. M. (Indiana Univ., Bloomington). Lett. Nuovo Cim.; 2: No. 13, 635-40(25 Sep 1971).

It is suggested that the concept of a mesonic cloud surrounding the nucleon should be considered along the lines similar to the problem of nucleons in nuclei. The essential point made is the assumption that mesons exist in nucleons, in the sense that the meson distribution manifests itself in scattering experiments on nucleons, in much the same way as the nucleon distribution appears in scattering on nuclei. Starting from the idea that the mesons in the nucleon can be characterized by the Bose−Einstein distribution, the momentum distribution is studied from one-pion production process on a nucleon. (L.B.S.)

**56513** U(6,6) ⊗ O(3,1) ABSORBED K-MATRIX MODEL FOR SPIN-2 EXCHANGE IN $\pi^-p \rightarrow \eta n$. III. Gujadhur, T. K. (International Centre for Theoretical Physics, Trieste, Italy); Moriarty, K. J. M.; Migneron, J. H. R. Lett. Nuovo Cim.; 2: No. 13, 652-6 (25 Sep 1971).

The process $\pi^-p \rightarrow \eta n$ with $A_2$ exchange is studied using a modified form of the absorption model within the U(6,6) ⊗ O(3,1) symmetry scheme. The model fails to predict the differential cross section. (L.B.S.)

**56514** INELASTICITY OF MULTIPION PRODUCTION FROM A QUARK MODEL. Erwin, A. R. (Univ. of Wisconsin, Madison). Contract AT(11-1)-881. Phys. Lett.; 36B: No. 5, 489-92(4 Oct 1971).

The maximum observed multiplicity in $\pi$p, pp and $\gamma$p interactions differs dramatically from what might reasonably be expected. The energy dependence of the maximum multiplicity suggests a quark model with near massless quarks which serve to partition the energy and momentum available for interaction in the incident particles. (auth)

**56515** SOME CONSEQUENCES OF EXCHANGE DEGENERACY AND THE TRIPLE-REGGE-HYPOTHESIS. Finkelstein, J. (Stanford Univ., Calif.); Rajaraman, R. Phys. Lett.; 36B: No. 5, 459-62(4 Oct 1971).

The proton-Reggeized rho total cross section is extracted from inclusive data for $K^+ + p \rightarrow K^0 +$ (anything) in the triple-Regge domain and it is found that it is of the same order as physical meson-proton cross-sections for a range of Reggeon mass. Other processes such as $pp \rightarrow pX$ and $K^+p \rightarrow K^+X$ to $K^+p \rightarrow K^0X$ are also related and good agreement with data is obtained. Methods for calculating baryon exchange processes as well are suggested. (auth)

**56516** DETERMINATION OF $|g_A|$ FROM VENEZIANO AMPLITUDE AND CURRENT ALGEBRA SUM RULE FOR $\pi$-N SCATTERING. Chowdhury, A. Roy; Banerjee, S. N. (Jadavpur Univ., Calcutta). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1701-2 (May 1971).

An attempt is made to investigate the compatibility of current-algebraic sum rules with the Veneziano-type amplitude for $\pi$-N scattering, constructed mainly on the hypothesis of high-energy behavior, crossing symmetry, and duality. The investigation yields $|g_A|$ equal to 1.33, which compares favorably with the corresponding experimental value. (L.B.S.)

**56517** HELICITY CONSERVATION IN THE INELASTIC SCATTERING. Biyajima, Minoru (Tokyo Univ. of Education). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1552-63(May 1971).

The helicity conservation in the inelastic channels is discussed: $\pi N \rightarrow VN$, $\pi N \rightarrow \sigma N$ and $\pi\pi \rightarrow \rho\rho$ scattering. Requiring the helicity conservation in $\pi N \rightarrow VN$ scattering, it is concluded that the coefficients of leading terms in Ball amplitudes $B_3$ and $B_5$ are zero. From these conditions, two relations can be derived. Further in $\pi N \rightarrow \sigma N$ scattering, it is concluded that the A invariant amplitude vanishes or $\beta_{\sigma \rightarrow 2\pi}(t) = 0$. The condition that the $C_2$ invariant amplitude must vanish in $\pi\pi \rightarrow \rho\rho$ scattering is obtained. Applying the factorization theorem to the $\pi$-meson pole, it is concluded that the existence of the $\pi$-meson pole is not compatible with helicity conservation hypothesis in inelastic scattering ($NN(N\bar{N})$ charge exchange, $\pi N \rightarrow VN$ and $\pi N \rightarrow \sigma N$ scattering. (auth)

**56518** PARTICLE EXCHANGE, REGGE-POLE EXCHANGE, AND THE VENEZIANO AMPLITUDE FOR KN SCATTERING. Kinoshita, Kisei; Shiga, Kunio (Kyushu Univ., Fukuoka). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1564-77(May 1971).

Based on the observation that the (t,u)-Veneziano terms can be expressed as an infinite sum of one-particle exchange contributions in the physical region, contrary to the (s,t) and (s,u) terms where the particle exchange picture is divergent, the validity of the particle exchange picture and the transcendental mechanism to the Regge pole exchange picture is examined in a KN Veneziano amplitude consisting of (t,u) terms only. At threshold, the contribution of meson exchanges with the lowest mass almost saturates the KN Veneziano amplitude. The hyperon exchange contributions should be discarded there, because of the duality between meson exchange contributions and hyperon exchange contributions. As energy increases, the meson towers with various spin states and degenerate mass begin to contribute one by one. Regge behavior is obtained as a result of a detailed cancellation among the contributions of meson exchangers with various masses and spins. Here, Regge behavior in a limited energy region is given by a finite sum of one-meson exchange terms. On the other hand, the hyperon exchange picture with finite terms does not approximate well the amplitude in the low energy region, even at threshold. These situations are understood through the study of the condition for an approximate truncation of infinite series of poles in the

XUM

(t,u)-terms. The low energy interpolations of Regge asymptotic forms are studied, and the meson Regge pole exchange is also confirmed to give the gross features of the amplitude down to the threshold. The problem of double counting between the t- and u-Regge poles in low energy is noted. (auth)

**56519** $P_{11}\pi N$ SCATTERING IN THE THREE-CHANNEL MODEL. Hori, Setsuko (Osaka Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1703-4(May 1971).

Bootstrap calculations for the $P_{11}\pi N$ scattering are carried out in the three-channel model, taking into account only the $\rho N$ and $\pi N^*$ inelastic channels. Coupling constants for $\pi NN$, $\rho NN$, and $\pi NN^*$ are obtained. It is found that the Roper resonance could not be produced dynamically in the three-channel model. (L.B.S.)

**56520** (IC-71/106) MULTIPLE SCATTERING EFFECTS IN QUASIFREE SCATTERING. Abul-Magd, A. Y.; Guardiola, R. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1971. 18p. (CONF-710911-9). Dep. NTIS (U. S. Sales Only).

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

The Glauber multiple scattering theory is applied to the study of quasi-free scattering of high-energy protons by nuclei. The multiple scattering of the knocked-out nucleon is not considered. The differential cross section is written as a sum of different terms corresponding to single, double, ..., incoherent scattering of the incident nucleon inside the target nucleus. It is shown that the single scattering term is similar to the outcome of the distorted wave impulse approximation. The theory is compared with the experimental cross section of the quasi-free scattering of 1 GeV protons from $^{12}C$ and the agreement is satisfactory at forward angles. The contribution from double scattering terms appears to be rather important. (auth)

**56521** (JINR-P1-5975) ANALYSIS OF THE REACTION $np \rightarrow pp\pi^-$ FROM THE POINT OF VIEW OF REGGEIZED OPE MODEL. Boreskov, K. G.; Gasparyan, A. P.; Kaidalov, A. B.; Nikitin, A. V.; Ponomarev, L. A.; Troyan, Yu. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1971. 18p. (In Russian). Dep. NTIS (U.S. Sales Only).

In the framework of the Reggeized OPE model the handling was performed of the available experimental data on the $np \rightarrow pp\pi^-$ reaction in the energy range from 2 to 30 GeV. It is shown that side by side with the $\pi$-meson exchange, beginning from the energy of 4 GeV the mechanism of diffraction production of $N^*(1470)\,1/2(1/2)+$ and $N^*(1690)1/2(5/2)+$ isobars is revealed which contribution is of (30 to 40)% from the value of the total reaction cross section. (auth)

**56522** (ORNL-tr-2520) CLASSIFICATION OF INELASTIC INTERACTIONS OF HIGH-ENERGY PROTONS AND NUCLEI. II. CHARACTERISTICS OF LOW-ENERGY NUCLEI. Barashenkov, V. S.; Il'inov, A. S.; Sobolevskii, N. M.; Toneev, V. D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). Translated for Oak Ridge National Lab., Tenn., from report JINR-P2-5549. 26p. Dep. NTIS.

A detailed calculation and discussion is given of the properties of the low-energy secondary particle component produced in proton reactions with nuclei from aluminum to lead at 0.010 to 5 GeV. The stage is investigated in which the characteristics of these particles depend on the cascade stage of the process. The evaporation model description of the experiments in this case is discussed. The results in conjunction with previous data on cascade particle characteristics allow one to determine essentially all characteristics of an inelastic proton reaction with a nucleus for any nucleus and for energy values in the studied region as a function of energy. (J.F.P.)

**56523** (USIP-71-3) AUTOMATIC SELECTION OF KINEMATICAL HYPOTHESES FROM TWO PRONG PROTON-PROTON INTERACTIONS IN A HYDROGEN BUBBLE CHAMBER AT 19 GeV/c. Danielsson, O.; Granstroem, L.; Ronne, B. E. (Stockholm Univ. (Sweden). Inst. of Physics). Apr 1971. 63p. Dep. NTIS (U. S. Sales Only).

A program, ALICE, is described which automatically selects hypotheses accepted by a kinematics program applied to two-prong reactions from proton-proton interactions at 19 GeV/c. It is demonstrated to be both much faster and more accurate than manual selection. (auth)

**56524** Λ-EXCITED STATES OF HYPERNUCLEI. Deloff, A; Pniewski, J. (Inst. for Nuclear Research, Warsaw Univ., Warsaw). Nucl. Phys.; B32: No. 2, 453-60(1971).

Excited Λ-states of hypernuclei are considered by means of the optical potential model. A realistic Saxon-Woods potential is simulated by an equivalent square well potential. The positions of the levels are calculated in terms of the mass number A of the core nucleus. The spread in binding energies due to uncertainties in the value of parameters characterizing the optical potential is discussed.

**56525** EVIDENCE FOR BOSON PRODUCTION VIA ISOBAR DECAY. Dubal, L. (Conseil National de Recherches du Canada, Ottawa); Brown, D. J. Nucl. Phys.; B32: No. 2, 535-40(1971).

Boson production in processes of type $NA' \rightarrow AX$, where A(A') is a light nucleus of atomic number a (a' = a − 1), and X a boson, is probably mediated by the formation of intermediate nucleon-isobars. All available experimental data including the results of the Saclay experiment on $np \rightarrow d\sigma(310)$ and $dp \rightarrow {}^3He\sigma(310)$ strongly support the model proposed based on the Selleri OPE triangle diagram. (auth)

**56526** RADIATIVE NEUTRON-PROTON SCATTERING AT LOW ENERGY. Baier, R. (Univ., Graz); Kuehnelt, H. Acta Phys. Austr.; 32: No. 1, 60-4(1970).

Neutron-proton bremsstrahlung cross sections were calculated for a laboratory energy of 14.4 MeV with the help of two relativistically covariant models. Results are given for coplanar (symmetric and nonsymmetric) as well as for noncoplanar symmetric geometries. (auth)

**56527** MULTI-PION EXCHANGE CONTRIBUTION TO NUCLEON-NUCLEON BINDING AND THE ELECTRODISINTEGRATION OF DEUTERONS. Bebel, D.; Biebl, K. J.; Otto, H. J. (Humboldt-Univ., Berlin. Institut fuer Hochenergiephysik, Berlin). Monatsber. Deut. Akad. Wiss. Berlin; 12: 876-83(1970). (In German).

The results of a dispersion theoretical calculation of the deuteron-nucleon vertex function, which represents the relativistic analog to the deuteron wave function, are reported. The question of its experimental detection in the electrodisintegration of deuterons is considered. This calculation includes one-, two-, and three-pion exchange effect in the abnormal and part of the normal spectral range of the vertex function. (tr-auth)

**56528** BREAKS OF $d\delta/dt$ IN HIGH-ENERGY PROTON-PROTON SCATTERING. Sawada, T. (Univ., Sao Paulo, Brazil). Lett. Nuovo Cim.; 2: No. 13, 647-51(25 Sep 1971).

It is pointed out that in the high-energy limit breaks occur in the differential cross sections of proton-proton scattering at $t = t_{Bj}$, which satisfies $\alpha(t_{Bj}) = \alpha_j(0)$, where $\alpha_j(0)$ are values of lower Regge trajectories at $t = 0$ and $\alpha(t)$ is the leading Regge trajectory, and that discontinuity of $(d/dt)\ln(d\delta/dt)$ at these break points can be computed from the known Regge parameters. (L.B.S.)

**56529** COMMENT ON THE $^1S_0$ NUCLEON-NUCLEON EFFECTIVE-RANGE EXPANSION PARAMETERS. Noyes, H. Pierre; Lipinski, Hubert M. (Stanford Univ., Calif.). Phys. Rev., C; 4: No. 3, 995-1002(Sep 1971).

The most accurate nucleon-nucleon scattering experiments below 10 MeV are now consistent with the following values and uncertainties for the $^1S_0$ scattering lengths and effective ranges: $a_{pp}^c = -7.823 \pm 0.01$ F, $r_{pp}^c = 2.794 \pm 0.015$ F; $a_{nn} = -17 \pm 1$ F, $r_{nn} = 2.84 \pm 0.03$ F; $a_{np} = -23.715 \pm 0.015$ F, $r_{np} = 273 \pm 0.03$ F. Unless strong theoretical arguments can be advanced that all charge-dependent corrections to the parameters can be calculated accurately enough to prove that the values $a_{nn}$, $r_{nn}$, or $r_{np}$ must be moved outside these limits, or strong experimental reasons given to believe that experiments leading to these results were significantly in error, it is argued that new calculations or experiments aimed at changing these values are likely to fail. This argument is supported by an analysis of the latest p-p experiments of Jarmie, Jett, Detch, and Hutson at 9.918 MeV, which reconfirm the one-pion-exchange shape effect and give $G^2_{\pi^0 p} = 15.3 \pm 2.4$ for the pion-nucleon coupling constant. (auth)

**56530** PION PRODUCTION AND NUCLEAR SURFACE. Lombard, R. J. (Institut de Physique Nucleaire, Orsay, France); Auger, J. P.; Basile, R. Phys. Lett.; 36B: No. 5, 480-2(4 Oct 1971).

The pion production by high energy protons on nuclei is calculated within the framework of an isobar model using realistic nu-

clear proton and neutron distributions. The sensitivity of the pion production to nuclear surface properties is discussed. (auth)

**56531** SEPARABLE POTENTIALS. Oberhummer, H.; Zingl, H. F. K. (Univ., Graz). Acta Phys. Austr.; 31: No. 4, 373-6(1970).

The Schroedinger equation is used to obtain a separable potential. The case of low-energy p + p scattering is considered. (J.F.P.)

**56532** ONE-BOSON-EXCHANGE MODEL OF NUCLEON–NUCLEON SCATTERING FOR THE 0 TO 3 GeV ENERGY RANGE. Ueda, Tamotsu (Osaka Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1527-51(May 1971).

With the technique of dispersion relation, one-boson-exchange models involving $\pi$, $\rho$, $\omega$, $\eta_V$, f and $\sigma(0^+, I = 0, 416$ MeV) are studied for the nucleon–nucleon interaction below 3 GeV. The models give qualitatively good fits to all observables of proton–proton scattering at 670, 970, and 1400 MeV, in addition to nucleon–nucleon elastic data. Effects of absorption on phase shifts, nucleon–meson form factor and high-energy cutoff of the one-boson-exchange amplitudes are discussed. Nucleon–nucleon scattering amplitudes in which a meson with an arbitrary spin is exchanged are formulated. (auth)

**56543** (DESY–71/39) SMALL-DISTANCE-BEHAVIOUR ANALYSIS AND WILSON EXPANSIONS. Symanzik, K. (Deutsches Elektronen-Synchrotron, Hamburg (West Germany)). Jul 1971. 85p. Dep. NTIS (U. S. Sales Only).

A previously described method to obtain the asymptotic forms of vertex functions at large momenta is, with the help of Wilson operator product expansion formulas, extended to momenta where the vertex functions of the zero-mass theory underlying the asymptotic forms are infrared singular. To obtain from asymptotic forms information on asymptotic behavior requires assumptions on the behavior of the zero-mass theory in the limit of infinite dilatation. One particular set of assumptions is discussed and found to pass a simple consistency test; this set of assumptions leads to power laws, or slight modifications thereof, with coupling-constant-independent exponents. The detailed discussion is given for the $\varphi^4$ model. (auth)

**56544** (IC-71/71) FORMULATION OF QUANTUM FIELD THEORY IN TERMS OF TEMPERED DISTRIBUTIONS AND A POSSIBLE DEPARTURE FROM THE PRINCIPLE OF SUPERPOSITION. Rayski, J. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1971. 9p. Dep. NTIS (U. S. Sales Only)

A new type of representations related to complete sets of square integrable functions is introduced. The Green's functions of the theory become tempered distributions. Normal ordering of creation and annihilation operators related to such representations yields Hamiltonians which are no longer positive definite. This difficulty is circumvented by introducing suitable supplementary conditions. The principle of superposition of states breaks down under such supplementary conditions but a probabilistic interpretation in terms of conditioned probabilities is still possible. The difficulties with an infinite volume are avoided. The cases of massive and massless particles may be treated on an equal footing. The old difficulty with securing the Lorentz condition is avoided without having to introduce a nondefinite metric. A large class of nonpolynomial (e.g. square root) lagrangians becomes quantizable along these lines. (auth)

**56545** (IC-71/108) FINITE FIELD THEORIES. Salam, Abdus (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1971. 27p. (CONF-710810-3). Dep. NTIS (U. S. Sales Only).

From Meeting on particles and fields; Rochester, N. Y. (30 Aug 1971).

Developments in finite field theories are reviewed nonrigorously. Exponential Lagrangian theories as good field theories, and inbuilt cut-offs in some currently accepted field theories are discussed. (J.F.P.)

**56546** (JINR-P2-5998) NONPOLYNOMIAL LAGRANGIANS (HIGHEST PERTURBATION ORDERS). Volkov, M. K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 21p. (In Russian). Dep. NTIS (U. S. Sales Only).

It is proved that the theory with nonpolynomial Lagrangians is finite and unitary in highest perturbation orders. The order of increase of amplitudes in an arbitrary perturbation order is found. (auth)

**56547** (NYO-1932(2)-200) SOME NEW APPLICATIONS OF INDEFINITE METRIC TO QUANTUM ELECTRODYNAMICS AND WEAK INTERACTIONS. Lee, T. D. (Columbia Univ., New York). [1971]. Contract AT(30-1)-1932. 19p. (CONF-710609-9). Dep. NTIS.

From International conference on elementary particles; Amsterdam, Netherlands (30 Jun 1971).

Several topics related to possible physical applications of indefinite metric are discussed; among these are the neutron–proton mass difference, the production cross section of the heavy photon and the possible existence of the spin-0 charged intermediate boson. (auth)

**56548** (ORO-3992-1) LAGRANGIAN FORMALISM FOR NEUTRAL MASSIVE SPIN 3 FIELDS. Chiang, C. C. (Syracuse Univ., N. Y. Dept. of Physics. Texas Univ., Austin. Center for Particle Theory). Sep 1969. Contracts AT(30-1)-3399; AT(40-1)-3992. 22p. (CPT-26). Dep. NTIS.

The Lagrangian formalism for massive neutral spin-3 fields is investigated without introducing an auxiliary field. The field variables are assumed a priori to be symmetric. By using the Takahashi–Umezawa method, the relativistic quantization is also carried out for this field. It is shown that both Lagrangian and field equations are parameter dependent. However, these parameters do not have any real physical significance as far as the free field is concerned. In the presence of an interaction, the Green's function is also parameter dependent. The determination of the parameters should be based on the high-energy behavior of the Green's function from experimental results. (auth)

**56549** (ORO-3992-9) BREAKING OF CONFORMAL SYMMETRY AND RENORMALIZATION OF NONPOLYNOMIAL THEORIES. Salam, A. (Texas Univ., Austin. Center for Particle Theory). May 1970. 25p. (CPT-50; CONF-700424-2). Dep. NTIS.

From Symposium on the past decade in particle theory; Austin, Tex. (14 Apr 1970).

Nonlinear realizations of the conformal group and the group of general relativity and nonpolynomial Lagrangians in general are considered, including nonlinear realizations. The problem of the kind of field theories such nonlinear nonpolynomial Lagrangians define is discussed. In particular it is shown that these theories do not appear to suffer from the ultraviolet infinities of usual polynomial Lagrangian theories. It is shown that explicit calculations give the result that in quantized general relativity theory all infinities still surviving in renormalized theories like quantum electrodynamics disappear. (J.F.P.)

**56550** (ORO-3992-14) ACTION-AT-A-DISTANCE. Sudarshan, E. C. G. (Texas Univ., Austin. Center for Particle Theory). Sep 1970. 41p. (CPT-55). Dep. NTIS.

The historical development of "action-at-a-distance" theories is reviewed. The formulation of classical action-at-a-distance theories is reviewed, and the relevant conserved quantities are identified. This theory is compared with a corresponding classical field theory. The lessons of this classical theory are applied to the formulation of a quantum theory of action-at-a-distance. The problems of unitarity and physical interpretation are described. The relation with indefinite metric theories of elementary particles is clarified and finally a theory of interactions which includes self interaction but contains only finite computations is formulated. (auth)

**56551** BOUNDARIES OF THE SINGULARITY MANIFOLDS ASSOCIATED WITH A FIVE POINT FUNCTION. Berkmen, Haluk (Middle East Technical Univ., Ankara). Nucl. Phys.; B32: No. 2, 645-54(1971).

The Feynman graph of a five point function and its singularity manifolds are investigated. (auth)

**56552** TWO-COMPONENT THEORY OF FERMIONS. Volkovyskii, R. Yu. (Leningrad Inst. of Railway Transport Engineers). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 5, 53-8(1971). (In Russian).

A variant of the theory of the Fermi-particle is given which is described by two-component spinors, conforming to a relativistic equation of the second order. In order to positively determine the probability density of the particles with a spin of $\frac{1}{2}$, a procedure is proposed, in which a complex conjugation of a function and Hermitian conjugation of operators are followed by an operation of spatial reflection. A single-particle theory is developed in Hamiltonian form. The Lagrange formalism is suggested for a free, two-component field and second quantization. For quantum-electrodynamic calculations there is proposed the Hamiltonian related to the Hamiltonian interaction of spinless particles with an electromagnetic field, but containing a spin contribution. (tr-auth)

**56553** UNIFIED TREATMENT OF THE $V-\theta$, $V-2\theta$ SECTORS OF THE LEE MODEL. Uliu, Florea (Univ., Craiova, Rumania). Stud. Cercet. Fiz.; 23: No. 3, 287–309(1971). (In Rumanian).

The treatment covers field operators, S-matrices, bound states, scattering states, the $V-\theta$ and $V-2\theta$ sectors, and $\tau(W)$ functions. (J.F.P.)

**56554** EQUIVALENCE OF LORENTZ TRANSFORMATIONS AND FOLDY–WOUTHUYSEN TRANSFORMATIONS FOR FREE SPINOR FIELDS. Tiomno, J. (International Centre for Theoretical Physics, Trieste, Italy). Physica; 53: No. 4, 581-601 (30 Jun 1971).

Generalized Lorentz and Foldy–Wouthuysen transformations are introduced. They lead to parametrized forms of the Dirac equation which include, besides the previously known representations, other simple ones which are explicitly given. Equivalence of generalized Lorentz and Foldy–Wouthuysen transformations is proved. It is shown that this is a consequence of the invariance of the Dirac equation under $D_1 \otimes O(4,1)$, where $D_1$ is a one-parameter dilatation group and O(4,1) is a De Sitter group. It is also shown that the referred equivalence is connected to the fact that $i\partial/\partial t$ must be used as a hermitian operator. (auth)

**56555** CANONICAL PROPER-TIME FORMALISM. Bakri, M. M. (Cairo Univ.). Lett. Nuovo Cim.; 2: No. 12, 603-7 (18 Sep 1971).

An attempt is made to develop a five-dimensional manifestly covariant canonical formalism, which leads automatically to a self-consistent proper-time formalism, and, at the same time, to a Lorentz-covariant set of Hamilton's equations. The results hold for any n-dimensional space. (L.B.S.)

**56556** SUBSIDIARY CONDITIONS FOR GENERATING FUNCTIONALS. Graff, P. (Max-Planck-Institut fuer Plasmaphysik, Garching, Ger.). Lett. Nuovo Cim.; 2: No. 12, 611-15 (18 Sep 1971).

It is pointed out that the functional equation of the dynamics can be used to describe a statistical ensemble; the conditions for various possible ensembles in terms of the functionals are con-

sidered. The equal-time formalism is discussed, starting with one degree of freedom. The connection between von Neumann formulation of statistical mechanics, the Wigner distribution function in phase space, and the Schwinger formalism in its simplest version is established. An attempt is made to extend the results to infinitely many degrees of freedom. (L.B.S.)

**56557** GEOMETRIC STRUCTURE OF A PARITY-CONSERVING RELATIVISTIC QUANTUM FIELD THEORY. Westenholz, C. v. (Rhodes Univ., Grahamstown, South Africa). Int. J. Theor. Phys.; 4: No. 4, 305-20(Aug 1971).

Wheeler's conjecture that there might exist a "principle" which rules out parity-nonconserving spaces was analyzed. The following result was obtained: A local relativistic quantum field theory is parity-conserving if the following conditions hold: (a) The fields are derived from geometry, i.e. they are represented by quantized currents (in the sense of de Rham); and (b) The theory may be defined on a connected and, under certain restrictions, on a disconnected orientable space-time continuum $M^4$. (auth)

**56558** REMARK ON GENERAL LORENTZ COVARIANCE. Braeuer, Hans-Juergen (Zentralinstitut fuer Astrophysik, Berlin). Int. J. Theor. Phys.; 4: No. 4, 243-6(Aug 1971).

A mathematical comment is made on previous work. The metric tensor g reduces the tangent bundle T of a space-time to the tangent Lorentz bundle L. The Levi-Civita connection in T induces in a natural way connections in L, and in the tensor product bundles of T, L, and the spinor bundle S. These connections are "the general Lorentz-covariant connection" by Treder. It is possible to treat the local tetrad field components as local components of a global cross-section of $L \otimes T$, with vanishing general Lorentz-covariant derivative. (auth)

**56559** TWO-COMPONENT SPHERICAL FACTORIZATION OF THE KLEIN-GORDON AND KRAMERS EQUATIONS. Biedenharn, L. C.; Han, M. Y. (Duke Univ., Durham, N. C.). Phys. Lett.; 36B: No. 5, 475-6(4 Oct 1971).

An alternative to Dirac's factorization of the K-G equation is presented, and a two-component, first-order wave equation for $m \neq 0$ spin-$\frac{1}{2}$ particles is obtained. Applied to the Coulomb potential it reproduces precisely the Dirac-Coulomb energies. (auth)

**56560** COMMENTS ON QUANTUM FIELD THEORY OF TACHYONS. Kamoi, Koichi; Kamefuchi, Susumu (Tokyo Univ. of Education). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1646-61 (May 1971).

The problem of tachyons is investigated within the framework of quantum field theory. The quantization methods for a free scalar tachyon field, which have so far been proposed by various authors, are critically reviewed. Among them the Arons-Sudarshan method is found to be most satisfactory, which guarantees at least the relativistic covariance of the theory at the expense of locality and reasonable energy spectrum. On the basis of this method, interactions of a tachyon field are investigated. It is found that causal S-matrices do not exist as far as interaction terms are restricted to the ordinary, local-polynomial type. A model S-matrix, which is unitary but not causal, is then assumed, and the reinterpretation principle is applied to it in order to remove states of negative-energy tachyons. It is found that the reinterpreted S-matrix thus obtained is not consistent with unitarity. (auth)

**56561** SCHWINGER EQUATIONS FOR THE YANG-MILLS AND THE GRAVITATIONAL FIELDS. Maheshwari, Amar (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1662-72(May 1971).

It is established that the nonlinear gauge formulation of non-Abelian gauge fields is equivalent to the path-dependent and gauge-independent field-theoretic formalism of Mandelstam. This is proved by showing that the generating functionals for the Yang-Mills and the gravitational fields in the functional integral form, derived using the method of nonlinear gauge, are solutions of Mandelstam's equations for the auxiliary Green's functions of the Yang-Mills and the gravitational field, respectively. Schwinger equations for the gravitational field in the harmonic gauge are also obtained. (auth)

**56562** AXIOMATIC FOUNDATIONS OF SPECIAL RELATIVITY. Bosch, Jorge (Facultad de Ciencias Exactas, La Plata). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1673-88(May 1971).

A mathematical axiom system for general affine kinematics is proposed, and then the relativistic case is separated from the classical one by means of a single axiom. A "characteristic" k is introduced, which allows to classify naturally three distinct types of affine kinematics. It is shown that, once the classical point of view is abandoned, there are essentially two types of relativistic affine kinematics: one of them is characterised by the existence of a limit velocity, and the other by the existence of time reversal. Physical axioms are later introduced and the concept of model is studied in connection with transformation groups. A general epistemological discussion is given. (L.B.S.)

**56563** QUANTIZED FIELDS ASSOCIATED WITH THE ANNULUS-TYPE MEDIUM. Minami, Masatsugu (Kyoto Univ.); Sughimoto, Hiroshi. Progr. Theor. Phys. (Kyoto); 45: No. 5, 1618-33(May 1971).

The boundary-value problem is stated for the position (the potential) and the dual position (the stream function) associated with the "one-loop" medium which is a continuous version of a planar Feynman graph. The solutions are obtained as convolutions of the external momentum and a Green function which is a commutator of the quantized fields. A canonical formalism is exploited to quantize the fields. The Koba-Nielsen kernel is presented also for the non-planar orientable case. (auth)

**56564** LORENTZ INVARIANCE AND FINITE SELF-MASS IN LOCAL FIELD THEORY. Taguchi, Yukio (Univ. of Osaka Prefecture); Yamamoto, Kunio. Progr. Theor. Phys. (Kyoto); 45: No. 5, 1692-4(May 1971).

It is shown that the self-energy divergent terms have incorrect transformation properties under the Lorentz group; then the Lorentz invariant theory has no divergent terms. The quadratic divergence of the pion mass of the $\pi N$ system is considered to order $g^2$ in renormalization theory. (L.B.S.)

**56565** PHENOMENOLOGICAL ENERGY TENSOR IN THE FRAMEWORK OF LINEAR FIELD THEORY. Scherrer, Willy. Helv. Phys. Acta; 44: No. 4, 530-44(7 Jan 1971). (In German).

The phenomenological energy tensor of Einstein's theory of gravitation can be incorporated covariantly into the linear field theory. Application to a resting homogenous and incompressible liquid sphere yields a solution that differs from the corresponding Schwarzschild solution only by the fact that the total energy tensor appears in absolute covariant form. Through calculation of the total energy, equivalence of energy and mass is confirmed at a high degree of accuracy. It is demonstrated that Einstein's gravitation tensor is contained exactly in the linear field theory. (tr-auth)

**56566** EXCITATION OF ULTRASONIC WAVES BY PASSAGE OF FAST ELECTRONS THROUGH A METAL. Borshkovskii, I. A.; Volovik, V. D.; Grishaev, I. A.; (and others) (Kharkov State Univ.). JETP Lett. (USSR) (Engl. Transl.); 13: No. 10, 390-2(20 May 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 13: No. 10, 546-9(20 May 1971).

Data from experiments performed on the excitation of ultrasonic waves by the passage of fast electrons through a metal were used to estimate the level of the signal excited by muon showers in Weber experiments. It is concluded that the random coincidences of the pulses from two Weber detectors of muons from extensive air showers with $E_0 > 5 \times 10^{14}$ eV have a frequency not higher than $10^{-3}$/year. (J.F.P.)

**56567** LORENTZ TRANSFORMATIONS WHICH DO NOT CHANGE THE MAGNITUDE OF THE ELECTRIC TENSION VECTOR AND MOTION OF ELECTRIC CHARGES IN STATIONARY, HOMOGENEOUS ELECTROMAGNETIC FIELDS. Tarnovskii, A. S. (Kubyshev State Teacher's Inst., USSR). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 5, 109-10(1970). (In Russian).

Assume that an electromagnetic field is given in an inertial system O, and let a system O' move translationally with respect to the system O. What should its velocity be in order that the electric field vector E have the same value in both systems? With the use of Lorentz transformations for the field vectors, an expression is obtained for the velocity vector. It is found that the electric charge in a stationary homogeneous electromagnetic field moves in such a fashion that the electric tension vector does not change in magnitude. Thus these vectors are reduced to rotating at a constant angular velocity. A charge moving in such a field radiates energy at a constant rate. (TTT)

**56568** REFERENCE SYSTEMS AND GRAVITATION. Treder, Hans-Juergen; Borzeszkowski, Horst-Heino V. (Zentralinstitut fuer Astrophysik, Berlin). Int. J. Theor. Phys.; 4: No. 4, 295-303(Aug 1971).

It is shown how the formalism of the tetrad theory of gravitation

XUM

used previously follows from the more general fiber bundle formalism. This is of interest in the study of the relations between tetrad theories and the general theory of relativity. In particular, the breaking of the principle of general relativity and the interpretation of tetrad fields as reference systems are considered in greater detail. (auth)

**56569** SCALAR-TENSOR THEORIES AND THE PRINCIPLE OF EQUIVALENCE. Ohanian, H. C. (Rensselaer Polytechnic Inst., Troy, N. Y.). Int. J. Theor. Phys.; 4: No. 4, 273-80 (Aug 1971).

The restrictions on scalar-tensor theories of gravitation implied by the assumptions: the field equations are derivable from an action principle, units of mass length and time are defined by atomic standards, and the principle of equivalence holds whenever gravitational self-energy can be neglected are investigated. It is shown that in all these theories the presence of gravitational energy in a system leads to violations of the principle of equivalence. (auth)

**56570** GRAVITATIONAL WAVES IN CLOSED UNIVERSES. Gowdy, Robert H. (Univ. of Maryland, College Park, Md.). Phys. Rev. Lett.; 27: No. 12, 826-9(20 Sep 1971).

New boundary conditions on the Einstein–Rosen–Bondi gravitational-wave metrics yield closed inhomogeneous universes which solve Einstein's vacuum field equations exactly. Space sections of these universes have either the three-sphere topology $S^3$ or the wormhole (hypertorus) topology $S^1 \otimes S^2$. (auth)

## Scattering Theory

**56571** (CERN–71-14, pp 229-87) BASIC NOTIONS OF RELATIVISTIC SCATTERING THEORY. Steinmann, O. (Schweizerisches Institut fuer Nuklearforschung, Zurich). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

The phenomenology of elementary particle interactions is placed in the general theoretical context of quantum field theory. The postulates of relativistic quantum field theory, the LSZ formalism, the S-matrix, analyticity, and analyticity of the scattering amplitude are covered. (J.F.P.)

**56572** SCATTERING PROBLEM UNDER A NON-MONOTONIC POTENTIAL FOR THE CLASSICAL CASE. Kochetov, I. I.; Rakhmatulina, A. Kh. Zh. Vychisl. Mat. i Mat. Fiz.; 11: No. 2, 525-8(Mar-Apr 1971). (In Russian).

The dependence of the scattering angle $\theta$ on the impact parameter $\rho$ was investigated for non-monotonic potentials. It is apparent that for a non-monotonic potential U(r), the function $\theta(\rho)$ as well is non-monotonic, provided that the energy of the scattering particle is sufficiently great. The function $\theta(\rho)$ may be non-monotonic if U(r) is monotonic, but has recurvature. A sufficient indication of monotony in $\theta(\rho)$ was obtained for a monotonic U(r). (tr-auth)

**56573** POLARIZATION FORCES IN ELASTIC NUCLEAR COULOMB SCATTERING. Beck, Rainer; Kleber, Manfred (Technische Univ., Munich). Z. Phys.; 246: No. 5, 383-95 (1971).

The polarization potential is determined for the adiabatic sub-Coulomb scattering of two nuclei. No collective coordinates are used. The relevant nuclear polarizabilities are evaluated by means of sum rules. The departure from the pure Rutherford scattering law is calculated for various nuclei. For adiabatic heavy-ion collisions, the differential cross section is found to be reduced below the Coulomb scattering by 1% at backward angles. (auth)

**56574** PROPERTIES OF THE AMPLITUDE OF ELASTIC SCATTERING AT EXTREMELY HIGH ENERGIES. Vernov, Yu. S. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 102-56(1971). (In Russian).

Proceeding from general quantum field theory, the association was studied between the behavior of the amplitude of elastic scattering and the ratio of its real and imaginary parts for extremely high (asymptotic) energies. It is shown that the use of this association permits one to obtain a series of new scattering amplitudes, limited by asymptotic behavior, and dependent upon the behavior of the ratio of its real and imaginary parts. The reverse of this problem was undertaken in order to establish the connection between asymptotic behavior of the amplitude of elastic scattering of a particle and an antiparticle. Both the amplitude of scattering and the amplitude of elastic scattering were calculated for an arbitrary, fixed, momentum transfer. (tr-auth)

**56575** MULTIPLE-SCATTERING EXPANSIONS FOR NON-RELATIVISTIC THREE-BODY COLLISION PROBLEMS. Chen, J. C. Y. (Univ. of California, San Diego, La Jolla); Joachain, C. J. Physica; 53: No. 3, 333-50(15 Jun 1971).

A simple derivation of the three-body multiple-scattering expansions from the Faddeev equations is given for non-relativistic elastic, inelastic, rearrangement, and break-up processes. The Faddeev approach to the multiple scatterings is compared with the Watson multiple-scattering theory and is shown to be equivalent to a symmetric version of the Watson multiple-scattering theory, treating all three particles on the same footing. The significance of the Faddeev–Watson expansion is interpreted diagrammatically. The advantages of these expansions lie in the fact that there is no disconnected diagram, suggesting a better convergence behavior. The modifications required by the inclusion of an intrinsic three-body interaction are investigated. (auth)

**56576** ADDITIVITY OF PHASE SHIFTS FOR SCATTERING IN ONE DIMENSION. Kujawski, E. (Univ. of Maryland, College Park). Amer. J. Phys.; 39: No. 10, 1248-54(Oct 1971).

Scattering by two delta-function potentials in one dimension is solved using the "one-dimensional partial wave" analysis developed by Eberly. Despite its simplicity, the above example exhibits a wide range of multiple scattering effects and is quite useful for illustrating some of the difficulties associated with scattering by a many-body system. This example is used to investigate the validity of additivity of phase shifts, which is one of the basic assumptions in Glauber's multiple scattering formalism. (auth)

**56577** SOME RELATIVISTIC EXPANSIONS. Desimirov, G.; Krapchev, V. (Inst. of Physics, Sofia). Compt. Rend. Acad. Bulg. Sci.; 24: No. 3, 289-92(1971).

The problem of expansion in relativistic invariant functions of a scalar function defined in a pseudoeuclidean space is investigated. This is a generalization of previous work in which formulas for the expansion of the scattering amplitude on the mass shell are given. The purpose is to go off the mass shell. (J.F.P.)

**56578** ANALYTIC FORM OF MULTIPLE SCATTERING AMPLITUDES IN THE REGGE POLE MODEL. Sakai, Sunao (Tokyo Univ. of Education). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1699-1700(May 1971).

It is shown that the contribution of multiple scattering amplitudes in high energy scattering can be obtained without making use of eikonal approximation; the integration over the intermediate momentum is carried out analytically. (L.B.S.)

**56579** CONDITION FOR REGGE ASYMPTOTIC BEHAVIOUR. Kobayashi, Masanori (Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1711-13(May 1971).

A condition for the infinite one-particle-exchange type model imposed from the requirement of Regge asymptotic behavior is given. (L.B.S.)

## Particle Accelerators

**56580** (BNL–16026) RECENT DEVELOPMENTS IN PULSED MAGNET MULTIFILAMENT SUPERCONDUCTING WIRES. McInturff, A. D.; Dahl, P. F.; Sampson, W. B.; Robins, K. E. (Brookhaven National Lab., Upton, N. Y.). 30 Jun 1971. 23p. (CONF-710625–1). Dep. NTIS.

From Thermonuclear information meeting; Oak Ridge, Tenn. (Jun 1971).

It has been noted that the introduction of a metallic or intermetallic insulator to bond the individual multifilamentary wires into a fully transposed or partially transposed conductor, e.g., braid, greatly enhances the performance of the magnets constructed with them. The wires in these conductors tend to be coupled at low dB/dt, thus leading to high losses. Data are presented showing a metallic and intermetallic insulated braid with excellent magnet performance while maintaining losses comparable to that of an organically insulated braid (wire to wire) for rise times of $dB/dt \leq 5$ kG/sec. (auth)

**56581** (BNL-tr–442) PROTON BEAM OF THE ITEP ACCELERATOR FOR RADIUM [RADIATION] THERAPY. Khoroshkov, V. S.; Barabash, L. Z.; Barkhudaryan, A. V.; Gol'din, L. L.; Lomanov, M. F.; Onosovskii, K. K.; Plyashkevich, L. N. Translated by S. J. Amoretty (Brookhaven National Lab., Upton, N. Y.), from Med. Radiol.; 14: No. 4, 58-62(1969). 11p. Dep. NTIS.

The design features of the ITEP proton synchrotron are described, with emphasis on beam extraction at the proper energy.

The advantages of proton beams for therapy of human neoplasms are reviewed. Preliminary tests indicate that the proton beam extracted from the ITEP accelerator has a small diameter, small angular divergence, adequate intensity, and a highly uniform energy. (C.H.)

**56582** (CEA-R-4188) SHIELDING PROBLEMS SET BY THE USE OF A NATURAL URANIUM TARGET WITH A LINEAR ELECTRON ACCELERATOR. SHIELDING AND SAFETY SYSTEMS NECESSARY. Vialettes, Henry; Rocchesani, Jean; Lemure, Pierre (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1971. 32p. (In French). Dep. NTIS (U. S. Sales Only).

The use of a natural uranium target for neutron production with a linear electron accelerator sets special shielding problems due to the fact that, to standard photonuclear reactions, are added photoneutron-induced photofission reactions giving rise to fission products, of which the untimely liberation could cause very serious contamination problems. On the occasion of a recent accident on the target used with the Saclay 60-MeV linear accelerator, activity measurements were carried out on a certain number of samples taken. This revealed the presence of some twenty radionuclides of half-lives between 30 minutes and 30 years and of activities such that the combustion of 1 g of target would release about 30 mCi of fission products of medium and short half-life (over 1 hour). This figure shows the magnitude of a contamination accident on a unit of this type, which is why the present report describes the systems to be employed in order, on the one hand, to detect the appearance of contamination as quickly as possible and, on the other hand, to channel and retain this contamination so as to avoid a personnel contamination accident and/or the spread of contamination toward the outside. (auth)

**56583** (IAE-1980) PULSE GENERATOR OF MEGAVOLT CAPACITY. Mikhailov, V. I. (Institut Atomnoi Energii, Moscow (USSR)). 1970. 11p. (In Russian). Dep. NTIS (U. S. Sales Only).

A transformer with a sectioned core and a special commutated circuit was used as a generator of high voltage for accelerator tubes. Such an arrangement provides semisinusoidal voltage pulses with an amplitude of several megavolts. Experimental and calculated results are introduced and discussed. (tr-auth)

**56584** (JINR-P6-5888) COLLECTOR SYSTEM OF AN ISOTOPE SEPARATOR FOR INVESTIGATING SHORT-LIVED ISOTOPES. Vasilenko, A. T.; Makhunka, I.; Mate, Z.; Nad, J.; Soroko, V. M.; Stancheva, N. S.; Stanchev, S. M.; Utkin, V. A.; Fenyes, T. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). Jul 1971. 19p. (In Russian). Dep. NTIS (U. S. Sales Only).

The investigated isotopes are collected on a tape near the focal plane and then transported to the detectors in 2 to 3 sec with an accuracy of ±1 mm. There is a possibility for $\alpha$-, $\beta^{\pm}$-, $e^{-}$-, and $\gamma$-ray spectrum measurements with surface barrier Si, Si(Li), and Ge(Li) detectors. The characteristic properties of the mass marker beam are measured during separation with a Faraday chamber and a vibrational scanner. A formula is given for the calculation of the collection place of the investigated mass. (auth)

**56585** (JINR-P9-5945) DEPENDENCE OF THE BEAM SHAPE IN THE CENTRE OF THE SYNCHROCYCLOTRON ON THE ACCELERATING VOLTAGE AND MAGNETIC FIELD DECAY. Danilov, V. I.; Poluboyarova, P. A.; Safonov, A. N.; Feoktistov, B. V. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1971. 12p. (In Russian). Dep. NTIS (U. S. Sales Only).

The dependence of the beam shape on the accelerating voltage, by proportional decrease of the modulation frequency, and on the decay of the magnetic field at different radii is cleared up by means of computer calculations for radial-phase motion of particles in the center of the synchrocyclotron. The process of the beam formation during the capture is considered taking into account the changes of the range of the captured phases. (auth)

**56586** (JINR-P9-5956) DEBUNCHER OF THE JINR SYNCHROPHASOTRON INJECTOR WITH MODULATION OF THE ACCELERATED BEAM ENERGY. Beznogikh, Yu. D.; Zinov'ev, L. P.; Kadyrov, R. B.; Karyagin, Yu. K.; Plyashkevich, N. N.; Popov, V. A.; Semenyushkin, I. N.; Stepanyuk, V. L. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1971. 9p. (In Russian). Dep. NTIS (U. S. Sales Only).

The main results of calculation of the injection efficiency for the JINR proton synchrotron at the modulation of the energy and narrowing of the energy spread of the injector beam are given as well as a brief description of the debuncher and the experimental results obtained in the process of its adjustment and testing in the synchrotron. (auth)

**56587** (JUL-748-PP) QUANTITATIVE COMPARISON OF THE CONTINUUM RADIATION OF HIGH-TEMPERATURE PLASMAS WITH SYNCHROTRON RADIATION IN THE WAVELENGTH RANGE 500 TO 9000 A. I. INVESTIGATION WITH THE SYNCHROTRON OF THE BONN UNIV. 2.5-GeV ELECTRON SYNCHROTRON. Thimm, Klaus (Kernforschungsanlage, Juelich (West Germany). Institut fuer Plasmaphysik). Apr 1971. 89p. (In German). Dep. NTIS (U. S. Sales Only).

The synchrotron radiation from the Bonn synchrotron was measured for wave lengths ranging from 450 to 9000 Å. For various electron energies, calculations yielded spectral distribution, angular distribution, and polarization. A method for calibrating the synchrotron beam was developed which is based on a carbon-arc standard. With the calibrated beam, a series of wavelengths was measured in the radiation continuum of a carbon V-plasma. Spectral distribution of the radiation also was calculated by means of the bremsstrahlung theory. After corrections according to Gaunt, Inglis, Teller, and Griem, theoretical and experimental results showed good agreement. (H.B.G.)

**56588** (LA-4535) A PROPOSAL FOR $P^3$: A VERSATILE HIGH-ENERGY PION BEAM FACILITY. Gram, Peter A. M.; (and others) (Los Alamos Scientific Lab., N. Mex.). Sep 1970. Contract W-7405-eng-36. 76p. Dep. NTIS.

A proposal for a versatile, high-energy (100 to 600 MeV), high-intensity ($10^{10}$ $\pi$/sec) pion beam for LAMPF is presented. Experimental proposals are described including the pion beta-decay experiment, ratio of $\pi_{e2}$ to $\pi_{\mu 2}$ decay rates, complete study of the reaction $\pi^- p \rightarrow n\gamma$, radiative pion scattering on protons, discussion of radiative scattering experiments, muon g-2 experiment at LAMPF, single pion production in pion-nucleon scattering, measurement of threshold pion production cross section ($\pi^{\pm} p \rightarrow \pi^{\pm}\pi^{+}n$) at LAMPF, comments on $\pi N \rightarrow \pi\pi N$, mechanisms of simple pion-induced reactions on complex nuclei, comments on experiments detecting prompt gammas, and nuclear chemistry studies with energetic pions. (W.H.K.)

**56589** (LA-DC-12730) LAMPF LOW-ENERGY PION LINE. Amato, J.; Burman, R. L. (Los Alamos Scientific Lab., N. Mex.); Jakobson, M. (Montana Univ., Missoula. Dept. of Physics). [1971]. 4p. (CONF-710911-2). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

The proposed LAMPF low-energy pion line is designed to provide charged-pion beams of 20 to 300 MeV. The design parameters and expected performance of the channel are described, and electron and neutron contamination of the pion beam is estimated. (R.W.R.)

**56590** (LA-tr-71-46) CHARGE-EXCHANGE METHOD OF PROTON INJECTION INTO ACCELERATORS AND ACCUMULATORS. Dimov, G. I. (Akademiya Nauk SSSR, Novosibirsk. Institut Yadernoi Fiziki). Translated by Helen Dahlby (Los Alamos Scientific Lab., N. Mex.), from report IIF-304. 28p. Dep. NTIS.

Features of a charge-exchange target for proton injection, development of sources of negative hydrogen ions, regions of application, comparison with the usual injection methods, and the density of protons in the phase space are discussed. Also, the status of the charge-exchange method of proton injection is outlined. (62 references) (W.H.K.)

**56591** (LAL-RT-42-70) STATUS REPORT ON ACO. Le Duff, J. (Paris Univ., Orsay (France). Laboratoire de l'Accelerateur Lineaire). 10 Sep 1970. 13p. Dep. NTIS (U. S. Sales Only).

During the first half of 1969, the ACO has been prepared and run for the study of the $\varphi$ decay into $K^+K^-$. An integrated luminosity of $7 \times 10^{33}$ $cm^{-2}$ was obtained with an average of $4.5 \times 10^{31}$ $cm^{-2}$ per hour of data taking. For the similar period during 1970 it was run with a new apparatus for the study of the $\varphi$ decay into neutrals. Owing to its large size and its complicated structure, the setting-up of this equipment involved a major effort of the laboratory. The most significant results concern the transverse instabilities and the study of a new structure for reaching higher luminosities. (French)

**56592** (LAL-RT-43-70) SPACE CHARGE EFFECTS IN BEAM-BEAM CROSSING. Augustin, J. E. (Paris Univ., Orsay (France). Laboratoire de l'Accelerateur Lineaire). 10 Sep 1970. 7p. Dep. NTIS (U. S. Sales Only).

Results concerned with space charge effects between two colliding beams, in head-on collisions and in crossing at an angle in the Orsay storage ring are given. (France)

**56593** (LYCEN-7104, S7.1-2) PROJECT OF NUCLEAR SPECTROMETRY AT THE SATURNE SYNCHROTRON (1 GeV).

XUM

Birien, P.; Saudinos, J.; Thirion, J. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

A nuclear spectrometry device to be used in conjunction with the Saturne synchrotron at Saclay is briefly described. (France)

**56594** (NP-18998) DEFLECTION OF ELECTRONS IN A SUPERCONDUCTING $HEM_{11}$ RESONATOR. Bauer, W. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). May 1971. 22p. (In German). Dep. NTIS (U. S. Sales Only).

A deflection test measurement of a lead-plated, superconducting deflecting cavity of about 0.5-m length using 1-MeV electrons from a radioactive beta source is described. The measurement yielded a transverse interaction parameter $R_t/Q = (0.46 \pm 0.07)$ kΩ/m which is about 16% below the theoretical value of 0.55 kΩ/m. Reasons for this difference and possible improvements of the experimental setup are given. (auth)

**56595** (NP-19007) MAGNETIC FIELD TOLERANCE AND SELF FIELD EFFECTS OF AN ELECTRON RING ACCELERATOR. Kappe, P. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). May 1971. 105p. (In German). Dep. NTIS (U. S. Sales Only).

In connection with the project of an electron ring accelerator the kinematics of electron rings in a magnetic field is studied. The single particle dynamics during the compression of the electron ring inside a set of pulsed Helmholtz coils is investigated. The magnetic field tolerances of such a setup which are important for betatron resonances are calculated, and a procedure for the compensation of certain field errors is given. Also, the influence of the ring self fields on the kinematics during the axial acceleration in an axially decreasing magnetic field (expansion) is calculated. It is shown, that the relative blow up of the large ring radius due to collective effects is a constant of the motion, and the influence of the self fields on the axial motion is calculated. (auth)

**56596** (SC-RR-710436) IMPLICATIONS OF A MODEL OF CHARGE-NEUTRALIZED, HIGH-CURRENT RELATIVISTIC ELECTRON BEAMS WITHIN CONDUCTING BOUNDARIES ON DIODE AND TRANSPORT SYSTEM DESIGN. Kelly, John G. (Sandia Labs., Albuquerque, N. Mex.). Jul 1971. 94p. Dep. NTIS.

A careful analysis is given to the implications of the behavior of idealized, high-current electron beams within conducting boundaries. Complete space charge neutralization and weak z dependence are assumed for line currents in cylinders and cylindrical sheet beams between coaxial cylinders. The forces on these beams are determined and the equations of motion found. The solutions to these problems can be used as Green's functions for more general current distributions. The results have been used as an aid in the design of a new converging annular diode that injects a beam between concentric cones. The central cone then conducts current back through the cathode in order to prevent diode pinch. The important physics involved in using conductors such as cones to compress high-current relativistic electron beams is identified and discussed. (auth)

**56597** (SJC-A-71-3) COMPUTER CONTROL OF AN ACCELERATOR. Hidechika, Takahashi; Kazuhiro, Ishii; Hideyo, Kodama (Tokyo Univ. (Japan). Inst. for Nuclear Study). Mar 1971. 18p. (In Japanese). Dep. NTIS (U. S. Sales Only).

A fundamental experiment was performed to study the computer control of a proton synchrotron. The control of the voltage of the power source was examined. Two systems were employed. In one method the reference voltage was given by rotation of a helipot driven by a servomotor. The other method was based on the principle that the reference voltage of a stabilized power source, which was controllable from outside of system, was given through a DAC of the computer. When the servomotor was used the final value was within ±1 digit of the set voltage. The voltage was within ±3 digit of the set voltage when the stabilized power source was used. (Japan)

**56598** (SLAC-75(Rev.2)) FIRST- AND SECOND-ORDER MATRIX THEORY FOR THE DESIGN OF BEAM TRANSPORT SYSTEMS AND CHARGED PARTICLE SPECTROMETERS. Brown, Karl L. (Stanford Linear Accelerator Center, Calif.). Aug 1971. Contract AT(04-3)-515. 117p. Dep. NTIS.

A matrix algebra formalism is used to develop the essential principles governing the design of charged particle beam transport systems, with particular emphasis on the design of high energy magnetic spectrometers. (W.H.K.)

**56599** (SLAC-136) TWO-MILE ACCELERATOR PROJECT. Quarterly Status Report, April 1-June 30, 1971. (Stanford Linear Accelerator Center, Calif.). Sep 1971. Contracts AT(04-3)-400; AT(04-3)-515. 60p. Dep. NTIS.

A status report on the Stanford Linear Accelerator Project covering the period April 1, 1971 to June 30, 1971 is presented. Topics included are accelerator and research area operations, accelerator and research area equipment development, and physics research equipment development. (auth)

**56600** (TID-25781) 1970 ANNUAL REPORT OF THE STANFORD LINEAR ACCELERATOR CENTER. (Stanford Linear Accelerator Center, Calif.). 123p. Dep. NTIS.

Highlights in the development and operation of the Stanford Linear Accelerator in 1970 are discussed. High-energy research projects are described, and publications are listed. (W.H.K.)

**56601** SECTOR CYCLOTRON AT 300 keV WITH EXTERNAL INJECTION. Gladyshev, V. A. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 187-225(1971). (In Russian).

The construction and startup are described for a sector cyclotron designed for deuteron acceleration up to 300 keV. The cyclotron design incorporates a number of special features: the magnet was completed in the form of three separate C-shaped magnets; the vacuum chamber was assembled from a large number of components with an original seal design; and the power supply of the dee is implemented by a four-wave spiral line. The magnetic field has a good depth of azimuthal variation which assures adequate focusing at all orbits. External injection, using ion drift along the sector edge, brings the beam to the accelerating interval of the dees without loss. (tr-auth)

**56602** FOCUSING OF AN ION BEAM DRIFTING IN A NONUNIFORM MAGNETIC FIELD. Gladyshev, V. A.; Katsaurov, L. N.; Moroz, E. M.; Nechaeva, L. P. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 226-38(1971). (In Russian).

In the presence of ion drift along a magnet edge, the vertical focusing of a beam occurs over a broad range of initial conditions. In the median plane the beam size increases during drift. An appropriate selection of initial conditions, however, permits a few dozen turns without substantial increase in beam size. (tr-auth)

**56603** IMPROVEMENTS IN OR RELATING TO PARTICLE ACCELERATORS. (to KEV Electronics Corp.). British Patent 1,241,407. 4 Aug 1971. Priority date 4 Jun 1969, United States.

Shielding means for a high-voltage electrostatic accelerator is described. The shielding surrounds the accelerating tube, and consists of a high-Z element supported in a semi-insulating matrix, e.g., black rubber filled with lead oxide. (R.W.R.)

**56604** ABERRATIONS OF ASYMMETRIZED QUADRUPOLE LENSES. Ovsyannikova, L. P. (Physical-Technical Inst., Leningrad); Szabo, Gy. ATOMKI (At. Kut. Intez.) Kozlem.; 13: No. 1-2, 1-16(May 1971). (In Russian).

An investigation of the third order geometric aberrations of combined electrostatic and magnetic quadrupole lenses with asymmetrized field, giving the aberration coefficients valid for an arbitrary longitudinal distribution of the field, and related to a point object located on the axis is described. Analytically obtained third order trajectory equations are presented for electrostatic lenses, assuming a rectangular model. Aberration curves are reported as calculated by the help of the above formulae for lenses, of given configurations singlets and doublets. (auth)

**56605** IMPROVEMENTS IN OR RELATING TO SUPPLY CIRCUITS FOR ION ACCELERATORS. Wood, James David London Hedley (to National Research Development Corp.). British Patent 1,243,056. 18 Aug 1971. Filed 2 Feb 1968.

Reference is made, in particular, to supply circuits for neutron generators in which D and/or T ions are extracted from a plasma and accelerated onto a target containing D and/or T. Optimum operation requires that the ion beam shall pass through the extractor aperture with minimum interception, to prevent undue heating or sputtering of the extractor electrode. If there is too much interception, adsorbed gas may also be released into the accelerator tube and cause an unstable condition which can result in destruction of the tube; this is particularly liable to occur under start-up conditions. The object of the system described is to alleviate such problems. The system includes a negative feedback loop connected so as to cause the extractor electrode current to control the ion source energizing supply output in a sense to maintain the extractor current constant. The energizing supply may be a radiofrequency supply adapted to energize a plasma ion source. (UK)

**56606** CHARGED PARTICLE ANALYZER OF MAGNETIC AND ELECTROSTATIC SECTOR TYPE. Matsuda, Hisashi (Osaka Univ.). Cho-Koon Kenkyu; 7: No. 3, 132-41(Oct 1970). (In Japanese).

A magnetic and electrostatic sector field is discussed, and the effect of fringing fields is described. Barber's law that the ion source and the top of the field boundary and image are on a straight line is satisfied in the case of a uniform field. This law is extended for an inhomogeneous field by replacement of the opening angle of a sector field $\phi$ with $k\phi$ and the radius a of the orbit with $a/k$. The k is defined in relation to the inhomogeneity factor. Dispersion and resolving power are explained. The matrix representation of the orbit of a charged particle is also described. The effect of the fringing field is analyzed with a proper transform matrix. The effect is treated as follows. (1) An ideal field extends up to normal boundary. (2) Optic axis shifts at the boundary. (3) The charged particle advances straight up to the boundary, and here it is subjected to a change of position and direction, and this phenomena is described by a transform matrix. (4) The particle moves in the ideal field thereafter. The image and secondary aberration are also analyzed by the matrix representation. (Japan)

**56607** EXPERIMENTAL RESEARCH ON DESIGN CRITERIA OF FACILITIES FOR PARTICLE ACCELERATORS FOR MEDICAL USE. Okajima, Nobuo; Yamamoto, Moriyuki; Mizushina, Tomoyuki; Maeda, Hidenori; Kitamura, Takeshi (Taisei Construction Co. Ltd., Tokyo). Taisei Kensetsu Gijutsu Kenkyusho-Ho; No. 3, 67-91(Oct 1970). (In Japanese).

The research project was sponsored by the research fund for peaceful uses of atomic energy established by the Science and Technology Agency. A Specialist Committee was organized to carry on this research program, and many meetings were held to discuss the methodologies of experimental research to make the tests useful, and some criteria were derived from them. Examples of facilities are described according to these criteria derived. (auth) (Japan)

**56608** FOCUSING OF HIGH-CURRENT ELECTRON BEAMS IN LINEAR INDUCTION ACCELERATORS. Vakhrushin, Yu. P.; Kuznetsov, V. S.; Komarov, O. L.; Bogdanova, V. I.; Ivanova, N. I. At. Energ. (USSR); 31: No. 3, 294-5(Sep 1971). (In Russian).

Linear induction accelerators are used for accelerating electron beams in currents of hundreds of amperes. Focusing such beams is discussed relative to their deviation from equilibrium, and an equation describing a high-current relativistic beam of electrons is presented. Criteria for stability were obtained for the motion of beams of charged particles in discrete focussed systems, valid for arbitrary values of the accelerating field. (K.S.W.)

**56609** PROCESS FOR MEASURING ENERGY. Tyapkin, A. A. (to Joint Inst for Nuclear Research). Russian Patent 265,301. 9 Mar 1970. Filed 24 Mar 1969. (In Russian).

A method for measuring electron and gamma energies above 5 GeV is described. A converter, the thickness of which corresponds to the maximum of the electron and photon cascade curve, is placed in the beam trajectory; from the intensity of the secondary electrons the energy of the electrons or gamma rays measured is determined. (R.W.R.)

**56610** ISTOCHNIKI POLYARIZOVANNYKH CHASTITS. (Polarized Particle Sources). Pucherov, N. N.; Romanovskii, S. V.; Tarasov, G. P.; Chernievskii, V. K. Kiev; Izdatel'stvo Naukova Dumka (1968). 116p.

This survey describes the basic methods of producing polarized particle sources which are widely used today in contemporary experimental nuclear physics. Polarized particle beams, their parameters, and source construction are examined. Multipole magnets, separating magnets, and the motion of charged particles in a magnetic field are studied. Vacuum systems, dissociation of hydrogen and deuterium, and the ionization of atom beams are also treated. 103 references. (K.S.W.)

**56611** MEASUREMENT OF THE EMITTANCE OF AN ION-OPTICAL SYSTEM. Marghitu, S. (Institut de Physique Atomique, Bucharest). Rev. Roum. Phys.; 16: No. 4, 461-6(1971). (In French).

An apparatus for the measurement of emittance, used with particle accelerators for the study of ion sources and formation systems for beam acceleration and ion-optical transport is presented. The idea of emittance as a unit of measurement used in the phase plane is discussed, and the principle of emittance measurements with the help of a baffle with an opening and the method of plotting the form of emittance are presented. A description of a realized apparatus and its operation with an ion source is given. (tr-auth)

**56612** DIRECT-ACCESS MULTI-USER COMPUTER SYSTEM FOR THE HARWELL SYNCHROCYCLOTRON. Jarvis, O. N.; Langsford, A.; Whitehead, C. (Atomic Energy Research Establishment, Harwell, Eng.). pp 53.1-2 of Computational Physics. Vols. I and II. London; Her Majesty's Stationery Office (1969).

From Conference on computational physics; Culham, England (28 Jul 1969). See CONF-690706-(Vols.1 and 2).

A Honeywell DDP-516 computer system and its real time executive system (OLERT) were chosen for future experimental work on the Harwell Synchrocyclotron on the following grounds; experiments change frequently, a high-level real-time programming language is necessary for visiting experimentalists, and off-line data analysis, assemblies, compilations and other utility programs should run as background jobs. The hardware is configured as follows. The CPU has an extended arithmetic unit and the 16-bit, 32K word store has full memory protection. There are four ASR 33 teletypes, high speed paper tape equipment, 3 seven-track magnetic tape units and an incremental plotter. Data from experiments and CRT display units are driven through CAMAC. The basic OLERT operating system was augmented to provide the software to drive the CAMAC units both for autonomous data transfer and I/O-bus operations so that all communication with experiments could take place through simple INPUT/OUTPUT statements. The present operating system takes one third of the available core store and it is hoped to purchase a high capacity fixed head disc and install some degree of peripheral processing in the CAMAC system to ease the demands on core store. **56613** (AD-715563) NEUTRON TRANSPORT FROM A POINT SOURCE IN A SLAB; A COMPARISON BETWEEN DIFFUSION THEORY AND TRANSPORT THEORY. Shimerda, John Henry (Naval Postgraduate School, Monterey, Calif.). Sep 1970. 53p. NTIS.

Thesis.

The one-speed, steady state, diffusion equation was solved for a point source and for a normal pencil beam in a homogeneous, isotropically scattering slab. Numerical results obtained using diffusion theory were compared to available transport theory results for two slab thickness. This comparison demonstrated that the diffusion theory approximation to the transport equation will yield accurate results except within about one-half mean free path of a boundary and except within about three mean free paths of a source. The best agreement between diffusion theory and transport theory is obtained if the first radial buckling constant in the diffusion solution is chosen equal to the radial buckling computed using transport theory. (auth) (USGRDR)

**56614** (ANL-7714) ARC SYSTEM CROSS-SECTION HOMOGENIZATION AND MODIFICATION CAPABILITIES. Kovalsky, E. A.; Zapatka, J.; Henryson II, H.; Hoover, J.; Walker, P. M. (Argonne National Lab., Ill.). Jun 1971. Contract W-31-109-eng-38. 455p. Dep. NTIS.

This document presents the documentation of the ARC System modules INHOMG (NUI001), HOMOG (NUC001), HHOMOG (NUC007) MICCOL (AJC007), MACCOL (AJC008), and MODXSISO (NUI006). NUI001 reads and processes BCD card images which define isotope to material and material to composition assignments for the various reactor regions. NUC001 generates the material and composition level macroscopic cross sections using the mixture information processed by NUI001 and a specified microscopic cross-section data set, XS.ISO or XS.ISO2. NUC007 is a restricted version of NUC001 in that it generates only composition level cross sections based on a homogenization of existing material level cross sections. AJC007 performs a group collapse for microscopic cross sections using a specified multigroup spectrum. AJC008 performs a group collapse for macroscopic cross sections using a specified multigroup spectrum. NUI006 processes the type 20 cards in the BCD data set A.NIP to provide run-time modification of an XS.ISO2 microscopic cross-section data set. (auth)

**56615** (FMRB-37/71) THEORETICAL INVESTIGATION ON DIFFRACTION OF SLOW NEUTRONS. Heintz, W. (Physikalisch-Technische Bundesanstalt, Brunswick (West Germany)). Jun 1971. 25p. (In German). Dep. NTIS (U. S. Sales Only).

It was previously observed that the interference in a neutron-interferometer disappeared, when two samples of the same material, only separated by a narrow cut, were placed into the neutron beam. An attempt was made to explain this by waves originating from the cut between the two samples. The gradual disappearance of the interference by moving both samples is described by splitting the neutron wave in two components with a phase difference. It is attempted to explain the existence of a phase difference symmetric to the plane of the cut by means of Sommerfeld's theory of diffraction. The result is unsatisfactory. Therefore a simple calculation, based on quantum mechanics is made with the assumption that the cut is splitting the incident neutron beam into two components. The result is that with small angles of incidence the reflection is very strong and the ratio of the reflected to the transmitted intensity oscillates sensitively with the cross section of the cut. (auth)

**56616** (JUL-764-RG) NUMERICAL METHOD FOR THE SOLUTION OF THE TIME INDEPENDENT TRANSPORT EQUATION FOR NEUTRONS. Lindenmayr, Georg (Kernforschungsanlage, Juelich (West Germany). Institut fuer Reaktorentwicklung). May 1971. 60p. (In German). Dep. NTIS (U. S. Sales Only).

A discrete form of the stationary, one-dimensional multigroup transport equation for neutrons is solved. Sphere geometry and isotropic scattering cross sections are assumed. Starting with the integral form of the neutron transport equation a system of difference equations is derived. An existence theorem independent of the mesh size chosen can be proved: There exists a single positive eigenvalue ($k_{eff}$) which is larger than the absolute value of any other eigenvalue and a corresponding unique positive eigenvector (neutron flux). The eigenvalue and the corresponding eigenvector can be calculated by the power method. In any iteration step a high-order system of simultaneous equations must be solved. Four iteration methods are defined and the convergence is proved: a point iteration method (PI), a block iteration method (BI), a combination of the two which can be interpreted as an ADI (alternating direction implicit) —method for the special case $\omega = 0$, and the block-SOR (successive overrelaxation) —method. Convergence properties of the methods are studied by some numerical examples. It is demonstrated that the PI method is fast only for small mesh sizes and small values $s = \sigma^s/\sigma^t$. The BI method has opposite convergence property: it is very fast for large mesh sizes and large s. The ADI ($\omega = 0$) and SOR ($\omega = 1$) are well convergent methods in any case, the ADI being somewhat superior over SOR. Difference scheme and iteration methods are well suited for calculating neutron flux and $k_{eff}$ of large thermal assemblies with voids ($\sigma^t = 0$) and strong absorbers. (auth)

**56617** (JUL-765-RG) METHOD FOR THE NUMERICAL SOLUTION OF THE LINEAR POSITION DEPENDENT BOLTZMAN EQUATION IN SPHERICAL GEOMETRY AND SPHERICAL SYMMETRY. Wolf, Lothar (Kernforschungsanlage, Juelich (West Germany). Institut fuer Reaktorentwicklung). May 1971. 52p. (In German). Dep. NTIS (U. S. Sales Only).

In its integral form and by means of Green's functions with a $P_1$ method, the neutron transport equation is solved with respect to position, angle, and energy. An analytical calculation successfully yielded the moment of Green functions for spherical geometry and spherical symmetry. A well-convergent iteration method is developed for the inversion of the transport matrix, which is diagonal with respect to energy. (H.B.G.)

**56618** (RPI-328-230) EXPERIMENTAL AND ANALYTICAL STUDIES OF FAST NEUTRON TRANSPORT IN IRON. Malaviya, B. K.; Kaushal, N. N.; Becker, M.; Burns, E. T.; Ginsberg, A.; Gaerttner, E. R. (Rensselaer Polytechnic Inst., Troy, N. Y. Dept. of Nuclear Science). [1971]. Contract AT(30-1)-328. 58p. Dep. NTIS.

As part of a comprehensive program devoted to the integral checks of differential microscopic cross section data pertinent to the LMFBR program, the experimental and analytical investigations of fast-neutron transport in bulk assemblies of iron are described. Time-of-flight-measured fast-neutron angular flux spectra at different positions in a simple, clean, homogeneous assembly are analyzed using ENDF/B data as input, the $MC^2$ code system, and $S_N$ transport calculations. In addition, continuous slowing-down theory was developed to complement precise calculations by indicating direct relationships between cross-section uncertainties and spectra; this approach permits integrating, in the analysis, other non-ENDF/B data. The well-defined integral experiment permits clear-cut interpretation, leading to definitive conclusions with respect to input data and also checks of standard analytical codes. The Karlsruhe (KEDAK) data set and the ENDF/B-I and ENDF/B-II files for iron have been assessed. On the basis of cross section uncertainties in iron and of their influence on spectra, it is possible to recommend not only preferred data but also a redirection in emphasis in differential measurements and evaluation. (auth)

**56619** (RT/FI-(70)49) NEUTRON THERMALIZATION IN POLYCRYSTALLINE MATERIAL BY MONTE CARLO METHOD. Ardente, V.; Cupini, E.; Molinari, V. G. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 20 Nov 1970. 27p. Dep. NTIS (U. S. Sales Only).

The thermalization phenomena of neutron population in finite and infinite samples of beryllium are studied by using the Monte Carlo method. The preliminary analysis presented intends to show the reliability of the Monte Carlo method in the field of the time-dependent neutron thermalization for different geometrical situations, and represents a basis for a detailed investigation of the problems of the equilibrium approach in small samples of beryllium. The scattering kernel from polycrystalline beryllium is calculated at room temperature. For the contribution to the scattering from inelastic processes the incoherent approximation was used. Interference effects were taken into account by evaluating the elastic (zero-phonon) term of the polycrystalline coherent scattering cross section for a hexagonal lattice. (auth)

**56620** (RT/FI-(70)53) ANALYSIS BY A SIMULATED MEASUREMENT OF NEUTRON SPECTRA. Giovannini, R.; Menapace,

E. (Comitato Nazionale per l'Energia Nucleare, Bologna (Italy). Centro di Calcolo). 16 Dec 1970. 36p. (In Italian). Dep. NTIS (U. S. Sales Only).

A neutron spectrum measurement performed with a proton recoil proportional counter is analyzed. The unfolding method here adopted utilizes the "a priori" information of spectrum nonnegativity. By means of the linear programming technique the confidence intervals of integral quantities of the unknown spectrum are obtained. (auth)

**56621** NONHOMOGENEOUS BOUNDARY-VALUE PROBLEM FOR THE LINEAR TRANSPORT EQUATION FOR A SLAB GEOMETRY. Hintz, Gerald R. (California Inst. of Tech., Pasadena). J. Math. Phys. (N. Y.); 12: No. 7, 1100-12(Jul 1971).

A nonhomogeneous boundary-value problem for the infinite slab of finite thickness is considered. In this problem, the slab receives radiation from a time-dependent source on one of its surfaces. The intensity of this radiation increases from zero at time zero until a later time $t_0'$, after which the intensity is a function of direction only. This problem is solved in the strong sense. The asymptotic behavior of the solution is determined and related to results for steady-state problems in neutron transport theory and radiative transfer. (auth)

**56622** FUNCTIONS OF THE TRANSITION REGION FOR BERYLLIUM AND SOME EXAMPLES OF ITS USE. Bogomolov, V. N.; Chernov, L. A. At. Energ. (USSR); 30: No. 6, 543-5(Jun 1971). (In Russian).

The mathematical relation which describes the energy distribution of neutrons contains the expression $\Delta(E/kT)$ which is the transition region function, calculable from a single experimental spectrum. The authors obtained $\Delta(E/kT)$ for Be, and thence the Maxwellian distribution $M(E/kT)$. It was noted that the function $\Delta(E/kT)$ for Be was graphically quite similar to that for C(graphite). If the function $\Delta(E/kT)$ for Be was obtained from an equation by Bekurts and Virtts, an error of ~50°K was inherent in the neutron temperature. (K.S.W.)

**56623** SCATTERING CROSS-SECTION AT SUBTHERMAL ENERGIES AND GENERALIZED PHONON FREQUENCY SPECTRUM OF ZIRCONIUM HYDRIDE. Saastamoinen, J.; Palmgren, A. (Helsinki Univ. of Tech., Otaniemi, Finland). J. Nucl. Energy; 25: No. 5, 189-202(May 1971).

Total neutron cross section for $ZrH_2$ was measured at the subthermal wavelength range from 7 Å to 17.5 Å, the sample temperature ranging from 20°C to 270°C. From the measured values the slope of the scattering cross section vs. wavelength was determined. The measured slope values were compared with theoretical values to determine the weight of the acoustical part in the generalized phonon frequency spectrum of zirconium hydride. An acoustical weight factor of about 1/150 gave the best fit to the measurements. A calculation method based on the phonon expansion method was developed to determine the coefficients of the first terms in the presentation of the scattering cross section as a power series in neutron wavelength. The question of existence of a discrete thermalization time constant in zirconium hydride is discussed. (auth) (UK)

**56624** INTENSE THERMAL-NEUTRON GENERATING APPARATUS. (to Atomic Energy of Canada Ltd.). British Patent 1,246,235. 15 Sep 1971. Priority date 16 May 1969, United States.

An intense thermal neutron generator is described which is based on proton reactions with liquid metal targets. (W.H.K.)

**56625** SPECTRAL FUNCTION REPRESENTATION OF TIME- AND ENERGY-DEPENDENT NEUTRON DENSITY IN FAST MEDIA. PART 2. MEDIA WITH MULTIPLICATION. Collatz, S. (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Kernenergie; 14: No. 5, 148-52(May 1971).

A representation with the spectral functions of the time-independent part of the transport operator without fission for the energy and the time dependent neutron density in multiplying media in the buckling approximation is found in two ways. According to this method, the pulse experiment in subcritical systems is studied. (auth)

**56626** IMPROVEMENTS IN OR RELATING TO NEUTRON TARGETS. Stark, Donald Sutherland (to National Research Development Corp.). British Patent 1,243,262. 18 Aug 1971. Filed 12 Feb 1969.

Reference is made to neutron generator targets consisting of D and/or T absorbed in a film of Sc, Y or a lanthanon supported on a metal substrate. With such targets disintegration may occur owing to trihydride formation; the target described is claimed to show a reduced tendency to such disintegration. A film of a second metal is interposed between the substrate and the first film. This second metal is selected so as to diffuse readily into the metal of the first film under solid state conditions to form a solid solution or compound therewith, and also to adhere well to the substrate. The thickness of the intermediate film is made much less than that of the hydrogen-absorbing film in order to limit dilution of the latter by diffusion when the solid solution or compound is formed, but is sufficient to increase its adhesion to the substrate. Production methods are described both for the targets and for sealed neutron generators using them, and examples are given. Metals suitable for the intermediate film include Be, Au, Ag, Ni, Co, and Cu, and Mo is suitable as substrate. Erbium is suitable as hydrogen-absorbing film. (UK)

**56627** SUPPRESSION OF (n,γ) REACTION IN RESONANT SCATTERING OF NEUTRONS BY A PERFECT CdS CRYSTAL. Shil'shtein, S. Sh.; Somenkov, V. A.; Dokashenko, V. P. JETP Lett. (USSR) (Engl. Transl.); 13: No. 6, 214-17(20 Mar 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 13: No. 6, 301-5(20 Mar 1971).

A search was made for the suppression of the inelastic channels for neutrons at resonant energies in transmission experiments. Reflection and transmission curves in CdS were measured for neutron wavelengths of 0.81 and 1.06 Å (0.123 and 0.08 eV). The results show that anomalous transmission occurs in resonant neutron scattering, i.e., the (n,γ) reaction is suppressed when a neutron interacts with a perfect crystal in the Bragg position. (D.L.C.)

**56628** MULTIPLE SCATTERING OF NEUTRONS IN GASEOUS AND LIQUID METHANE. Agrawal, Ashok K. (Argonne National Lab., Ill.). Phys. Rev., A; 4: No. 4, 1560-7(Oct 1971).

A "factor method" of evaluating the double-scattering correction for inelastic-neutron-scattering experiments with an infinite-plane-slab specimen was developed. Using appropriate dynamical models, calculations have been made both for highly compressed room-temperature gaseous methane and for liquid methane at 98°K. As a result, the agreement between analytical results with measurements is remarkably improved. In addition, the model sensitivity of the correction and the advantages of reflection-type experimental geometry over transmission-type are investigated. (auth)

**56629** MEASUREMENTS OF TIME-DEPENDENT THERMAL NEUTRON SPECTRA IN PULSED MODERATORS USING A TIME-FOCUSSED CRYSTAL SPECTROMETER. Graham, Kingsley F. Ann Arbor, Mich.; Univ. of Michigan (1970). 197p. University Microfilms Order No. 71-15,160.

Thesis.

A technique is described for measuring the joint time and energy dependence of the rate of emission of slow neutrons emerging from the surface of a moderator following the injection of a short pulse of fast neutrons into the moderator. A crystal spectrometer is used to select neutrons of a given energy. The leakage current at that energy is examined as a function of time. The crystal spectrometer is arranged to be time-focussed; time resolution is decoupled from energy, spatial and angular resolution. The time-focussing feature enables measurements to be performed with much less intense neutron sources ($\sim 10^{11}$ neutrons/sec peak) than used by previous workers. Adequate statistical precision in a reasonable length of time is obtained by sampling the leakage current from most of the moderator surface with a relatively large angular and energy resolution ($\Delta E/E \simeq 20\%$). Good time resolution (<5 μsec at 0.025 eV) is maintained by time focussing. A second set of measurements using standard time-of-flight techniques is used to determine the absolute time-integrated leakage current per incident 14.7 MeV neutron as a function of energy. This result is used to normalize the time dependent spectra measured with the time focussed crystal spectrometer. Measurements were performed on rectangular moderator blocks of nominal lateral dimensions of 10 cm × 10 cm and various thicknesses from 2.55 cm to 7.65 cm. Many of the moderators had a cadmium or gadolinium filter (heterogeneous poison) placed in a plane parallel to the viewed 10 cm × 10 cm face and various depths beneath it. Polyethylene moderators were studied at both 296°K and 77°K. Solid methane and solid anhydrous ammonia moderators were studied at 77°K. For most moderators, both a measurement of the absolute energy dependent leakage spectrum per incident neutron and a measurement of the time dependent leakage spectrum were performed. No one moderator appeared superior giving both high yield and narrow time width. Significant differences were apparent at 0.025 eV, while at 0.1 eV and above the difference between moderators was less pronounced. Both solid methane and solid ammonia at 77°K appear to be good moderator materials with ammonia better at 0.025 eV and above. Methane may be superior be-

XUM

low about 0.01 eV. It was further found that heterogeneous poisoning can be used to decrease the time width without severely reducing the slow neutron peak yield rate, although the time integrated yield is strongly reduced. Decreasing the moderator temperature also produces narrower time widths while not significantly changing the peak yield rate for neutrons above 0.025 eV. Below about 0.025 eV the time integrated yield is increased by cooling the moderator. (Diss. Abstr. Int., B)

**56630** DEGENERATE KERNEL TECHNIQUE IN NEUTRON THERMALIZATION THEORY. Turinsky, Paul Josef. Ann Arbor, Mich.; Univ. of Michigan (1970). 259p. University Microfilms Order No. 71-15,328.

Thesis.

The degenerate kernel technique (DKT) has been developed to improve the computational efficiency of treating the speed dependence in neutron thermalization calculations. The only approximation employed in the DKT is that the scattering kernel can be accurately represented in the thermal range by a degenerate kernel expansion (DKE). Using the DKE in the inscattering term encountered in neutron thermalization theory is found to recast the initial Fredholm integral equation in speed into a speed-independent matrix operator equation of size K, the DKE size. To render equivalent accuracy, K has been found to be considerably smaller than the number of mesh points employed in a discrete speed mesh treatment (multigroup). Hence the matrix operator equations that the DKT give rise to are solved more readily on a digital computer due to reduced matrix size. To minimize K (therefore computational costs), the DKE was so constructed such that it: converged rapidly pointwise to the true scattering kernel; preserved the total scattering cross section; and yielded the correct speed dependence to known analytic solutions to several infinite media neutron thermalization problems when employed in the inscattering term. The DKT was employed to numerically solve the infinite media thermal neutron steady state, time moment, time eigenvalue, and time dependent problems. These same problems were resolved within the spatial modal expansion of the diffusion equation for finite media for various values of $B^2$. The use of the DKT in the linear transport equation for the isotropic scattering slab geometry problem is studied and found to also yield a (K X K) speed-independent matrix integral equation. The DKT is also applied within the invariant-imbedding transport formalism for obtaining the reflection (R) and transmission (T) probabilities of thermal neutrons impinging on an isotropic scattering slab system. The DKT is found to mathematically decouple the initial and final neutron states, resulting in considerable computational storage and CPU time reductions as has been confirmed by computational studies. The DKT and the numerical methods employed were also confirmed to yield accurate results for R and T. (Diss. Abstr. Int., B)

**56631** CALCULATION OF THERMAL NEUTRON PARAMETERS IN HYDROGENOUS LIQUID MODERATORS. Ben Ahmed, Ali. Morgantown, W. Va.; West Virginia Univ. (1970). 88p. University Microfilms Order No. 71-15,477.

Thesis.

Adapting the Brown and St. John cross section formalism for low energy neutron scattering in $D_2O$, a modified classical monatomic gas model is presented for light water and benzene. This is accomplished by the computation of different sets of BSJ parameters over three specified energy regions encompassed by the total thermal scattering cross section, $\sigma_s(E)$, to a more accurately match experimental and gas model calculated values of $\sigma_s(E)$. In addition, a new temperature-dependent closed form expression has been derived for the second energy transfer moment, $M_2$. These theoretical developments are applied to temperature-dependent calculations of the thermal diffusion constant, $D_0$, and the thermal diffusion cooling coefficient, C, in heavy water, light water, and benzene. Also computed are the average cosine of neutron scattering angle, $\bar{\mu}_0$, in $H_2O$ and $C_6H_6$ plus the thermal diffusion length, $\bar{L}_T$, in $H_2O$ at different levels of boron poisoning. Good agreement between this work and the results of other investigators is noted for $D_0$ and $\bar{L}_T$. The values of $M_2$ used to obtain C, however, are approximately 15 to 40% higher than quantum model calculations, suggesting that the monatomic gas model underestimates the chemical binding effects of atoms in liquid moderators. Inconsistencies in the average cosine of the scattering angle, $\bar{\mu}_0$, are noted since it is higher for light water but lower for benzene than the experimentally obtained values at low neutron energies. This indicates that refinements on gas model scattering cross sections are still needed. (Diss. Abstr. Int., B)

**56632** ENERGY-DEPENDENT NEUTRON TRANSPORT CALCULATIONS IN THICK AND THIN SLABS. Larson, Howard Allen. Seattle; Univ. of Washington (1970). 199p. University Microfilms Order No. 71-16,970.

Thesis.

An efficient method for the calculation of transmission and reflection functions for the albedo problem in a thick slab has been developed. The results, continuous in angle and energy, depend upon the expansion of the scattering kernel in a nonisotropic degenerate form. The mathematical procedure utilizes principles of invariance to express the collision density in the slab in terms of a generalized Milne collision density and the transmitted or reflected collision density. Neutron angular collision densities, obtained from the reflection and transmission functions, are expressed in terms of normal modes using the singular eigenfunction technique. In order to demonstrate the feasibility of the numerical method, calculations are performed on model problems using the isotropic form of the thermalization scattering kernel for the heavy gas. Numerical results illustrate the effects of kernels for different gases on the eigenvalue spectrum, emergent Milne distribution, and half-space and slab collision densities. In order to solve the thin slab albedo problem with a minimum of computational effort, an exact solution is also developed for the angle- and energy-dependent transmission and reflection functions of the slab using the separable kernel for neutrons in thermal equilibrium with a non-multiplying medium. This is accomplished by a method which relates the functions to the endpoint values of the solution of a non-homogeneous Fredholm integral equation. This method is most efficient for thin slab calculations where the optical path for transmission is small. Model calculations are performed for reflection and transmission functions of neutrons incident upon a slab of free gas; the effects of varying the mass number, the slab width, the amount of absorption and absorption law, and the angle and energy of the incident beam are illustrated. (Diss. Abstr. Int., B)

**56633** SPIN POLARIZATION EFFECTS ON NEUTRON TRANSPORT. Cardito, Joseph Michael. University Park, Pa.; Pennsylvania State Univ. (1970). 55p. University Microfilms Order No. 71-16,578.

Thesis.

The effects of spin polarization on neutron transport are quantitatively investigated. Azimuthal asymmetries of differential scattering cross sections are considered for transport in non-multiplying and multiplying systems. Consequences of considering polarization in calculations of the neutron flux are determined for both the monoenergetic and the polyenergetic case. Specific attention is given to the dependence of these effects on neutron energy and system size. For a non-multiplying medium the scalar flux penetrating a finite slab is decreased by polarization. Maximum effects of 3.1% were found for a seventeen mean free path slab. For a multiplying medium the scalar flux of neutrons escaping from the system is decreased by less than one percent. These maximum effects occur in the energy range 0.25 to 1.0 MeV. In all cases the effects of polarization on the neutron flux increase with system size. Uncertainties in neutron cross sections of two percent or less produce errors in computed neutron fluxes comparable to polarization effects. (Diss. Abstr. Int., B)

**56634** DIFFUSIVE MOTIONS IN NEUTRON COHERENT SCATTERING BY LIQUIDS BY FILTER TIME-OF-FLIGHT SPECTROMETRY. Teutsch, Heinz (Inst. of Atomic Physics, Bucharest). Stud. Cercet. Fiz.; 23: No. 5, 517-33(1971). (In Rumanian).

Topics include information on the diffusive motion in liquids that can be obtained by neutron scattering, the time-of-flight neutron spectrometer, determination of the scattering law and the $1 + \tau(K)$ function for liquid nitrogen and liquid bismuth, convolution of Gaussian and Lorentzian functions, and conclusions. (W.H.K.)

**56635** CALCULATION OF CONSTANT RELAXATION OF AN AVERAGE NEUTRON FLUX IN A NONUNIFORM MEDIUM WITH ANISOTROPIC SCATTERING. Stepanov, A. V.; Shelagin, A. V. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 181-6(1971). (In Russian).

Green's function was employed in an examination of a steady-state transport of monoenergetic neutrons in a nonuniform medium with weakly anisotropic scattering. An expression was obtained for constant relaxation of an average neutron flux. (tr-auth)

**56636** USE OF GREEN'S FUNCTION IN THE THEORY OF NEUTRON DIFFUSION IN A HETEROGENEOUS MEDIUM WITH SLUGS OF SMALL DIMENSIONS. Stepanov, A. V. Tr. Fiz. Inst., Akad. Nauk SSSR; 53: 167-80(1971). (In Russian).

The passage of neutrons through a nonuniform medium is considered, with an expression for a constant relaxation for an average neutron current in a diffuse medium with an arbitrary absorber being obtained. A coefficient of loss was calculated

for thermal neutrons for a system with small slug effect. (tr-auth)

**56637** CONTRIBUTIONS TO THE SUNAKAWA MODEL OF ELASTIC MULTIPLE NEUTRON SCATTERING: DETERMINATION AND INTERPRETATION OF MANY-PARTICLE DISTRIBUTION FUNCTIONS. Weil, Juergen W. (Univ. of Innsbruck). Rev. Roum. Phys.; 16: No. 1, 19-29(1971).

The connection between the Van Hove and the Sunakawa pair distribution functions is reviewed; the Sunakawa functions are interpreted as to their physical content and their connection with the two-particle distribution function. The free Sunakawa functions are calculated up to the fifth order; a graphical method for setting up such functions of any order is presented. (auth)

**56638** SCAT: CODE FOR COMPUTING SCATTERING CROSS SECTION OF LIGHT AND HEAVY WATER. Rapeanu, S.; Stefan, H.; Gheorghe, D. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 2, 241-3(1971).

A computer program was written for the analysis of thermal neutron scattering in light and heavy water using the Koppel-Young model. The computing algorithm used is described. (J.W.R.)

**56639** USE OF $^{252}$Cf AS A RANDOMLY PULSED NEUTRON SOURCE FOR PROMPT NEUTRON DECAY MEASUREMENTS. Mihalczo, John Thomas. Knoxville, Tenn.; Univ. of Tennessee (1970). 115p. University Microfilms Order No. 71-17,760.

Thesis.

Cross correlation measurements were performed for unmoderated and polyethylene-moderated uranium (~93 wt % $^{235}$U) assemblies with prompt neutron decay constants varying from $3 \times 10^3$ to $10^5$ sec$^{-1}$. One of the detectors was an ionization chamber containing $^{252}$Cf which triggered the time analysis equipment every time a spontaneous fission of $^{252}$Cf occurred. The other was a proton recoil scintillator which measured the response of the multiplying assembly to the neutrons emitted in the $^{252}$Cf fission. These measurements used $^{252}$Cf as a randomly pulsed neutron source but had the simplicity of the Rossi-$\alpha$ technique. The randomly pulsed neutron method allowed the measurement of the prompt neutron decay without the use of a complicated pulsed neutron source where Rossi-$\alpha$ measurements were not practical. In assemblies for which Rossi-$\alpha$ measurements were also made, the prompt neutron decay constant agreed within the precision of the measurements with those obtained by this technique. The ratio of the correlated count rate in a randomly pulsed neutron measurement to that in a Rossi-$\alpha$ measurement was inversely proportional to the detector efficiency. This ratio was quite large for some assemblies; for example, it was 7,900 for a cylindrical assembly of 38.09-diam, 0.303-cm-thick uranium discs with 38.07-cm-diam, 0.628-cm-thick polyethylene discs between the uranium discs. The mass of uranium in this assembly was approximately one half of the critical mass. This type of source provided a good simple way to determine the characteristics of detection systems since the time at which the neutrons or gamma rays from fission enter the detector was known. It was used to determine detector efficiency, time resolution and to evaluate in a quantitative way the performance of a gamma discrimination method. (Diss. Abstr. Int., B)

**56640** (FRNC-CONF-8) QUASI FREE SCATTERING IN THE $^2$H(p,2p) AND $^2$H(p,pn) REACTION FROM 21.5 TO 56.4 MeV. Durand, J. L.; Arvieux, J.; Durand, M.; Fiore, A.; Perrin, C. (Grenoble Univ. (France). Institut des Sciences Nucleaires). 8 Jul 1971. 2p. (CONF-710708-3). Dep. NTIS (U. S. Sales Only).

From Symposium on the nuclear three body problem and related topics; Budapest, Hungary (7 Jul 1971).

Quasi free scattering was studied as function of energy using the spectator model. The absolute cross section was measured for incident energies from 21.5 MeV to 56.4 MeV. Data for the two reactions $^2$H(p,2p) and $^2$H(p,pn) were obtained from the same experiment. The experimental results show an important enhancement at minimum energy of the spectator. The absolute peak cross section for the (p,pn) reaction is 2.5 times greater than that corresponding to the (p,2p) enhancement. This ratio is almost independent of the incident energy. (France)

**56641** (JINR-P4-5986) NEUTRON-CHANNEL IN MUON CAPTURE AND SHORT RANGE NUCLEON-NUCLEON CORRELATIONS. REACTION $\mu^- + {}^4\mathrm{He} \rightarrow {}^3\mathrm{He} + n + \nu$. Salganic, Yu. A.; Eramzhyan, R. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 13p. (In Russian). Dep. NTIS (U. S. Sales Only)

The neutron channel in muon capture by complex nuclei is investigated in the example of the reaction $\mu^- + {}^4\mathrm{He} \rightarrow {}^3\mathrm{H} + n + \nu$. The effect of the short-range nucleon-nucleon correlations on the energy spectrum and asymmetry of the angular distribution is investigated. The final state interaction and relativistic terms of the muon-nucleon Hamiltonian is taken into account. It is shown, that the short range correlations influence significantly the high energy part of the spectrum and the asymmetry, too, although their form remains about the same. (auth)

**56642** (LYCEN-7104, C5,1-15) SEPARABLE NONLOCAL POTENTIALS AND THEIR EQUIVALENT LOCAL POTENTIALS IN ELASTIC SCATTERING STUDIES. El Baz, E.; Barguil, J.; Pigeon, J.; Fayard, C.; Lamot, G.-H. (Lyon Univ. (France). Institut de Physique Nucleaire). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

Separable nonlocal potentials have been widely used for describing two body interactions in scattering problems and bound state studies. The general formalism leading to the scattering amplitude analytical expression was studied. When Coulomb effects are introduced, the separable nonlocal potential is expanded in a Coulomb representation rather than in configuration spaces of phase spaces. The choice of the separable nonlocal potential is discussed. This formalism is applied to neutron-alpha and proton-alpha elastic scattering. The method used by Coz et al to obtain local potentials equivalent to separable nonlocal potentials in elastic scattering is described. (France)

**56643** (NP-19018) ANNUAL REPORT, 1970. (Lund Univ. (Sweden)). Jan 1971. 112p. Dep. NTIS (U. S. Sales Only).

The research carried out at the departments of cosmic high energy physics, elementary particle physics and nuclear physics of the University of Lund and the Institute of Technology is reviewed. The equipment is dominated by three accelerators: a 1.2-GeV electron synchrotron, a 3-MeV Van de Graaff generator and a 0.4-MeV neutron generator. (K.K.) (Sweden)

**56644** EXPERIMENTAL DETERMINATION OF THE DIFFERENTIAL CROSS SECTION FOR THE REACTION d(p,2p)n. Burns, James Martin Jr. College Station, Tex.; Texas A and M Univ. (1970). 139p. University Microfilms Order No. 71-17,797.

Thesis

A kinematically complete experiment for the reaction d(p,2p)n has been performed for an incident proton energy of 28.61 MeV. Simultaneous detection of the two protons was made by two systems of 96 scintillation detectors each (9216 detector pairs), located uniformly over a 1.22 m diameter spherical scattering chamber. Use of an IBM 7094 computer for on-line data acquisition allowed accumulation of approximately 300,000 three-nucleon break-up events during an eight hour period. The differential cross section as a function of the proton center-of-momentum energies and the total break-up cross section are presented. Comparison of the total break-up cross section with a value suggested by other experiments shows fairly good agreement. (Diss. Abstr. Int., B)

**56645** RADIATIVE PROTON CAPTURE IN DEUTERIUM. Vos, Robert. Philadelphia; Univ. of Pennsylvania (1970). 158p. University Microfilms Order No. 71-19,295.

Thesis.

The d(p,$\gamma$)He$^3$ differential cross section at 90° has been measured for proton energies from 0.82 to 3.24 MeV, and a gamma ray angular distribution measurement carried out at 3.24 MeV. The gamma rays were detected by 3'' × 4'' Na-I counters, whose spectra were analyzed for absolute or relative photon flux per run, using spectrum shape Monte Carlo calculations. A deuterium gas target was used. The results of the angular distribution measurement, as well as absolute cross section measurements are compared with other data on the d(p,$\gamma$)He$^3$, d(n,$\gamma$)H$^3$, He$^3$($\gamma$,p)d and $^3$H($\gamma$,n)d reactions, with brief mention of the $^3$He($\gamma$,n)pp and $^3$H($\gamma$,p)nn reaction data. A survey of theoretical $^3$He and $^3$H photodisintegration cross section calculations is also made, and theoretical results are compared with experimental data. A modified Dalitz-Thacker type ground state $^3$H, $^3$He wave function is suggested, which includes t = ½ $^4$D and $^2$S mixed symmetry states and has correct asymptotic structure. (Diss. Abstr. Int., B)

**56646** STUDY OF THE REACTION T($^3$He,$\gamma$)$^6$Li FROM 0.5 TO 20 MeV. Young, Alan Morris. Columbus, Ohio; Ohio State Univ. (1970). 102p. University Microfilms Order No. 71-18,110.

Thesis.

Gamma-ray spectra from the T($^3$He,$\gamma$)$^6$Li reaction have been

XUM

obtained over a range of $^3$He bombarding energies from 0.5 to 20 MeV. The anticoincidence-shielded NaI(Tl) detection systems employed are capable of providing better than 7% energy resolution (FWHM) for 20 MeV gamma radiation, and reject cosmic rays in the ratio of 1000 to 1. The detectors are gain stabilized and utilize pulse-pileup rejection logic. Strong $\gamma$-ray transitions were seen to the ground and first two excited states of $^6$Li. Evidence was also found for a transition to the second T = 1 state in $^6$Li. Angular distributions for the three strong transitions were recorded at 1.0, 2.7, 5.0, and 8.25 MeV. The observed $\sin^2\theta$ angular dependence for the ground state transition is apparently independent of bombarding energy. The capture cross sections for transitions to the ground and first two excited states were found to vary smoothly with energy with an apparent lack of resonant behavior. The integrated cross section for the inverse reaction $^6$Li($\gamma_0$,t)$^3$He up to $E_\gamma$ = 25.8 MeV was found to be 10.1 ± 1.6 MeV-mb in good agreement with the phototriton sum rule prediction for $^6$Li. The angular distributions and energy dependence of the capture cross sections for the three strong transitions can be most easily understood within the framework of the direct capture model. The energy dependence of the calculated ground state capture cross section agrees quite well with that observed experimentally over the entire range studied. T + $^3$He resonating-group wave functions, which describe T + $^3$He elastic scattering well, were employed in the direct-capture calculation. Coefficients of fractional parentage, $\theta^2_{T+^3He}$, were obtained for the ground state and for the first, second and fourth excited states of $^6$Li. Substantial T + $^3$He clustering in these four low lying $^6$Li states is evident. (Diss. Abstr. Int., B)

**56647** COMMENTS ON CENTER-OF-MASS MOTION AND THE $^4$He CHARGE FORM FACTOR. Friar, J. L. (Massachusetts Inst. of Tech., Cambridge). Nucl. Phys.; A173: No. 2, 257-64(1971).

Various methods of removing the cm coordinate from single-particle wave functions are discussed. A nonunitary generalization of the Gartenhaus–Schwartz transformation is shown to incorporate both of the common methods for constructing translation-invariant wave functions as limiting cases. By using a simple single-particle model density for $^4$He, a family of charge form factor curves is generated. It is shown that two-body correlations may be sensitive to the procedure used to remove the cm coordinate from the problem. (auth)

**56648** SPIN-ORBIT COUPLING FOR $\Lambda$-$^4$He SCATTERING USING A ONE-BOSON-EXCHANGE MODEL FOR THE $\Lambda N$ INTERACTION. Londergan, J. T. (Oxford Univ. Case Western Reserve Univ., Cleveland); Dalitz, R. H. Phys. Rev., C; 4: No. 3, 747-64(Sep 1971).

The polarization and cross sections for $\Lambda$-$^4$He elastic scattering are calculated for $\Lambda$ incident energies 1–20 MeV. A $\Lambda$-$^4$He potential is constructed using a phenomenological $\Lambda N$ Gaussian central potential and the empirical shape for $^4$He, and a spin-orbit potential obtained from a one-boson-exchange (OBE) model for the $\Lambda N$ interaction. As indicated recently by Downs, the OBE model for $\Lambda N$ forces leads to strong antisymmetric spin-orbit terms due to vector-meson exchange. This means that the $\Lambda$-$^4$He potential depends only on part of the $\Lambda N$ spin-orbit interaction, since it results from summing the latter interaction over the nucleon spin states. Parameters from three quite different OBE calculations are used to predict the $\Lambda$-$^4$He scattering, and these three sets of OBE parameters lead to remarkably similar predictions concerning the cross sections and polarization properties for this energy range. However, no $\Lambda$-$^4$He resonances are predicted, in contrast to recent Hartree–Fock calculations of $\Lambda$-$^4$He scattering. The polarization effects predicted are large, and experimental data concerning them would have interesting consequences for our knowledge of the origin of spin-orbit forces in the baryon-baryon system. (auth)

**56649** PHOTONEUTRON CROSS SECTION FOR $^4$He UP TO 31 MeV. Berman, B. L.; Fultz, S. C.; Kelly, M. A. (Univ. of California, Livermore). Phys. Rev., C; 4: No. 3, 723-32(Sep 1971).

The photoneutron cross section for $^4$He has been measured with monoenergetic photons from threshold to 31 MeV. The cross section reaches its maximum value of 1.0 mb from 24.3 to 27.3 MeV and appears to be split into two broad peaks. The integrated cross section is 7.9 MeV mb. The fore-aft asymmetry of the photoneutrons also was measured. This quantity, which is a measure of the interference between the E1 amplitude and the underlying positive-parity contribution, changes from forward to backward peaking at about 27 MeV. The E2-to-E1 amplitude ratio deduced from these data is of the order of 0.04. A comparison of the cross-section results with the considerably larger values for the $^4$He($\gamma$,p) reaction measured elsewhere shows appreciable (≳15%) isospin mixing throughout the energy region studied, with indications that this mixing might be increasing with energy above 28 MeV. **56650** (COO–2049–5) EVALUATION OF MINIMA IN TOTAL NEUTRON CROSS SECTION BY TRANSMISSION OF FISSION SPECTRA THROUGH THICK SAMPLES. Miller, William H.; Meyer, Walter (Kansas State Univ., Manhattan. Dept. of Nuclear Engineering). 30 Jul 1971. Contract AT(11-1)-2049. 97p. Dep. NTIS.

An evaluation of minima in total neutron cross sections was performed for several materials by comparing an experimentally measured transmitted spectrum with the corresponding calculated result. Published cross section data were evaluated for iron, lead, liquid oxygen, and solid and liquid sodium. Since thick samples (three or more mean free paths thick) were used, the analysis was very sensitive to minima in the cross-section. The incident neutron spectrum was obtained from the Triga Mark II reactor and was detected using an NE-213 liquid scintillator spectrometer system. Computer codes were used to unfold the raw data and to calculate the transmitted spectrum (which was a function of published cross section data, the measured incident flux on the sample and the resolution of the detector). The results of this study demonstrate the usefulness of this technique in evaluating total neutron cross section. Several experimental geometry conditions were used in this work to obtain valid results and to study the effects of forward scattering and multiple scattering in the thick samples. The results showed that there is a question as to the accuracy of published angular-dependent cross section data near the zero scattering angle. (auth)

**56651** (INSJ–127) TABLE OF BANDS IN EVEN–EVEN NUCLEI. Sakai, Mitsuo (Tokyo Univ. (Japan). Inst. for Nuclear Study). 2 Jun 1971. 35p. Dep. NTIS (U. S. Sales Only).

For even-even nuclei, a list is presented of the probable members of quasi-ground, quasi-beta and quasi-gamma bands of the spherical regions and the corresponding ground, beta and gamma bands of the deformed region. For simplicity the term "quasi" is used for both regions. References are given to the experimental data basic to the level assignments. The literature was covered up to the middle of May, 1971. (auth)

**56652** (LYCEN–7104, S2,1-2) SUBSTRUCTURES IN $^{12}$C AND $^{14}$N BY STUDYING VISUAL INTERACTIONS OF PROTONS AND ALPHA PARTICLES OF INTERMEDIATE ENERGY (70 TO 150 MeV). Jacquot, C.; Sakamoto, Y.; Braun, H. (Centre National de la Recherche Scientifique, Strasbourg (France). Laboratoire de Physique Corpusculaire). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

All the interactions of $\alpha$ particles with $^{12}$C and $^{14}$N at 70 and 90 MeV were studied and a table of the structures knocked out and the cross sections was drawn up. (France)

**56653** (LYCEN–7104, S4.1-10) $\pi$ AND K MESONS USED FOR INVESTIGATING LIGHT NUCLEI STRUCTURES FROM THE ANALYSIS OF THEIR INTERACTIONS (IN FLIGHT AND STOPPING ABSORPTION, DOUBLE CHARGE EXCHANGE). Massue, J. P.; Kurtz, N.; Sakamoto, Y.; Batusov, I.; Souslenko, V.; Sidorov (Centre National de la Recherche Scientifique, Strasbourg (France). Laboratorie de Physique Corpusculaire). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The absorption of $\pi^-$, $\pi^+$, and $K^-$ mesons by $^{12}$C, $^{14}$N, and $^{16}$O nuclei of the ionographic emulsion was studied. The most important primary mechanisms involved are the absorption by one or two nucleons in the case of $K^-$ and by two nucleons in the case of $\pi^-$. Clusters of more than two nucleons, especially the alpha cluster, contribute to the absorption process; this was verified by the double charge exchange of $\pi$ mesons. (auth)

**56654** (LYCEN–7104, S13,1-11) MICROSCOPIC DESCRIPTION AND CLUSTER STRUCTURE OF LIGHT NUCLEI. Leclercq-Willain, C. (Brussels Univ. (Belgium)). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The energy states of light nuclei which can be described by a cluster model ($\alpha$ or other clusters) were studied. Quasi molecular systems where one or several nucleons describe "molecular" orbits and the remaining nucleons are in "atomic" orbits were investigated. This study was restricted to two-cluster states in $^{8}$Be, $^{4}$He, $^{9}$Be, and $^{5}$He. (France)

**56655** (ORNL-TM-3379) keV NEUTRON CAPTURE GAMMA RAY SPECTRA. Bird, J. R.; Bergqvist, I.; Biggerstaff, J. A.; Gibbons, J. H.; Good, W. M. (Oak Ridge National Lab., Tenn.). Apr 1971. 78p. Dep. NTIS.

Techniques are described for using a 9'' × 12'' NaI detector to measure pulse height spectra for gamma rays from the capture of 10 to 100-keV neutrons generated by a pulsed Van de Graaff beam. Pulse height spectra are given for capture in 36 elements or separated isotopes. In many cases, tabulated gamma ray intensities are compared with results for thermal neutron capture. In a few cases the excitation functions for particular gamma rays are included. The experimental work described was carried out at ORNL during the period 1961 to 1963 and some of the results have been presented previously. This compilation summarizes all the spectra and intensities measured during that period. (auth)

**56656** ISOSPIN FORBIDDEN $^{12}$C(d,$\alpha_2$)$^{10}$B(1.74) REACTION. Smith, Horace Vernon Jr. Madison, Wis.; Univ. of Wisconsin (1971). 113p. University Microfilms Order No. 71-14,166.

Thesis.

Extensive new data on the isospin forbidden $^{12}$C(d,$\alpha_2$)$^{10}$B(1.74) reaction for 7.2 MeV ≤ $E_d$ ≤ 14.0 MeV are reported. A multi-detector array in a differentially pumped gas scattering chamber ($CH_4$ target) allows simultaneous measurement of eight to fourteen excitation functions in $E_d$ steps of 40 keV. The cross sections exhibit resonant behavior indicative of compound nucleus formation. No evidence for appreciable direct or semi-direct contribution to the reaction cross sections was found. The cross sections are expanded according to the following: $(d\sigma/d\Omega) = (\lambda^2/12) \mid \Sigma_l [2l+1\ l(l+1)]S[dP_l(\cos\theta)/d\theta]\mid^2$ where $S_l$ is the complex amplitude for the $l^{th}$ partial wave. Partial waves up to l = 5 are necessary for satisfactory fits to the data. This expansion uniquely determines the $J^\pi$ of an isolated resonant state of $^{14}$N. Extensive data are reported for the isospin allowed $^{12}$C(d,$\alpha$)$^{10}$B reactions leaving $^{10}$B in its ground, first, and third excited states. The total cross section ratios of the $\alpha_2$ group to the $\alpha_0$, $\alpha_1$, and $\alpha_3$ groups are determined to obtain lower limits to the isospin impurities present in $^{14}$N. The lower limit to the average isospin impurities in $^{14}$N(17.1 MeV < $E_x$ < 22.3 MeV) is ~4%. The lower limit to the isospin impurity at some individual resonances is 9%. (Diss. Abstr. Int., B)

**56657** $^{16}$O + $^{16}$O REACTION. Spinka, Harold. Pasadena, Calif.; California Inst. of Tech. (1971). 237p. University Microfilms Order No. 71-17,386.

Thesis.

The $^{16}$O + $^{16}$O total reaction cross section was measured at six energies between $E_{cm}$ = 6.80 to 11.85 MeV near the astrophysical region of interest. Angular distributions and cross sections for the production of protons, alphas and deuterons were obtained with counter telescopes in a differentially pumped gas target. No $^{3}$He or $^{3}$H was observed. Cross sections for the formation of $^{31}$S and $^{30}$P were measured by detecting the betas from their radioactive decays. The angular distribution and cross section for production of neutrons was obtained with a "long counter" at $E_{cm}$ = 12 MeV, demonstrating that the $^{16}$O ($^{16}$O,pn) process accounts for over 90% of the $^{30}$P formed at this energy. The presence of such three body breakup reactions made the experimental determination of the total cross section difficult. Finally, the $^{16}$O + $^{16}$O → $^{12}$C(g.s.) + $^{20}$Ne(g.s.) reaction was studied with a coincidence technique at $E_{cm}$ = 12 MeV. Gamma spectra were taken at several energies for a number of targets using Ge(Li) counters. Gamma lines from nuclei produced in both two and three body exit channels from $^{16}$O + $^{16}$O reactions were observed. In addition, the gamma yield as a function of bombarding energy was measured in 50 keV (C.M.) steps for both $^{16}$O + $^{16}$O and $^{12}$C + $^{12}$C. The $^{16}$O + $^{16}$O gamma yield is smoothly varying, indicating that the $^{16}$O + $^{16}$O reaction cross section does not have large fluctuations with energy similar to the structure seen in $^{12}$C + $^{12}$C reactions. Nearly all cross sections were measured relative to the $^{16}$O + $^{16}$O elastic scattering at $\theta_{lab}$ = 45° to avoid the problems with direct current integration of heavy ion beams in gas targets. A new, more precise determination of the elastic scattering cross section at $\theta_{cm}$ = 90° was made for $E_{cm}$ = 7.3 to 14.4 MeV in steps of 100 keV (C.M.). A previously unknown anomaly was observed near $E_{cm}$ = 10 MeV. Elastic scattering cross sections were also obtained for $^{12}$C + $^{12}$C in steps of 60 keV C.M. energy from $E_{cm}$ = 3.9 to 8.0 MeV at $\theta_{cm}$ = 90°. In both cases, gas mixtures were used in the differentially pumped system as the target. (Diss. Abstr. Int., B)

**56658** MEASUREMENT OF THE HALF-LIFE OF $^{16}$N DECAY. Karlik, Berta. Oesterr. Akad. Wiss., Math.-Naturwiss. Kl., Anz.; No. 10, 1-4(1967). (In German).

The half-life of $^{16}$N was remeasured with special attention to correct statistical evaluation and interferring activities. A measurement device consisting of a NaI(Tl) crystal and a 100-channel analyser was used. A value of $t_{\frac{1}{2}}$ = 7.090 ± 0.016 sec was obtained. (J.S.R.)

**56659** HEAVY ION EMISSION FROM LIGHT NUCLEI. Rudy, Clifford Robert Jr. Seattle; Univ. of Washington (1970). 104p. University Microfilms Order No. 71-16,994.

Thesis.

Reactions involving the emission of heavy ions leading to low-lying states of the residual nucleus have been studied using 42 MeV alpha particles incident on light target nuclei. The heavy ions resulting from these reactions were identified by mass number using the time of flight technique. With this method products with a mass number as high as A = 14 could generally be separated from neighboring isobars. Reactions leading to different particle masses from a particular target were studied simultaneously. Angular distributions and total cross sections were obtained for the reactions $^{12}$C($\alpha$,$^{6}$Li(g.s.))$^{10}$B(g.s.), $^{12}$C($\alpha$,$^{6}$Li(g.s.))$^{10}$B(0.717 MeV), $^{12}$C($\alpha$,$^{7}$Be(g.s.))$^{9}$Be(g.s.), $^{12}$C($\alpha$,$^{7}$Be(0.431 MeV))$^{9}$Be(g.s.), $^{16}$O($\alpha$,$^{6}$Li(g.s.))$^{14}$N(g.s.) and $^{16}$O($\alpha$,$^{7}$Be(g.s. + 0.431 MeV))$^{13}$C(g.s.). In addition to these reactions, others leading to different states of excitation of the above-mentioned products and to different masses were studied over a limited angular range for the $^{12}$C and $^{16}$O targets. Fragmentary angular distributions were obtained for the reactions $^{24}$Mg($\alpha$,$^{6}$Li(g.s.))$^{22}$Na(g.s.) and $^{24}$Mg($\alpha$,$^{12}$C(g.s.))$^{16}$O (g.s.). The reactions $^{28}$Si($\alpha$,$^{16}$O(g.s.))$^{16}$O(g.s.), $^{28}$Si($\alpha$,$^{16}$O(g.s.))$^{16}$O(6-7 MeV), $^{28}$Si($\alpha$,$^{12}$C(g.s.))$^{20}$Ne(g.s.) and $^{28}$Si($\alpha$,$^{12}$C(g.s.))$^{20}$Ne (1.63 MeV) were also observed. The $^{28}$Si($\alpha$,$^{12}$C(g.s.))$^{20}$Ne(g.s.) cross sections were several times larger than the $^{28}$Si($\alpha$,$^{16}$O (g.s.))$^{16}$O(g.s.) reactions. A comparison of the experimental angular distributions and cross sections with statistical model calculations was carried out. It is shown that as the mass of the emitted heavy ions increases for a particular reaction, the amount of compound nuclear contribution increases. Considerable compound nuclear contributions to all the reactions studied are indicated. Contrary to previous suggestions, comparison of the calculated and experimental results for the $^{16}$O($\alpha$,$^{7}$Be)$^{13}$C and $^{16}$O ($\alpha$,$^{7}$Li)$^{13}$N reactions with those for the reaction $^{16}$O($\alpha$,$^{8}$Be)$^{12}$C indicate that there is no enhancement of this reaction due to alpha clustering relative to the ($\alpha$,$^{7}$Li) and ($\alpha$,$^{7}$Be) reactions. Evidence is given for the conservation of isotopic spin in complex reactions proceeding through a short-lived compound nucleus. (Diss. Abstr. Int., B)

**56660** REALISTIC SHELL MODEL CALCULATIONS FOR $^{14}$C AND $^{14}$N. Ostrander, Peter Erling. University Park, Pa.; Pennsylvania State Univ. (1970). 81p. University Microfilms Order No. 71-16,648.

Thesis.

The low-lying energy level structure of $^{14}$C and $^{14}$N and the $^{14}$C → $^{14}$N ground state beta decay are investigated in a shell model calculation employing the nonlocal interaction of Tabakin and the realistic matrix elements of Elliott as the residual interactions. In this calculation, second-Born terms are taken into account and lowest order core polarization processes are evaluated in a microscopic approach for both interactions. Two approaches are used for the mass-14 calculations; in the first, the $0^+1$ ground state of $^{14}$C and the ground and first excited $1^+0$ levels of $^{14}$N are assumed to arise from p-2 configurations in a $^{16}$O core. In the second, a $^{12}$C core is chosen and the residual interactions are diagonalized in 2s-1d shell configurations. In addition, a similar investigation of the energy levels of $^{18}$O and $^{18}$F is carried out for purposes of comparison with other realistic calculations. The results obtained indicate that although these realistic interactions are able to predict the mass-18 spectra with considerable accuracy, the same methods do not properly give the $1^+0$ ground state of $^{14}$N and the ground state beta decay. This is probably due to the significance of higher order core-polarization processes for the mass-14 nuclei. Other levels are predicted in fair agreement with experimental results. (Diss. Abstr. Int., B)

**56661** PHOTONUCLEAR REACTIONS IN LIGHT NUCLEI. Mustafa, Mohammed Golam. New Haven; Yale Univ. (1970). 163p. University Microfilms Order No. 71-17,013.

Thesis.

Photonucleon emission in $^{16}$O and $^{12}$C has been studied up to

XUM

excitation energy of 50 MeV. The giant resonance and the high energy ($E_\gamma$ > 30 MeV) emissions are described from a reaction theory point of view. For the high energy emission, this theory is compatible with the standard direct reaction model and, therefore, the high energy photonucleon yield was studied using (a) the standard direct reaction model and (b) the standard direct reaction model modified to incorporate the ground state correlation. Electric dipole (E1), electric quadrupole (E2), and magnetic dipole (M1) transitions are considered. The calculation has been made for the 90° differential cross section, integrated cross section, angular distributions at a few energies, and polarizations at 45° and at 90°. The results are compared with the available experimental data. In the giant resonance region, the theory is compatible with an intermediate coupling model; the giant dipole region was studied in that context. The calculation has been made for the electric dipole transition strength in $^{16}O$ and compared with one particle-one hold and other calculations. The following conclusions are made: (1) The high energy ($E_\gamma$ = 30-50 MeV) photonucleon emission in light nuclei is a dominant direct process with E1, E2, and M1 transitions participating. There is substantial direct reaction amplitude even in the giant resonance region. (2) The magnitude of the cross section is reduced by the ground state correlation. The amount of reduction sensitively depends on the degree of correlation. (3) The intermediate coupling model calculation of dipole strength produces a distribution of strength different from one particle-one hole calculation and can be brought in accord with experimental observation. Thus the structure seen in $^{16}O$ is likely to be actual resonances. (Diss. Abstr. Int., B)

**56662** STUDY OF $^{17}N$ LEVELS AND T = 3/2 MULTIPLETS IN MASS 17 NUCLEI. Hartwig, D. (Kernforschungszentrum, Karlsruhe, Ger.). Z. Phys.; 246: No. 5,418-23(1971).

Ten states of $^{17}N$ were excited via the $^{18}O(d,^3He)^{17}N$ reaction at $E_d$ = 52 MeV. The l-transfer values are presented for eight of these states. Based on the subsequent spin and parity assignments, proposals for several T = 3/2 isobaric multiplets are made. (auth)

**56663** INVESTIGATION OF THE LEVEL STRUCTURE OF $^{17}O$. Schmidt-Boecking, H.; Brommundt, G.; Bethge, K. (Univ., Heidelberg). Z. Phys.; 246: No. 5, 431-46(1971).

The reactions $^{12}C(^7Li,d)$ and $^{13}C(^7Li,t)$ were studied at $E_{C.M.}$ = 13.3 MeV. Spin assignments are extracted from the integrated cross sections of the first reaction. The latter reaction is analyzed in terms of a modified-DWBA code. (auth)

**56664** $^3H(^3He,\gamma)^6Li$ CAPTURE REACTION AND THE STRUCTURE OF $^6Li$. Ventura, E.; Chang, C. C.; Meyerhof, W. F. (Stanford Univ., Calif.). Nucl. Phys.; A173: No. 1, 1-16(1971).

The capture reaction $^3H(^3He,\gamma)^6Li$ has been studied for $^3He$ bombarding energies from 9 to 26 MeV. Transitions to the ground and first four excited states in $^6Li$ are observed. The 90° differential cross section for the ground state transition decreases smoothly from 9 to 26 MeV. The 90° differential cross section for the first excited state transition shows a broad maximum centered at $E_{^3He}$ = 20.6 ± 0.4 MeV, indicating a possible resonance in $^6Li$ at $E_x$ = 26.2 ± 0.2 MeV. The excitation function for the transition to the third excited state also shows a broad maximum centered at $E_x$ = 26.6 ± 0.4 MeV. The excitation functions for the transitions to the second ($T = 1,0^+$) and fourth ($T = 1,2^+$) excited states have also been measured. The former does not show any resonance structure, while the latter shows a broad maximum indicating a possible resonance in $^6Li$ at $E_x$ = 26.7 ± 0.4 MeV. These results are compared with theoretical predictions. (auth)

**56665** STUDY OF THE ($^4He,^6He$) REACTION ON s–d SHELL NUCLEI. Arnold, Jeffrey Mark. Cleveland; Case Western Reserve Univ. (1970). 64p. University Microfilms Order No. 71-18,966.

Thesis.

The ($^4He,^6He$) reaction has been studied using targets of $^{18}O$, $^{22}Ne$, and $^{26}Mg$ at an incident energy of 42 MeV. Solid state detectors and the Goulding double particle identification technique have been used. Angular distributions have been obtained over the range from 15° to 70° (lab) for transitions to the ground states of all the nuclei, to the excited states of 6.052-6.131 MeV (unresolved) and 6.916-7.115 MeV (unresolved) in $^{16}O$, to the excited states at 1.63 and 4.25 MeV in $^{20}Ne$, and to the excited states at 1.37 and 4.123-4.23 MeV (unresolved) in $^{24}Mg$. Diffraction-like patterns are observed for most transitions, indicating that the reactions may be predominantly direct in nature. All levels in the final nuclei are populated with comparable intensity in contrast to the enhancement of the ground state transitions in (p,t) reactions. A zero-range two-nucleon transfer DWBA analysis of the $^{18}O(^4He,^6He)^{16}O$ g.s. transition was attempted with unsatisfactory results. (Diss. Abstr. Int., B)

**56666** SHELL MODEL WITH REACTION MATRICES AND PAIRING CORRELATIONS. Mercier, Roch Edouard. Pittsburgh; Univ. of Pittsburgh (1970). 151p. University Microfilms Order No. 71-18,139.

Thesis.

In light nuclei, the calculation of Kuo and Brown in $^{18}O$-$^{18}F$ was repeated with important modifications. The reference spectrum approximation with harmonic oscillator intermediate states, coupled with the Köhler–McCarthy matrix inversion technique gives an accurate treatment of the Pauli operator and the long range part of the tensor force. Various intermediate spectra are used to test the sensitivity of the calculation. In heavy nuclei the spectrum of the antimony isotopes was studied with the smooth Tabakin interaction. The wave function representing the states of antimony consist of an admixture of |IP > and |2QP IP > wave functions with the proton one-particle (IP) and the neutron quasiparticle (QP) states restricted to the 5 filling levels. Following the work of the Trieste group it was found that it is necessary to renormalize the model space in order to obtain reasonable agreement with the odd-even mass difference data in the Tin isotopes. The effective G-matrix elements include the 2p, 2h and 3plh diagrams of Kuo and Brown. The single QP energies were taken from experiment. It was found that the weak coupling approximation is very good in this region. The antimony wave function corresponding to the lowest part of the spectrum is well represented by a phonon state (in even tin) plus a proton. The crossing of the $d_{5/2}$ and $g_{7/2}$ levels is fairly well reproduced by this method. The spectroscopic factors and BE2 transition rates are in reasonable agreement with experiment. However one difficulty arises for the 2QP IP states. If the coupling is really weak these states should occur at an energy of about 1 MeV above the ground state. They were found much higher. This is because the energy shift produced by the matrix element connecting the 4QP IP subspace to the 2QP IP subspace was neglected. When this is taken into consideration reasonable agreement with experiment is obtained. (Diss. Abstr. Int., B)

**56667** ISOSPIN FORBIDDEN $^{16}O(d,\alpha_1)^{14}N$ REACTION FOR 2 < $E_d$ < 14 MeV. Jolivette, Peter Lauson. Madison, Wis.; Univ. of Wisconsin (1971). 103p. University Microfilms Order No. 71-14,146.

Thesis.

Data is presented for the isospin forbidden $^{16}O(d,\alpha_1)^{14}N$ reaction in 10–30 keV steps at 12 to 18 angles for 1.8 < $E_d$ < 14 MeV. The data is expanded in partial waves: $(d\sigma/d\Omega) = (\lambda^2/12)|\Sigma_l[2l + 1/\sqrt{l(l+1)}]Sl\ e^{i\Phi}(dPl/d\theta)(\cos\theta)|^2$. There are $2^l$ sets of S-matrix elements that give identical angular distributions as calculated from the above equation. The "physical" solution is selected on the basis of simplicity and the lack of correlation between the partial waves. The S-matrix elements are parameterized as a coherent sum of Breit–Wigner resonances for each partial wave and the level parameters for about a hundred states in $^{18}F$ are presented. A number of levels have been identified as the analogs of T = 1 states in $^{18}O$. No evidence was found for a direct reaction contribution to the isospin forbidden $^{16}O(d,\alpha_1)^{14}N$ reaction even near $E_d$ = 14 MeV ($E_x(^{18}F) \simeq 20$ MeV). The allowed $^{16}O(d,\alpha_0)^{14}N$ reaction also appears to be primarily compound nuclear at all energies studied. The isospin violating reaction does not show the expected decrease in cross section relative to the allowed reactions at high energy and the average magnitudes of the S-matrix elements do not show a strong J dependence even at 20 MeV excitation in $^{18}F$. The isospin allowed $^{16}O(d,\alpha_0)^{14}N$ data taken simultaneously with the forbidden data has been expanded in Legendre polynomials and the coefficients are presented for the entire energy range. The total cross section for $^{16}O(d,\alpha_2)^{14}N$ is shown for 7 < $E_d$ < 14 MeV. (Diss. Abstr. Int., B)

**56668** QUADRUPOLE SURFACE OSCILLATIONS AND THE ELASTIC FORM FACTOR OF $^{16}O$ AND $^{12}C$. Friar, J. L. (Univ. of Washington, Seattle). Nucl. Phys.; A173: No. 2, 248-56(1971).

By using a volume-conserving liquid-drop model for quadrupole surface oscillations, the elastic form factors for $^{16}O$ and $^{12}C$ are calculated. It is shown that zero-point oscillations of the quantized drop produce an effective charge density which differs from that of the uniform, unquantized drop by having a reasonable skin thickness. The resulting elastic form factors are in reasonable agreement with recent experimental data. The transition density for exciting the lowest quadrupole state in this model is shown to be the same as that of Tassie's hydrodynamical model [Aust. J. Phys., 9: 407(1956)]. (auth)

**56669** PROPERTIES OF THE 12,50 AND 12,52 MeV LEVELS OF $^{15}N$. Young, F. C.; Figuera, A. S.; Steerman, C. E. (Univ.

of Maryland, College Park). Nucl. Phys.; A173: No. 2, 239-47 (1971).

Simultaneous $\gamma$-ray and neutron excitation functions were measured for the bombardment of $^{14}C$ with 2.3- to 2.6-MeV protons to identify a $^{15}N$ level at $E_p$ = 2.452 MeV ($E_x$ = 12.50 MeV, $\Gamma$ = 44 keV), which is observed by neutron decay, and a level at $E_p$ = 2.482 MeV ($E_x$ = 12.52 MeV, $\Gamma$ = 58 keV), which is observed by $\gamma$ decay. Absolute cross sections were used to determine $\gamma$-ray partial widths. Transition strengths are compared with results based on shell-model and weak-coupling-model calculations. The absolute (p,n) cross section for the 2.452-MeV resonance indicates J = $^5/_2$ or $^7/_2$. Spin $^7/_2$ is suggested based on the lack of evidence for isospin mixing of these levels. (auth)

**56670** ELASTIC SCATTERING OF DEUTERONS BY $^6Li$ AND $^7Li$ AT 8.0 TO 12.0 MeV. Bingham, H. G.; Zander, A. R.; Kemper, K. W.; Fletcher, N. R. (Florida State Univ., Tallahassee). Nucl. Phys.; A173: No. 2, 265-72(1971).

Absolute differential cross sections for the elastic scattering of protons and deuterons by $^6Li$ and $^7Li$ were measured with an error of ≈2% at selected angles and bombarding energies. The optical model is used to describe the angular distributions of the deuteron scattering at $E_d$ = 8.0, 10.0, and 12.0 MeV. The model parameters found for a real potential radius between 3 F and 4 F are more nearly constant with changes in bombarding energy than are those obtained using a value ≈2 F. The two sets of parameters represent a phase equivalent ambiguity. (auth)

**56671** MEASUREMENT AND DIRECT REACTION ANALYSIS OF THE REACTIONS $^7Li(d,t)^6Li$ AND $^7Li(\tau,\alpha)^6Li$. Zander, A. R.; Kemper, K. W.; Fletcher, N. R. (Florida State Univ., Tallahassee). Nucl. Phys.; A173: No. 2, 273-85(1971).

Angular distributions for the reactions $^7Li(d,t)^6Li$ and $^7Li(^3He,\alpha)^6Li$ were measured and analyzed in an energy region shown to be relatively free of compound-nucleus resonance structure. Both front and back angle maxima in the measured angular distributions are reproduced by the conventional DWBA without the inclusion of exchange effects. The zero-range DWBA calculation is a factor of 25 smaller than the $^7Li(^3He,\alpha)^6Li$ cross section and a factor of 2.5 to 4.5 smaller than the $^7Li(d,t)^6Li$ cross section. In a true finite-range calculation the large renormalization of the DWBA calculation is no longer necessary. (auth)

**56672** NUCLEAR SPECTROSCOPIC STUDIES ON $^{18}O$. Berant, Z.; Goldberg, M. B.; Popp, M.; (and others) (Weizmann Inst. of Science, Rehovot, Israel). Nucl. Phys.; A173: No. 2, 401-13(1971).

Nuclear spectroscopic studies of $^{18}O$ were made by $\alpha$-bombardment of enriched self-supporting $Al_2{}^{18}O_3$ targets at energies between 13.5 and 17 MeV. Alpha–gamma angular correlation measurements were performed on decay transitions from levels at 3.92, 4.45, 5.09, 5.25, 5.33, 6.19, and 6.39 MeV. Spins of levels up to 5.33 MeV excitation were confirmed, and levels at 6.19 and 6.39 MeV are assigned $I^\pi = 1^-$ and $3^-$, respectively. The 1.94-MeV transition from the 3.92-MeV level and the 3.27-MeV transition from the 5.25-MeV level are found to be almost pure M1 in character. Decay branching ratios of all investigated levels were determined. (auth)

**56673** REACTION MECHANISMS OF $^{10}B(d,\alpha)^8Be_{2.9}(\alpha)^4He$ FOR $E_d$ = 0.4, 1.0, AND 1.5 MeV. Lambert, J. M.; Treado, P. A.; Haddad, D.; Moyle, R. A.; Sessler, J. C. (Georgetown Univ., Washington, D. C.). Phys. Rev. Lett.; 27: No. 12, 820-2 (20 Sep 1971).

The angular correlation of the first-emitted $\alpha$ and an $\alpha$ from the sequential decay of the $^8Be_{2.9}$ state in the reaction $^{10}B(d,\alpha)^8Be_{2.9}(\alpha)^4He$ strongly suggests that this reaction proceeds by compound-nucleus formation at $E_d$ = 0.4 MeV and by a deuteron-pickup direct interaction at $E_d$ = 1.0 and 1.5 MeV. The observed symmetry axis for the $^8Be_{2.9}$ breakup distribution in its own center of mass is compared to the momentum-transfer and recoil directions associated with various possible mechanisms and appears to provide the necessary information to select the mechanism. (auth)

**56674** $(\alpha,2\alpha)$ REACTION ON $^9Be$ AT 42.8 AND 49.2 MeV AND ON $^{16}O$ AT 49.2 AND 52.5 MeV. Guichard, A.; Chevallier, M.; Gaillard, O.; (and others) (Univ. Claude Bernard, Lyon). Phys. Rev., C; 4: No. 3, 700-3(Sep 1971).

The $(\alpha,2\alpha)$ reactions on $^9Be$ at 42.8 and 49.2 MeV and $^{16}O$ at 46.0 and 52.5 MeV have been studied in order to test the validity of the impulse approximation. The experimental data are consistent with this approximation, but the over-all agreement is much worse than in the case of the $(\alpha,2\alpha)$ reaction on $^6Li$. (auth)

**56675** STUDIES OF THE REACTION $^{12}C(\alpha p_0)^{15}N$. Zelenskaya, N. S.; Tarov, K. G.; Teplov, I. B.; Fateeva, L. N. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 193-8(Jan 1971). (In Russian).

Excitation functions and angular distributions of protons from the reactor $^{12}C(\alpha p_0)^{15}N$ were measured of $\alpha$-particle energies from 11.3 to 17.9 MeV. Data obtained were combined with data obtained previously for the $\alpha$-partical energy range from 16 to 26 MeV and were used for determining the cross sections as functions of energy in the range from 11.3 to 26.3 MeV. (R.V.J.)

**56676** VERIFICATION OF CERTAIN REGULARITIES OF PHOTONUCLEAR REACTIONS BY PROPERTIES OF FEYNMAN TRIANGLE DIAGRAMS. Dubovoi, E. I. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 199-202(Jan 1971). (In Russian).

A method of polar and triangle skeletal diagrams for elementary calculations of fine-structure peaks for heavy magic nuclei and also for a large number of light nuclei is described. Photospallation of $^{12}C$, $^{16}O$, $^{19}F$, $^{40}Ca$, and $^{208}Pb$ nuclei is analyzed. Energy behavior of the cross section for $\gamma$,n reactions and the peculiarities of cross sections in the presence of amplitudes in the triangle-type diagrams are studied. Tabulated data are given of the fine structure of the giant resonance in $^{12}C$, $^{16}O$, $^{19}F$, $^{40}Ca$, and $^{208}Pb$ in $(\gamma,n)$ reactions and absorption cross sections. The positions of the radical extrema in $^{12}C(\gamma,n)^{11}C$ and $^{16}O(\gamma,n)^{15}O$ reactions coincide completely with the fine structure of the giant resonance in $^{12}C$ and $^{16}O$. For $^{19}F$ and $^{208}Pb$ the theoretical and experimental data were in good agreement. (R.V.J.)

**56677** METHOD OF DISTORTED WAVES IN CALCULATIONS OF ANGULAR DISTRIBUTION IN THE STRIPPING PROCESS FOR $(\alpha,p)$ AND $(\alpha,d)$ REACTIONS ON CERTAIN LIGHT NUCLEI. Burymov, E. M.; Gridnev, K. A.; Karabanov, N. V. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 159-64(Jan 1971). (In Russian).

Experimental data on $(\alpha,p)$ and $(\alpha,d)$ reactions with light nuclei at $E_\alpha$ = 25 were analyzed by the method of distorted waves for the multinucleon stripping process. The relation of the shape of the angular distributions in the $(\alpha,p)$ and $(\alpha,d)$ reactions and the optical parameters of the incident $\alpha$ particles and transferred particles was studied. Reactions of $^{14}N(\alpha,p)^{17}O$, $^{10}B(\alpha,d)^{12}C$, and $^{14}N(\alpha,d)^{16}O$ were calculated for various radii of the $\alpha$ particles and the transferred particles at a 4-Fermi stripping radius. Theoretical and experimental angular distributions for the $(\alpha,p)$ reactions with $^{10}B$, $^{11}B$, $^{12}C$, $^{14}N$, $^{27}Al$, and $^{28}Si$ and for $(\alpha,d)$ reactions with $^{6,7}Li$, $^9Be$, $^{10}B$, $^{11}B$, $^{14}N$, $^{12}C$, and $^{13}C$ nuclei were compared. It was concluded that the distorted-wave calculations do not produce any correct results in the case of $\alpha$ reactions with light nuclei because the true mechanism of these reactions is unknown and the correctness of the optical model for $\alpha$-particle scattering by light nuclei is doubtful. (R.V.J.)

**56678** POLARIZATION OF PROTONS ELASTICALLY SCATTERED ON NUCLEI WITH A ZERO SPIN. Klyucharev, A. P.; Slabospitskii, R. P. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 71-80(Jan 1971). (In Russian).

Polarization effects appearing during resonance elastic scattering of protons by nuclei with a zero spin were studied. Polarization of protons as a function of their energy in elastic scattering by $^{40}Ca$ at $\theta_{cm}$ = 60°, $^{28}Si$ at $\theta_{cm}$ = 90°, $^{12}C$ at $\theta_{cm}$ = 120° and 150°, and $^{16}O$ at $\theta_{cm}$ = 100° was established. Results of the theoretical and experimental studies showed that the polarization studies produced unambiguous data for complete spin–parity assignments for the excited states of nuclei, permitted determination of the parameters of overlapping nuclear levels, and revealed a set of phase shifts which were used for reproducing the scattering matrix. (R.V.J.)

**56679** T = $^3/_2$ STATES IN $^{11}C$. Watson, B. A.; Chang, C. C.; Hasinoff, M. (Stanford Univ., Calif.). Nucl. Phys.; A173: No. 3, 634-40(1971).

The $^{11}B(\tau,t)$ $^9Be(\tau,n)$ and $^{10}B(p,p')$ reactions have been employed to investigate T = $^3/_2$ states in $^{11}C$. States are observed at 12.17 ± 0.05, 12.57 ± 0.07 and 13.92 ± 0.05 MeV excitation having widths of 250 ± 50, 350 ± 100 and 250 ± 50 keV, respectively. The strength with which these states are populated in the $^{11}B(\tau,t)$ reaction are compared to the population of the T = $^3/_2$ states in $^{11}B(\tau,\tau')$ reaction. The first two of these states in $^{11}C$ are observed to decay predominantly by proton emission to the T = 1 state in $^{10}B$ at 1.74 MeV. These states are, thus, tentatively identified as the first three T = $^3/_2$ states in $^{11}C$. (auth)

**56680** STUDY OF THE REACTION $^{14}N(n,2\alpha)^7Li$. Schmidt, Guenter; Moesner, Juergen; Schintlmeister, Josef (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Nucl. Phys.; A173: No. 3, 449-55(1971).

The reaction $^{14}N(n,2\alpha)^7Li$ was analyzed at an energy of 14.1 MeV. A cloud chamber was employed. About 1400 events were evaluated and interpreted as decay cascades via various excited levels of $^{11}B$ or via the ground state of $^8Be$. In both cases, the $^7Li$ nucleus is produced in the ground state or the first excited state.

XUM

Branching ratios for the various types of decay are given. The measured total cross section was 58 ± 12 mb. The spin of the energy levels 9.19 MeV ($^1/_2$) and 9.277 MeV ($^5/_2$) of $^{11}$B was confirmed. (auth)

**56681** ENERGY LEVELS OF $^{16}$O IN THE REGION OF EXCITATION BETWEEN 13.5 AND 15.0 MeV. Ophel, T. R.; Martin, Ph.; Cloud, S. D.; Morris, J. M. (Australian National Univ., Canberra). Nucl. Phys.; A173: No. 3, 609-33(1971).

Measurements have been made of the $^{12}C(\alpha,\alpha_0)$, $^{12}C(\alpha,\alpha'\gamma)$ and $^{12}C(\alpha,p)$ reactions for bombarding energies between $E_\alpha$ = 8.5 and 10.5 MeV. Phase-shift analysis of the elastic scattering angular distributions and excitation functions complemented by particle and γ-ray angular distributions and Doppler-broadened profile measurements of the $^{12}C(\alpha,\alpha'\gamma)$ reaction, enabled level assignments in $^{16}$O. A complete description of the levels in the region of excitation studied was not possible because of the strong interference effects which were present. (auth)

**56682** STUDY OF $^{14}$N USING THE $^{12}C(^3He,p)^{14}N$ AND $^{12}C(^3He,2p)$–$^{13}C$(g.s.) REACTIONS. Focht, William Laurie. Philadelphia; Univ. of Pennsylvania (1970). 150p. University Microfilms Order No. 71-19,222.

Thesis.

The levels of $^{14}$N populated in the reactions $^{12}C(^3He,p)^{14}N$ and $^{12}C(^3He,2p)^{13}C$(g.s.) have been studied using a 15 MeV $He^{3+}$ beam from the University of Pennsylvania Tandem Accelerator. In the $^{12}C(^3He,p)^{14}N$ study, performed on a single-gap Browne-Beuchner magnetic spectrograph, $^{14}$N excited states up to 13 MeV excitation energy were observed. The 8.96–8.98 MeV doublet was resolved, and a new doublet was discovered at 10.06–10.10 MeV, which has previously been listed as a singlet ($1^+$) 0 level. The angular distributions of protons for $^{14}$N states between 0 and 13 MeV were measured over a range of laboratory angles of at least 10° to 60°, and were analyzed employing the DWBA computer code "JULIE" using the optical-model parameters of Mangelson. Dominant (NLSJ) values were successfully assigned, particularly to $^{14}$N states of low excitation energy. Good agreement was shown between these assignments and the dominant configurations predicted by True's shell-model analysis of $^{14}$N. In the $^{12}C(^3He,2p)$ $^{13}C$(g.s.) reaction study at 15 MeV, proton-proton events were measured in coincidence between a silicon surface-barrier detector fixed at a lab angle of 30° and any one of an array of four similar detectors placed at other angles covering the full 180° range in the $^{14*}$N intermediate state center-of-mass system. In this reaction study, the sequential mechanism (through excited states of $^{14}$N) was observed to dominate over the direct mechanism. Angular correlations corresponding to populating intermediate $^{14}$N states of 8.49, 8.91 + 8.96 + 8.98, 9.18, 9.39, 9.70, 10.06 + 10.10, 10.44, and 10.81 MeV excitation energy were measured. Two methods of predicting these angular correlations were employed. A simple "plane-wave" theory prediction of the $^{14}$N substate populations is characterized by stronger 0° and 180° peaking for higher $J_f$ values, and symmetry about 90° in the $^{14}$N center-of-mass system. A more complex "distorted-wave" theory based on the DWBA code "JULIE" analysis of the first step of the sequential reaction does not in general maintain this symmetry. A comparison of these two methods of correlation prediction was made. On the basis of the "plane-wave" theory predictions, a spin-parity assignment of $5^+$ for the 10.81 T = 0 intermediate $^{14}$N state is noted to be more likely than Mangelson's choice of $4^+$. This viewpoint is supported by the work of Zurmühle, Noé and Balamuth studying the same reaction with the first proton detected at 0°. A comparison of their results and the present work was made for several intermediate $^{14}$N states. (Diss. Abstr. Int., B)

**56683** (FEI–205) GAMMA-RADIATION DURING THERMAL NEUTRON CAPTURE ON CHROMIUM AND IRON ISOTOPES. Broder, D. L.; Gamalii, A. F.; Zemtsev, B. V.; Nesterov, B. V.; Kham'yapov, L. P. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk, Fiziko-Energeticheskii Institut). 1970. 29p. (In Russian). Dep. NTIS (U. S. Sales Only).

Gamma radiation resulting from thermal-neutron capture by the isotopes $^{50}$Cr, $^{52}$Cr, $^{53}$Cr, $^{54}$Fe, and $^{56}$Fe was examined by means of a Ge(Li) gamma spectrometer. The gamma line yield per 100 captured neutrons was determined for each isotope, and energy-level diagrams were prepared. The results are compared with those of other authors. (tr-auth)

**56684** (FEI–216) INTERACTION BETWEEN 14-MeV NEUTRONS AND THE NUCLEI OF IRON, COPPER, AND NIOBIUM. Sal'nikov, O. A.; Lovchikova, G. N.; Kotel'nikova, G. V.; Nesterenko, V. S.; Fetisov, N. I.; Trufanov, A. M. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk, Fiziko-Energeticheskii Institut). 1970. 49p. (In Russian). Dep. NTIS (U. S. Sales Only).

This is a study of the spectra and differential inelastic scattering cross sections of neutrons as well as of (n,2n) reactions on nuclei of Fe, Cu, and Nb in the presence of initial neutron energies amounting to 14.4 MeV. The differential cross sections were measured at angles of 30 to 150° through every 30°. The measurements were performed by the method of transit time in cylindrical geometry. A correction for multiple scattering of neutrons in the specimen, calculated by the Monte Carlo method, was introduced. In this study the differential inelastic scattering cross sections of neutrons as well as the differential cross-sections of the (n,2n) reaction are derived, as are the spectra of sound neutrons for this reaction. The nuclear-level density parameters are calculated taking the nucleus model to be a Fermi gas with allowance for residual interaction in the form of vaporization energy, and the contribution of direct processes to the inelastic scattering cross section in the presence of that energy is estimated. The findings are compared with the data of other studies, praticularly studies of the nuclear-level density parameter by other methods. It is established that a Fermi gas model allowing for residual interaction makes it possible to calculate with sufficient accuracy the nuclear-level density parameter. (JPRS)

**56685** (FRNC-TH–48) STUDY OF NUCLEAR REACTIONS INDUCED BY ALPHA PARTICLES WITH ENERGIES BETWEEN 70 AND 160 MeV IN VARIOUS LIGHT NUCLEI, PARTICULARLY ALUMINUM AND SILICON. POSSIBILITY OF A FISSION MECHANISM. Tirard, Michele (Paris Univ., Orsay (France). Faculte des Sciences). 1971. 101p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

Al and Si targets were bombarded with α particles with energies between 70 and 160 MeV. Measurements were made on the formation of some nearly stable nuclei and others deficient in neutrons ($^7$Be, $^{11}$C, $^{13}$N, $^{15}$O, $^{18}$F). At 160 MeV the cross sections for the formation of the highly neutron enriched nuclei $^9$Li, $^{16}$C and $^{17}$N, detected by their delayed neutron emission, were determined. In order to explain these results, the usual mechanisms involved in spallation reactions are considered. The simple case is envisaged, in which the compound nuclei formed ($^{31}$P or $^{32}$S) de-excite emitting a neutron, proton, deuteron, triton, $^3$He, or alpha particles, and leave at the end of the evaporation chain, a residual cold nucleus. This process was studied using a computer and the Monte Carlo method with the EVA 67 program. A comparison between the calculated results and the experimental results demonstrated that the formation of certain nuclei might be difficult to explain by the de-excitation by particle evaporation process; the fission mechanism is envisaged as the reaction process. Applications of this experimental study to activation analysis and astrophysics are presented. (France)

**56686** (JINR–P3-5875) SEARCH FOR THE (n,α) REACTION IN THE RESONANCES OF THE ZINC AND HAFNIUM ISOTOPES. Popov, Yu. P.; Semenov, V. G.; Florek, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). Jul 1971. 11p. (In Russian). Dep. NTIS (U. S. Sales Only).

The results of the search for the (n,α) reactions in the nuclei-targets $^{64}$Zn, $^{67}$Zn and $^{177}$Hf are presented. The α-decay is observed in the resonance states appearing in the capture of neutrons with the energies 281 and 2637 eV by $^{64}$Zn nuclei, with the energy 1548 eV by $^{67}$Zn nuclei and with the energies 1.09; 2.38; 5.89; 6.57; 8.87 eV by $^{177}$Hf nuclei. The α-widths ($\Gamma_\alpha$) of the mentioned levels are given. (auth)

**56687** (KFK–1397) INVESTIGATION OF THE DEFORMATION OF LIGHT NUCLEI WITH THE HELP OF SCATTERING OF 104-MeV ALPHA PARTICLES. Rebel, H. (Kernforschungszentrum, Karlsruhe (West Germany). Zyklotron-Laboratorium). Apr 1971. 78p. (In German). Dep. NTIS (U. S. Sales Only).

The differential cross sections for the elastic and inelastic scattering of 104-MeV α-particles from low-lying states of $^{20}$Ne, $^{22}$Ne, $^{24}$Mg, $^{26}$Mg and $^{28}$Si are measured. The experimental results are analyzed in terms of coupled channels on the basis of the rotational model. The method and formalism of the analysis are

described in detail. The sensitivity of the analyzing technique for magnitude and sign of possible hexadecapole deformation are studied. The results show a systematic trend of the $\beta_4$ deformation parameter through the region A = 20–28 and confirm the oblate shape of $^{28}$Si known from reorientation measurements. The $(\alpha,\alpha')$-scattering results are compared to results of other experimental and theoretical investigations. (auth)

**56688** (LYCEN–7104, S6,1-2) REACTIONS PERFORMED WITH POLARIZED PROTONS AT SACLAY. Thirion, J. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The experimental aspects of the reactions performed at Saclay with polarized protons are described (beams, injection, acceleration). The reactions actually studied or planned are mentioned. (France)

**56689** (RLO–1062-711) LOW ENERGY NUCLEAR RESEARCH. Final Report. Schecter, Larry (Oregon State Univ., Corvallis. Dept. of Physics). Jul 1971. Contract AT(45-1)-1062. 45p. Dep. NTIS.

Research progress in nuclear spectroscopy and nuclear interactions at Oregon State University for the contract period ending July 1971 is briefly reported. (J.W.R.)

**56690** (RT/FI–(70)47) METHOD OF ANALYSIS OF NEUTRON CAPTURE GAMMA-RAY SPECTRA. Fubini, A.; Napoli, A.; Prosperi, D.; Terrasi, F. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 19 Nov 1970. 28p. Dep. NTIS (U. S. Sales Only).

The method used to calibrate the neutron capture gamma-ray spectra of a Ge(Li) detector is described in detail. The procedure used to obtain from the gamma-ray energy a decay scheme is reported. The method is applied to the $^{35}$Cl(n, $\gamma$) reaction. (auth)

**56691** MEASUREMENT OF THE THERMAL NEUTRON CAPTURE CROSS SECTION AND RESONANCE CAPTURE CROSS SECTION OF $^{80}$Kr. Bradley, James Garrison. Minneapolis; Univ. of Minnesota (1970). 66p. University Microfilms Order No. 71-18,691.

Thesis.

The thermal neutron capture cross section and resonance capture cross section of krypton-80 were measured by mass spectroscopy methods. A tandem double focusing mass spectrometer of high abundance sensitivity was used to measure the $^{81}$Kr/$^{80}$Kr isotopic ratios produced in thermal neutron irradiations of about $10^{19}$ neutrons/cm$^2$. One krypton sample was irradiated uncovered and one sample was irradiated inside a cylindrical cadmium cover with 0.020 inch thick walls. The reactor flux reaching the sample was monitored during each irradiation with National Bureau of Standards aluminum-1% cobalt wire. The resulting cobalt-20 activities were determined by the Nuclear Science Group at the University of Missouri reactor facility used for the irradiations. Three measurements of the uncovered sample isotopic ratio yielded a mean value of $^{81}$Kr/$^{80}$Kr = $146.2 \times 10^{-6}$ with a range of 2% in the three measurements. Three measurements of the cadmium covered sample isotopic ratio yielded a mean value of $^{81}$Kr/$^{80}$Kr = $16.0 \times 10^{-6}$ with a range of 4% in the three measurements. From the spectrometer measurements and the flux monitor cobalt-60 activities, it is deduced that the 2200 m/s neutron cross section for $^{80}$Kr(n,$\gamma$)$^{81}$Kr is $g\sigma_0 = 11.5 \pm 0.6$ barns and $s_0/g = 5.04 \pm 0.40$ with respect to $\sigma_0 = 37.2$ barns and $s_0 = 1.77$ for cobalt. The 0.5 eV epicadmium resonance absorption integral for krypton-80 is deduced to be $56.6 \pm 4.5$ barns with respect to 75 barns for cobalt. (Diss. Abstr. Int., B)

**56692** PARTICLE–GAMMA ANGULAR CORRELATIONS IN THE $^{50}$Cr($^3$He,$\alpha\gamma$)$^{49}$Cr REACTION. Blumenthal, David Alan. Philadelphia; Univ. of Pennsylvania (1970). 116p. University Microfilms Order No. 71-19,204.

Thesis.

Alpha-gamma angular correlations have been measured in the $^{50}$Cr($^3$He,$\alpha\gamma$)$^{49}$Cr reaction to study excited levels in $^{49}$Cr. A $^{50}$Cr target of 200 $\mu$g/cm$^2$ was bombarded with 15 MeV $^3$He$^{++}$ ions from the University of Pennsylvania Tandem Accelerator. The emerging $\alpha$ particles were detected at 0° using a position sensitive detector located in the focal plane of a double focusing magnetic spectrometer. Coincident $\gamma$-rays were detected at four angles simultaneously using 7.6 cm × 10.2 cm NaI(Tl) crystals. The angular distributions of the $\alpha$ particles from the $^{50}$Cr($^3$He,$\alpha$)$^{49}$Cr reaction were measured using the University of Pennsylvania multi-angle magnetic spectrograph. l-values extracted from these measurements were used together with the alpha-gamma correlation measurements to determine the spins and parities of excited levels. The results are: 0.27 MeV $^1/_2^-$, 1.07 MeV ($^5/_2^-$, $^9/_2^-$), 1.57 MeV($^5/_2^-$,$^7/_2^-$,$^{11}/_2^-$), 1.71 MeV ($^1/_2^-$,$^3/_2^-$), 1.74 MeV $^3/_2^-$, 1.98 MeV $^3/_2^+$, 2.43 MeV $^5/_2^-$, 2.58 MeV $^1/_2^+$, 2.61 MeV $^3/_2^-$, 3.24 MeV $^5/_2^-$, 3.51 MeV ($^5/_2^-$,$^7/_2^-$), 3.93 MeV $^1/_2^-$, 4.76 MeV $^7/_2^-$, 6.43 MeV $^1/_2^+$, 6.47 MeV $^1/_2^+$, 6.76 MeV $^1/_2^+$. Branching ratios of the decay $\gamma$ radiations are presented along with multipole mixing ratios for the stronger transitions. (Diss. Abstr. Int., B)

**56693** K = $^3/_2^+$ ROTATIONAL BAND IN $^{45}$Ti. Blasi, P. (Max-Planck-Institut fuer Kernphysik, Heidelberg); Morando, M.; Maurenzig, P. R.; Taccetti, N. Lett. Nuovo Cim.; 2: No. 2, 63-7 (10 Jul 1971).

Internal conversion coefficients for some transitions in $^{45}$Ti were determined from a study of the $\gamma$ and conversion electron spectra following the $^{45}$Sc(p,n$\gamma$) reaction at proton energies of 3.5 to 5.5 MeV. Lifetimes and transition probabilities for the same levels were determined from a recoil distance study of the $^{31}$P($^{16}$O,pn$\gamma$) reaction at 34 and 36 MeV. The data support the existence of a K = $^3/_2^+$ rotational band in $^{45}$Ti. (J.W.R.)

**56694** ANALYSIS OF PROTON SCATTERING ON $^{32}$S. Berinde, A.; Neamu, I.; Vladuca, G. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 3, 341-8(1971).

The competition of the direct interaction and of the compound nucleus mechanism in the $p_0$ and $p_1$ angular distributions on $^{32}$S is analyzed in the energy range $E_p = 5.05$ to 14.00 MeV. The direct interaction contribution was calculated for elastic and inelastic distributions in terms of the optical model and DWBA, respectively. The compound nucleus component was calculated in terms of Hauser–Feshbach theory, with fluctuation correction included. All the disintegration channels of the compound nucleus were taken into account; at the energies of 11.00 and 14.00 MeV, the Gilbert–Cameron level density formula was also used. A good agreement between theory and experimental data was obtained using Perey's average optical parameters for a theoretical estimation of both mechanisms. (auth)

**56695** CALCULATION PROGRAM FOR DETERMINATION OF HALF-LIVES AND INTENSITIES OF TOTAL DECAY CURVES OF RADIOACTIVITY. Karlik, B. Oesterr. Akad. Wiss., Math.-Naturwiss. Kl., Anz.; No. 3, 1-7(1968). (In German).

A computer program in Fortran II-D for the IBM-1620 for the determination of the half-lives and intensity of total decay curves is described. The program is applicable to all decays with interferring reactions. The program was tested on half-life determination of $^{79m}$Br, $^{89m}$Y, $^{197m}$Au, $^{20}$F, and $^{11}$Be. (J.S.R.)

**56696** MEASUREMENT OF SOME CAPTURE CROSS SECTIONS FOR FAST NEUTRONS. Karlik, B. Oesterr. Akad. Wiss., Math.-Naturwiss. Kl., Anz.; No. 10, 1-6(1968). (In German).

At a neutron energy of $2.9 \pm 0.2$ MeV, the following (n,$\gamma$) effective cross sections were determined: $^{26}$Mg (n,$\gamma$) = $0.21 \pm 0.03$ mb; $^{27}$Al (n,$\gamma$) = $0.30 \pm 0.05$ mb; $^{37}$Cl (n,$\gamma$) = $0.59 \pm 0.09$ mb; $^{51}$V (n,$\gamma$) = $1.4 \pm 0.2$ mb; $^{55}$Mn (n,$\gamma$) = $2.2 \pm 0.2$ mb; $^{65}$Cu (n,$\gamma$) = $6.2 \pm 0.8$ mb; $^{68}$Zn (n,$\gamma$) = $2.6 \pm 0.4$ mb; $^{75}$As (n,$\gamma$) = $14.0 \pm 1.4$ mb; $^{115}$In (n,$\gamma$) = $68 \pm 11$ mb; $^{127}$I (n,$\gamma$) = $42.8 \pm 5.0$ mb; $^{138}$Ba (n,$\gamma$) = $3.0 \pm 0.4$ mb. All effective cross section measurements were made by the activation method relative to the cross section $\sigma^{115}$/n(n,n'$\gamma$)$^{115}$m/n = 360 mb. Various materials were investigated on their suitability as deuterium self-targets for the production of fast neutrons. (tr-auth)

**56697** DECAY OF $^{84}$Rb AND THE FLUORESCENCE YIELD OF KRYPTON. Gehrling, Volker; Hammer, J. Wolfgang; Hoffmann, Klaus-Werner (Univ., Stuttgart). Z. Phys.; 246: No. 5, 376-82(1971). (In German).

The electron-capture decay and the positron decay of $^{84}$Rb were investigated using NaI(Tl) detectors and a Ge(Li) detector. Measurements of all intensities and of some informative double and triple coincidences were performed. From coincidence measurements between K X radiation and the subsequent $\gamma$ radiation the K-fluorescence yield of krypton was found to be $\omega_K = 0.653 \pm 0.004$. Consideration of former measurements [Grotheer et al., Z. Phys., 225: 293(1969)] indicates a continuous behaviour of $\omega_K$ (Z) for Z = 36, 37, and 38 within an uncertainty of 1%. Branching ratios of the decay of $^{84}$Rb were obtained. The half-life of $^{84}$Rb was determined to be $T_{\frac{1}{2}} = (34.5 \pm 0.2)$d. (auth)

**56698** ENERGY LEVELS OF $^{79}$Br AND $^{81}$Br. Barnard, E.; de Villiers, J. A. M.; Coetzee, N.; Reitmann, D.; van der Merwe, P. (Atomic Energy Board, Pretoria). Z. Phys.; 246: No. 5, 424-30(1971).

XUM

The low-lying energy-level and decay schemes of the stable bromine isotopes were studied by observing the γ rays from the (n,n'γ) reactions in a natural bromine sample with the aid of a Ge(Li) detector. A pulsed neutron source and time-of-flight methods were used to reduce background due to neutron events in the detector. Most of the γ rays observed could be assigned to transitions in either $^{79}$Br or $^{81}$Br. In addition to those levels previously known from γ-decay or Coulomb-excitation experiments, several new levels were excited in each isotope. (auth)

**56699** NUCLEON DENSITY DISTRIBUTION IN NUCLEI $^{54,56}$Fe. Shilyaev, B. A.; Shlyakhov, N. A.; Golavnya, B. Ya.; (and others) (Physical-Technical Inst., Kazan). Yadern. Fiz.; 13: No. 5, 918-22(May 1971). (In Russian).

Angular distributions of elastically scattered protons with energy of 9.6 MeV were measured on $^{54}$Fe and $^{56}$Fe, and were analyzed by means of the modified optical model. Values of the r.m.s. radii of the nuclear matter distribution are obtained from the analysis of the data. (auth)

**56700** DETERMINATION OF ANGULAR CORRELATIONS AND MEAN LIFETIMES IN $^{57}$Co. Dayras, R.; Toulemonde, M.; Cujec, B.; (and others) (Laval Univ., Quebec). Nucl. Phys.; A173: No. 1, 49-72(1971). (In French).

The reaction $^{54}$Fe(α,p)$^{57}$Co at 9.86, 10.02 and 10.40 MeV incident energies was used to measure the proton-gamma angular correlations in the Litherland–Ferguson geometry and to measure the mean lifetimes by the Doppler-shift attenuation method. The mixing ratios have been obtained for levels at 1.897, 2.134, 2.311 and 2.879 MeV. The mean lifetimes have been determined for 14 levels up to 2.9 MeV. The spins have been unambiguously assigned to all levels up to 2.311 MeV and to the 2.879($\frac{3}{2}^-$) and 2.981($\frac{1}{2}^+$) MeV levels. The partial radiative widths have been determined for all levels, except 1.505 MeV, up to 2.311 MeV. (auth)

**56701** ELASTIC SCATTERING OF 60 TO 120 MeV ELECTRONS FROM $^{46,48,50}$Ti. Romberg, E. F. (Univ. of Maryland, College Park); Wall, N. S.; Blum, D.; Lightbody, J. W. Jr.; Penner, S. Nucl. Phys.; A173: No. 1, 124-8(1971).

The elastic electron scattering from the isotopes of $^{46,48,50}$Ti has been measured at an angle of 127.5°. The ratios of the cross sections were analyzed with a partial-wave analysis for a Fermi-shaped charge distribution and the parameter variations were deduced. Some consequences of these results are discussed. (auth)

**56702** THRESHOLD PHOTONEUTRON CROSS SECTIONS FOR MEDIUM AND HEAVY NUCLEI. Baglan, Robert Joseph. Berkeley, Calif.; Univ. of California (1970). 142p. University Microfilms Order No. 71-15,710.

Thesis.

The following (γ,n) cross sections were measured with very high resolution in the energy range from threshold to ~1 MeV above threshold: $^{25}$Mg, $^{52,53}$Cr, $^{56,57}$Fe, and $^{206,207,208}$Pb. Many individual compound nucleus resonances were resolved and area analyzed to give $\Gamma_{\gamma 0}$, from which El-strength functions, $\langle\Gamma_{\gamma 0}/D\rangle$, were obtained. In addition, the cross sections were investigated for the occurrence of three distinct nuclear phenomenon: (1) nonresonant neutron capture; (2) doorway states; and (3) analog states. Nonresonant neutron-capture cross sections of 0.5 mb/sr for $^{207}$Pb, and 4.2 μb/sr for $^{56}$Fe were determined by measuring the asymmetry of resonances. In $^{207}$Pb, additional evidence, in the form of an envelope of γ-ray widths, was found for the previously reported $\frac{1}{2}^+$ doorway state at 500 keV. A correlation analysis for the γ-ray and neutron widths of the fine structure of the doorway state determined its ground-state γ-ray width to be 36.5 eV. Evidence was found for a $\frac{3}{2}^+$ doorway state near 125 keV in $^{207}$Pb. The analogs of the ground and first excited states of $^{25}$Na were seen in $^{25}$Mg and the following lower limits were determined for their $\Gamma_n$'s: 0.25 and 1.8 eV, respectively. Five analog states of $^{56}$Mn may have been excited in $^{56}$Fe, and lower limits for their $\Gamma_{\gamma 0}$'s were determined. (Diss. Abstr. Int., B)

**56703** SEARCH FOR GAMMA-RAY EMISSION FROM UNBOUND PARTICLE STATES IN $^{87}$K AND THE DECAY SCHEME OF $^{87}$Kr TO LEVELS IN $^{87}$Rb. Shihab-Eldin, Adnan Ahmed. Berkeley, Calif.; Univ. of California (1970). 246p. University Microfilms Order No. 71-15,883.

Thesis.

A chemical system was built for the rapid separation of bromine isotopes from fission products. Bromine sources with varying $^{86}$Br/$^{87}$Br yield ratios were prepared and studied with a Ge(Li) γ-ray spectrometer. The stripping of the resulting composite γ-ray spectra to $^{86}$Br and $^{87}$Br yield ratios was partially successful. Out of a total of 316 γ-ray lines found in these composite γ-ray spectra, 13 γ-ray lines had energies above 5.5 MeV, which is the neutron binding energy in $^{87}$Kr. Three of these high-energy γ-ray lines were tentatively assigned to the decay of $^{87}$Br. The significance of the presence of such high-energy γ-ray transitions in $^{87}$Kr in competition with delayed neutron competition is discussed and compared to the predictions of a "semi-theoretical" approach to delayed neutron emission. As a preliminary work, the gamma-ray transitions following β-decay of 78-minute $^{87}$Kr have been studied with Ge(Li) spectrometers. Thirty-three transitions between levels in $^{87}$Rb have been observed and γ–γ coincidence relations have been obtained for the prominent lines. A level scheme is presented that incorporates 28 of these transitions between thirteen levels in $^{87}$Rb. The level scheme is qualitatively interpreted according to the predictions of a simple weak-coupling model for excited states in $^{87}$Rb. Also, the results from an exact diagonalization of the seniority-one pairing force Hamiltonian matrix are compared with the proposed experimental single-particle energy levels in $^{87}$Rb and $^{89}$Y. (Diss. Abstr. Int., B)

**56704** STUDY OF THE ISOTOPES OF NEON WITH PROTON REACTIONS AT 40 MeV. Madland, David George. Minneapolis; Univ. of Minnesota (1970). 180p. University Microfilms Order No. 71-18,772.

Thesis.

The (p,p), (p,p'), and (p,d) reactions on the isotopes of neon have been studied with 40-MeV protons produced by the University of Minnesota Linear Accelerator. Differential scattering cross sections are presented for the elastic scattering by $^{20}$Ne and $^{22}$Ne, for the inelastic scattering by $^{20}$Ne, $^{21}$Ne, and $^{22}$Ne, and for the (p,d) reaction leading to states in $^{19}$Ne, $^{20}$Ne, and $^{21}$Ne. The elastic data has been analyzed in terms of the regular optical-model. The resultant optical potentials are utilized in both DWBA and coupled-channels analysis of the inelastic data, and in a DWBA analysis of the (p,d) reactions. Particular emphasis has been placed on the inelastic transitions within the ground state rotational bands of $^{20}$Ne and $^{22}$Ne. Permanent quadrupole ($\beta_2$) and hexadecapole ($\beta_4$) deformations in the intrinsic ground states are found necessary to reproduce the data in a collective form factor, coupled-channels, analysis. The data is sensitive to the signs as well as the magnitudes of the deformations. The values of the deformations are: $\beta_2(^{20}\text{Ne}) = 0.42 \pm 0.5$, $\beta_4(^{20}\text{Ne}) = 0.22 \pm 0.5$, $\beta_2(^{22}\text{Ne}) = 0.44 \pm .05$, and $\beta_4(^{22}\text{Ne}) = 0.08 \pm .05$, all with positive signs. The present determinations together with others in the (2s-1d) shell indicates the $\beta_2$ and $\beta_4$ deformations to be changing in a fashion not dissimilar to those in the heavy deformed region. A DWBA analysis is found inadequate because of the existence of multiple step processes and because the collective form factor is treated only to first order in the deformations. Spectroscopic factors have been extracted from a DWBA analysis of the observed transitions in the (p,d) reactions. The experimental spectroscopic factors are compared with those obtained from a Nilsson type calculation in the strong coupling collective model. The calculations utilized a deformed Woods–Saxon potential characterized by quadrupole deformations obtained from the inelastic scattering analysis. The results have shown that the measured spectroscopic factors are not inconsistent with the measured quadrupole deformations. Further interpretations are limited by the uncertainties associated with DWBA extracted spectroscopic factors. (Diss. Abstr. Int., B)

**56705** PHOTON ASYMMETRY FOR RADIATIVE μ CAPTURE IN CALCIUM. DiLella, L.; Hammerman, I.; Rosenstein, L. M. (Columbia Univ., New York). Phys. Rev. Lett.; 27: No. 12, 830-3(20 Sep 1971).

The photon asymmetry parameter for radiative μ capture in $^{40}$Ca was measured for photon energies from 57 to 75 MeV. The result obtained seems inconsistent with predictions based on the V–A theory. (auth)

**56706** SEPARATION ENERGY FOR SOME INTERMEDIATE-MASS NUCLEI IN THE (p,2p) REACTIONS AT 600 MeV. Landaud, G.; Yonnet, J.; Kullander, S.; (and others) (CERN, Geneva). Nucl. Phys.; A173: No. 2, 337-56(1971). (In French).

The separation-energy spectra obtained in a 600-MeV (p,2p) experiment are presented for the nuclei $^{12}$C, $^{28}$Si, $^{40}$Ca, $^{51}$V, and $^{90}$Zr. The structure above 25 MeV separation energy is assumed to originate from the 1p and 1s shells. The momentum distributions of the residual nuclei are used to separate a peak characteristic for the 1s shell from the rest of the spectrum. This peak lies at 35 MeV for $^{12}$C and at around 50 MeV for the other nuclei. (auth)

**56707** SCATTERING OF 14-MeV NEUTRONS BY IRON. Gurtovoi, M. E.; Kadkin, E. P.; Kukhlenko, A. C.; (and others). At. Energ. (USSR); 30: No. 5, 455-6(May 1971). (In Russian).

Inelastic neutron scattering to the excited state of $^{56}$Fe at 0.85 MeV was studied using a time-of-flight spectrometer with pulsed neutrons, generated by the reaction T(d,n)$^4$He. The data obtained

XUM

show that a vibrating model satisfactorily describes the cross sections of elastic and inelastic neutron scattering by $^{56}$Fe nuclei. A deformation parameter $\beta_2$ was estimated to be 0.21 ± 0.03, in agreement with the results of other investigators. (K.S.W.)

**56708** INTERNAL-CONVERSION COEFFICIENTS IN THE DECAY OF $^{83m}$Kr. Ruby, S. L.; Clark, R. G.; Glendenin, L. E. (Argonne National Lab., Ill.). Phys. Lett.; 36A: No. 4, 321-2 (13 Sep 1971).

The radiations from the decay of $^{83m}$Kr were measured with a high-resolution Si(Li) detector. The results are $T_{\frac{1}{2}}(^{83m}Kr)$ = 1.83 ± 0.02h, $E_{32}$ = 32.16 ± 0.02 keV, $E_9$ = 9.40 ± 0.02 keV, $\alpha_T(9)$ = 17.5 ± 1.4, and $\alpha_K(32)$ = 454 ± 15. (auth)

**56709** INVESTIGATION OF THE $^{27}$Al(d,p)$^{28}$Al REACTION AT $E_d$ = 12 MeV. Carola, T. P. G.; Van der Baan, J. G. (Rijksuniversteit, Utrecht). Nucl. Phys.; A173: No. 2, 414-26(1971).

The $^{27}$Al(d,p)$^{28}$Al reaction was investigated with a split-pole magnetic spectrograph at a bombarding energy of 12 MeV. The angular distributions of 41 proton groups were measured. One new state was found in $^{28}$Al at an excitation energy of 3762 ± 5 keV. Absolute spectroscopic factors were determined by DWBA analysis. Some new $l_n$ values are reported. The results are discussed within the framework of the shell model, and comparison is made with recent many-particle calculations. (auth)

**56710** DECAY OF $^{58}$Mn. Dyer, N. C.; Hamilton, J. H. (Vanderbilt Univ., Nashville). Nucl. Phys.; A173: No. 2, 393-400 (1971).

Gamma-ray singles spectra in the decay of $^{58}$Mn to $^{58}$Fe were measured with a Ge(Li) detector. Beta groups of 3.8 ± 0.1 (63.5%/decay) and 5.9 ± 0.1 (11.5%/decay) MeV were measured with a plastic scintillator. Sixteen γ transitions were observed, 10 for the first time. Twelve were fitted into levels (in keV) at 810.73, $2^+$; 1674.71, $2^+$; 2134.0, $3^+$; 2600.7; 3399.7; 3442.9; and 3634, $2^+$. The half-life was found to be 65.3 ± 0.7 s. (auth)

**56711** (p,2p) REACTIONS AT 600 MeV AND THE DISTORTED-WAVE IMPULSE APPROXIMATION. Kullander, S.; Lemeilleur, F.; Renberg, P. U.; (and others) (CERN, Geneva). Nucl. Phys.; A173: No. 2, 357-82(1971).

The summed-energy spectra obtained in a 600-MeV (p,2p) experiment on $^{12}$C, $^{28}$Si, and $^{40}$Ca were analyzed so that a large amount of the information from a nonsymmetric coplanar experiment is utilized. The experimental cross section is integrated over a selected interval in the summed-energy spectrum and presented as a function of the polar angle, $\theta_R$, and of the momentum, $p_R$, of the residual nucleus. By comparing the distributions of the experimental cross sections to $p_R$ and $\theta_R$ distributions calculated in the distorted-wave impulse approximation (DWIA), information is obtained on distortion effects and on rms radii for the various shell-model states contained in the summed-energy spectra. The DWIA calculations reproduce quite well the experimental distributions for the outer shells, while for the 1s shell in $^{28}$Si and $^{40}$Ca values of the proton occupation numbers that are too large are found. (auth)

**56712** ANGULAR CORRELATION STUDIES IN $^{32}$S($^3$He,pγ)$^{34}$Cl. DeLuca, P. M.; Lawson, J. C.; Berners, E. D.; Chagnon, P. R. (Univ. of Notre Dame, Ind.). Nucl. Phys.; A173: No. 2, 307-20 (1971).

The levels of $^{34}$Cl were investigated by means of the $^{32}$S($^3$He,pγ) reaction at 8 to 9 MeV bombarding energy. Ge(Li) detectors were employed to determine these excitation energies: 146.4 ± 0.3, 461.0 ± 0.1, 665.6 ± 0.1, 1230.3 ± 0.2, 1887.7 ± 0.9, 2158.6 ± 0.4, 2181.5 ± 0.8, 2376.5 ± 0.5, and 2721.7 ± 0.8 keV. In an axially symmetric geometry, p−γ angular correlations were measured for most levels below 3.2 MeV in excitation. All previous spin assignments are confirmed, and new assignments of J = 1 to the 2581 keV and 3126 keV levels and J = 2 to the 2722 keV levels are made. From the p−γ coincidence data, branching ratios are deduced. Multipole mixing ratios, determined from the correlation analysis, are compared with those predicted by a recent calculation based upon the shell model. (auth)

**56713** $^{28}$Si($^6$He,2p) AND $^{12}$C($^6$He,2p) REACTIONS AT 40 MeV. Stupin, D. M. (Univ. of Colorado, Boulder); Ristinen, R. A.; Schwandt, P. Nucl. Phys.; A173: No. 2, 286-306(1971).

Kinematically complete two-detector coincidence experiments were performed in which the angular distributions of the cross sections and the proton−proton relative energy distributions of the triple differential cross sections $d^3\sigma/d\Omega_1 d\Omega_2 dT_1$ were measured for $^{12}$C($^3$He,2p) and $^{28}$Si($^3$He,2p) reactions. Five states in $^{29}$Si and two states in $^{13}$C were studied at an incident $^3$He energy of 40 MeV. Angular distributions for the ($^3$He,2p) cross sections are compared to corresponding measurements for ($^3$He,d) reactions and to angular distributions predicted by distorted-wave calculations. The shapes of the ($^3$He,2p) and ($^3$He,d) distributions are similar, and distorted-wave calculations that use deuteron-like optical potentials for the 2p cluster are reasonable representations of the ($^3$He,2p) data. Enhancements in the measured cross sections due to final-state proton−proton interactions were also observed. (auth)

**56714** IS THE FIRST EXCITED $0^+$ STATE IN $^{44}$Ca of 6p-2h CHARACTER? Fortune, H. T.; Powers, J. R. (Univ. of Pennsylvania, Philadelphia). Phys. Rev., C; 4: No. 3, 776-8(Sep 1971).

The $^{40}$Ar($^6$Li,d) reaction has been used to investigate the structure of the low-lying states of $^{44}$Ca. Cross sections are small (a few μb/sr) but angular-distribution shapes are consistent with a direct process. The results suggest considerable mixing between low-lying four-particle and six-particle−two-hole states in $^{44}$Ca. (auth)

**56715** $^{31}$P($^3$He,pγ)$^{33}$S AND $^{39}$K($^3$He,pγ)$^{41}$Ca REACTIONS AND THE γ DECAY OF ANALOG STATES IN $^{33}$S AND $^{41}$Ca. Knoepfle, K. T. (Max-Planck-Institut fuer Kernphysik, Heidelberg. Kernforschungsanlage, Juelich, Ger.); Rogge, M.; Mayer-Boericke, C.; (and others). Phys. Rev., C; 4: No. 3, 818-35(Sep 1971).

Proton-γ-ray coincidence measurements have been made on the reactions $^{31}$P($^3$He,pγ)$^{33}$S and $^{39}$K($^3$He,pγ)$^{41}$Ca at incident $^3$He energies of 12 and 13 MeV. The protons were detected at 0° to the beam direction, thereby preferentially selecting L = 0 transfers of neutron−proton pairs. A Ge(Li) detector at 90° detected the γ rays with good energy resolution. Angular distributions for the $^{31}$P($^3$He,p)$^{33}$S reaction were measured with a magnetic spectrograph. These, together with previous results on the $^{39}$K($^3$He,p)$^{41}$Ca reaction, gave precise information on the intensities of the states excited, as well as their energies. The main purpose of the experiments was to measure the γ decay of the lowest-lying isobaric analog states in $^{33}$S and $^{41}$Ca. The analog state in $^{33}$S was found to decay primarily (85%) to the 842-keV level and secondarily (15%) to the ground state. The analog state in $^{41}$Ca decays in a more complex fashion to several states. The strongest transition (55%) is to the 4091-keV state. γ-ray decay schemes for several other low-lying even-parity levels in $^{33}$S and $^{41}$Ca were also measured. The observation that the 4091-keV level of $^{41}$Ca decays (34%) to the $\frac{7}{2}^-$ ground state and (58%) to the $\frac{3}{2}^+$ level at 2009 keV suggests a $\frac{5}{2}^+$ assignment. The implications of the measurements are discussed, particularly with reference to the structure of low-lying two-particle−one-hole states in these nuclei. (auth)

**56716** SPIN ASSIGNMENTS IN $^{20}$F. Fortune, H. T.; Garrett, J. D.; Powers, J. R.; Middleton, R. (Univ. of Pennsylvania, Philadelphia). Phys. Rev., C; 4: No. 3, 850-4(Sep 1971).

Comparison of the results of the $^{18}$O($^3$He,p), $^{19}$F(d,p), and $^{22}$Ne(d,α) reactions leads to an assignment of $J^\pi = 1^+$ for the state at $E_x$ = 3.489 MeV in $^{20}$F. These results, together with previous information, lead to the identification of the 3.531-MeV state as the only $0^+$ state predicted below 6 MeV. Recent information for the low-lying levels of $^{20}$F is reviewed and compared with predictions of recent shell-model calculations. (auth)

**56717** REACTIONS OF $^{20}$Ne WITH 14.3-MeV NEUTRONS. Kardonsky, Stanley; Finston, Harmon L.; Williams, Evan T. (Brooklyn Coll.). Phys. Rev., C; 4: No. 3, 846-50(Sep 1971).

Energy levels in $^{17}$O and $^{20}$F have been observed in the $^{20}$Ne(n,α) and $^{20}$Ne(n,p) reactions using a gridded ionization chamber. In the reaction $^{20}$Ne(n,α)$^{17}$O, cross sections to the ground state and four excited states in $^{17}$O at 0.83, 3.18, 3.90, and 4.63 MeV were determined to be 6.6 ± 2.5, 1.0 ± 0.4, 1.5 ± 0.4, 2.0 ± 0.4, and 1.3 ± 0.3 mb, respectively. The total cross section for the $^{20}$Ne(n,α) reaction is 12.4 ± 4 mb. The $^{20}$Ne(n,2α)$^{13}$C reaction was observed and the Q value and cross section to the ground state of $^{13}$C were found to be −7.00 ± 0.02 MeV and 41.8 ± 8.1 mb, respectively. (auth)

**56718** $^{40}$Ar(n,α)$^{37}$S REACTION AT 14.4 MeV. Kardonsky, Stanley; Finston, Harmon L.; Williams, Evan T. (Brooklyn Coll.). Contract AT(30-1)-3417. Phys. Rev., C; 4: No. 3, 840-6(Sep 1971).

A gridded ionization chamber was used to detect charged particles produced when $^{40}$Ar was bombarded with 14.4-MeV neutrons. The energies of the α particles so produced yielded levels in $^{37}$S of 0.59 ± 0.10, 1.39 ± 0.09, 2.20 ± 0.05, and 2.83 ± 0.09 MeV. The Q value for the $^{40}$Ar(n,α)$^{37}$S reaction was determined to be −2.41 MeV. Cross sections calculated for the reaction to the ground state and the four excited states are 2.1 ± 0.4, 0.3 ± 0.1, 3.1 ± 0.6, 3.5 ± 0.7, and approximately 0.3 mb. The total cross section for the $^{40}$Ar(n,α)$^{37}$S reaction was determined to be 9.4 ± 1.0 mb. Comparisons between the results herein reported, other work, and theoretical predictions are made. (auth)

XUM

**56719** $^{86}Kr(d,n)^{87}Rb^{A}$ THRESHOLD CUSP AND THE SYSTEMATIC APPEARANCE OF CHARGE-EXCHANGE CUSPS. Coker, W. R.; Hollas, C. L.; Riley, P. J.; Sen, S. (Univ. of Texas, Austin). Phys. Rev., C; 4: No. 3, 836-9(Sep 1971).

The $^{86}Kr(d,p)^{87}Kr$ reaction leading to three strong low-lying states in $^{87}Kr$($d_{\frac{5}{2}}$ g.s., 0.53 MeV $s_{\frac{1}{2}}$, and 1.47 MeV $d_{\frac{3}{2}}$) has been studied as a function of energy from 5.0 to 10.5 MeV at 100, 120, 140, and 160° laboratory angles. The strong, unusually shaped threshold cusp observed in the $^{86}Kr(d,p)^{87}Kr$($d_{\frac{5}{2}}$ g.s.) excitation curve near 7.56 MeV, threshold of the $^{86}Kr(d,n)^{87}Rb^{A}$ ($d_{\frac{5}{2}}$ isobaric analog resonance) reaction, is discussed in terms of its position in a systematic study and classification of such threshold effects, using simple quantitative physical considerations. The $^{86}Kr$ data are fit with coupled-channel Born-approximation calculations. (auth)

**56720** SELF-CONSISTENT STUDY OF EVEN Zn AND Ge ISOTOPES. Chandra, Harish; Rustgi, M. L. (State Univ. of New York, Buffalo). Phys. Rev., C; 4: No. 3, 874-86(Sep 1971).

Employing the central Yukawa and Kuo-Brown renormalized matrix elements for the Hamada-Johnston interaction, a self-consistent study of even Zn and Ge isotopes is made within the framework of Hartree-Fock (HF), Hartree-Fock-Bogoliubov (HFB), and spherical BCS approximations. It is found that both the interactions yield either oblate or spherical shapes for these isotopes except for $^{60}Zn$ for which a prolate shape is favored. Isotopes having 20 neutrons outside the $^{40}Ca$ core favor spherical BCS shapes. The agreement of the calculated binding energy per particle with the experimental ones is quite good. It is pointed out that for Zn isotopes, both the interactions do not exhibit the saturation in binding energy with the increase in neutron numbers which is observed experimentally. It is also found that for some of the solutions the HFB multipole moments acquire larger values as compared to the HF ones, though the cranking model moment of inertia is always decreased. The pickup strengths for neutrons and protons are also compared for the minimum energy solutions. (auth)

**56721** $^{40}Ca(^{20}Ne,^{16}O)^{44}Ti$ REACTION. Siemssen, R. H. (Argonne National Lab., Ill.); Halbert, M. L.; Saltmarsh, M.; van der Woude, A. Phys. Rev., C; 4: No. 3, 1004-5(Sep 1971).

The reaction $^{40}Ca(^{20}Ne,^{16}O)^{44}Ti$ has been studied at 63.0 and 73.7 MeV. The reaction is found to populate the same final states as the reaction $^{40}Ca(^{16}O,^{12}C)^{44}Ti$ and with comparable cross sections. (auth)

**56722** DECAY OF $^{85}Y$ (5 hr), $^{85}Y$ (2.68 hr), AND $^{85}Sr$. MULTIPLE THREE-PARTICLE LEVELS IN $^{85}Sr$. Arl't, R.; Zaitseva, N. G.; Kratsik, B.; (and others). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 48-55(Jan 1971). (In Russian).

Decay schemes of the isomers $^{85}Y$ and $^{85}Sr^{*}$ were studied using Ge(Li) spectrometers with sensitive volumes of 6.3 and 10 $cm^3$ and resolution of 3.5 to 5 keV for $^{60}Co$ $\gamma$ transitions. A 4096-channel analyzer was used for the amplitude analysis. In addition to the $^{85}Y$ source there were present also isotopes of $^{84}Y$(39 min), $^{86}Y$(14.6 hr), $^{87}Y$(80 hr), $^{87}Y^{*}$(12.5 hr) and $^{88}Y$(105 days). Energies and intensities of gamma rays from decay of $^{85}Y$($T_{\frac{1}{2}}$ = 2.68 hr) and $^{85}Sr^{*}$($T_{\frac{1}{2}}$ = 70 min) are tabulated and data on observed levels are correlated with published data. (R.V.J.)

**56723** DECAY OF $^{89}Zr$ AND $^{87}Zr$. Arl't, R.; Zaitseva, N. G.; Kratsik, B.; (and others). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 56-64(Jan 1971). (In Russian).

Studies were made on the decay of the $^{89}Zr$($T_{\frac{1}{2}}$ = 4.18 min) and $^{89}Zr^{*}$($T_{\frac{1}{2}}$ = 78.4 hr) isomers using $\gamma$-spectrometers with Ge(Li) detectors. The data obtained added to and verified the schemes of excited levels for $^{89}Y$. A decay scheme for $^{87}Zr$ was also constructed using the same methods. (C.E.S.)

**56724** STUDIES OF THE $^{14}N(d,p)^{15}N$, $^{28}Si(d,p)^{29}Si$, AND $^{32}S(d,p)^{33}S$ REACTIONS WITH POLARIZED DEUTERONS. Egoshin, V. G.; Igolkin, V. V.; Saltykov, L. S.; (and others) (Inst. of Physics, Moscow). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 205-6(Jan 1971). (In Russian).

The vector analyzing power was measured in the stripping reactions $^{14}N(d,p)^{15}N$, $^{28}Si(d,p)^{29}Si$, and $^{32}S(d,p)^{33}S$. The polarized deuteron beam was produced by elastic scattering of the primary 13.8-MeV deuteron beam by carbon at $\theta = 25°$. At such an angle scattered deuterons possess a considerable vector polarization. Results of the measurements are tabulated. Previously, it was observed that in (d,p) reactions with polarized deuterons, the vector analyzing power is connected with $j_n$. In the case of the reaction $^{14}N(d,p)^{15}N$, the angular and total momenta of the captured neutron are equal to 1 and $\frac{1}{2}$, respectively. However, the shape of the measured vector analyzing power was different from that observed for the reactions with $l_n = 1$ and $j_n = \frac{1}{2}$ with intermediate nuclei. For the reactions $^{28}Si(d,p)^{29}Si$ (the 1.28-MeV level) and $^{32}S(d,p)^{33}S$ neutron capture was observed with angular momentum $l_n = 2$ and total angular momentum $j_n = \frac{3}{2}$. The values $P^{D}$ for $^{28}Si(d,p)^{29}Si$ and $^{32}S(d,p)^{33}S$ in the angular range corresponding to the principal maximum of the proton angular distribution had negative values; this result is in agreement with the regularities observed in other intermediate-weight nuclei. (R.V.J.)

**56725** LIMITATIONS IMPOSED BY THE DISTORTED-WAVE METHOD ON THE SELECTION OF OPTICAL POTENTIALS OF DEUTERON INTERACTIONS WITH NUCLEI. Terenetskii, K. O.; Tokarevskii, V. V. (Inst. of Physics, Kiev). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 100-6(Jan 1971). (In Russian).

Properties of the optical potential for interactions of 13.6-MeV deuterons with $^{48}Ti$ and $^{50,52}Cr$ isotopes were studied by means of detailed analysis of experimental data. Elastic scattering of deuterons was analyzed using the optical model, and the optical potentials obtained were used for calculating the angular distributions of the protons from the stripping reactions $^{48}Ti(d,p)^{49}$ and $^{50,52}Cr(d,p)^{51,53}Cr$. An attempt was made to limit the number of optical-potential parameters varied by fixing certain processes without disturbing the theoretical and experimental correlation. The results of the combined analysis of the elastic scattering of deuterons and of the (d,p) stripping reactions showed that it was possible to limit the number of free optical-potential parameters varied for deuterons; consideration of spin-orbit interactions in the deuteron optical parameters improved the description of elastic scattering differential cross sections and did not interfere with calculations of stripping reaction cross sections. Calculations of cross sections for stripping reactions by the distorted-wave method were independent of optical potential with parameters $V \approx 30$ and 65 MeV. (R.V.J.)

**56726** INELASTIC SCATTERING OF $\alpha$ PARTICLES BY Zn ISOTOPES. Alekseev, V. V.; Gonchar, V. G.; Polyanskii, V. N.; (and others). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 107-11 (Jan 1971). (In Russian).

Inelastic scattering of $\alpha$ particles was analyzed as a means for obtaining spectroscopic information on collective nuclear levels. Inelastic scattering of $\alpha$ particles by the even-parity isotopes $^{64,66,70}Zn$ was studied in order to determine the possibility of using the distorted-wave method for imposing certain limitations on the parameters of optical potentials and finding out the influence of the selection of parameters on the reliability of the calculation of B(El)'s within the framework of the distorted-wave method. (R.V.J.)

**56727** INELASTIC PROTON SCATTERING IN INTERMEDIATE-WEIGHT NUCLEI. Pasechnik, M. V.; Prokopenko, V. S.; Tokarevskii, V. V ; (and others). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 81-5(Jan 1971). (In Russian).

Differential cross sections for inelastic scattering of 6.9-MeV protons by $^{50,52}Cr$, $^{56}Fe$, $^{58,60}Ni$, and $^{64,66}Zn$ were measured; subsequently, the results were analyzed by the distorted-wave method. Data obtained were correlated with the values obtained by other experiments (for Coulomb excitation and inelastic scattering of electrons, deuterons, and $\alpha$ particles). Tabulated data on excited states of nuclei and their respective integrated cross sections for proton scattering showed that the processes during the formation of the compound nuclei play an important role during inelastic scattering of 6.9-MeV protons by $^{52}Cr$, $^{60}Ni$, $^{64}Zn$, and $^{66}Zr$; however, their role is less significant during scattering by $^{50}Cr$, $^{56}Fe$, and $^{58}Ni$. (R.V.J.)

**56728** EXAMINATION OF COUPLED-CHANNEL CALCULATIONS FOR THE REACTION $^{24}Mg(d,p)^{25}Mg$. Hofmann, A.; Vogler, F. (Univ., Erlangen, Ger.). Lett. Nuovo Cim.; 2: No. 4, 133-4(24 Jul 1971).

The cross sections for the $^{24}Mg(d,p)$ reaction leading to the $^{25}Mg$ ground and first-excited states were measured at a deuteron energy of 10 MeV. The protons were detected in a multicounter arrangement using surface barrier detectors. The measured cross sections were compared with coupled channel calculations. (J.W.R.)

**56729** GAMMA-RAY SPECTRA FOLLOWING THE CAPTURE OF 14 MeV NEUTRONS BY $^{59}Co$, $^{93}Nb$, AND $^{103}Rh$. Rigaud, F. (CEN de Bordeaux, Gradignan, France); Irigaray, J. L.; Petit, G. Y.; Longo, G.; Saporetti, F. Nucl. Phys.; A173: No. 3, 551-60(1971).

Gamma-ray spectra from the radiative capture of 14.06 MeV neutrons in $^{59}Co$, $^{93}Nb$ and $^{103}Rh$ are measured by means of a time-of-flight spectrometer. The $(n,\gamma)$ cross sections, deduced from the integration of measured spectra, are very similar for

XUM

the three nuclei considered. The value of the $^{103}Rh(n,\gamma)$ cross section obtained here is lower by about a factor of 20 than that previously obtained from activation analysis. Comparisons of the measured cross sections with calculations based on the direct and collective capture models, including the contribution of interference between them, show a satisfactory agreement with the present experimental data. (auth)

**56730** INVESTIGATION OF THE $^{33}S(d,p)^{34}S$ REACTION. Van der Baan, J. G.; Sikora, B. R. (Rijksuniversiteit, Utrecht). Nucl. Phys.; A173: No. 3, 456-64(1971).

Angular distributions have been measured of proton groups, corresponding to $^{34}S$ states up to $E_x = 6.63$ MeV excited in the reaction $^{33}S(d,p)^{34}S$ at $E_d = 12$ MeV, with the use of a split-pole magnetic spectrograph. The ground state Q-value has been measured as $Q_0 = 9195 \pm 6$ keV. A DWBA analysis yields $l_n$ values and spectroscopic factors. The results of many-particle shell-model calculations for $^{34}S$ positive-parity are found to agree well with experiment. (auth)

**56731** QUADRUPOLE VIBRATIONS IN THE NICKEL REGION: STRUCTURE OF ODD-MASS Cu ISOTOPES. Gomez, Jose M. G. (Univ., Valencia). Nucl. Phys.; A173: No. 3, 537-50(1971).

The low-lying levels of the odd-mass copper isotopes are described as a proton in the $2p_{\frac{3}{2}}$, $1f_{\frac{5}{2}}$ and $2p_{\frac{1}{2}}$ orbits coupled to a quadrupole vibrator. The calculated and observed excitation energies, spectroscopic factors, static moments, B(E2) values, mixing ratios and branching ratios of $\gamma$-rays are discussed in detail. Some spin and parity assignments are proposed on the basis of a reasonable agreement of theory and experiments. (auth)

**56732** IN-BEAM STUDY OF PROMPT $\gamma$-RAYS EMITTED IN THE $^{66}Zn(p,n\gamma)^{66}Ga$ REACTION. Najam, M. R.; Davidson, W. F.; Zuk, W. M.; Carlson, L. E.; Awal, M. A. (Australian National Univ., Canberra). Nucl. Phys.; A173: No. 3, 577-94(1971).

The level structure of the nucleus $^{66}Ga$ has been studied by means of the $^{66}Zn(p,n\gamma)^{66}Ga$ reaction ($Q = -5.957$ MeV). Levels in $^{66}Ga$ up to 730 keV in excitation were selectively populated by varying the proton bombarding energy in the range of 6.00 to 6.82 MeV. The $\gamma$-rays associated with these levels were identified both in singles spectra, from a study of their threshold behavior, and in $\gamma\gamma$-coincidence measurements. Altogether 24 levels in $^{66}Ga$ were identified, of which 10 are known from previous studies of the $\beta^+$ decay of $^{66}Ge$ to $^{66}Ga$, and the remaining 14 are reported here for the first time. Gamma-ray branching ratios for these new levels have been determined and a decay scheme comprising 68 $\gamma$-transitions is presented. Angular distributions of de-excitation $\gamma$-rays have been measured at proton bombarding energies close to threshold for the levels studied. Comparison of these distributions with the theoretical predictions of the compound nucleus statistical model has led to spin and parity assignments for the levels studied. (auth)

**56733** (AECL-3912) PHYSICS DIVISION PROGRESS REPORT, JANUARY 1–MARCH 31, 1971. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). 105p. (PR-P-89). Dep. NTIS (U. S. Sales Only). AECL $2.00.

Research progress by the Physics Division at Chalk River Nuclear Laboratories in the period January 1 through March 31, 1971 is briefly reported. (J.W.R.)

**56734** (BNL-tr-446) MEASUREMENT OF THE RATIO OF THE RADIATIVE CAPTURE TO FISSION CROSS SECTIONS ($\alpha$) FOR $^{239}Pu$ IN THE NEUTRON ENERGY RANGE 0.1 TO 30 keV. Kurov, M. A.; Ryabov, Yu. V.; Sik, So Don; Chikov, N.; Kononov, V. N.; Poletaev, E. D.; Prokopets, Yu. S.; Stavisskii, Yu. Ya. Translated by S. J. Amoretty (Brookhaven National Lab., Upton, N. Y.), from At. Energ. (USSR); 30: No. 4, 362-9(1971). 16p. Dep. NTIS

Because of the unsatisfactory state of the experimental data on $\alpha(E)$, this quantity was measured for plutonium-239 in the energy range 0.1 to 30 keV. (J.F.P.)

**56735** (FEI-202) PROBABILITY OF ELECTROMAGNETIC QUADRUPOLE TRANSITIONS IN THE PHENOMENOLOGICAL NUCLEAR THEORY. Rabotnov, N. S.; Seregin, A. A. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut). 1970. 11p. (In Russian). Dep. NTIS (U. S. Sales Only).

Within the framework of a phenomenological collective model of a nucleus with a potential dependent on the internal variables $\beta$ and $\gamma$ and corresponding to nuclei of the deformed transition region, the probability of an electric quadrupole transition between $2^+$ states, and from a $2^+$ state to a $0^+$ state is calculated. In comparison with theories that use an adiabatic approximate separation of variables, the probability depends nonmonotonically on the stiffness parameters of the potential, in particular for the binding energy of the second and third $2^+$ states. A sharp minimum is observed in the probability of the $2_2^+ \rightarrow 0_0^+$ transition. This may be the source of the anomalously low value of this probability for some medium-weight nuclei. (tr-auth)

**56736** (FEI-233) ANGULAR ANISOTROPY AND THE EFFECTS OF NUCLEON PAIRING IN $^{239}Pu$ FISSION BY NEUTRONS. Shpak, D. L.; Ostapenko, Yu. B.; Smirenkin, G. N. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut). 1970. 25p. (In Russian). Dep. NTIS (U. S. Sales Only).

The angular anisotropy of $^{239}Pu$ fission (n,f) was studied as a function of neutron energy in the range 0.05 to 7.20 MeV using glass detectors. The considerable effect of pair correlations of nucleons of the superconducting type on the spectrum of transition states of the $^{240}Pu$ nucleus was shown. The critical energy of the phase transition $E_{kr}^* = 12.0 \pm 2.5$ MeV and the energy slot $2\Delta_0^f = 1.7 \pm 0.2$ MeV were determined. Several conclusions relative to the structure of the fission barrier are deduced. (JPRS)

**56737** (JINR-E4-5877) $\Delta N = \pm 2$ MIXING IN ODD-N DEFORMED NUCLEI. Gareev, F. A.; Fedotov, S. I.; Solov'ev, V. G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 20p. Dep. NTIS (U. S. Sales Only).

The $\Delta N = \pm 2$ mixing in a number of the Sm, Gd and Dy isotopes is studied in the framework of the model taking into account the superconducting pairing correlations and the quasiparticle-phonon interaction and using the Saxon–Woods single-particle energies and wave functions. It is shown that at deformations $\beta_{20} = 0.30 - 0.33$ and $\beta_{40} = 0.04$ there occurs a strong mixing of the following pairs of states: $\frac{1}{2}^+$ [400], $\frac{1}{2}^+$ [600] and $\frac{3}{2}^+$ [402], $\frac{3}{2}^+$ [651]. The results of calculations of the energies of these states and the wave function N = 4 and N = 6 components are in rather good agreement with the corresponding experimental data. It is shown that the quasiparticle-phonon interactions lead to an essential increase of the $\Delta\beta_{20}$ interval in which the $\Delta N = \pm 2$ mixing occurs as compared with the single-particle model. (auth)

**56738** (JINR-P-15-5959) EXCITATION OF THE SPONTANEOUSLY FISSIONING ISOMERIC STATES OF $^{239}Pu$ AND $^{243}Am$ IN INELASTIC $\gamma$-QUANTUM SCATTERING. Gangrskii, Yu. P.; Markov, B. N.; Kharisov, I. F.; Tsipenyuk, Yu. M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1971. 7p. (In Russian). Dep. NTIS (U. S. Sales Only).

The production of the spontaneously fissioning isomers of $^{239}Pu$ and $^{243}Am$ in inelastic $\gamma$-quantum scattering was investigated. Based on the isomeric excitation function the possibilities of the isomeric level population are analyzed. (auth)

**56739** (JINR-P1-6006) PROBABILITY OF THE $(\mu^-,\nu)$ PROCESS ON $^{139}La$ AND $^{208}Pb$ NUCLEI. Bunatyan, G. G.; Wilhelmova, V. S.; Evseev, V. S.; Nikityuk, L. N.; Pokrovskii, V. N.; Rybakov, V. N.; Yutlandov, I. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1971. 9p. (In Russian). Dep. NTIS (U. S. Sales Only).

With the finite Fermi-system methods proved to be successful in calculating the total muon capture rates in nuclei, the comparison of the theoretical and experimental values of certain partial capture rates, e.g., those of the $(\mu^-,\nu)$ process probabilities, appeared to be appropriate for a further investigation of the suitability of these methods. For the $^{27}Al$, $^{28}Si$, $^{51}V$ and $^{56}Fe$ nuclei the theoretical $W_{\mu^-,\nu}$ estimates gave qualitative account for the experimental values while the quantitative agreement turned out to be worse than for the total capture rates. This discrepancy supposed being smaller for heavier nuclei, the $W_{\mu^-,\nu}$ value is now determined for the $^{139}La$ and $^{208}Pb$ nuclei. The determinations were carried out by the activation technique, the experimental layout and conditions described earlier. The activities of the $(\mu^-,\nu)$ reaction products were measured on scintillation $\gamma$-spectrometers, the $^{139}Ba$ activity determined after the radiochemical separation while that of $^{208}Tl$ measured without separation. The main results are presented. The targets and the experimental results are indicated. The value of the probability of muon cap-

XUM

ture without subsequent neutron emission for natural Pb (evaluated from previous data) is given. The reasons for the evident disagreement are unclear; for the $^{27}Al$, $^{28}Si$ and $^{56}Fe$ nuclei the agreement was quite satisfactory. The experimental and theoretical total capture rates are quoted. The theoretical $W_{\mu^-,\nu}$ estimates, $\Lambda'$ denoting the muon capture rate on the levels placed below the threshold of particle emission, are presented. It may be worth noting that in the case of $^{208}Pb$ the dipole transitions yield is negligible and the major yield results from the quadrupole transitions due to axial and induced pseudoscalar interactions: $\Lambda_2^{GT} = 9.64 \cdot 10^5$ sec$^{-1}$ while total $\Lambda' = 12.7 \cdot 10^5$ sec$^{-1}$. (auth)

**56740** (JINR–P7–5884) ELASTIC SCATTERING OF HEAVY IONS BY NUCLEI. Karamyan, S. A.; Oganesyan, Yu. Ts.; Penionzhkevich, Yu. E.; Pustyinik, B. I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1971. 18p. (In Russian). Dep. NTIS (U. S. Sales Only).

Elastic scattering of $^{12}C$, $^{14}N$, $^{16}O$, $^{20,22}Ne$, $^{40}Ar$ ions by $^{108}Ag$, $^{141}Pr$, $^{159}Tb$, $^{165}Ho$, $^{197}Au$, $^{209}Bi$, $^{236}V$ nuclei in various combinations is studied in a wide range of energies of incident particles. The phase shift analysis of the angular distributions was performed and values $\langle l^2 \rangle$, $l_{cp}$ and $l_{max}$ were obtained. (auth)

**56741** (KFKI–71–35) REMARKS ON THE EXISTENCE OF RETARDED NEUTRONS IN FISSION. Jeki, L.; Kluge, Gy.; Lajtai, A. (Magyar Tudomanyos Akademia Kozponti Fizikai Kutato Intezete, Budapest). [1971]. 8p. Dep. NTIS (U. S. Sales Only).

New measurements on "retarded" fission neutrons are critically discussed. (auth)

**56742** (LYCEN–7101) INSTITUTE OF NUCLEAR PHYSICS ANNUAL PROGRESS REPORT, JANUARY 1971. (Lyon Univ. (France). Institut de Physique Nucleaire). 144p. (In French). Dep. NTIS (U. S. Sales Only).

The annual progress report of the Lyon Nuclear Physics Institute (Lycen) for 1970 is presented. The fields covered are: nuclear structures and spectrometry, nuclear reactions, and radiochemistry (theoretical and experimental studies), and nuclear instrumentation. A list of the published work is given. (France)

**56743** (NP–18966) EXPERIMENTAL INVESTIGATION OF FISSION. Boldeman, J. W. ([Australian Atomic Energy Commission Research Establishment, Lucas Heights]). May 1970. 196p. Dep. NTIS (U. S. Sales Only).

Thesis. Submitted to Wollongong Univ. Coll., Australia.

Accurate measurements have been made of the average number of prompt neutrons, $\bar{\nu}_p$, emitted per fission for thermal neutron fission of $^{233}U$, $^{235}U$, $^{239}Pu$ and $^{241}Pu$ and spontaneous fission of $^{240}Pu$ and $^{242}Pu$. The large liquid scintillator method has been used and sources of error in this method have been closely examined. In addition, precise measurements have been made of the probability distribution of neutron emission for each of the six cases above and the spontaneous fission of $^{252}Cf$. The data have been compared with the neutron emission distribution calculated from fragment kinetic energy data. It is noted that the existing discrepancy between experiment and calculation may be due to gamma ray competition. The variation of $\bar{\nu}_p$ with compound excitation has been determined for neutron fission of $^{233}U$ and $^{235}U$. The $\bar{\nu}_p(E_n)$ dependence was found to be linear and the claim of fine structure in some previous experiments has not been substantiated. The variation of the correlated parameter, the average total kinetic energy of the fission fragments ($\bar{E}_K$) with compound excitation for neutron fission of $^{235}U$ has also been examined. $\bar{E}_K$ was found to be constant in the range measured (0–1 MeV) and the lack of structure in $\bar{E}_K(E_n)$ confirmed the linear data for $\bar{\nu}_p(E_n)$. From an evaluation of the present and existing $\bar{\nu}_p$ data for $^{233}U$, $^{235}U$ and $^{239}Pu$, it is observed that the $\bar{\nu}_p(E_n)$ dependence, although linear, is characterized by a change in slope at the pairing energy. The nature of the dependence has been explained in terms of the double humped fission barrier with the adiabatic assumption of weak coupling of the collective saddle point energy to the nuclear degrees of freedom at scission. The change in the character of the $\bar{\nu}_p(E_n)$ dependence between $^{233}U$ and $^{235}U$ is associated with the change in the relative heights of the two humps of the fission barrier. It is noted that gamma ray competition has a slight effect on the $\bar{\nu}_p(E_n)$ dependence. Measurements have been made of the average neutron emission from fission fragments of specific mass for values of the total fragment kinetic energy in the thermal neutron fission of $^{235}U$. The well known sawtooth curve has been observed and the data confirm the most recent previous investigation. (auth) (Australia)

**56744** (NP-tr–1936) DELAYED FISSION OF SOME NEUTRON-DEFICIENT ATOMIC NUCLEI. Skobelev, N. K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). Translation of report JINR–P7–5584. 8p.

This item was previously abstracted from the original language and appeared in NSA as 25: 20371. (auth)

**56745** (ORNL–4691) TOTAL GAMMA-RAY ENERGY SPECTRUM ABOVE 1 MeV FROM NEUTRON INTERACTIONS IN $^{235}U$ AND $^{238}U$. Booth, R. S.; Muckenthaler, F. J. (Oak Ridge National Lab., Tenn.). Aug 1971. Contract W-7405-eng-26. 34p. Dep. NTIS.

The total gamma-ray energy spectra above 1 MeV from neutron interactions in $^{235}U$ and $^{238}U$ were measured to test the accuracy of model calculations and to improve the accuracy of shielding calculations by reducing the uncertainty in the source term. The general structure of the gamma-ray energy spectrum above 1 MeV from fission was independent of the isotope where the fission occurred and the energy of the neutron that caused the fission. This total fission spectrum was approximated to an accuracy of 20% by a simple empirical expression which, between 1 and 5.12 MeV, is twice the spectrum from prompt fission. The gamma-ray energy spectrum from all neutron interactions in $^{235}U$ was dominated by the total fission spectrum. The photon spectrum obtained as a result of reactor neutrons striking $^{235}U$ had the same shape as the proton spectrum obtained from the same neutron beam filtered with cadmium. When the reactor spectrum was filtered with $^{10}B$, a photon spectrum due to interactions other than fission was evident for photon energies between 1 and 3 MeV. The measured photon spectrum from thermal neutron interactions in $^{235}U$ was compatible with previous estimates and measurements. The photon energy spectra from $^{238}U$ were isolated from the measurements and presented on an absolute basis for three situations: (1) capture of thermal neutrons, (2) interactions with a 1/E spectrum of intermediate energy neutrons, and (3) interactions with a fission spectrum of neutrons. The first two spectra were used to determine parameters in model calculations of differential yield data which were compared to measured differential yield data. The relative photon spectra from neutron interactions in $^{233}U$ and $^{239}Pu$ were measured in preliminary experiments. The shapes of these spectra were quite similar to spectra obtained with $^{235}U$. (auth)

**56746** (ORNL–4707) MEASUREMENTS OF THE NEUTRON FISSION AND ABSORPTION CROSS SECTIONS OF $^{239}Pu$ OVER THE ENERGY REGION 0.02 eV TO 30 keV, PART II. Gwin, R.; Weston, L. W.; de Saussure, G.; Ingle, R. W.; Todd, J. H.; Gillespie, F. E.; Hockenbury, R. W.; Block, R. C. (Oak Ridge National Lab., Tenn.). Jul 1971. Contract W-7405-eng-26. 43p. Dep. NTIS.

The neutron absorption and fission cross sections for $^{239}Pu$ were measured simultaneously over the neutron energy range from 0.02 eV to 30 keV. These cross sections were measured using an ionization chamber containing $^{239}Pu$. The differential cross sections derived from these measurements are presented along with a multilevel analysis of the data up to 100 eV. A re-evaluation of data obtained using a metal foil of $^{239}Pu$ was also made. Average values of the neutron capture and fission cross sections are presented for $^{239}Pu$ as obtained using the ionization chamber as well as with the metal foil. A detailed comparison of the present data is made with the results of the ENDF/B evaluation for $^{239}Pu$ (material 1104). The neutron cross sections presented supersede the results previously reported. (auth)

**56747** (ORNL-tr–2531) STUDY OF THE $\gamma$ RADIATION ACCOMPANYING THE DECAY OF Ms Th(II) ($^{228}Ac$). Dalmasso, Josette; Maria, Henriette. Translated by David C. West (Oak Ridge National Lab., Tenn.), from Compt. Rend., Ser. B; 272 905-8(1971). 8p. Dep. NTIS.

The $\gamma$ radiation of $^{228}Ra$ and its daughters was studied using a coaxial Ge(Li) detector of very high resolution. The intensities of more than 156 transitions were determined; 32 transitions were observed for the first time. (auth)

**56748** (ORO–2408-45) PROGRESS REPORT, APRIL 1, 1971–JUNE 30, 1971. (North Carolina Univ., Chapel Hill). Contract AT(40-1)-2408. 10p. Dep. NTIS.

The activities of the atomic and nuclear physics groups at the University of North Carolina in the period April 1 to June 30, 1971, are briefly outlined. A list of publications is included. (J.W.R.)

**56749** (RCN–142) FISSION OF ORIENTED NUCLEI BY LOW ENERGY NEUTRONS. Kuiken, R. (Reactor Centrum Nederland,

XUM

Petten). Jun 1971. 171p. Dep. NTIS (U. S. Sales Only). Thesis. Submitted to Leiden Rijksuniversiteit (Netherlands).

The angular distribution of $\alpha$-particles and of fission fragments originating from neutron capture in heavy nuclei, which are aligned at low temperatures by the method of hyperfine interaction, are reported. The results of the measurements with the target nucleus $^{233}U$ with neutrons in the energy range from 0 to 2000 eV can be interpreted with the Bohr-theory of transition states at the deformation barrier for nuclear fission. The relatively invariant behavior of the anisotropy in the angular distribution of fission fragments as a function of neutron energy indicates that the available fission channels are strongly mixed. For neutron resonances with spin and parity $2^+$ 2 to 3 channels are open and for $3^+$ resonances 1 to 2. The group structure in the subthreshold fission cross section of $^{237}Np$ has been explained by the double-humped deformation barrier proposed by Strutinsky. The implication of this interpretation is that all the resonances in one group have the same spin. The resonances in the first group at 40 eV agree consistently with the fission channel $(2^+,2)$. The groups at higher neutron energies up to 2000 eV correspond mainly with the channels $(2^+,2)$ and $(3^+,2)$. (auth)

**56750** (RLO-1759-25) FISSION STUDIES ON ELEMENTS BELOW POLONIUM. Progress Report, July 1, 1970–June 30, 1971. Neuzil, Edward F. (Western Washington State Coll., Bellingham). Contract AT(45-1)-1759. 15p. Dep. NTIS.

Research on fission reactions producing the same compound nucleus at the same excitation energy but induced by different particles and tantalum fission at 65 and 41 MeV is summarized. (J.F.P.)

**56751** (RT/FI-(70)55) SPIN-DEPENDENCE OF LEVEL DENSITY IN $^{178}Hf$ AND $^{180}Hf$ BY RESONANCE NEUTRON CAPTURE EXPERIMENTS. Coceva, C.; Corvi, F.; Giacobbe, P.; Stefanon, M. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 23 Dec 1970. 19p. Dep. NTIS (U. S. Sales Only).

Measurement of gamma-rays from s-wave resonance neutron capture allowed the spin assignment to 97 resonances of $^{177}Hf$ below 300 eV and to 44 resonances of $^{179}Hf$ below 200 eV. Values of the spin cut-off parameter were deduced. (auth)

From second international conference on nuclear data for reactors; Helsinki, Finland (15 Jun 1970).

An abstract of this paper, prepared from the original language, appeared as NSA 25: 15097.

**56755** GAMMA X-RAY ANGULAR CORRELATION. Gelberg, A.; Piticu, I. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 2, 153-6(1971).

The directional correlation between X-rays following electron conversion and gamma rays in $^{191}Ir$ has been measured. The X rays were detected by a high-resolution lithium drifted silicon detector, so as to separate photons originating from the $L_{III}(2p_{\frac{3}{2}})$ subshell. An asymmetry of $-(6.2 \pm 1.8)\%$ has been found, thus confirming Dolginov's theory. (auth)

**56756** NUCLEAR STRUCTURE EFFECTS IN THE INTERNAL CONVERSION OF SOME MAGNETIC DIPOLE TRANSITIONS IN DEFORMED NUCLEI. Protop, C. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 3, 367-9(1971).

Penetration parameters for the effects of nuclear structure on the internal conversion of M1 transitions were extracted from experimental data on L-subshell internal conversion ratios for some heavy deformed nuclei. Results are presented for transitions in $^{153}Eu$, $^{165}Ho$, $^{175}Lu$, $^{187}Re$, and $^{249}Bk$. It was found that nuclear structure effects may be significant even for enhanced transitions when the penetration matrix element is large. (J.W.R.)

**56757** YIELDS AND CHARGE DISPERSION OF ANTIMONY PRODUCED IN URANIUM FISSION BY MEDIUM-ENERGY PROTONS. Miller, Larry Day. Montreal; McGill Univ. (1970). National Library of Canada, Ottawa. Thesis.

The independent formation cross sections of $^{120}Sb^m$, $^{124}Sb$, $^{125}Sb$, $^{126}Sb$, $^{127}Sb$, and $^{128}Sb^g$ and the cumulative cross sections of $^{125}Sb$, $^{127}Sb$, $^{129}Sb$, and $^{131}Sb$ produced in the fission of uranium by protons of energies 30–160 MeV have been measured radiochemically. Excitation functions were constructed whose maxima decrease monotonically with proton energy when compared to the increasing neutron-to-proton ratio of the products. Charge-dispersion curves were constructed at each energy from the cross sections as a function of neutron-to-proton ratio. These curves were observed to broaden and the most probable charge moved toward beta-stability with increased bombarding energy. The magnitude of these widths compared to those determined by other workers suggests a mass region dependence. The formation cross sections of fifteen fission products ranging in mass from A = 95 to A = 144 were determined by gamma-ray spectroscopy at a bombarding energy of 75 MeV without previous chemical separation. (Diss. Abstr. Int., B)

**56758** NUCLEAR STRUCTURE OF $^{92}Nb$. Bagne, Farideh. Philadelphia; Univ. of Pennsylvania (1970). 190p. University

XUM

Microfilms Order No. 71-19,201.
Thesis.

The study of the reactions $^{90}Zr(^3He,p)^{92}Nb$ and $^{94}Mo(d,\alpha)^{92}Nb$ was undertaken to clarify the structure of $^{92}Nb$ by confirming the properties of the known levels, identifying new states, and establishing quantum numbers and obtaining information on the wave functions of several levels. The reactions $^{90}Zr(^3He,p)^{92}Nb$ and $^{94}Mo(d,\alpha)^{92}Nb$ have been studied respectively with 16.5 and 18 MeV $^3He^{++}$ ions and 10 MeV deuterons from the University of Pennsylvania Tandem Van de Graaff accelerator. The $(^3He,p)$ reaction products were analyzed with a multiangle magnetic spectrograph. The deuterons in the $(d,\alpha)$ reaction were detected in a scattering chamber using solid state detectors. The new states up to 4.5 MeV were identified in the above reactions and the proton angular distributions for several states were measured and compared with the DWBA predictions codes "DWUC2" and "DWUCK". L-values were extracted, and spins, parities and dominant configurations were suggested. Shell model calculations based on pure configuration assumption were used to obtain the energy values for the coupling of a proton–neutron pair, in the (sgd) shell, outside the "closed" core of 90. The energies, L-values and possible spins and parities of the levels of $^{92}Nb$ found in this study are: 0.00 MeV (L = 6, $J^\pi = 7^+$); 0.136 (L = 2, $J^\pi = 2^+$); 0.224 (L = 1 + 3, $J^\pi = 2^+$); 0.283 (L = 2 + 4, $J^\pi = 3^+$); 0.350; 0.386; 0.492* (L = 4 + 6); 1.080 (L = 0 + 2, $J^\pi = 1^+$); 1.362; 1.488 (L = 0 + 2, $J^\pi = 1^+$); 1.615; 1.647; 1.792 (L = 2, $J^\pi = 2^+$); (1.90); 2.001 (L = 0, $J^\pi = (0,1)^+$); 2.209; 2.270; 2.355; (2.51); 2.602 (L = 2, $J^\pi = (2,3)^+$); 2.698; 2.770; 2.81; 2.895; (3.00); 3.030; 3.106 (L = 0, $J^\pi = (0,1)^+$); 3.276 (L = 0 + 2, $J^\pi = 1^+$); 3.375 (L = 0 + 2, $J^\pi = 1^+$); 3.475 (L = 0 + 2, $J^\pi = 1^+$); 3.536, 3.550 (L = 0 + 2, $J^\pi = 1^+$); 3.753; 3.818; 3.884; 4.07; 4.45; 4.58. (Diss. Abstr. Int., B)

**56759** STUDY OF $^{107}Cd$ EXCITED LEVELS. Rivier, Janine; Moret, Roger (Univ., Grenoble, France). Compt. Rend., Ser. B; 272: No. 21, 1215-7(24 May 1971). (In French).

The study of the $^{107}Indium \rightarrow {}^{107}Cd$ decay allowed the determination of 41 excited levels of cadmium 107 between 0 and 3 MeV. (France)

**56760** ELECTROMAGNETIC TRANSITIONS IN $^{190}Pt$. Husson, Jean-Pierre (Paris Univ., Orsay, France); Macias-Marques, Maria-Ines; Dionisio, Jose Sant'Ana; Vieu, Charles. Compt. Rend., Ser. B; 272: No. 20, 1189-92(17 May 1971). (In French).

The spectra of the internal conversion electrons of some electromagnetic transitions associated with the $^{190}Au \rightarrow {}^{190}Pt$ transmutation, are analyzed with a $\pi\sqrt{2}$ double focusing spectrometer. (France)

**56761** $^{139}Sm$, A NEW NUCLIDE OF RELEVANCE FOR THE SYSTEMATICS OF THE N = 77 ISOMERS. van Klinken, J.; Goering, S.; Habs, D.; (and others) (Kernforschungszentrum, Karlsruhe, Ger. Univ., Heidelberg). Z. Phys.; 246: No. 5, 369-75(1971).

The ground state and an isomeric state of $^{139}Sm$ were identified with $t_{1/2}^{m} = 9.5 \pm 1.0$ s and $t_{1/2}^{g} = 2.6 \pm 0.3$ min. The isomeric decay scheme is presented. It extends the chain of isomers with N = 77. The distance between the $d_{5/2}$ and $h_{11/2}$ levels reaches a maximum for Z = 60. This maximum is much more pronounced than expected from previous theoretical considerations and from systematic trends in the N = 81 and 79 chains. (auth)

**56762** LEVEL SCHEME OF $^{177}Lu$ IN THE REACTION $(n,\gamma)$. Manfrass, P. (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.); Prade, H.; Beitinis, M. R.; (and others). Nucl. Phys.; A172: No. 2, 298-322(1971). (In German).

The level scheme of $^{177}Lu$ has been studied in the $(n,\gamma)$ reaction up to excitation energies of about 2.2 MeV. The singles $\gamma$-ray spectrum and $\gamma\gamma$ coincidences have been measured using Ge(Li) detectors, and conversion electrons have been measured up to 2.2 MeV with a $\beta$-spectrograph. Many levels above 1.2 MeV were found to be excited directly from the capture state at 7070.8 keV. The de-excitation of these levels to lower rotational bands was investigated. The positions of the Nilsson orbitals $1/2^-[541]$, $1/2^-[523]$ and the $\gamma$-vibrational state $(K_0 - 2)$ associated with the $1/2^+[404]$ state are discussed. The rotational bands of the states $1/2^+[404]$, $9/2^-[514]$, $5/2^+[402]$ and $1/2^+[411]$ are discussed in terms of a rotational formula. The quantities $Q_0$, g and $(g_K - g_R)^2/Q_0^2$ have been deduced. (auth)

**56763** NON-NORMAL PARITY STATES OF $^{209}Bi$ AND $^{207}Pb$. Arita, K.; Horie, H. (Tokyo Inst. of Tech.). Nucl. Phys.; A173: No. 1, 97-123(1971).

The low-lying nonnormal parity states of $^{209}Bi$ and $^{207}Pb$ are studied by means of the shell model, assuming 1h-2p and 2h-1p configurations, respectively. The observed energy spectra are well reproduced. The wave functions obtained are analysed in comparison with those defined in the weak-coupling model and existence of the octupole multiplet and the mixing with other states are discussed in detail. The conditions for the existence of the weak-coupling states are also discussed. (auth)

**56764** PROTON DIFFERENTIAL ELASTIC SCATTERING CROSS SECTIONS FOR THE EVEN ISOTOPES OF TIN AT 30.4 MeV. Hardacre, A. G.; Turner, J. F.; Kerr, J. C.; (and others) (Atomic Energy Research Establishment, Harwell, Eng.). Nucl. Phys.; A173: No. 2, 436-48(1971).

Differential cross sections for the elastic scattering of 30.4-MeV protons were measured for the isotopes $^{112}Sn$, $^{114}Sn$, $^{116}Sn$, $^{118}Sn$, $^{122}Sn$, and $^{124}Sn$. With an experimental angular resolution of 0.94° (FWHM) and relative error assignments mostly in the range 1 to 2.5%, results were obtained over the angular range 6° to 88° in 2° intervals, and 90° to 144° in 4° intervals. These measurements are intended as an extension to existing data that already incorporate a similar measurement for $^{120}Sn$. (auth)

**56765** ISOMERIC CROSS-SECTION RATIOS ANALYSIS OF THE $^{134}Ba(\alpha,n)^{137}Ce$ REACTION IN THE SUPERCONDUCTIVITY MODEL. Ribansky, I.; Oblozinsky, P. (Inst. of Physics, Bratislava). Nucl. Phys.; A173: No. 2, 427-35(1971).

The isomeric cross-section ratios of the $^{134}Ba(\alpha,n)^{137}Ce$ reaction at $\alpha$-particle energies between 15 and 28 MeV are analyzed in the statistical-model theory of nuclear reactions by using the superconductivity model of the level density. The results are compared with the experimental data of Swanson and Porile [Nucl. Phys., A144: 344, 355(1970)]. The direct-process contribution is estimated to be ≈7% well above the $(\alpha,2n)$ threshold. Conventional odd-even corrections are found to be inadequate to reproduce the experimental data. (auth)

**56766** SPECTROSCOPY OF $^{93,95}Tc$ BY MEANS OF $^{92,94}Mo(d,n)$. Bommer, J.; Fuchs, H.; Grabisch, K.; Kluge, H.; Roeschert, G. (Hahn-Meitner-Institut fuer Kernforschung, Berlin). Nucl. Phys.; A173: No. 2, 383-92(1971).

The reactions $^{92,94}Mo(d,n)$ were investigated with the time-of-flight method at 6.25 and 7.0 MeV bombarding energy. Ten levels in $^{93}Tc$ and 16 levels in $^{95}Tc$ were observed. Excitation energies and angular distributions were obtained. Analysis with DWBA yielded l values and transition strengths. Spin and parity of three levels in $^{93}Tc$ and ten levels in $^{95}Tc$ are found to be $1/2^+$ because they are populated by l = 0 transfer. Shell-model orbit occupation probabilities of the target ground states are derived by means of sum rules. (auth)

**56767** RADIOACTIVE DECAY OF $^{168}Ho$ AND $^{169}Ho$. Haustein, P. E.; Tucker, A. B. (Ames Lab., Iowa). Nucl. Phys.; A173: No. 2, 321-36(1971).

Gamma rays accompanying the $\beta$ decay of $^{168}Ho$ (3.3 min) and $^{169}Ho$ (4.8 min) were investigated using Ge(Li) detectors. Sources were prepared by the reactions $^{170}Er(\gamma,np)^{168}Ho$ and $^{170}Er(\gamma,p)^{169}Ho$ from targets of isotopically enriched $^{170}Er_2O_3$ and from erbium metal of natural isotopic distribution. Energies and relative intensities are reported for 9 $\gamma$-ray transitions in $^{168}Ho$ decay and 23 transitions in $^{169}Ho$ decay. The decay of $^{168}Ho$ populates primarily the $2^+$, $3^+$, and $4^+$ members of the K = 2, $\gamma$-vibrational band of $^{168}Er$. The spin and parity of doubly odd $^{168}Ho$ are deduced to be $3^+$, in agreement with the theory of Gallagher and Moszkowski. The decay of the $^{169}Ho$ ground state, assigned to the $7/2^-(523)$ Nilsson state, occurs primarily to the first two members of the $5/2^-(523)$ rotational band in $^{169}Er$. The $\gamma$-ray decay pattern to $1/2^-(521)$, $5/2^-(512)$, and $7/2^+(633)$ bands is analyzed. (auth)

**56768** PARITY NONCONSERVATION IN HEAVY NUCLEI AND THE STRUCTURE OF WEAK-INTERACTION HAMILTONIANS. Eman, B.; Tadic, D. (Inst. Rudjer Boskovic, Zagreb. Univ., Zagreb). Phys. Rev., C; 4: No. 3, 661-72(Sep 1971).

Circular $\gamma$ polarization in heavy nuclei ($^{181}Ta$, $^{175}Lu$) has been calculated using the two-body parity-nonconserving potential deduced on the basis of several weak-interaction Hamiltonians. Gauge invariance was elucidated by the Feynman-diagram analysis. The relative contributions from various nuclear single-particle states have been analyzed in detail. Short-range correlations have been approximately taken into account. Our calculation is compared with earlier calculations. According to the calculations, the Cabibbo conventional weak-Hamiltonian model seems to disagree with the $^{181}Ta$ experiment. Other models allowing for extra neutron currents, such as d'Espagnat and the Lee model, might agree with experimental results. This conclusion depends

on the sign of the theoretical result, which cannot be fixed with absolute certainty. The Oakes model seems to give absolute values which are too large. (auth)

**56769** QUANTITATIVE STUDIES OF NUCLEAR STRUCTURE THROUGH ISOBARIC ANALOG RESONANCES. Darmodjo, S.; Alders, R. D.; Martin, D. G.; (and others) (Univ. of Texas, Austin). Phys. Rev., C; 4: No. 3, 672-83(Sep 1971).

Isobaric analog resonances (IAR) observed in the elastic scattering of protons from $^{208}$Pb, $^{138}$Ba, $^{124}$Sn, and $^{120}$Sn are analyzed in the framework of the shell-model theory of reactions. Parametrization of the energy-averaged S matrix elements given by the shell-model theory is discussed, and the dependence of the spectroscopic factors upon the various optical-model parameters is exhibited. The resonance mixing phases for most of the IAR analyzed here cannot be distinguished from zero. Damping of the single-particle wave functions arising from the nonlocality of the optical potentials is consistently incorporated. The nonlocality length of 0.85 F employed in this analysis leads to an attenuation of the single-particle wave functions by about 15% inside the nucleus. Neutron spectroscopic factors obtained here compare favorably with corresponding results from the study of (d,p) and (t,d) reactions. (auth)

**56770** NEUTRON-HOLE-STATE STRUCTURE IN N = 81 NUCLEI. I. $^{144}$Sm AND $^{142}$Nd (p,d). Jolly, R. K.; Kashy, E. (Michigan State Univ., East Lansing). Phys. Rev., C; 4: No. 3, 887-900(Sep 1971).

Angular distributions of deuterons from the (p,d) reaction (energy resolution ~35 keV) on $^{144}$Sm and $^{142}$Nd at E = 35 MeV have been measured and compared with distorted-wave Born-approximation (DWBA) calculations. The DWBA calculations were performed both with and without the finite-range and nonlocality corrections. In some typical cases corrections were also included for the nuclear density dependence of the effective pn interaction. The DWBA cross sections for l = 5 show an enhanced sensitivity to the inclusion of these corrections. Calculations including both the nonlocality and finite-range corrections yield acceptable spectroscopic factors. Considerable fractionation of the $(2d_{\frac{5}{2}})^{-1}_{\nu}$ and the $(1g_{\frac{9}{2}})^{-1}_{\nu}$ states is observed. No measurable population of neutron states in the 82 < N≤ 126 major shell was observed. The single-neutron-hole energies (in MeV) are as follows: $d_{\frac{5}{2}}$, 0.0; $s_{\frac{1}{2}}$, 0.45; $h_{\frac{11}{2}}$, 1.22; $d_{\frac{3}{2}}$, 1.52; and $g_{\frac{7}{2}}$, 2.12 for $^{143}$Sm; and $d_{\frac{5}{2}}$, 0.0; $s_{\frac{1}{2}}$, 0.43; $h_{\frac{11}{2}}$ 1.07; $d_{\frac{3}{2}}$, 1.47; and $g_{\frac{7}{2}}$, 2.20 for $^{141}$Nd. Data on the systematics of splitting and movement of these single-neutron-hole states as a function of the proton number (Z) in $^{143}$Sm, $^{141}$Nd, $^{139}$Ce, and $^{137}$Ba shall be presented in a subsequent paper. (auth)

**56771** INTERNAL-CONVERSION AND $\gamma$-$\gamma$ DIRECTIONAL-CORRELATION STUDIES IN THE DECAY OF $^{103}$Ru. Avignone III, F. T.; Frey, G. D. (Univ. of South Carolina, Columbia). Phys. Rev., C; 4: No. 3, 912-18(Sep 1971).

Internal-conversion coefficients, $\gamma$-ray intensities of weak $\gamma$ rays, and two $\gamma$-$\gamma$ directional correlations in the transitions of $^{103}$Rh, after the $\beta^-$ decay of $^{103}$Ru, were measured. The conversion coefficients are: $\alpha_K(53) = 2.47 \pm 0.14$, $\alpha_K(444) = (6.4 \pm 2.7) \times 10^{-3}$, $\alpha_K(497) = (4.4 \pm 0.4) \times 10^{-3}$, $\alpha_K(557) = (3.7 \pm 0.7) \times 10^{-3}$, $\alpha_K(610) = (2.7 \pm 0.3) \times 10^{-3}$, and $K/L + M + (497) = 8.43 \pm 0.40$. The $\gamma$-$\gamma$ directional correlations of the 557-53 and 444-53-keV cascades were measured with a 33-cm$^3$ Ge(Li) detector and a 2 × 2-in. NaI(Tl) detector on an automatic cycling correlation apparatus. The results are $A_2(557\text{-}53) = -0.130 \pm 0.008$ and $A_2(444\text{-}53) = -0.23 \pm 0.02$. The data imply that the 444-keV transition is pure E2 while the 53-keV transition is mixed M1 + E2 with $\delta(53) = -0.13 \pm 0.03$. The data allow unambiguous spin and parity assignments of $\frac{9}{2}^+$, $\frac{5}{2}^+$, and $\frac{7}{2}^+$ for the 93-, 537-, and 650-keV levels, respectively. The above data imply that the 557-keV transition is a multipole mixed transition with $\delta(557) = -0.32 \pm 0.03$. (auth)

**56772** DECAY OF $^{152}$Nd AND THE ISOMERS OF $^{152}$Pm. Daniels, William R.; Hoffman, Darleane C. (Los Alamos Scientific Lab., N. Mex.). Phys. Rev., C; 4: No. 3, 919-30(Sep 1971).

The radiations associated with the decay of 11.4-min $^{152}$Nd and its 4.1-min $^{152}$Pm daughter have been studied with Ge(Li), NaI(Tl), and anthracene detectors in both singles and coincidence configurations. A tentative decay scheme for $^{152}$Nd involving allowed $\beta$ decay to the 4.1-min isomer of $^{152}$Pm ($1^+$) (log ft = 4.8) and to an excited $1^+$ level 294.6-keV higher (log ft = 4.2) is presented. The 4.1-min level undergoes $\beta$ decay to 10 levels in $^{152}$Sm which have been previously established in decay studies of $^{152}$Eu, and from Coulomb excitation and reaction studies. A new level in $^{152}$Sm has been placed at ≈1081 keV. The total $\beta$-decay energy is nearly the same as the measured $\beta$ end-point energy, 3.6 ± 0.2 MeV. Evidence is presented for the existence of two previously unreported high-spin isomers of $^{152}$Pm having half-lives of 7.5 ± 1.0 min and ≈18 min. A decay scheme is proposed for the 7.5-min isomer ($4^\pm$) of $^{152}$Pm including 16 known $^{152}$Sm levels and new levels at 1081, 1804, and possible 1941 keV. At least 40% of the $\beta$ transitions decay to the 1804-keV level with a log ft of ≈5.7 which suggests hindered allowed or first-forbidden decay. The observation of a 1.8-MeV $\beta$ group in coincidence with an intense 1437-keV $\gamma$ transition which deexcites the 1804-keV level establishes the total $\beta$-decay energy for 7.5-min $^{152}$Pm as 3.6 ± 0.1 MeV. The ≈18-min isomer ($\geq 6^\pm$) of $^{152}$Pm appears to populate a new level at 2172 keV and possibly the 1941-keV level in $^{152}$Sm. (auth)

**56773** COMPARISON OF THE NUCLEAR-REACTION ENERGY SCALE WITH THE GAMMA-RAY ENERGY SCALE. Stocker, H.; Rollefson, A. A.; Hrejsa, A. F.; Browne, C. P. (Univ. of Notre Dame, Dame, Ind.). Phys. Rev., C; 4: No. 3, 930-3(Sep 1971).

The excitation energy of the first excited state of $^{24}$Mg was measured with inelastic deuteron scattering using the energy of $\alpha$ particles from $^{210}$Po as a standard. The result is 1368.2 ± 0.5 keV. The average of recent measurements of the energy of $\gamma$ rays emitted by this state gives an excitation energy of 1368.67 keV based on the electron rest-mass energy. Thus the widely used polonium calibration energy is found to be consistent with the $\gamma$-ray energy standard to within 0.04%. (auth)

**56774** PROTON INELASTIC SCATTERING FROM THE FIVE STABLE, EVEN-MASS ISOTOPES OF MOLYBDENUM. Lutz, H. F.; Heikkinen, D. W.; Bartolini, W. (Univ. of California, Livermore). Phys. Rev., C; 4: No. 3, 934-44(Sep 1971).

Elastic and inelastic scattering of 15-MeV protons, accelerated by the 90-in. cyclotron at Lawrence Radiation Laboratory, Livermore, from isotopically enriched targets of $^{92,94,96,98,100}$Mo was studied with an over-all resolution of 50 keV (full width at half maximum). The experimental angular distributions were analyzed using a coupled-channel calculation. The collective vibrational model was employed to describe the states of the nucleus. Fifty angular distributions of scattered particles were measured and all but three were fitted with theoretical curves. The results for $^{92}$Mo, which has a closed neutron shell associated with the magic number N = 50, are discussed separately. All the inelastic scattering to levels in $^{92}$Mo was fitted with single-step processes. The other even-mass isotopes of molybdenum were analyzed first by considering the main quadrupole and octupole vibrational states and then considering the states that can be described as possible mixtures of one- and two-quadrupole phonons. A high degree of single-phonon admixture was found to be present. Finally the weaker states were considered with the simple $0^+$-$I^\pi$ coupling scheme. Electromagnetic transition rates were inferred from the deformabilities deduced in the present experiment. The results are compared with other experiments. (auth)

**56775** MASS-YIELD CURVE OF FIRST-CHANCE FISSION FROM PROTON- AND DEUTERON-INDUCED FISSION OF $^{226}$Ra. Perry, D. G.; Fairhall, A. W. (Univ. of Washington, Seattle). Phys. Rev., C; 4: No. 3, 977-89(Sep 1971).

Information has been obtained on the mass distribution and kinetic energy release for fission of $^{226}$Ra induced by protons and deuterons at moderate bombarding energies (<20 MeV). The mass distribution, which is triple peaked, has previously been interpreted in terms of two separate fission "modes:" a single symmetric peak, characteristic of symmetric fission, associated with higher excitation energies; and a double-peaked distribution, characteristic of asymmetric fission, associated with lower excitation energies. It is shown that by a proper choice of proton and deuteron bombarding energies, and by a proper weighting of their respective mass-yield curves, the mass distribution for the fission of a single species, $^{228}$Ac, can be determined for a single excitation energy. At excitation energies near 25 MeV this mass distribution for $^{228}$Ac is shown to be a single symmetric peak, in agreement with the hypothesis of two fission components. It is shown further that the measured kinetic energy distributions can also be interpreted in terms of the two-component hypothesis. (auth)

**56776** BETA-GAMMA CORRELATIONS AND MATRIX ELEMENTS FOR SOME FIRST FORBIDDEN NONUNIQUE BETA TRANSITIONS. Manthuruthil, J. C. (Aerospace Research Labs., Wright-Patterson Air Force Base, Ohio); Poirier, C. P.; Sastry, K. S. R.; (and others). Phys. Rev., C; 4: No. 3, 960-76(Sep 1971).

Results of $\beta$-$\gamma$ directional-correlation measurements in the nonunique first-forbidden $\beta$ decay of the ground states of several odd-odd nuclei ($^{124}$Sb, $^{152}$Eu, $^{186}$Re, $^{170}$Tm, $^{84}$Rb) to the first $2^+$ levels in the even-even daughter nuclei are presented. These measurements were made as a function of the $\beta$-ray energy using

XUM

a small shaped-field magnetic spectrometer. The results, in combination with all other available experimental data on each $\beta$ transition, have been analyzed to obtain the nuclear matrix element parameters. The analysis is based on the theoretical expressions given by Morita and Morita using exact electron radial wave functions which include finite nuclear size corrections. In addition, all available experimental data for the nonunique first-forbidden $\beta$ decay of $^{183}$Re and $^{86}$Rb were analyzed. A unique set of parameters was found for $^{186}$Re, $^{189}$Re, and $^{170}$Tm although the set for $^{170}$Tm suffers from a lack of adequate experimental information. For $^{86}$Rb, the matrix element sets depend on whether the shape of the $\beta$ spectrum is statistical or not. For $^{84}$Rb, five distinct sets of parameters were found which fit all available data equally well. For both $^{124}$Sb and $^{152}$Eu, two sets of parameters were found that fit the data equally well; however, it is shown that a measurement of the $\beta$-circularly-polarized $\gamma$ correlation as a function of energy can eliminate one set in each case. Appropriate discussions based on nuclear models are given. (auth)

**56777** DIRECTIONAL CORRELATIONS OF GAMMA RAYS IN $^{152}$Sm MEASURED BY GATING ON THE 244.66-keV TRANSITION. Barrette, J. (Univ. of Montreal); Barrette, M.; Haroutunian, R.; (and others). Phys. Rev., C; 4: No. 3, 991-5(Sep 1971).

Directional-correlation measurements have been performed with two high-resolution and high-efficiency Ge(Li) counters on several $\gamma$ rays in coincidence with the 244.66-keV transition which deexcites the 366.44-keV ($4^+$) state to the 121.78-keV ($2^+$) level in $^{152}$Sm. It was determined that the 1005.15-keV transition deexciting the $4^+$ level of the $\gamma$ band to the $4^+$ level of the ground-state rotational band has 93.3% E2 mixing. Furthermore, the existence of a new level in $^{152}$Sm at 1681.5 keV has been established. (auth)

**56778** DISTORTED-WAVE BORN-APPROXIMATION ANALYSIS OF THE $^{90}$Zr(d,$\gamma$)$^{88}$Y AND $^{89}$Y($^3$He,$\alpha$)$^{88}$Y REACTIONS. Park, Yong Sook; Jones, H. D.; Bainum, D. E. (Army Ballistic Research Labs., Aberdeen Proving Ground, Md.). Phys. Rev., C; 4: No. 3, 778-802(Sep 1971).

The levels of $^{88}$Y have been studied with the $^{90}$Zr(d,$\alpha$) and $^{89}$Y($^3$He,$\alpha$) reactions with 30- to 40-keV resolution at 15-MeV incident energy. The (d,$\alpha$) angular distributions for transitions to eight prominent levels below 2.2 MeV have been measured over $15° \leq \theta \leq 150°$. The reliability of parameters entering distorted-wave Born-approximation calculations was checked in detail. The (d,$\alpha$) calculations include the finite-range correction of Chant and Mangelson. The two-nucleon form factors (f.f.) were generated by the oscillator-expansion technique of Drisko and Rybicki, and the effect of residual interaction on the f.f. and angular distributions was studied. An attempt has been made to determine the (d,$\alpha$) absolute normalization constant based on local zero-range calculations, and limits of $20 \leq D_0^2 \leq 30$ have been set. Two-nucleon f.f. generated by the Bayman-Kallio method were compared with the Drisko-Rybicki f.f. The ($^3$He,$\alpha$) angular distributions for eight strongly populated levels below 1.7 MeV were measured $20° \leq \theta \leq 125°$. Spectroscopic factors and $l_n$ transfers have been extracted with both local zero-range and nonlocal finite-range calculations. The ($^3$He,$\alpha$) results were compared with (d,$\alpha$) results to determine unique parities and narrow $J^\pi$ limits for the levels studied. $^3$He and $\alpha$ elastic scattering on $^{89}$Y has also been measured and optical-model potentials have been determined. Good agreement between this work and the recently reported $^{85}$Rb($\alpha$,n$\gamma$)$^{88}$Y results is seen for the level energy and $J^\pi$ assignments made. (auth)

**56779** PARTICLE-HOLE MULTIPLETS IN $^{88}$Y AND THE MECHANISM OF THE ($^3$He,t) REACTION. Comfort, J. R. (Argonne National Lab., Ill.); Schiffer, J. P. Phys. Rev., C; 4: No. 3, 803-17(Sep 1971).

The reactions $^{87}$Sr($^3$He,d)$^{88}$Y, $^{87}$Sr($\alpha$,t)$^{88}$Y, $^{88}$Sr($^3$He,t)$^{88}$Y, and $^{89}$Y($^3$He,$\alpha$)$^{88}$Y were studied and the data were used to construct a level scheme of $^{88}$Y. Spin and parity assignments are suggested for many new states below 2.5 MeV. The principal components of their wave functions are interpreted in terms of particle-hole multiplets. The angular distributions from the ($^3$He,t) reaction are not well fitted by distorted-wave calculations. Some systematic patterns of the ($^3$He,t) reaction mechanism are noted, but the exceptions indicate that the conventional treatment of the ($^3$He,t) reaction may be far from adequate. (auth)

**56780** ANALYSIS OF THE INELASTIC SCATTERING OF DEUTERONS WITH EXCITED COLLECTIVE STATES IN A MODEL OF STRONG CHANNEL BONDS. Korbetskii, E. V.; Nemets, O. F.; Sokolov, L. S. (Kiev State Univ.). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 187-92(Jan 1971). (In Russian).

It is shown that the method of [strong channel bond] can be used for spectroscopic analysis of even-even nuclei by means of elastic and inelastic deuteron scattering. Used in scattering through single-phonon excitation states, it does not differ much from the distorted-wave method. The method was used for describing the elastic and inelastic scattering of 13.6-MeV deuterons by $^{12}$C, $^{48}$Ti, $^{60}$Ni, $^{117}$Cd, and $^{118}$Sn nuclei. (R.V.J.)

**56781** NEW $0^+$ STATES IN $^{124}$Te AND $^{126}$Te. Zhelev, Zh. T.; Zaitseva, N. G.; Sabirov, S. S. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 43-7(Jan 1971). (In Russian).

Excited states in Te populated by the $\beta$-decay of $^{120m,g}$I, $^{120}$I, $^{120*}$I, $^{122}$I, $^{124}$I, and $^{126}$ I were studied using two Ge(Li) detectors with 4.0-keV and 6.0-keV resolution for the 1333-keV $\gamma$-line of $^{60}$Co. Electron internal conversion spectra were studied using a double-focusing $2\pi\sqrt{2}$ $\beta$ spectrometer (R = 0.20%, $\Omega$ = 0.1%). Samples for examination of the $\gamma$-$\gamma$-coincidences were prepared six days following the irradiation of the target. In $^{124}$Te new levels were found at 1156 keV (from 602.5-554 gamma coincidences) and at 2020 keV (from 602.5-1418 and 722.5-695 gamma coincidences). New levels in $^{126}$Te were found at 1396 and 1685 keV by study of coincidences between 389-, 491-, 666-, 730-, and 754-keV gamma rays from the decay of $^{126}$I. (R.V.J.)

**56782** RESONANCE SCATTERING OF $\gamma$ RAYS OF RADIATIVE THERMAL NEUTRON CAPTURE ON CERTAIN NUCLEI. Begzhanov, R. V.; Akharov, S. M. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 131-4(Jan 1971). (In Russian).

Resonance scattering of capture $\gamma$ rays was studied in a horizontal channel of the VVR-S reactor. A detector with a 70 × 70 mm NaI(Tl) crystal and an FEU-52 photomultiplier connected to a multichannel pulse analyzer were used in the studies of the scattered radiation. In order to determine the partial width of radiation transition to the ground state, $\Gamma_\gamma^0$, total widths, $\Gamma_\gamma$, the energy difference between the lines of emission and absorption, $\delta = |E_\gamma - E_p|$, and the statistical factor, $g = (2I + 1)\ (2I_0 + 1)$, measurements were made of the effective transverse cross section according to the intensity of resonance scattering, resonance absorption using self-absorber, effective cross section of resonance scattering at various temperatures of the diffuser, and the angular $\gamma$-ray distribution during resonance scattering. Parameters of resonance levels from various diffuser-sources are tabulated. (R.V.J.)

**56783** PROPERTIES OF CERTAIN MULTIPARTICLE STATES WITH LARGE SPINS. Kharitonov, Yu. I.; Peker, L. K.; Sliv, L. A. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 94-9(Jan 1971). (In Russian).

Highly excited energy levels with excitations ranging from 3 to 5 MeV and high spins are considered; production is by spallation induced by residual interactions of three-particle $(j^3)$ and four-particle $(j^3, j_1 = 1/2)$ configurations. The studies are limited to the diagonal approximation. Cascades of the E2 transitions in $^{92}$Mo, $^{209}$Po, and $^{210}$Po are shown and analyzed. (R.V.J.)

**56784** CERTAIN STATES OF $^{134}$Cs. Rozantsev, I. N. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 112-17(Jan 1971). (In Russian).

Relative intensities of delayed gamma coincidences and multipole transitions following the decay of $^{134}$Cs with $T_{1/2}$ = 53 nsec were studied. The decay scheme is given, and the intensities of $\gamma$-ray cascade transitions for $^{134}$Cs were measured and correlated with published data. (R.V.J.)

**56785** EXCITED STATES OF ODD NONAXIAL NUCLEI. Begzhanov, R. B.; Belen'kii, V. M.; Sharipov, Sh. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 141-5(Jan 1971). (In Russian).

Energies of excited states and probabilities of electric quadrupole transitions for the odd nonaxial atomic nuclei with the ground-state spin 9/2 are calculated on the basis of the A. S. Davydov model (Excited States of Atomic Nuclei, Atomizdat, 1967), in which it is assumed that the angular momentum j of the external nucleon is retained and the equilibrium shape of the core is approximated by a triaxial ellipoid. Experimental and theoretical data on spins and energies of the excited states of $^{115}$In and $^{249}$Cf and the ratios of the E2 transition probabilities in $^{115}$In are tabulated. (R.V.J.)

**56786** STUDIES OF THE FISSION PROCESS IN ATOMIC NUCLEI IN THE TRANSITION REGION NEAR X = 0.7. Bochagov, B. A.; Kassirov, S. A.; Solyakin, G. E.; Semenchuk, G. G. Izv.

XUM

Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 175-9(Jan 1971). (In Russian).

Experimental studies were made of the liquid-drop simulation of light and heavy nuclei in order to determine the differences in the fission of nuclei with identical values of $Z^2/A$ but with a different nucleon composition. The fission was studied with $^{221}$Ac and $^{236}$U with $Z^2/A = 35.84$ and 35.86, respectively; for these nuclei A differed by 15 nucleons (12 n and 3 p). Surface-barrier detectors were used for measuring the energies of paired fission fragments. Experiments with $^{221}$Ac fission were carried out in a multicharged-ion accelerator with a $^{209}$Bi target irradiated by $^{12}$C ions with 82 and 62 MeV energy, and $^{236}$U fission was studied in a cyclotron with a target of $^{232}$Th nuclei irradiated by $^{4}$He ions with 26.4 MeV energy. The results verified the concept of two types of fission—the symmetric and the asymmetric. In the cases in which the distribution p(u) has one maximum during the rupture of the fissioning nucleus at an arbitrary point of the potential barrier (i.e., at arbitrary fixed magnitude E*), the fission is symmetric; the fission is asymmetric when the distribution has two maxima. An intermediate case in which the p(u) has three maxima with one value of E* and one or two maxima with other E* values is also possible. (R.V.J.)

**56787** DROP NUCLEAR MODEL OF FISSION AND KINETIC ENERGY OF FRAGMENTS OF $^{238}$U AND $^{232}$Th FISSION BY NEUTRONS AND $\gamma$ QUANTA. Bochagov, B. A.; Fadeev, V. I. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 169-74(Jan 1971). (In Russian).

The physical concept of the parameter E* was studied, and the results obtained on the $^{232}$Th and $^{238}$U fission by $\gamma$ quanta and neutrons (at 14 MeV) were analyzed using the parameter E*. The contour of $^{238}$U fission by 14-MeV neutrons is constructed, and the $\overline{M}_H$ (heavy-fragment mass) as a function of E* for $^{238}$U fission by 14-MeV neutrons and 35-MeV $\gamma$ quanta and for $^{232}$Th fission by 14-MeV neutrons and 90-MeV $\gamma$ quanta is given in graphical form. The $\overline{M}_H$ as a function of E* is also given for $^{233}$U, $^{235}$U, and $^{239}$Pu fission by thermal neutrons. It was observed that during fission by 14-MeV neutrons and photons the most probable value of the heavy-fragment mass drops with an increase of E*; i.e., that a symmetrization of fission takes place with the drop from the apex of the barrier. (R.V.J.)

**56788** NUCLEI OF LIGHT ELEMENTS WITH LARGER NEUTRON EXCESS. Artyukh, A. G.; Avdeichikov, V. V.; Vil'chinski, Ya.; (and others) (Joint Inst. for Nuclear Research, Dubna, USSR. Inst. of Physics and Tech., Leningrad). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 2-17 (Jan 1971). (In Russian).

An attempt was made to produce neutron-rich light elements using the methods of spontaneous fission of $^{252}$Cf and fission of $^{235}$U, $^{233}$U, and $^{239}$Pu by thermal neutrons; deep nuclear spallation reactions induced by high-energy protons; $\pi$-meson capture; and transfer reactions with heavy ions. Graphical data are given of the yield of light-element isotopes during uranium irradiation by 5.5-GeV protons, two-dimensional spectra obtained during irradiation of $^{232}$Th by $^{22}$Ne ions with an energy of 174 MeV, and the yield of O, N, C, B, and Be isotopes during irradiation of $^{232}$Th by $^{15}$N, $^{22}$Ne, and $^{18}$O ions. The search for $^{10}$He as a neutron-rich nucleus and determination of its nuclear stability is described. (R.V.J.)

**56789** DIFFERENTIAL CROSS SECTIONS FOR ELASTIC SCATTERING OF NUCLEONS CONSIDERING EXCITATION LEVELS OF THE COMPOUND NUCLEUS. Sirotkin, V. K.; Chesnokova, V. D. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 118-24(Jan 1971). (In Russian).

Cross sections for reactions and differential cross sections for elastic scattering of 7-MeV neutrons by $^{90}$Zr, $^{120}$Sn, and $^{181}$Ta; 9.6-MeV protons by $^{120}$Sn; and 11-MeV protons by $^{60}$Ni were analyzed using the method suggested by D. F. Zaretskii et al., (Yader. Fiz. 11: 361(1970)). (R.V.J.)

**56790** DISTRIBUTION OF PARTIAL RADIATION WIDTHS IN $^{238}$U(n,$\gamma$)$^{239}$U. Wasson, O. A. (Brookhaven National Lab., Upton, N. Y.); Chrien, R. E.; Slaughter, G. G.; Harvey, J. A. Phys. Rev., C; 4: No. 3, 900-12(Sep 1971).

The resonant-neutron-capture $\gamma$-ray spectra for 28 resonances below 600-eV neutron energy are measured in $^{238}$U(n,$\gamma$)$^{239}$U with improved neutron and $\gamma$-ray energy resolution to allow an accurate test of the predictions of the statistical model of neutron capture. No convincing departures from these predictions are observed. The variation over 23 S-wave neutron resonances of the $\gamma$-ray transition probabilities to 15 final states is consistent with the Porter-Thomas distribution for both E1 and M1 multipoles. There is also no statistically significant correlation between the different decay modes of the neutron resonances. A large correlation coefficient of +0.81 is observed between the partial radiative widths of the 3991- and 3982-keV $\gamma$ rays. This result, however, is not in violation of statistical independence for a sample size of 15 $\gamma$ rays. The E1 and M1 $\gamma$-ray strength functions are $(2.6 \pm 0.4) \times 10^{-3}$ and $(8.1 \pm 1.6) \times 10^{-3}$, respectively, compared to $3 \times 10^{-3}$ and $4 \times 10^{-3}$ listed by Bartholomew as the median values of all nuclei. Three of the weaker resonances at 10.2, 89.5, and 263 eV are assigned to P-wave capture. The neutron binding energy is measured to be 4806.7 ± 2.0 keV, which is 5.0 keV higher than the previously accepted value. Previously unobserved $\gamma$-ray transitions are reported. (auth)

**56791** DECAY OF $^{90}$Nb. HIGH-EXCITATION STATES IN THE MAGIC NUCLEUS $^{90}$Zr. Zaitseva, N. G.; Kratsik, B.; Muziol, G.; (and others). Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 35-42(Jan 1971). (In Russian).

Measurements were made of $\gamma$ spectra and $\gamma\gamma$-coincidence spectra in $^{90}$Nb decay. The data obtained were used for developing a series of new levels for $^{90}$Zr and studying the properties of these levels. Preparation of the radioactive sources and measuring instrumentation are described, and the energies and intensities of $\gamma$ rays in $^{90}$Nb decay and K-shell internal conversion coefficients for transitions in $^{90}$Zr are tabulated. (R.V.J.)

**56792** DECAY OF $^{238}$Am. Post, J. C.; Aten, A. H. W. Jr. (Instituut voor Kernphysisch Onderzock, Amsterdam. Univ., Amsterdam). Radiochim. Acta; 15: No. 4, 205-6(Jun 1971).

Neutron deficient isotopes of americium were produced in $^{237}$Np($\alpha$,xn) reactions at $\alpha$ energies of 38 to 46 MeV. The $\gamma$ activity of the americium isotopes was studied with a germanium detector. The $\gamma$ lines corresponding to the decay of $^{238}$Am were identified and placed in a decay scheme. (J.W.R.)

**56793** STUDY OF THE $^{236mf}$U ISOMERIC FISSION THROUGH THE $^{235}$U(n,$\gamma$) REACTION IN THE ENERGY RANGE 0.25 TO 4 MeV. Boca, I.; Sezon, M.; Vilcov, I.; Vilcov, N. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 4, 473-8(1971).

The excitation function for the $^{235}$U(n,$\gamma$) reaction with excitation of the $^{236}$U fission isomer was measured for neutron energies of 0.25 to 4 MeV. A half-life of 80 ± 20 ns was found for the $^{236}$U fission isomer. The measurements were compared with theoretical predictions. (J.W.R.)

**56794** QUASI-PARTICLE DESCRIPTION FOR INDIUM. Alzetta, R. (Nuclear Research Inst., Rez, Czech.); Gmitro, M.; Gambhir, Y. K. Czech. J. Phys.; 21: No. 7, 768-84(1971).

The quasiparticle model has been applied for the description of the nuclear properties of the low-lying states of In isotopes. The Hamiltonian is diagonalized in the space obtained by coupling zero- and two-quasineutron configurations with the proton-hole states in N = Z = 50 core, using the renormalized Tabakin interaction. The inclusion of two-hole one-particle proton configurations, consistent with the experimental findings in $^{114}$Cd($^{3}$He,d)$^{115}$In reaction, in a weak coupling approximation in which the quasineutron excitation modes are first generated independently, and then coupled to the proton hole excitations to obtain the configuration space for the diagonalization work, is also studied quantitatively. The energy spectrum of $^{115}$In is calculated and discussed. (auth)

**56795** NEUTRON RESONANCE CROSS SECTION ANALYSIS IN FILTERED NEUTRON BEAMS. Bohl, William Raymond. Madison, Wis.; Univ. of Wisconsin (1971). 197p. University Microfilms Order No. 71-14,128.

Thesis.

A novel technique to verify low keV cross sections has been developed at the National Reactor Testing Station. The technique follows from the prominent interference minimums in the cross sections of scandium and iron. Beams of 2 and 24.5 keV based on scandium- and iron-filtered neutrons have been developed. The problem treated here is the analysis of filtered beam measurements on materials containing unresolved resonance cross sections. For accuracy in treating resonance overlap and interference, a ladder approach is used. Stratification procedures are investigated to obtain statistical mean values utilizing only a few ladders such that computer time is minimized. The use of individual resonance test statistics closely correlated to predictions of possible measurable quantities is found to possess good stratification properties if self-shielding is significant and resonance overlap is small. If self-shielding is small and resonance overlap is significant, the optimum approach is to sample without replacement from a pool initially containing all resonances for the ladder. An integral transport theory (ITT) treatment is applied to correct for multiple scattering and self-shielding effects in analyzing activation measurements. The ITT technique forms the basis of the computer code FACE, written in FORTRAN IV for

XUM

the UNIVAC 1108 and IBM 360/75. The code treats a one-dimensional homogeneous slab with up to 5 isotopes, 20 spatial regions, and an arbitrary number of energy groups. The savings in time over Monte Carlo is estimated to be at least a factor of 10. Activation in gold and indium using the iron-filtered beam are the principle measurements analyzed. The cross section stratification approach is coupled with the FACE code. Parametric studies indicate that multiple scattering and self-shielding effects are relatively insensitive to the average resonance parameter set used. The shape of curves of activation as a function of thickness determined from a stack of foils compare reasonably well with FACE predictions. A slight low-energy flux component at the present irradiation position is probably present. Further, present reproducibility of measurements is found to be poor. However, it is believed that with a systematic experimental approach in a high flux reactor, scandium- and iron-filtered neutron beams could produce useful and rather precise cross section information. (Diss. Abstr. Int., B)

**56796** HIGH-SPIN ROTATIONAL EXCITATION IN $^{173}$Hf. Birattari, C.; Grassi Strini, A. M.; Strini, G.; Tagliaferri, G. (Univ., Milan. Istituto Nazionale di Fisica Nucleare, Milan). Lett. Nuovo Cim.; 2: No. 4, 187-92(24 Jul 1971).

The high-spin rotational states of $^{173}$Hf were excited in the reaction $^{175}$Lu(p,3n) using a natural Lu target. The proton energy was varied from 20 to 40 MeV in 2 MeV steps. Transitions in $^{173}$Hf were studied by in-beam $\gamma$-ray spectroscopy. Gamma spectra and excitation functions are presented. A level scheme for the K = 112$^-$ rotational band in $^{173}$Hf is proposed. (J.W.R.)

**56797** ANOMALOUS INTERNAL CONVERSION OF E1 TRANSITIONS IN OUTER ATOMIC SHELLS. Dragoun, O. (Nuclear Research Inst., Rez, Czech.); Blumberg, H. Czech. J. Phys.; 21: No. 7, 785-93(1971).

The experimental N and O shell conversion coefficients of highly hindered E1 transitions were found to be anomalous. The discrepancies as well as those for the L and M shells were removed by using the following values of the nuclear current parameter $\eta$: 9.2 ± 0.1 for the 6.21 keV transition in $^{181}$Ta, 8.5 ± 0.5 or −7.5 ± 0.5 for the 84.20 keV transition in $^{231}$Pa and 1.9 ± 0.2 for the 26.38 keV one in $^{237}$Np. (auth)

**56798** LEVEL STRUCTURE OF THE NEAR $^{208}$Pb NUCLEI (NEUTRON-DEFICIENT Pb AND Bi ISOTOPES). Kusch, Wlodzimierz (Instytut Badan Jadrowych, Swierk, Poland). Nukleonika; 16: No. 3-4, 97-124(1971). (In Polish).

The structure of the low-lying levels of the near $^{208}$Pb nuclei, especially of neutron-deficient Pb and Bi isotopes is discussed. Both experimental and theoretical works concerned with the determination of the energy of excited states by the shell model are discussed. The regularity of the level structure revealed by the existence of isomeric states among these nuclei as well as to the effects of the particle-vibration coupling have been observed. Special attention has been concentrated on the results concerning the $^{204}$Po decay to the excited states of $^{204}$Bi, recently obtained by the author. A tentative level scheme of $^{204}$Bi is proposed on the basis of measurements of the $\gamma$-spectra, coincidence spectra, and electron conversion spectra. (auth)

**56799** RECOIL STUDY OF THE $^{209}$Bi($\alpha$,p)$^{212m,g}$Po REACTION MECHANISM. Chulick, E. T.; Natowitz, J. B. (Texas A and M Univ., College Station). Nucl. Phys.; A173: No. 3, 487-96(1971).

Recoil techniques have been used to determine excitation functions, recoil ranges and angular distributions of the product nuclei in the reaction $^{209}$Bi($\alpha$,p)$^{212m,g}$Po. The production of both states is found to occur by a direct reaction mechanism. A comparison of experimental recoil angular distributions with DWBA calculations of the angular distributions expected from triton transfers of varying orbital angular momentum suggests that the $^{212m}$Po state is populated primarily by l = 11 transfer reactions. (auth)

**56800** CALCULATION OF THE GIANT DIPOLE RESONANCE IN A 1p–1h CONTINUUM SHELL-MODEL APPROXIMATION FOR $^{208}$Pb. Barrett, R. F. (Univ., Frankfurt am Main); Delsanto, P. P. Nucl. Phys.; A173: No. 3, 641-64(1971).

The results of a continuum shell-model calculation for $^{208}$Pb are presented and discussed. A method of locating the bound states embedded in the continuum is described which enables the accurate location and identification of resonances in the total photo-absorption cross section. The final cross section is then calculated using the eigenchannel reaction theory. The partial photo cross sections and the angular distribution of the reaction products are also calculated. Results of the calculations are compared with those of experiment and of earlier bound-state calculations. (auth)

**56801** SEARCH FOR BREMSSTRAHLUNG-INDUCED FISSION ISOMERS OF $^{238}$U AND $^{239}$Pu. Tamain, B. (Univ., Clermont, France); Pfeiffer, B.; Wollnik, H.; Konecny, E. Nucl. Phys.; A173: No. 3, 465-76(1971).

Delayed fission of $^{238}$U and $^{239}$Pu induced by bremsstrahlung has been measured using the Giessen linear electron accelerator at an electron energy of 53 MeV. The half-lives found are about 200 ns for $^{238}$U and about 500 ns for $^{239}$Pu. For both nuclei the delayed to prompt fission ratio is about $10^{-5}$. (auth)

**56802** RESONANCE NEUTRON CAPTURE BY $^{170}$Yb AND $^{172}$Yb. Ritter, J. C.; Namenson, A. I. (Naval Research Lab., Washington, D. C.). Nucl. Phys.; A173: No. 3, 477-86(1971).

Primary $\gamma$-ray spectra following resonance neutron capture by $^{170}$Yb and $^{172}$Yb were observed using the NRL linac neutron time-of-flight facility. Spectra from the first four resonances in $^{170}$Yb and the first three resonances in $^{172}$Yb were studied with a 30 cm$^3$ Ge(Li) detector using natural and separated isotope targets. The intensity of $\gamma$-ray transitions to particular Nilsson bands in $^{171}$Yb and $^{173}$Yb was examined for non-statistical effects. Possible regularities similar to those observed in thermal capture are discussed. (auth)

**56803** DELAYED NEUTRONS FROM THE $\tau$- AND $\alpha$ INDUCED FISSION OF $^{238}$U, $^{232}$Th, AND $^{209}$Bi. Chulick, Eugene T.; Reeder, Paul L. (Washington Univ., St. Louis). Nucl. Phys.; A173: No. 3, 497-519(1971).

The production of delayed neutrons from fission of $^{238}$U, $^{232}$Th and $^{209}$Bi with 20–34 MeV $\tau$- and $\alpha$-particles has been studied. For $^{238}$U and $^{232}$Th, delayed-neutron decay curves were analyzed into 7 components, three of which correspond to the particular precursors $^{87}$Br, $^{88}$Br and $^{137}$I. The cross sections for delayed-neutron production increase up to about 30 MeV due to the increase in fission cross section, but then decrease with 34 MeV $\tau$-particles. The number of delayed neutrons per fission as a function of excitation energy shows structure attributed to enhanced chain yields for certain light masses. For $\tau$-fission of $^{209}$Bi, four components were sufficient to fit the observed delayed-neutron decay curves. Half-lives of 55, 16.2 ± 1.5, 3.2 ± 0.7 and 1.4 ± 0.8 s were obtained corresponding to the half-lives of known Br precursors. Heavy-mass precursors in the iodine mass region are noticeably absent as expected from the symmetric mass-yield curve for Bi. (auth)

**56804** ANGULAR DISTRIBUTIONS OF FRAGMENTS IN THE FISSION OF URANIUM AND THORIUM NEAR THE (n,2n'f) THRESHOLD. Barutcugil, E.; Juhasz, S.; Varnagy, M.; Nagy, S.; Csikai, J. (Kossuth Univ., Debreccen, Hungary). Nucl. Phys.; A173: No. 3, 571-6(1971).

The angular distributions of fragments from the neutron-induced fission of $^{236}$U and $^{232}$Th were measured by polycarbonate track detectors at the energy $E_n$ = 14.1 MeV. The effect of the (n,2n'f) threshold has been observed. (auth)

**56805** NUCLEAR CHARGE DISPERSION OF LIGHT-MASS ELEMENTS IN THE FISSION OF $^{232}$Th BY PROTONS OF MEDIUM ENERGY. McGee, T.; Rao, C. L.; Yaffe, L. (McGill Univ., Montreal). Nucl. Phys.; A173: No. 3, 595-608(1971).

The fission of $^{232}$Th by protons of energies 20–85 MeV has been studied. Independent formation cross sections of $^{90m}$Y, $^{90m+g}$Y, $^{91m}$Y, $^{91m+g}$Y, $^{92}$Y, $^{95m+g}$Nb, $^{96}$Nb, $^{97}$Nb and $^{98}$Nb, and cumulative formation cross sections for $^{91}$Sr, $^{92}$Sr, $^{93}$Y, and $^{97}$Zr were measured. Charge dispersion curves were obtained. The full-width at half-maximum remains sensibly constant over this energy range, unlike products studied in the heavy-mass region. The value of $Z_A - Z_p$ decreases, but does not show the same sensitivity to the N/Z value of the target, as found in the heavy-mass region. Calculation shows that the data for $Z_p$ lie closer to the unchanged charge distribution than that suggested by the equal charge displacement hypothesis. An estimate was made of the number of neutrons emitted in fission. The light fragment was found to emit half the number of neutrons as the heavy fragment. (auth)

**56806** FISSION OF MEDIUM MASS NUCLEI INDUCED BY 167 MeV ALPHA PARTICLES. Pate, Brian D.; Peter, J. (Laboratoire de Chimie Nucleaire, Orsay, France). Nucl. Phys.; A173: No. 3, 520-36(1971).

Mica track detectors have been employed to measure the intensity, angular distribution and track-length distribution of fission fragments from eleven target nucleides from Cu to Ho, bombarded with 167 MeV $\alpha$-particles. Calibration of the mica detectors was effected with known projectiles, energies and intensities. Fissilities have been found to decrease monotonically with decreasing target mass, and no abrupt change in the fission mass-division mode was detectable in the series of systems studied, in conflict with theo-

retical expectations. The total fission fragment kinetic energy was, however, found to decrease with target mass in accordance with model calculations. (auth)

## Nuclear Theory

**56807** (CERN–71-14) SPRING SCHOOL ON PION INTERACTIONS AT LOW AND MEDIUM ENERGIES, LYCEUM ALPINUM, ZUOZ, ENGADIN, SWITZERLAND, 29 MARCH–8 APRIL 1971. PROCEEDINGS. (Schweizerisches Institut fuer Nuklearforschung, Zurich. European Organization for Nuclear Research, Geneva (Switzerland)). 4 Aug 1971. 396p. Dep. NTIS (U. S. Sales Only).

Separate abstracts were prepared for the seven lectures presented. (J.F.P.)

*For abstracts of individual lectures see: 56422, 56496, 56571, and 56808–56811.*

**56808** (CERN–71-14, pp 1-65) SOFT AND HARD PIONS IN NUCLEI. Ericson, M. (Lyon Univ. (France). European Organization for Nuclear Research, Geneva (Switzerland)). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

The applications of the soft pion theorems to pion reactions with nuclei are discussed. Examples of soft pion theorems, applications of soft pion results, the elastic scattering charge antisymmetric amplitude, the charge symmetric amplitude, and radiative capture are covered. (J.F.P.)

**56809** (CERN–71-14, pp 67-99) NUCLEAR MODELS. Green, A. M. (Eidgenoessische Technische Hochschule, Zurich (Switzerland)). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

The aim is to illustrate ways in which the nuclear physics aspects of various middle-energy phenomena are treated. Wherever possible, the same phenomena will be discussed, as the nuclear physics approximations employed become more and more realistic. Firstly, the use of the so-called elementary particle method is discussed in the particular case of the partial capture rate $\mu^- + O^{16}(g.s) \rightarrow N^{16}(g.s.) + \nu_\mu$. Then we shall look at the corresponding total capture rate to illustrate the use of the Fermi gas model, Migdal theory, and the standard shell model. (auth)

**56810** (CERN–71-14, pp 155-228) PRODUCTION AND ABSORPTION OF PIONS ON NUCLEI, AND DISPERSION RELATIONS FOR ELASTIC NUCLEAR SCATTERING. Locher, M. P. (Schweizerisches Institut fuer Nuklearforschung, Zurich). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

These review lectures cover the $NN \rightarrow NN\pi$ interaction, pion absorption on light nuclei, forward dispersion relations for nd and $n^4He$ scattering and for incident pions on nuclei, and partial-wave dispersion relations for $\pi d$ and nd elastic scattering. (J.F.P.)

**56811** (CERN–71-14, pp 289-378) SCATTERING OF PIONS FROM NUCLEI. Wilkin, C. (University Coll., London (England)). 4 Aug 1971.

In Spring school on pion interactions at low and medium energies.

A review is given of pion scattering from nuclei in processes where the pion does not vanish. The phase shift analysis, the impact parameter representation, simple collective models, the single scattering approximation, the optical potential including correlations, Glauber theory, the influence of spin and isospin, Coulomb distortion of the optical potential, inelastic scattering to discrete levels, and other inelastic scatterings are covered. (J.F.P.)

**56812** (COO–1120-124) COLLECTIVE MODEL OF ODD-ODD DEFORMED NUCLEI. Sharma, S. D. (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1970]. Contract AT(11-1)-1120. 134p. Dep. NTIS.

Thesis.

A model of odd-odd nuclei, in which two odd nucleons are attached to a rotating core, is described. The Hamiltonian consists of $H_R$, the rotational part, $H_p$ and $H_n$, the Hamiltonians for proton and neutron moving in harmonic oscillator potential wells with l.s and $l^2$ terms, $V_{pn}$, the residual neutron-proton interaction which has a Gaussian radial dependence with a Serber exchange mixture. The model is applied to all the main odd-odd nuclei whose energy spectra are experimentally known. The present investigation deals with all the main odd-odd nuclei on the basis of symmetric and asymmetric core models. The important feature of the model spectrum is found to be the constancy of basis in the symmetric core formulation which is shown to be related with core-rotation. The concept of state-gradient is introduced and the modification of the rotational features of the spectra by the particle states is explained in terms of state-gradient. The magnetic moments and quadrupole moments of ground states are calculated and compared with the experimental values, wherever possible. The general conclusions from this study are discussed and the suggestions for improvements are made. (auth)

**56813** (COO–1746-57) MARISCOTTI DESCRIPTION OF GROUND STATE BANDS OF EVEN–EVEN NUCLEI. Harris, Samuel M. (Purdue Univ., Lafayette, Ind. Dept. of Physics). [1970]. Contract AT(11-1)-1746. 8p. Dep. NTIS.

Mariscotti has shown that almost all ground-state bands in even-even nuclei may be fit within the framework of the higher-order-cranking model. Three types of bands are observed; some follow the $\gamma$ trajectory ($\vartheta_0 > 0$, $C > 0$), others the $\alpha$ and $\alpha$–$\beta$ trajectories ($\vartheta_0 < 0$, $C > 0$). It is shown that the first two trajectories are unique in that they yield bands with no upper cut-off for which the angular momenta and angular velocities are parallel, whereas the $2^+$ state of the $\alpha$–$\beta$ trajectory has its angular momentum opposite to its angular velocity. (auth)

**56814** (COO–2022-7) CODILLI II: A FORTRAN IV PROGRAM FOR THE ANALYSIS OF NEUTRON RESONANCE WITH PROGRAM SCORE. Technical Report No. 3. Adler, D. B.; Adler, F. T. (Illinois Univ., Urbana. Dept. of Physics). Jan 1971. Contract AT(11-1)-2022. 29p. Dep. NTIS.

This FORTRAN IV version of Program CODILLI was made compatible with Program SCORE so that it can be used in the interactive analysis of neutron resonance data with Program SCORE. The batchmode version of CODILLI II can be used independently. CODILLI II utilizes the multilevel expansion in a form which is applicable to the analysis of neutron resonance data of fissile as well as of nonfissile nuclides. Options are included which permit one to treat selected resonances as symmetrical, so that nonfissile nuclides can readily be analyzed. The program allows one either to use a least-squares data ditting procedure, or to calculate cross section curves from prescribed resonance parameters. In either case, the cross section curve may include contributions of several (at present four) nuclides. Different spin states may also be treated as separate isotopes. Tests were implemented which allow one to display the quality of fit of individual lines or of the entire cross section curve. Provisions are made to treat experimental resolution effects in a flexible manner, with particular attention to the use of the program in analyzing LINAC data. The option of calculating with CODILLI II cross section curves from prescribed parameters is of particular relevance for the anticipated use with Program SCORE. The "conversational mode" of this program will allow for a rapid adjustment of parameters which enter the trial function in a nonlinear form, and thus eliminate the need for nonlinear fitting procedures which were contained in the older version of CODILLI. (auth)

**56815** (INP–741) OPTICAL MODEL PROGRAMME WITH THE AUTOMATIC SEARCH ROUTINE EXTENDED TO INCLUDE THE SPIN-ORBIT TERM. "OMAS." Ziemkiewicz, Miroslaw (Institute of Nuclear Physics, Krakow (Poland)). Jan 1971. 41p. Dep. NTIS (U. S. Sales Only).

The OMAS program written in the ODRA–ALGOL autocode calculates the differential cross sections and polarizations for particles with spin 0, $\frac{1}{2}$ and 1 elastically scattered on atomic nuclei. The program permits an automatic search over the space of the nuclear optical model parameters, yielding optimum fits to experimental cross sections. (auth)

**56816** (JAERI-Memo-4383) METHOD FOR CALCULATING ENERGY DEPENDENCE OF MASS CHAIN YIELD OF FISSION. Tasaka, Kanji; Seki, Yasushi (Japan Atomic Energy Research Inst., Tokyo). Mar 1971. 39p. (In Japanese). Dep. NTIS (U. S. Sales Only).

An attempt to give a phenomenological explanation for the energy dependence of the mass chain yield of nuclear fission, using the energy dependence of the penetration factor through the potential barrier for nuclear fission is presented. The mass chain yield of nuclear fission is defined as the sum of the fission yields of the nuclides with the same mass number. The mass chain yield of $^{235}U$ fission by the neutrons with kinetic energies, 1.95 and 15 MeV was calculated utilizing the experimental mass chain yield data for thermal neutrons. The calculated values are compared with the experimental values in ENDF/B. As the result, it is concluded that the calculated values coincide with the experimental

XUM

values fairly well, if appropriate parameters are chosen. Using this method, the mass chain yield of $^{235}U$ fission by a neutron of any desired energy can be calculated from the mass chain yield data by a thermal neutron. It is planned to apply this method to calculate the mass chain yield of other nuclides, especially fertile nuclides, and through comparison with the experimental data to investigate the application limit of the method more thoroughly. This method is programmed for computer calculation. The programme list of the code "TUNNEL-FY" is given in Appendix 1. (auth)

**56817** (JINR-E4-5836) MULTI-CHANNEL ASPECTS IN STRIPPING REACTIONS ON SPHERICAL AND DEFORMED NUCLEI. Luk'yanov, V. K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 12p. (CONF-710708-2). Dep. NTIS (U. S. Sales Only).

From Symposium on the nuclear three body problem and related topics; Budapest, Hungary (7 Jul 1971).

The main multi-channel features of A(d,p)B stripping reactions, connected with low-lying collective state virtual excitations in the nuclei A and B are analyzed. In deriving the reaction amplitude the generalized distorted wave method is used where the multi-channel aspects of the problem are taken into account by the coupled channel calculations of the corresponding distorted waves. Using the so-called double adiabatic approach it is possible to obtain the cross section in a very simple and obvious form. The reaction turns out to be a multistep one where each step characterizes the transfer of a neutron via one of the excited levels of the nuclei A and B. The multistep effects are analyzed in the case of the spherical (with phonon states) and deformed (with rotational states) nuclei. (auth)

**56818** (JINR-E4-5880) ON CORRELATIONS BETWEEN REDUCED NEUTRON AND RADIATIVE WIDTHS IN NEUTRON RESONANCES OF COMPOUND ODD-N NUCLEI. Solov'ev, V. G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 5p. Dep. NTIS (U. S. Sales Only).

The cases are considered which are the most favorable for experimental studies of correlations between reduced neutron and radiative widths in s- and p-neutron resonances of compound odd-N nuclei. (auth)

**56819** (JINR-P4-5889) COLLECTIVE $1^+$ STATES IN EVEN-EVEN DEFORMED NUCLEI. Gabrakov, S. I.; Kuliev, A. A.; Pyatov, N. I.; Salamov, D. I.; Schulz, H. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). Jul 1971. 17p. (In Russian). Dep. NTIS (U. S. Sales Only).

In the framework of Tamm-Dankov and RPA methods the properties of collective states with $I^\pi = 1^+$ (K = 0 or 1) in even-even deformed nuclei were studied. The pairing interactions and spin-spin correlations are taken into account in the model. The strength of the spin-spin force is deduced from the calculation of magnetic moments in odd-mass nuclei. The calculation of $B(M1, 0 \rightarrow 1^+)$ values, dipole sum rule and M1-transition strength function showed that in rare-earth nuclei the spin-spin correlations concentrate the main M1-transition strength in the high-energy region (≈10 MeV), where the coherent $1^+$ states (magnetic dipole resonance) can be formed. The structure of these states is investigated. (auth)

**56820** (JINR-P1-5997) SPECTRUM AND ASYMMETRY OF HIGH ENERGY NEUTRONS IN THE REACTION $\mu^- + {}^{16}O \rightarrow {}^{15}N + n + \nu$. Salganik, Yu. A.; Eramzhyan, R. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 14p. (In Russian). Dep. NTIS (U. S. Sales Only).

The spectrum and asymmetry of angular distribution in the $\mu^- + {}^{16}O \rightarrow {}^{15}N + n + \nu$ is calculated in the framework of the direct reaction mechanism. The dependence of above mentioned characteristics on the final state interaction is investigated. The effect of the exchange terms in the matrix elements is discussed. The relativistic terms of the muon-nucleon Hamiltonian are taken into account. (auth)

**56821** (LYCEN-7104) SOME MICROSCOPIC ASPECTS OF NUCLEAR REACTIONS. A Conference Held at La Toussuire, France, February 15-19, 1971. (Lyon Univ. (France). Institut de Physique Nucleaire). 1971. 284p. (In French and English). (CONF-710216).

Twenty-five papers were presented at the conference. Eight of them are presented in abstract form. Separate abstracts were prepared for the remaining 17. (France)

*For abstracts of individual papers see: 56390, 56593, 56642, 56652-56654, 56688, and 56822-56831.*

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

To describe the nucleon-nucleus scattering in a microscopic theory, a system composed of a nucleon and a set of nucleons interacting in a given bound state was studied. The principle of the optical potential calculation and the approximation made are recalled. (France)

**56823** (LYCEN-7104, C3,1-40) METHODS FOR ANALYZING TRANSFER REACTIONS. Becker, Francois (Centre National de la Recherche Scientifique, Strasbourg (France). Laboratoire de Physique Theorique). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The properties of the scattering amplitude in direct reactions or compound nuclei reactions are discussed and a separation method is deduced from them. The different factors involved in a transfer reaction are analyzed and the physical bases of most of the classical theories are shown. The methods for analyzing direct transfer reactions (particularly distorted wave methods) are presented. (France)

**56824** (LYCEN-7104, C4,1-17) SHORT-RANGE CORRELATIONS. Do Dang, G.; Longuemare, C. (Paris Univ., Orsay (France). Laboratoire de Physique Theorique et Hautes Energies). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The existence of a strong repulsion or a hard core leads to short range correlations. Methods used for studying these correlations (Jastrow wave function and Villars formalism) are described. The effect of correlations in electron-nucleus scattering and $\mu$ capture is recalled and an example of the direct investigation of correlations is given. (France)

**56825** (LYCEN-7104, C6,1-12) GENERATING COORDINATES IN CONTINUUM STATES. Giraud, B.; Hocquenghem, J. C.; Lumbroso, A. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The generator coordinate formalism leads to a microscopic description of nuclear collisions and might be able to describe fission and heavy nuclei collisions. An example which can be solved exactly and a numerical application in the case of the elastic collision between two very light nuclei are given. This theory was shown to be equivalent to the resonating group formalism for clusters. (auth)

**56826** (LYCEN-7104, C7,1-36) SPIN-ORBIT INTERACTION IN NUCLEON INELASTIC SCATTERING. Raynal, J. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

Spin-orbit coupling was introduced into the optical model to describe the elastic scattering polarization of particles with spin and inelastic scattering. A macroscopic description of the target nucleus was made without taking into account the orbits of the nucleons. Then the scattering amplitude of particles of spin ½, and the deformed spin-orbit coupling were calculated; this coupling was introduced into a coupled equation program using the sequential interaction method (ECIS). The microscopic description takes into account the different nucleons. The helicity formalism was presented and nuclear reactions were studied using either a finite interacting distance neglecting the incident nucleon antisymmetrization with nucleons, or a zero interacting distance interaction. It is thus possible to understand why the spin-orbit coupling deformation is more important for some targets. (France)

**56827** (LYCEN-7104, S8,1-10) ISOVECTOR EXCITATIONS IN PHOTONUCLEAR REACTIONS. Goulard, B. (Laval Univ. (Quebec)). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

Some simple properties of isovector nuclear excitations are given. The total strength excitation (that is to say the sum of the intensities leading to all the possible states) was studied and these excitations and their energy spectra were analyzed

in the framework of the shell model. A complete calculation was made for $^{88}Sr$. The experimental results concern essentially isospin in photonuclear reactions. (France)

**56828** (LYCEN–7104, S9.1–7) DEFORMATIONS IN THE s–d SHELL AND INELASTIC SCATTERING OF POLARIZED PROTONS. de Swiniarski, R. (Grenoble Univ. (France). Laboratoire de Physique Nucleaire); Raynal, J. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The deformations determined by calculations on cross sections only are not modified when polarizations are taken into account unless the complete Thomas form is used for the spin-orbit coupling. Therefore, the complete Thomas form must be used in all inelastic scattering calculations with polarized protons. (France)

**56829** (LYCEN–7104, S12.1–4) PAULI PRINCIPLE IN THE THEORY OF REACTIONS BETWEEN LIGHT NUCLEI. Zaikine, D. A. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The influence of the Pauli principle is studied in the framework of the generator coordinate principle, and is applied to collisions between two light fragments. (auth) (France)

**56830** (LYCEN–7104, S14.1–18) QUASI-ELASTIC SCATTERING BY SUBSTRUCTURE OF LIGHT NUCLEI. Gaillard, Paul (Lyon Univ. (France). Institut de Physique Nucleaire). (In French).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The formalism used to obtain the quasielastic scattering cross section in the P.W.I.A. is recalled. The spectroscopic data related to the nuclear clusters are given. Information about reaction mechanisms and spectroscopy obtained from the study of these reactions is presented. (France)

**56831** (LYCEN–7104, S18.1–18) DIFFERENTIAL METHOD AND FEYNMAN NUCLEAR GRAPHS. Giffon, M. (Lyon Univ. (France). Institut de Physique Nucleaire).

From Conference on some microscopic aspects of nuclear reactions; La Toussuire, France (15 Feb 1971).

The differential method introduced in the relativistic theory is used as a first step in a unified treatment of the nonrelativistic Feynman amplitudes (NRFA) describing direct nuclear reactions. Only single loop graphs (triangular and box diagrams) were studied. (France)

**56832** (NYO–3525–67) STUDIES OF ELECTROMAGNETIC PROPERTIES OF EXCITED STATES OF NUCLEI. Final Report, March 15, 1965–March 14, 1971. Metzger, F. R. (Bartol Research Foundation, Swarthmore, Pa.). 31 Mar 1971. 27p. Dep. NTIS.

Research on the electromagnetic properties of nuclear excited states is summarized and covers experimental work using the high-speed rotor and the gaseous source methods, the method using nuclear reaction gamma rays, and the bremsstrahlung method. The theoretical research includes isobaric analog states, shell model calculations, and boson exchange potentials. A list of publications is given. (J.F.P.)

**56833** (ORO–3765–31) PAULI BREAK-UP IN DEUTERON REACTIONS. Technical Report No. 71–116. Gambhir, B. L.; Griffin, James J. (Maryland Univ., College Park. Dept. of Physics and Astronomy). May 1971. 13p. Dep. NTIS.

An approximate method for including effects of Pauli Exclusion Principle in deuteron break-up on heavier nuclei is described. A Hilber-Schmidt Integral equation is obtained for the break-up amplitude, in which the Pauli term is isolated. This term is estimated for a model $^{16}O$ target. Interesting features of energy and angular correlations are discussed. The large magnitude (10 Mb/$Sr^2$MeV at peak) of the cross section guarantees the importance of Pauli break-up in nuclear reactions involving deuterons. (auth)

**56834** (ORO–3765–32) BRUECKNER–HARTREE–FOCK CALCULATIONS USING DENSITY-DEPENDENT EFFECTIVE INTERACTIONS. APPLICATION TO $^{16}O$. Technical Report No. 71–123. Reid, Neal E.; Banerjee, Manoj K.; Stephenson, G. J. Jr. (Maryland Univ., College Park. Dept. of Physics and Astronomy). Jun 1971. 42p. Dep. NTIS.

The effects of allowing variations in the radial orbital wave functions, or major shell mixing, were investigated within the framework of Brueckner-Hartree-Fock theory for $^{16}O$. The calculation is carried out in the matrix representation using harmonic oscillator wave functions as a basis. Effective G-matrix elements are calculated through the use of a density-dependent, two-body operator following a prescription of Bethe. Two possible parameterizations, the local density approximation and an average density approximation are compared. A consideration of the rearrangement energy shows that it is an important contribution to the binding energy. The problem is formulated in a way which facilitates the application of BHF theory to deformed as well as spherical nuclei. (auth)

**56835** (UCRL-Trans–10540) DENSITY OF THE EXCITED STATES OF ATOMIC NUCLEI. Ignatyuk, A. V.; Stavinskii, V. S.; Shubin, Yu. N. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut). Translated by T. **56837** (UCRL-Trans–10544) SINGLE PARTICLE STATES IN A DEFORMED ENERGY-DIFFERENT NUCLEUS POTENTIAL. Roeper, Peter. Translated for Univ. of California Lawrence Radiation Lab., Livermore, from Z. Phys.; 195: 316-42(1966). 32p. Dep. NTIS.

The nucleon wave functions and energy eigenvalues in a spheroidal potential well of Woods–Saxon type are calculated approximately by diagonalizing the Hamiltonian in a finite subspace of Hilbertspace. The depth of the potential well is made energy dependent to account for the nonlocality of nucleon–nucleus interaction. With the pairing theory of residual interaction taken into consideration these results are used to determine nuclear deformation, energy of single-particle excited states, and an estimate of magnetic moments of nuclei with mass number about 177. Several methods are applied to calculate the equilibrium deformation. They all yield nearly identical results. The experimentally given low-energy spectra of odd-A nuclei however, could not be reproduced satisfactorily. Some pronounced discrepancy between calculated and measured magnetic moments as already observed by Mottelson and Nilsson could not be reduced, either, though in other cases there is considerable improvement to their results. When comparing the structure of the calculated single particle scheme with the observed sequence of nuclear levels one is led to the conclusion that better agreement will be found for a somewhat different deformation: the nuclear shape will be given by a spheroid necked in to some degree by the equator and thickened at the ends. (auth)

**56838** (UR–875–350) LECTURES ON GROUP SYMMETRIES IN NUCLEAR STRUCTURE. Parikh, J. C. (Rochester Univ., N. Y. Dept. of Physics and Astronomy). 24 Jun 1971. Contract AT(30-1)-875. 217p. Dep. NTIS.

The lectures cover abstract group theory, group representations, representation theory and the symmetric group, continuous groups and Lie groups, irreducible tensors, the unitary group and its subgroups, and spectral distribution methods. Also discussed are isospin distributions, the space symmetry group Wigner supermultiplet scheme, SU(3) symmetry and rotational features in light nuclei, and seniority and symplectic symmetry. (J.F.P.)

**56839** STUDY OF THE ISOSPIN FORM OF THE ELECTROMAGNETIC OPERATOR. Divon, Baruch. Ithaca, N. Y.; Cornell Univ. (1971). 133p. University Microfilms Order No. 71-15,623.

Thesis.

Two alternative methods are devised for a low-energy nuclear

XUM

physics test of the existence of an isotensor component in the electromagnetic operator. The methods allow extraction of the relative magnitude of the isovector and isotensor γ-matrix elements, and also suggest the phase of the isotensor matrix element. The first method is an extended Blin–Stoyle's method, in which isospin mixing effect is considered explicitly. Measured decay widths ($\Gamma_\gamma$) of $T = 3/2 \rightarrow T = 1/2$ transitions in $Tz = \pm 1/2$ mirror nuclei are compared, and the difference in widths attributed to both electromagnetic isotensor and nuclear isospin mixing effects. It is demonstrated that the isospin mixing effect can inhibit the isotensor effect in the expression for $\Gamma_\gamma$, since both are expected to be of the same order of magnitude but may be of opposite phase. A method is suggested for the experimental measurement of the isospin mixing effect, assuming that the dominant mixing is due to the antianalog state. This method is applied to the ground state transition of the lowest $T = 3/2$ level in mass-13. It is demonstrated that the introduction of isospin mixing changes the phase of the isotensor matrix element, determined without isospin mixing, although the upper limit for the relative magnitude remains 10%. This method is found to be of limited usefulness due to the small number of cases to which it can be applied. In order to apply the test to more cases a second method is suggested. According to this method the measured γ-decay width of a $T = 3/2 \rightarrow T = 1/2$ transition in the $Tz = -1/2$ nuclei is compared to the mirror decay width, as obtained from the measured log ft values of the analogous $\beta^-$ decay. This method is again applied to the lowest $T = 3/2$ states in mass-13, and the results for the isotensor matrix element are found to be equivalent to those obtained using the first method. Accordingly, this method is applied to the γ-decay of the lowest $T = 3/2$ states in mass-29, mass-25, and mass-21. It is concluded that the isotensor matrix element is about 4%, but no more than 15%, of the isovector matrix element. In most of the cases the phase of the isotensor matrix element is found to be positive. The isotensor effect also is found to be roughly independent of the mass number A. The second method also suggests the experimental measurement of the isospin mixing amplitude ($\alpha_A$) of the antianalog state in the analog state. The application of this method to mass-13 yields an upper limit of $4.5 \times 10^{-3}$ for $\alpha_A^2$, which is in good agreement with previous shell model calculations for adjacent even nuclei. (Diss. Abstr. Int., B)

**56840** GROUND STATE PROPERTIES OF SPHERICALLY SYMMETRIC NUCLEI USING THE MODIFIED DELTA INTERACTION. Ehlers, Jerry William. Los Angeles; Univ. of California (1970). 92p. University Microfilms Order No. 71-13,994.

Thesis.

Calculations of ground state properties of spherically symmetric nuclei (especially double closed shell nuclei) were made using the Modified Delta Interaction. Preliminary studies were done using first the Harmonic Oscillator approximation, then the more realistic Woods–Saxon potential. In using the latter potential, variational calculations were made. Finally, Hartree–Fock calculations were performed taking into consideration the center-of-mass corrections, proton size corrections, Coulomb energy, rearrangement potential, and adding a spin-orbit splitting. With only 3 parameters in the Modified Delta Interaction, good agreement with experimental ground state energies and charge radii was obtained, while moderate agreement was reached for single particle energies. (Diss. Abstr. Int., B)

**56841** NEW STATISTICAL THEORY OF THE NUCLEAR SURFACE. Siemens, Philip John. Ithaca, N. Y.; Cornell Univ. (1970). 67p. University Microfilms Order No. 71-14,595.

Thesis.

The Thomas–Fermi integral theory of the nuclear surface is shown to have singular solutions for the nuclear density. This failure is traced to its inadequate representation of the behavior of wave functions in a potential. A new theory based on approximate wave functions is developed and shown to be asymptotic to the Thomas–Fermi theory in the interior of the nucleus. An improved treatment of exchange forces is shown to be essential to obtaining realistic solutions. (Diss. Abstr. Int., B)

**56842** ANHARMONIC EFFECTS IN SPHERICAL NUCLEI. Almoney, Stanley Richard. Bethlehem, Pa.; Lehigh Univ. (1971). 211p. University Microfilms Order No. 71-17,074.

Thesis.

The method of Bal'butsev and Jolos (Yad. Fiz, 7: p. 738(1968)) to include anharmonic effects in even–even spherical nuclei is extended to include both neutrons and protons. These anharmonicities are introduced in order to explain the large experimental values for the static quadrupole moment of the first excited $2^+$ state, $Q_{2+}$, that have been observed in several spherical nuclei. The pairing plus quadrupole · quadrupole Hamiltonian is used and the anharmonic effects are produced by retaining the quasi-particle scattering terms in the quadrupole interaction. The even–even nucleus is first described by harmonic quadrupole phonon states, and the anharmonic terms are considered as a perturbation which admixes these harmonic phonon states. The matrix elements of the quadrupole operator between these admixed anharmonic states are then calculated and the results are non-zero values for both the static $Q_{2+}$ moment and the reduced cross-over $B(E2; Q_1^+ - 2_2^+)$. Calculations that included up to three phonon states are performed on spherical nuclei throughout the periodic table and the theory is found to provide qualitative estimates in all nuclei investigated. The energy spectra for several neighboring odd mass spherical nuclei are also calculated as a check of the description of the even–even nucleus. The method used for calculating the odd nucleus is the equations of motion developed in such a manner that the input parameters include the matrix elements of the quadrupole operator between states of the even–even nucleus. Again the pairing plus quadrupole · quadrupole Hamiltonian is used and the quasi-particle scattering term is again retained. The introduction of "backward-going" amplitudes provides a technique for including the total quadrupole· quadrupole interaction, but it also introduces spurious states that are in addition to those states that are spurious because of the disregard of the Pauli Principle. It is found that the anharmonic effects are larger than previously anticipated and that the theory can only provide qualitative estimates for the static $Q_{2+}$ moments, the B(E2) values, and the energy spectra for large regions of neighboring spherical nuclei. For the odd nucleus the extreme sensitivity of the calculations to the input parameters and the spurious states severely limits its applicability. (Diss. Abstr. Int., B)

**56843** BOSON EXPANSION METHOD IN NUCLEAR PHYSICS. Li, Shou-yung. Philadelphia; Univ. of Pennsylvania (1970). 117p. University Microfilms Order No. 71-19,252.

Thesis.

A method of constructing boson expansions of fermion pair and multipole operators, which correctly includes the effect of the Pauli principle to all orders and gives convergent expansions within some well-defined subspaces of the boson representation space is presented. In this way it is shown explicitly how the Pauli principle limits the boson degrees of freedom in any attempt to approximate fermion pairs by bosons. The expansions are constructed in a basis in which the total angular momentum is a good quantum number. Therefore the expansion is especially suitable for practical applications. The expansion methods are described for both even and odd systems in single-shell or multishell problems. An interesting application of the method would be the calculation of energy levels of the pairing-plus-quadrupole Hamiltonian in a single j-shell, with large $\Omega = (2j + 1)/2$ and N nucleons, but $N \ll 2\Omega$. For given j and N, one can construct a subspace in which the boson expansions are convergent. In this subspace it is therefore legitimate to neglect the higher order terms in the boson expansion of the Hamiltonian. It is then easy to diagonalize this approximated Hamiltonian and compare its low-lying states with those obtained from the exact diagonalization. If the agreement is reasonably good, then one can probably expect to get fairly good results in using this method as an approximate shell model calculation for heavy spherical nuclei, where an exact shell model calculation would be impossible. (Diss. Abstr. Int., B)

**56844** STUDIES IN HIGH ENERGY PARTICLE PRODUCTION IN NUCLEI. Tang, Chi-li. Montreal; McGill Univ. (1970). National Library of Canada, Ottawa.

Thesis.

Methods for calculating high energy particle production in nuclei for the cases of diffractive production including multi-step processes, non-diffractive reactions and Coulomb production are presented. The formalism for multi-step processes is used to calculate the photon-nucleus total cross section with the vector mesons, $\rho^0$, $\omega$ and $\varphi$, as intermediate particles according to the vector dominance assumption for the photon. The agreement with experiment is good. Effects on the production cross section due to nuclear correlations, nuclear spin and the finite range of the interactions between the projectile particles and the nucleon are studied. Absorption of the projectile particles by the nucleus in non-diffractive coherent reactions is found to be less than in diffractive reactions. Such a difference is observed in the $\gamma + A \rightarrow \pi^0 + A$ reaction. (Diss. Abstr. Int., B)

**56845** YADERNAYA FIZIKA. TOM II. VZAIMODEISTVIE IZLUCHENII S VESHCHESTVOM. KNIGA 2. (Nuclear Physics. Volume 2. Interactions of Radiation and Matter. Book 2).

Starodubtsev, S. V. Polnoe Sobranie Nauchnykh Trudov. V Shesti Tomakh. Tashkent; Izdatel'stvo Fan Uzbekskoi SSR (1970). 380p.

This book is written in three distinct parts, the first and most extensive portion being concerned with the passage of charged particles through matter. This includes topics such as elastic collisions and elastic scatter of particles by matter, energy loss theory for inelastic collisions, experimental tests of deceleration theory, and the relationship between the mean/range free path of fast neutrons and their energy. Vavilov–Cherenkov radiation is discussed, with an application to the energy measurement of ultrafast neutrons. Loss of energy through ionization, and radiation during the passage of heavy charged particles through a substance is considered, 520 references are appended. The second part of this book constitutes a survey of beta-decay problems, accompanied by discussions of the neutrino, beta-interaction, beta-neutrino correlation, spectra and forbidden transitions, and concludes with beta-decay and models of the nucleus and nuclear shells, with 56 references. The final section of the book examines atom recoil during beta-conversion. Source requirements—gaseous and film sources and their uses—are treated. Results are summarized for experimental studies of atom recoil during beta conversion, with reference to the law of conservation of energy, and studies of K-capture for a number of isotopes. (71 references) (K.S.W.)

**56846** IMPROVED THEORY OF NUCLEAR COMPRESSIBILITY AND ITS APPLICATION TO THE ISOTOPE SHIFT PROBLEM. Ionescu-Pallas, N. J. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 1, 3-10(1971).

The problem of the nuclear compressibility and of its role in defining the radii of heavy nuclei is investigated from a phenomenological standpoint, accounting for all the terms which enter the nuclear binding energy formula. The expression of the nuclear radius, so obtained, exhibits a dependence in terms of neutron number N and proton number Z, respectively, different from that taking place through the agency of the sum N + Z. (auth)

**56847** DIFFRACTION ANALYSIS OF TRANSFER REACTIONS. Gonchar, V. Yu.; Yushkov, A. V. Izv. Akad. Nauk Kaz. SSR, Ser. Fiz.-Mat.; No. 4, 67-72(Jul-Aug 1970). (In Russian).

Diffraction analysis of the angular distributions from stripping reactions was conducted for ten nuclei from $^{10}B$ to $^{91}Zr$ for deuteron energies from 7 to 21.4 MeV. The following results were obtained: diffraction theory describes the angular distribution well, in some cases better than the distorted wave method (DWM); the interaction radii found from the diffraction theory agree with values derived from the DWM and plane-wave method; reduced widths coincide with the quantities from the DWM; the deuteron interaction radii are increased 1 F, on the average, for a unit increase of angular momentum transfer. From the optimization of theoretical parameters the domain of applicability of the theory is carefully determined. (tr-auth)

**56848** HIGHLY RESTRICTED PARTITIONS AND ANGULAR-MOMENTUM STATES OF EQUIVALENT PARTICLE CONFIGURATIONS. Bose, A. K.; Patera, J. (Univ. of Montreal). Can. J. Phys.; 49: 1919-23(15 Jul 1971).

A simple method is given for determining the angular-momentum multiplets of equivalent particle configurations of symmetry [λ]. The number of times a multiplet occurs in a configuration can be found directly without doing a complete analysis. The problem is reduced to the evaluation of certain partition functions $P^{(c)}(J)$. As an example the $k^4$ configuration (j = 7) is analyzed. First, the frequency of one multiplet in $k^4$ of any symmetry [λ] is determined and then a complete angular-momentum analysis is made. (auth) (Canada)

**56849** CROSS SECTIONS FOR SUMMED QUASI-ELASTIC AND INELASTIC SCATTERING. Jackson, Daphne F. (Univ. of Surrey, Guildford, Eng.). Nucl. Phys.; A173: No. 2, 225-38(1971).

Recent studies of the energy spectra of medium- and high-energy protons and electrons inelastically scattered from nuclei have used a variety of assumptions concerning the mechanism of the scattering process. By using the impulse approximation and a single-particle model, the connection between the description in terms of quasi-elastic knockout, in which the struck nucleon is ejected from the nucleus, and a description that includes the excitation of bound and quasi-bound states of the target nucleus is examined. Some problems arising from the formalism are discussed, with particular reference to the results for inelastic proton scattering at 160 MeV and 1014 MeV. (auth)

**56850** CLUSTER EXPANSIONS FOR CORRELATED WAVE FUNCTIONS IN NUCLEAR PHYSICS. Shakin, C. M. (Case Western Reserve Univ., Cleveland). Phys. Rev., C; 4: No. 3, 684-92(Sep 1971).

The cluster expansion for the energy for a system with Bijl–Dingle–Jastrow (BDJ) correlation structure is derived in a new form. It is shown how the theory may be related to the Brueckner–Bethe–Goldstone theory with a particular choice for the correlation operator (or wave matrix) appearing in the BDJ wave function. The three-body cluster terms are discussed. It is shown that these clusters contain a limited class of dispersive terms which may be included in the analysis of the two-body clusters. The three-body clusters are also shown to contain terms which correct for violations of the Pauli principle in the correlation operator. (auth)

**56851** EXTRAPOLATION TO THE LIMIT OF SINGULAR-CORE INTERACTIONS IN THE THREE-BODY PROBLEM. Kim, Y. E.; Tubis, A. (Purdue Univ., Lafayette, Ind.). Phys. Rev., C; 4: No. 3, 693-9(Sep 1971).

Several aspects of the three-body problem with singular-core interactions given by the boundary-condition model (BCM), are studied. The kernel of the Faddeev equations for these interactions is shown to have an infinite Schmidt norm even if the two-body interactions are confined to a single partial wave. This does not necessarily imply that the Faddeev kernel is noncompact. A proof of the compactness (or noncompactness) of the kernel has not been found. A family of two-body interactions, with square repulsions of strength V for particle separation $r < r_0$, which become the BCM in the limit $V_0 \to \infty$ is considered. For finite $V_0$, the Faddeev kernel has a finite Schmidt norm (and is hence compact) and standard numerical matrix techniques may be used for solving the three-body equations. Simplified calculations of the triton binding energy, using two-body s-wave interactions of this type, are carried out for a number of choices of $V_0$. The two-body potentials for $r > r_0$ are not varied. It is found that the three-particle binding energy has a simple dependence on $V_0$. The value of the binding energy extrapolated to the limit $V_0 = \infty$ is found to be in excellent agreement with the result of a previous calculation based on BCM two-particle interactions and numerical methods predicted on the assumed validity of standard matrix-inversion techniques. Some implications of these results for more realistic calculations on three-body systems with two-body singular-core interactions are discussed. (auth)

**56852** DESCRIPTION OF ELASTIC SCATTERING PROCESSES WITH THE USE OF NONLOCAL SEPARABLE POTENTIALS. Pigeon, J.; Barguil, J.; Fayard, C.; Lamot, G.-H.; El Baz, E. (Univ., Lyon). Phys. Rev., C; 4: No. 3, 704-22(Sep 1971).

Elastic scattering processes are studied with the use of nonlocal separable interactions. An explicit and general expression for the transition amplitude has been given which includes Coulomb effects and possible excitation of the particles involved. As a first application of the formalism it is shown that a striking improvement of Mongan's results can be obtained in p-p elastic scattering just by including Coulomb effects at low energy. The nucleon-$\alpha$ elastic scattering below 50 MeV and the $\alpha-\alpha$ elastic scattering below 100 MeV are studied, and the results obtained are in very good agreement with experimental data. (auth)

**56853** MASS FORMULA CONSISTENT WITH NUCLEAR-MATTER CALCULATIONS VS CONVENTIONAL MASS-LAW EXTRAPOLATIONS. Brueckner, K. A.; Chirico, J. H.; Meldner, H. W. (Univ. of California, San Diego, La Jolla). Contract AT(11-1)-Gen-10. Phys. Rev., C; 4: No. 3, 732-40(Sep 1971).

The energy-density functional proposed by Brueckner et al. is used to calculate the average nuclear-binding-energy surface on the N-Z plane at $\beta$ stability ± about 40 units. The equibinding contours are compared with those predicted by recent liquid-droplet models. Normally, some disagreement begins about 15 units away from the region of known nuclei. The deviations toward lower binding are significant for neutron-rich transuranium (superheavy) nuclei. This would seem to indicate a physically important uncertainty in conventional mass-law extrapolations. The semiempirical dependence on neutron excess cannot be established very well, because of the narrowness of the region of known isotopes. The energy-density functional, on the other hand, incorporates the present knowledge about nuclear matter—including recent neutron-matter results. The disagreement with other extrapolations, therefore, questions the validity of stability and formation (e.g., r-process) calculations based on conventional mass formulas. (auth)

XUM

**56854** SECOND-CLASS CURRENTS AND ANALOG PROCESSES. Holstein, Barry H. (Princeton Univ., N. J.). Phys. Rev., C; 4: No. 3, 764-75(Sep 1971).

Semileptonic processes between members of a common isotopic multiplet provide a nearly model-independent test for currents with anomalous or "second-class" G-parity properties. For such processes the implications of the presence of second-class currents are discussed for $\beta$ decay, muon capture, and elastic neutrino scattering. (auth)

**56855** PARITY-INVARIANCE TESTS ORIGINATING WITH NUCLEAR BETA DECAY. Walker, James F. (Univ. of Massachusetts, Amherst). Phys. Rev., C; 4: No. 3, 951-60(Sep 1971).

Most of the experiments to date which have indicated the presence of a parity-nonconversing component to the nuclear force have used $\beta$ decays to populate states which in turn decay electromagnetically. This report analyzes the degree to which parity nonconservation, present in the $\beta$ decay, affects the experimentally observed circular polarization of the electromagnetic radiation. A background contribution is found which has no monochromatic component, provided the electromagnetic and $\beta$-decay interactions are time-reversal invariant. A crude estimate of the effect of this background on specific experiments indicates that it should be much smaller than presently observed effects. A second more elaborate estimate comparing this background effect with the effect expected using theories of the parity-nonconserving forces confirms this. (auth)

**56856** NEUTRON EMISSION FROM PROMPT FRAGMENTS IN THE FISSION OF EXCITED NUCLEI. Sarkar, Ratna (Saha Inst. of Nculear Physics, Calcutta); Chatterjee, Aparesh. Phys. Rev., C; 4: No. 3, 944-51(Sep 1971).

An improved approach combining the renormalized Fermi-gas model (RGM) with the use of an average collective potential energy surface (PES) has been used to estimate the energy release in prompt fission phenomena from fission of excited nuclei. The role of excess excitation $\Delta U_I$ on top of the fission barrier, under several assumed constraints, is discussed. The partition of $\Delta U_I$ into the conjugate prompt fragments has been calculated from a simple RGM saturation condition. The practical limits of $\Delta U_I$ have been discussed from the viewpoint of the statistical model of nuclear reactions. The number of evaporated neutrons from the prompt fragments $\nu_F$ has been estimated from LeCouteur and Lang's approximation using Wing and Varley's neutron binding-energy tables. Fairly satisfactory agreement for the number $\nu_F$ has been obtained with the experimental work on fission of $^{230}$Th by 25.7- and 29.5-MeV $^4$He ions and of $^{226}$Ra by 13.0-MeV protons. A linear relationship of the average number of prompt neutrons $\bar{\nu}$ with $\Delta U_I$ is predicted from the model. (auth)

**56857** REACTION MATRIX ELEMENTS AND STRUCTURE CALCULATIONS WITH THE YALE AND REID POTENTIALS FOR THE Ni REGION. Rustgi, M. L.; Kung, H. W.; Raj, R.; Nisley, R. A.; Hull, M. H. Jr. (State Univ. of New York, Buffalo). Phys. Rev., C; 4: No. 3, 854-73(Sep 1971).

Employing the Yale and soft-core Reid free nucleon-nucleon potentials, the shell-model reaction matrix elements are calculated and tabulated for the Ni region. The matrix elements consist of the bare part and the renormalization effects due to the core polarization. The bare matrix elements are evaluated following the unitary-model approach of Shakin, Waghmare, Tomaselli, and Hull and the renormalization corrections are calculated in the same manner as by Kuo and Brown for a $^{56}$Ni core. As a test of these matrix elemits, spherical shell-model spectra of $^{58}$Ni, $^{58}$Cu, $^{59}$Ni, $^{59}$Cu, $^{60}$Ni, $^{60}$Zn, and $^{60}$Cu are calculated. Quasiparticle calculations for the odd and even Ni isotopes are also performed. In general the calculated results are in good agreement with each other as well as with the observed data. It is concluded that different potentials which fit the same nucleon–nucleon scattering data give essentially the same results for effective-interaction and nuclear-structure calculations for the Ni region of the Periodic Table. (auth)

**56858** EFFECT OF HEXADECAPOLE DEFORMATION ON THE $\Delta N = 2$ CROSSING OF THE NILSSON ORBITALS. Mukherjee, P.; Ramakrishna, G. (Saha Inst. of Nuclear Physics, Calcutta). Phys. Rev., C; 4: No. 3, 990-1(Sep 1971).

The effect of $Y_{40}$ deformation on the $\Delta N = 2$ orbital crossing is found to yield the observed splitting of the levels. (auth)

**56859** REDETERMINATION OF THE SINGLET EFFECTIVE-RANGE PARAMETERS OF THE MONGAN SEPARABLE POTENTIALS. Serduke, Franklin, J. D. (Argonne National Lab., Ill. Univ. of California, Davis); Afnan, I. R. Phys. Rev., C; 4: No. 3, 1002-3(Sep 1971).

The singlet effective-range parameters for the Mongan separable potentials are shown to be more than trivially in error. The implications of this result on triton calculations using these potentials are discussed. (auth)

**56860** STATIC QUADRUPOLE MOMENTS OF VIBRATIONAL STATES OF SPHERICAL NUCLEI IN THE SELF-CONSISTENT CRANKING APPROXIMATION. Marshalek, E. R.; Sabato, M. (Univ. of Notre Dame, Ind.). Phys. Rev., C; 4: No. 3, 1006-9 (Sep 1971).

A simple microscopic expression is derived for static quadrupole moments of vibrational states by means of the self-consistent cranking model. The result sums together the effects of all relevant cubic anharmonicities of the Beliaev–Zelevinsky boson expansion taken in perturbation theory. (auth)

**56861** INDUCED TENSOR IN ALLOWED NUCLEAR BETA DECAY. Holstein, Barry R. (Princeton Univ., N. J.). Phys. Rev., C; 4: No. 3, 740-6(Sep 1971).

The contribution of the "induced-tensor" term in allowed nuclear $\beta$ decays is predicted in the impulse approximation. Current experimental results are compared with these predictions and additional experiments are suggested which could verify the existence of such an effect. (auth)

**56862** INFLUENCE OF STRUCTURE OF NUCLEUS WITH ELECTROMAGNETIC MULTIPOLE MOMENTS ON THE BREMSSTRAHLUNG OF NONPOLARIZED AND LONGITUDINALLY POLARIZED ELECTRONS. Kerimov, B. K.; Sokolov, A. A.; El Gavkhari, A. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 125-30 (Jan 1971). (In Russian).

The Born approximation was used for calculating differential cross sections for bremsstrahlung of nonpolarized and longitudinally polarized electrons in a nuclear field with electric quadrupole moment Q, magnetic dipole moment $\mu_I$, and octopole moment $\Omega$, with the distribution of electric and magnetic multipole moments in the nuclei taken into account. The process can be written symbolically as $e^- + (Ze, Q, \mu_I, \Omega) \rightarrow (Ze, Q, \mu_I, \Omega) + e^{-\prime} + \gamma$. Effects of finite dimensions were calculated by means of form factors $F_i(q^2)$, where i = C, Q, M1, and M3, obtained in experiments with high-energy electron scattering on nuclei in the 1p shell. It is shown that, at high energies and large angles of radiation ($\theta \rightarrow 180°$), the form factors of nuclear magnetic multipole moments influence the electron bremsstrahlung significantly. (R.V.J.)

**56863** SOME PECULIARITIES OF THE HEAVY-PARTICLE STRIPPING PROCESS. Teplov, I. B. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 154-8(Jan 1971). (In Russian).

Differential cross sections for the heavy-particle stripping process are calculated in the plane-wave Born approximation with the assumption that the heavy-particle stripping corresponds to the interaction V(x,C). The $\alpha$-induced reactions $^{12}C(\alpha,\alpha_0)^{12}C$, $^{12}(\alpha,\alpha_1)^{12}C$, where $E_\alpha$ = 25 MeV, $^{15}N(\alpha,\alpha_0)^{15}N$, $^{16}O(\alpha,\alpha_0)^{16}O$, $N(\alpha,d_0)^{16}O$, where $E_\alpha$ = 25 MeV, $^{12}C(\alpha,p_0)^{15}N$, where $E_\alpha$ = 25 MeV, and $^{12}C(\alpha,n_0)^{16}O$, where $E_\alpha$ = 20 MeV were studied; results of the analysis are presented graphically. (R.V.J.)

**56864** POSSIBILITY OF IDENTIFICATION OF THE MECHANISM OF DIRECT NUCLEAR REACTIONS ACCORDING TO THE EXTREMES OF DIAGRAM ORIGIN IN THE SPECTRUM OF INTERNAL BREMSSTRAHLUNG $\gamma$ QUANTA. Dubovoi, E. I. Izv. Akad. Nauk SSSR, Ser. Fiz.; 35: No. 1, 203-4(Jan 1971). (In Russian).

Arbitrary triangle diagrams for multiparticle and binary (n = 0) nuclear reactions are analyzed. (R.V.J.)

**56865** LANCZOS METHOD FOR NUCLEAR SHELL MODEL CALCULATIONS. Whitehead, R. R. (Univ. of Glasgow). pp 32.1-4 of Computational Physics. Vols. I and II. London; Her Majesty's Stationery Office (1969).

From Conference on computational physics; Culham, England (28 Jul 1969). See CONF-690706-(Vols.1 and 2).

A new scheme for nuclear shell model calculations is described which makes use of a novel application of the Lanczos method of tridiagonalizing matrices. The scheme appears to have several advantages over conventional approaches particularly where one is interested in systematic studies of a shell rather than in one particular nucleus. (auth) (UK)

**56866** SYSTEMS APPROACH TO THE NUCLEAR SHELL MODEL. Cohen, S. (Argonne National Lab., Ill.). pp H.1-

XUM

12 of Computational Physics. Vols. I and II. London; Her Majesty's Stationery Office (1969).

From Conference on computational physics; Culham, England (28 Jul 1969). See CONF-690706-(Vols.1 and 2).

Theoretical studies of nuclear structure rely heavily on calculations using an independent-particle model similar to the shell model of atomic structure. A typical nuclear shell-model calculation involves several different steps. First a complete set of basis states is constructed. The matrices of the model Hamiltonian in this basis are then constructed and diagonalized. Finally the resultant eigenvalues and eigenvectors are used to make theoretical predictions of experimentally measured quantities. In a systematic approach to the problem, an open-ended evolutionary system called DELPHI was designed and constructed to cater to the needs of scientists relatively unskilled in the use of computers. The facilities provided range from documentation techniques and large libraries of coherently designed algorithmic subroutines to automatic means of managing the dynamic storage of data. They also include a user-oriented language called SPEAKEASY, designed to make short investigations even more direct. In all cases the design specifications are such as to aid the scientist in obtaining answers to his problems quickly. The growth capability led to the use of the system in ways not originally contemplated; extensions of the system to allied fields of study in nuclear physics are already under way. (auth) (UK)

**56867** NEUTRON MATTER COMPUTATIONS IN BRUECKNER AND VARIATIONAL THEORIES. Siemens, P. J. (Niels Bohr Inst., Copenhagen); Pandharipande, V. R. Nucl. Phys.; A173: No. 3, 561-70(1971).

The binding energy of dense neutron gas is calculated in lowest-order Brueckner theory, and in Jastrow variational theory using the lowest-order cluster expansion of the energy, with a Reid soft-core potential. Subsidiary healing conditions are imposed on the Jastrow correlation function to simulate the Pauli exclusion effects. Due to the soft-core nature of the potential, the defect parameter $\kappa$ is small even at high densities and hence the lowest-order calculation could be a fair approximation. Up to $\rho = 0.5$ fm$^{-3}$ the Brueckner and variational calculations give comparable results. Technical complications in applying the Brueckner theory for $\rho >$ 0.5 fm$^{-3}$ are discussed and the results of only the variational calculation are presented for $0.5 < \rho < 4.5$ fm$^{-3}$. These may be useful in astrophysical studies. (auth)

**56868** ISOTENSOR DIPOLE SUM RULES IN NUCLEAR ELECTROEXCITATION. Cannata, F. (Scuola Normale Superiore, Pisa, Italy. Scuola di Perfezionamento in Fisica, Bologna); Leonardi; R. Nucl. Phys.; A173: No. 3, 665-72 (1971).

Electric dipole sum rules are analyzed in electron-nucleus scattering for different isotensor components, in the limit $q^2 \to 0$. As an application, the giant resonance form factor of several nuclei is studied. In particular the relation between the dip at 60 MeV/c and the existence of the $(\Sigma_i \mathbf{l}_i \cdot \mathbf{s}_i)$ $SU_4$ symmetry-breaking term is analyzed. (auth)

**56869** SHELL EFFECTS IN (n,p) AND (n,$\alpha$) CROSS-SECTIONS AT ABOUT 14 MeV. Cuzzocrea, P. (Instituto di Fisica Nucleare, Naples. Univ., Naples); Notarrigo, S. Nuovo Cim.; 4A: No. 2, 251-98(21 Jul 1971).

A comprehensive compilation of the available data on (n,p) and (n,$\alpha$) reaction cross sections, up to December 1969, for about 14 MeV neutrons is given. These data, suitably averaged, have been used in a search for shell effects by standard statistical methods. The analysis shows that the evaporation model is able to explain the experimental data when shell effects are included in the excitation energy in analogy with pairing corrections. This simple model gives the absolute value of a cross-section with a relative standard error of about 40% to be compared with an expectation value of about 10% as deduced from the errors (systematic plus random) with which the cross sections have been measured. The most critical parameter in this model is that which takes roughly into account quantum penetration, while other approximations, i.e., neglecting secondary emission, considering independence of the temperature parameter on excitation energy and mass number, and so on, prove to be quite reasonable. However the temperature parameter mentioned above does not correspond to the nuclear temperature because it includes shell and Coulomb barrier effects; its value is about 2.1 MeV. (auth)

**56870** CROSS SECTIONS IN THE UNRESOLVED RESONANCE REGION: METHODS AND EVALUATION OF APPROXIMATIONS. Heenan, T. F.; Adkins, C. R. (Carnegie-Mellon Univ., Pittsburgh). Nucl. Sci. Eng.; 45: No. 3, 279-96(Sep 1971).

A method is presented for calculating pointwise average cross sections in the unresolved region. This method can assess the effects of interference and overlap up to the fourth decimal place in cross-section calculations, having the capability of considering the effects of interference among sequences of resonances and of overlap between resonances in a sequence up to third order in each. Thus, the method, while more sophisticated than justified in view of current cross-section data uncertainties, can be used to evaluate the validity of various approximations currently made in the determination of cross sections for use in Doppler calculations. The effects of the level of approximation on cross-section calculations are given, Hwang's method for calculating the overlap in a single sequence is assessed, and the range of validity of Hwang's method and the approximations used in it are evaluated. Results of studies to determine the relative speed and accuracy of methods for calculating the J integral, performing the statistical average, and computing the complex probability integral, W, are also presented. The effects of interference among sequences are shown to be small for the calculation of cross sections and the Doppler change in cross sections over a wide range of composition. The effects of resonance overlap within one sequence, however, may be significant for the calculation of both cross sections and Doppler changes in cross sections in some critical assemblies. (auth)

**56871** ADVANCES IN NUCLEAR PHYSICS. VOLUME 3. Baranger, Michel; Vogt, Erich (eds.). New York; Plenum Publishing Corporation (1969). 491p. $22.50.

Articles are included on the nuclear three-body problem, the interactions of pions with nuclei, complex spectroscopy, single nucleon transfer in deformed nuclei, and isoscaler transition rates in nuclei from the ($\alpha$,$\alpha'$) reaction. Separate abstracts were prepared for each of the articles. (J.W.R.)

*For abstracts of individual chapters see: 56872–56876.*

**56872** NUCLEAR THREE-BODY PROBLEM. Mitra, A. N. (Univ. of Delhi). Advan. Nucl. Phys.; 3: 1-70(1969).

The treatment of the nuclear three-body problem is discussed from the point of view of potentials. Three-body techniques using separable potentials which are applicable to few-nucleon problems and light nuclei are described. Topics examined in detail include separable potentials, the model three-body problem, a model stripping problem, the three-nucleon formalism, numerical results for PN systems, and unequal mass three-body systems. (127 references) (J.W.R.)

**56873** INTERACTION OF PIONS WITH NUCLEI. Koltun, Daniel S. (Univ. of Rochester, N. Y.). Advan. Nucl. Phys.; 3: 71-191(1969).

A survey of experimental and theoretical research on the interaction of pions with nuclei is presented. Some of the inadequacies of currently available data are discussed. Some particularly useful experiments for the understanding of $\pi$-nuclear interactions are suggested. A thorough list of references is included. (J.W.R.)

**56874** COMPLEX SPECTROSCOPY. French, J. B. (Univ. of Rochester, N. Y.); Halbert, E. C.; McGrory, J. B.; Wong, S. S. M. Advan. Nucl. Phys.; 3: 193-257(1969).

The application of a formalism for treating large spectroscopic calculations is described and illustrated. The discussion includes notation and formalism, structure of the Hamiltonian matrix, multishell programs, and methods for checking spectroscopic calculations. Some studies making use of the system are reviewed, and some suggestions for future extension of the system are made. (J.W.R.)

**56875** SINGLE NUCLEON TRANSFER IN DEFORMED NUCLEI. Elbek, Bent (Univ. of Copenhagen); Tjoem, Per Olav. Advan. Nucl. Phys.; 3: 259-323(1969).

The properties of single-nucleon transfer reactions are surveyed from an experimental and theoretical point of view. The theory of single-nucleon excitations in deformed nuclei is reviewed. Experimental methods used in the study of transfer reactions are described. The available experimental data is discussed. Some problems which deserve further study are pointed out. (53 references) (J.W.R.)

**56876** ISOSCALAR TRANSITION RATES IN NUCLEI FROM THE ($\alpha$,$\alpha'$) REACTION. Bernstein, Aron M. (Massachusetts Inst. of Tech., Cambridge). Advan. Nucl. Phys.; 3: 325-476 (1969).

The role of the isoscalar transition operator in alpha inelastic scattering by nuclei is examined. Treatments of alpha scattering using diffraction, optical, and DWBA models are compared. The experimental data on isoscaler transition rates are reviewed. Tables for calculating transition rates and sum rules using a Fermi distribution are presented in an appendix. An extensive bibliography is also included. (J.W.R.)

# REACTOR TECHNOLOGY

## Commercial Power Reactors

*Refer also to abstracts 54934 and 55378.*

**56877** (CONF-700438) REACTOR CONFERENCE, BERLIN, APRIL 20–22, 1970. (Deutsches Atomforum e. V., Bonn (West Germany). Kerntechnische Gesellschaft (West Germany)). Jun 1970. 715p. (In German and English).

In 1970, the nuclear technological society of the German Atomic Forum arranged the second annual meeting in Berlin, where a survey was given about the development and present status of reactor technology in Germany. Also presented was the international status of reactor technology. Presentations were arranged under the following topics: reactor analysis; development and technology of structural reactor elements and components; construction and operation experiences with nuclear power plants; fuel cycle; and reactor concepts and economic problems. (H.B.G.)

**56878** (CONF-710302–(Vol.1), pp 199-214) APPLICATIONS SOFTWARE FOR A FAST REACTOR MALFUNCTION DETECTOR ANALYZER. Masters, S. M.; Cox, T. H. (Atomic Power Development Associates, Inc., Detroit, Mich.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A digital data acquisition and analysis system is operational at the Enrico Fermi Atomic Power Plant. Known as the malfunction detection analyzer (MDA), the system compares measured data with results predicted by calculational models and initiates alarms to plant operations personnel if the comparisons exceed prescribed limits. The implementation and operation of the MDA from a system programming point of view are described. (auth)

**56879** (EUR–4638) EXPERIMENTAL AND THEORETICAL DETERMINATION OF BURNUP AND HEAVY ISOTOPE CONTENT IN A FUEL ASSEMBLY IRRADIATED IN THE GARIGLIANO BOILING WATER REACTOR. Ariemma, A.; Bramati, L.; Galliani, M.; Gualandi, M. Paoletti; Zaffiro, B.; Cricchio, A.; Koch, L. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)). Jul 1971. 120p. Dep. NTIS (U. S. Sales Only). EUR F,Fr. 18.35.

Under the joint ENEL-EURATOM program for the utilization of Pu in thermal reactors, post-irradiation analyses were carried out on an enriched-uranium assembly irradiated at about 10,000 MWd/MTU in the Garigliano boiling water reactor. The objective was the determination of burn-up and U and Pu concentration in order to supplement the experimental data to be used for the verification of the calculation method on irradiated fuel. Burn-up was measured non-destructively by means of a high-resolution solid-state detector and destructively through $^{148}Nd$ determination, whereas heavy isotope concentrations by mass spectrometry combined with isotopic dilution techniques. The measurements compare favorably with the five-group BURSQUID calculation; the burn-up values agree within ±1.5%, whereas the concentrations of $^{235}U$, $^{239}Pu$, and $^{240}Pu$ are within less than 4%. Several correlations of general interest that were found among different isotope ratios or between isotopic abundances and burn-up parameters are discussed. The correlations were used only to check the consistency of experimental results, although their validity to determine also burn-up and isotopic abundances is recognized. 27 references. (auth)

**56880** (ZJE–104) RESEARCH OF THE HYDRODYNAMICS OF A ROD FUEL ASSEMBLY. Stepanek, K. (Skoda Works, Pilsen (Czechoslovakia). Nuclear Power Construction Dept.). 1971. 28p. Dep. NTIS (U. S. Sales Only).

The results of experimental work performed in connection with the development of the rod type fuel assembly for the heavy water reactors A–1 and A–2 are summarized. Main attention is given to tasks directly associated with the fuel assembly for A–1 which consists of a bundle of finned rods provided with spacers. The results presented were obtained by a measurement on a low pressure air loop. (auth)

**56881** CAN ALL LIQUID RADWASTE DISCHARGES BE ELIMINATED? Wilson, R. L.; Lee, J. (Sacramento Municipal Utility District, Calif.). Elec. Light Power (Boston); 49: No. 7, 40-2(May 1971).

The Rancho Seco power reactor site is described, and the reasons for selecting a "dry site" are discussed. The operation of the liquid radwaste system to eliminate liquid effluent discharges is described. (H.D.R.)

**56882** STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 3. REACTOR PRESSURE VESSELS. PART H. PRESTRESSED CONCRETE PRESSURE VESSELS. Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 492p. (In several languages). (CONF-710903–(Vol.3)(Pt.H)).

Twenty-six conference papers are presented in Part H. A separate abstract was prepared for each paper. (J.R.D.)

**56883** PRESTRESSING AND PROOF PRESSURE TESTING OF THE WYLFA PRESTRESSED CONCRETE PRESSURE VESSELS AND COMPARISON OF MEASURED DATA WITH PREDICTED PERFORMANCE. Carlton, D. (Taylor Woodrow Construction Ltd., Southall, Eng.); Smith, J. R.; Bellwood, G. N. pp H4/1.1-33 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The analytical approaches adopted for the Wylfa vessel design and the background experimental work undertaken to establish the necessary basic parameters of the concrete and prestress system are described. Brief details are also given of the in situ tests which confirmed the design values of the parameters. Each of the vessels was provided with extensive instrumentation to observe strains, deformations and temperatures, and these were monitored during prestressing and the cold proof pressure tests. The results of all this work in comparing the behaviors of both vessels with each other and with the analytical predictions are examined. Sources of error are identified and discussed. General conclusions are drawn on the overall degree of correlation achieved. (auth)

**56884** PRESTRESSED CONCRETE PRESSURE VESSEL OF THE THTR-300-MW(e) PROTOTYPE NUCLEAR POWER PLANT. Lotz, H.; Schwiers, H.-G.; Schoenig, J. (Brown Boveri/Krupp Reaktorbau GmbH, Mannheim, Ger.). pp H4/3.1-15 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The first prestressed concrete pressure vessel for a nuclear plant in Germany will be constructed for the THTR-300 MW(e)-power plant. Information on the design and the calculations of the vessel and its components, the liner, the cooling system, and the insulation is presented. (auth)

**56885** DESIGN OF POD BOILER PRESSURE VESSELS WITH PARTICULAR REFERENCE TO HARTLEPOOL NUCLEAR POWER STATION. Langan, D.; O'Flynn, M.; Welch, A. K. (Taylor Woodrow Construction Ltd., Southall, Eng.). pp H4/4.1-39 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The design and development of the podded boiler type of prestressed concrete pressure vessel now being constructed for both the Hartlepool and Heycham Nuclear Power Stations in the United Kingdom are described. In this form of vessel two features of the reactor layout govern the vessel design: (1) The adoption of a single channel fueling arrangement with interstitial control rods and consequent close spacing of standpipes through the top cap of the vessel. (2) The housing of the boilers in the wall of the vessel. Prestressing of the top cap, therefore, has to be accomplished by circumferential tendons located outside the perforated zone. The second feature restricts the space available for internal hoop tendons and therefore external wire winding was adopted. The principal method used in analyzing the Hartlepool vessel and model, based on dynamic relaxation, is described. Various programs were developed in which plane stress and strain solutions were expressed in Cartesian and polar coordinates. Additional programs using axisymmetric and three-dimensional cylindrical coordinates were derived. An ultimate load analysis is introduced which shows the response of the vessel to overload pressures which would cause progressive cracking and rotation. The method is based on finding the collapse mechanism associated with the minimum potential energy in the vessel. The experimental pro-

XUM

gram which has been conducted on a $^1/_{10}$th scale model concrete vessel of the Hartlepool design is described. The essential experimental details, together with the degree of simulation achieved, are presented. The elastic response, overload, and ultimate load behavior of the model are then correlated with two methods of analysis described. (auth)

**56886** SIMULATION OF THE PRESSURE VESSEL OF THE BUGEY REACTOR. Boisserie, J. M. (Electricite de France, Chatou). pp H5/2.1-12 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In French).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The first phase in the testing of the prestressed concrete pressure vessel in the summer of 1971 is described. During this phase and in the future, results of careful stain measurements "in situ" will be compared to these of mathematical models. The thermal properties and the creep of concrete were simulated. Initial results are presented. (auth)

**56887** THREE-DIMENSIONAL ELASTIC STRESS CONDITIONS IN THE AREA OF THE OPENINGS OF THE THTR PRESTRESSED CONCRETE VESSEL: A COMPARISON BETWEEN NUMERICAL CALCULATION AND MEASURING RESULTS OF AN ELASTIC MODEL. Hansson, V. (Ruhr-Univ., Bochum, Ger.). pp H5/4.1-16 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Stresses were determined at the surfaces and inside the wall and plates of a model of the THTR-vessel made of epoxy resin. With this experimental investigation results of three-dimensional calculations were checked. The region with large horizontal and vertical openings near the junction of wall and plate was of greatest interest. The computation with the dynamic relaxation method and the model test are described. Both results show good agreement and are discussed. (auth)

**56888** MODEL EXPERIMENTS ON THE CARRYING CAPACITY OF THE PRESTRESSED CONCRETE PRESSURE VESSEL FOR THE THTR-300-MW(e) PROTOTYPE NUCLEAR POWER STATION. Lotz, H.; Meerwald, K. (Brown Boveri/Krupp Reaktorbau GmbH, Mannheim, Ger.). pp H5/5.1-18 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Three model tests for the prestressed concrete pressure vessel for the THTR 300 MW(e) power plant are described. The top slab of the vessel has numerous penetrations. It was tested as a partial model at a scale of 1:20. The vessel will be tested as a full scale model at a scale of 1:5 consisting of concrete and also as a model consisting of casting resin at a scale of 1:47. (auth)

**56889** INVESTIGATION INTO STRUCTURAL BEHAVIOUR OF INSULATION OF THE PRESTRESSED CONCRETE PRESSURE VESSELS OF WYLFA NUCLEAR POWER STATION. Williams, A. J. (British Nuclear Design and Construction Ltd., Whetstone, Eng.). pp H6/5.1-10 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Experience at Wylfa has shown that under some conditions, and particularly where highly turbulent flow occurs, the stresses induced in the studs retaining insulation cover plates may be sufficiently high to cause fatigue failure. The course of events related to this situation are outlined, stress data obtained by measurement under reactor conditions are presented, tentative conclusions are drawn from the available data. (auth)

**56890** EXPERIMENTS ON THE BEHAVIOR OF METALLIC INSULATIONS IN HELIUM. von der Weyden, H. D. (Brown Boveri/Krupp Reaktorbau GmbH, Mannheim, Ger.). pp H6/6.1-18 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

In order to find a safe design for the insulation of the THTR-300, the behavior of the insulation modified for application in helium was investigated by testing in helium atmosphere. The tests were carried out under the operating conditions of THTR-300. The total and local heat fluxes in the insulation were regularly repeated after temperature cycles, depressurizations, and pressurizations with regard to the expected operating conditions of THTR-300. The tests confirm that the modifications carried out on the original insulation system to achieve the adaptation to helium were appropriate. (auth)

**56891** FAST-NEUTRON FLUX MEASUREMENT IN AES NOVO-VORONEZHSKII REACTORS. Lomakin, S. S.; Morozov, A. G.; Petrov, V. I.; (and others). At. Energ. (USSR); 31: No. 1, 54-6(Jul 1971). (In Russian).

Neutron spectra of reactors in the first and second units of the Novo-Voronezh nuclear power station were determined with threshold detectors. The characteristics of threshold detectors and gamma-sources are tabulated and discussed. Eight threshold nuclear reactions were investigated, and for each the fast neutron spectra were measured at the core center, behind the thermal shield, and outside of the reactor vessel. (K.S.W.)

**56892** RESULTS OF ULTRA-SOUND TESTS ON THE REACTOR PRESSURE VESSEL OF THE NUCLEAR POWER STATION OBRIGHEIM. Schenk, H.; Mayr, A.; Pickel, E. (Kernkraftwerk Obrigheim GmbH, Stuttgart). Atomwirt., Atomtech.; 16: No. 8-9, 453-4(Aug-Sep 1971). (In German).

Experience with ultrasound testing on the reactor pressure vessel of the nuclear power station Obrigheim leads to the conclusion that remote controlled nondestructive testing is possible in water depths of 11 meters. The test equipment can be handled with ease and results are reproducible. The present state of development, however, does not permit establishment of a definite relationship between echo and type as well as size of defect. To achieve a reliable coordination, testing should be performed before the start of operation; the cause of equivocal echo could be determined directly. (tr-auth)

## *Operation and Economics*

**56893** (70-CNA-631) OPERATING EXPERIENCE WITH OTHER REACTORS. Foulkes, F. M. (Canatom Ltd., Montreal (Quebec)). 1970. 11p. (CONF-700564-5). Dep. NTIS (U. S. Sales Only).

From tenth annual international conference of the Canadian Nuclear Association; Toronto, Canada (24 May 1970).

Operating experiences with Magnox and water cooled power reactors are reviewed and compared. Capacity and availability factors are listed. (D.C.C.)

**56894** (DLCS-5000271) SHIPPINGPORT ATOMIC POWER STATION QUARTERLY OPERATING REPORT. Second Quarter, 1971. (Duquesne Light Co., Shippingport, Pa.). Contract AT(11-1)-292. 23p. Dep. NTIS.

During the second quarter of 1971, the Shippingport Atomic Power Station was operated for Duquesne Light Company system load demand, training, testing, and maintenance. The Heat Dissipation System remained shutdown throughout the period. Three operational incidents occurred during the quarter. On April 7, during the quarterly flush of the condensate surge header, the six inch rubber hose attached to the flush connection ruptured causing approximately 25,000 gallons of condensate to be inadvertently discharged to the river. On April 16, a full Reactor scram occurred during the performance of weekly Nuclear Protection System checks when test leads were erroneously plugged into incorrect test points on the 1A Nuclear Channel. The cause was determined to be a grounding of the power range signal causing a spurious scram signal from the 1A Nuclear Channel. Chemistry results on May 17 indicated the Reactor Coolant System to contain above limit total gas concentration and low coolant pH. The BD purification loop was removed from service and the AC purification loop returned to service, which restored normal RCS chemistry conditions. The resin charge was changed in the BD demineralizer and the demineralizer was returned to service on May 21 without further problems. The cause is undetermined. During the second quarter period, there were two shipments made for off-site disposal of solid radioactive waste for a total of 1,422 millicuries of radioactivity contained in 300 drums weighing 63,486 pounds. (auth)

**56895** (DOCKET-1155-135) LA CROSSE BOILING WATER REACTOR. Environmental Monitoring Associated with Radioactive Discharges, January 1, 1969-June 30, 1971. (Dairyland Power Cooperative, La Crosse, Wis.). 16 Sep 1971. 46p. (DPC-851-31). Dep. NTIS.

Revised technical specifications are presented concerning the core burnup limit for Cycle 2 operation. The present burnup limit of 17000 MWD/MTM is changed to 18000 MWD/MTM. (D.C.C.)

**56899** (DOCKET-50219-146) OYSTER CREEK NUCLEAR POWER PLANT, UNIT NO. 1. Semiannual Report No. 4, January 1, 1971-June 30, 1971. (Jersey Central Power and Light Co., Morristown, N. J.). 22 Sep 1971. 36p. Dep. NTIS.

**56900** (DOCKET-50219-147) OYSTER CREEK NUCLEAR POWER PLANT, UNIT NO. 1. Technical Specifications, Change Request No. 8. (Jersey Central Power and Light Co., Morristown, N. J.). 28 Sep 1971. 4p. Dep. NTIS.

Revised technical specifications are presented concerning the replacement procedures for a local power range monitor. (D.C.C.)

**56901** (DOCKET-50220-73) NINE MILE POINT NUCLEAR STATION. Semiannual Operation Reports for 1970 Corrections. (Niagara Mohawk Power Corp., Syracuse, N. Y.). 14 Sep 1971. 2p. Dep. NTIS.

Revised data on radioactive effluents from the Nine Mile Point Power Reactor during January to December 1970 are presented. (D.C.C.)

**56902** (DOCKET-50220-74) NINE MILE POINT NUCLEAR STATION. Broken Pins in Turbine Wheel. (Niagara Mohawk Power Corp., Syracuse, N. Y.). 25 Sep 1971. 2p. Dep. NTIS.

Inspection and maintenance requirements for cracked and broken attachment pins of last stage turbine bucket shanks are described. (D.C.C.)

**56903** (DOCKET-50244-80) ROBERT EMMETT GINNA NUCLEAR POWER PLANT. $^{131}I$ Release. (Rochester Gas and Electric Corp., N. Y.). 6 Oct 1971. 3p. Dep. NTIS.

The excessive release of $^{131}I$ from the plant vent during September 27 and September 28, 1971, is described. Revised sampling and operating procedures are studied to prevent reoccurrence of the incident. (D.C.C.)

**56904** (DOCKET-50245-89) MILLSTONE NUCLEAR POWER STATION, UNIT NO. 1. Failure of Motor Operators (A0-71-9 and A0-71-10) Found in Control Circuit of Automatic Valves. (Millstone Point Co., Hartford, Conn.). 7 Sep 1971. 4p. Dep. NTIS.

The failure of electric motors used to actuate the emergency core cooling system valves is described. The failures were initiated by control circuit set conditions. Corrective actions are described. (D.C.C.)

**56905** (DOCKET-50245-90) MILLSTONE NUCLEAR POWER STATION, UNIT NO. 1. Reevaluation of Number of Curies of Liquid Waste Activity Discharged During 1970. (Millstone Point Co., Hartford, Conn.). 28 Sep 1971. 1p. Dep. NTIS.

**56906** (DOCKET-50245-91) MILLSTONE NUCLEAR POWER STATION, UNIT NO. 1. Abnormal Occurrence No. A0-71-15 and A0-71-16. (Millstone Point Co., Hartford, Conn.). 28 Sep 1971. 2p. Dep. NTIS.

On September 17, 1971, the loop pressure coolant injection valve on the B loop and the torus spray valve on the A loop failed to operate. Both actuating motors had burned out. Replacement of the motors is described. On September 18, 1971, the low pressure coolant injection outboard containment spray valve failed to operate. The operation failure was due to disengaged drive unit. Worn pins allowed the drive unit to become disengaged. Corrective actions are described. (D.C.C.)

**56907** (DOCKET-50245-92) MILLSTONE NUCLEAR POWER STATION, UNIT NO. 1. Abnormal Occurrence No. A0-71-17. (Millstone Point Co., Hartford, Conn.). 30 Sep 1971. 1p. Dep. NTIS.

The failure of the emergency service water pumps to reach their specified pumping pressure at 2500 gallons per minute during a surveillance test is described. (D.C.C.)

**56908** (DOCKET-50245-93) MILLSTONE NUCLEAR POWER STATION, UNIT 1. Abnormal Occurrence A0-71-18, September 23, 1971. (Millstone Point Co., Hartford, Conn.). 4 Oct 1971. 1p. Dep. NTIS.

Failure of the turbine steam bypass valves to open during a plant shutdown is described. The failure resulted from a fractured stud on one of the six bypass valve linkages. Corrective actions are described. (D.C.C.)

**56909** (DOCKET-50249-101) DRESDEN NUCLEAR POWER STATION. Facility License DPR-25, Proposed Change No. 7 to Appendix A. (Commonwealth Edison Co., Chicago, Ill.). 24 Sep 1971. 7p. Dep. NTIS.

Revised technical specifications are presented concerning the substitution of the steam jet air ejector off-gas monitors to perform the monitoring function of the plant chimney monitoring system. The substitution is effective during steady state operation or during testing to determine the plateout of iodine and particulates in the chimney off-gas monitoring system piping. A description of the chimney sample line plateout test is included. (D.C.C.)

**56910** (DOCKET-50255-53) PALISADES PLANT. Incident Involving the Primary Cooling System. (Consumers Power Co., Jackson, Mich.). 16 Sep 1971. 5p. Dep. NTIS.

On September 8, 1971, a technician de-energized the breakers to the reactor protective system to install a minor modification. This action de-energized the feed to the electromatic relief valve pilot valve solenoids allowing the valves to open. The primary system pressure decreased to a low point of 1280 psia over a period of 2 to 3 minutes until the blowdown was terminated by closure of the motor operated valves used to isolate the open relief valves. The incident occurred due to non-standard designation of contacts in the control circuit to the power operated relief valves. Corrective actions are described. (D.C.C.)

**56911** (DOCKET-50255-54) PALISADES PLANT. Two Incidents Involving Control Rod Drive System. (Consumers Power Co., Jackson, Mich.). 24 Sep 1971. 2p. Dep. NTIS.

The failure of control rod drive mechanisms numbers 4 and 31 to drop control rods when tested is described. The cause of drop failure is attributed to excessive epoxy deposits on the clutch surfaces of the control rod drives. Corrective actions are described. (D.C.C.)

**56912** (DOCKET-50263-82) MONTICELLO NUCLEAR GENERATING PLANT, UNIT 1. Inoperability of the High Pressure Coolant Injection System. (Northern States Power Co., Minneapolis, Minn.). 15 Sep 1971. 2p. Dep. NTIS.

**56913** (DOCKET-50263-84) MONTICELLO NUCLEAR GENERATING PLANT, UNIT 1. Inoperability of the High Pressure Coolant Injection System. (Northern States Power Co., Minneapolis, Minn.). 28 Sep 1971. 2p. Dep. NTIS.

**56914** (DOCKET-50263-85) MONTICELLO NUCLEAR GENERATING PLANT, UNIT NO. 1. Unusual Occurrences, September 5, 1971 and September 9, 1971. (Northern States Power Co., Minneapolis, Minn.). 5 Oct 1971. 2p. Dep. NTIS.

On September 5, 1971, a reactor scram resulted from a low pressure condition in the plant compressed air system. A failed compressor control combined with operator action of improperly placing the standby air compressor controls in the "OFF" position caused the scram. On September 9, 1971, a shorted switch during surveillance testing caused emergency core cooling system initiation. The shorted switch was the "low-low" reactor water level switch. Also, on September 9, 1971, a failed mercury wetted, magnetic switch in a low-low water level instrument was discovered and replaced. (D.C.C.)

**56915** (DOCKET-50269-37) OCONEE NUCLEAR STATION, UNIT NO. 1. Description of Cause and Correction of Damage to Control Rod Drive Mechanisms During Preoperational Testing. (Duke Power Co., Charlotte, N. C.). 29 Sep 1971. 51p. Dep. NTIS.

**56916** (TID-25791) GUNDREMMINGEN NUCLEAR POWER PLANT. Monthly Report, May 1971. (Kernkraftwerk RWE-Bayernwerk G.m.b.H., Gundremmingen (West Germany)). 23 Jun 1971. 53p. (In German). Dep. NTIS.

The plant was run at full load throughout the month. To check the efficiency of all the units necessary for load switching and to train the personnel, the plant was disconnected from the grid for a short

XUM

time on 23 May and the load was reduced briefly to 65 MWe on 30 May. Both load reductions went according to plan. The activity in the reactor water and the waste gas rose appreciably, but not dangerously, so that it was possible to repair leaks caused by load switching at various weak points in the fuel element cans. Preparations are in hand for work during the overhaul shut-down beginning on 12 June. (auth)

**56917** (TID-25805) SENA NUCLEAR POWER PLANT. Report for November 1970. (Societe d'Energie Nucleaire Franco-Belge des Ardennes, Chooz-lez-Givet (France)). 21p. Dep. NTIS.

The SENA power reactor operated throughout November 1970 at an average power level of 245 MW(e). There were four unscheduled scrams and a scheduled shutdown for maintenance. The operating statistics and equipment and systems performance are summarized. (H.D.R.)

**56918** (TID-25806) SENA NUCLEAR POWER PLANT. Report for December 1970. (Societe d'Energie Nucleaire Franco-Belge des Ardennes, Chooz-lez-Givet (France)). 21p. Dep. NTIS.

**56923** (TID-25811) SENA NUCLEAR POWER PLANT. Report for June 1971. (Societe d'Energie Nucleaire Franco-Belge des Ardennes, Chooz-lez-Givet (France)). 21p. Dep. NTIS.

Operations and maintenance requirements are described. Fuel inventory is itemized. (J.M.J.)

**56924** (TID-25812) GUNDREMMINGEN NUCLEAR POWER PLANT. Monthly Report, June 1971. (Kernkraftwerk RWE-Bayernwerk G.m.b.H., Gundremmingen (West Germany)). 27 Jul 1971. 56p. (In German). Dep. NTIS.

After 10½ months of trouble-free operation the plant was shut down on 12 June 1971 for a scheduled overhaul and refueling. The tasks featured in the flow chart were carried out according to plan and the plant was restarted on 17 July 1971. All fuel elements were examined for burst clads, and 38 of them were found to be defective. Of these, 22 had in any case attained their rated burn-up. Of the remaining 16 fuel elements, four had been loaded into the reactor in 1966, six in 1969 and six in 1970. Altogether, 88 new and three partly spent, repaired elements were charged. The HP and IP turbine sections were entered and visually inspected. The last-row blading appeared to be in good condition. In the HP casing and at various extraction points corroded spots were found, some of which had to be repaired. It was possible to carry out all the repair and maintenance jobs despite the sometimes considerable hindrances caused by high local dose rates. (auth)

For Rochester Gas and Electric Corp., N. Y.

Early in the operation of the first cycle at the Ginna reactor, increases in primary coolant activity indicated the development of fuel leaks. During a recent shutdown, many fuel assemblies were visually examined and leak tested. Leaks were confirmed as being distributed within, and limited to, Region 3 fuel assemblies. The source of the leaks has been determined to be moisture contained in the fuel resulting in local hydriding. Twelve of these assemblies were removed and replaced with new assemblies. The new fuel incorporates later engineering/manufacturing changes and should not be subject to this defect mechanism. Although some leaks remain in the core, a thorough review of the causes and effects of these leaks leads to the conclusion that the reactor can be operated safely without any additional technical or administrative restrictions. Weld metal was removed from nine Type 316 stainless steel pipe-to-valve joints in the Maine Yankee reactor coolant system

XUM

and sent to Battelle's Columbus Laboratories for evaluation. The examinations made on each sample follow: liquid-penetrant inspection of the top surface and the major surfaces cut during removal of the sample from the pipe joint; metallographic examination of a cross section of each sample cut perpendicular to the major axis at the location of greatest width of the weld sample; and determination of the delta ferrite content for each sample. The procedures used to process the nine weld metal samples submitted are described. The observations made during the studies are presented. (7 references) (auth)

Revised design parameters of the Aguirre Power Reactor Unit 1 are presented. Included also are additional data on the reactor requested by the Division of Reactor Licensing. (D.C.C.)

**56973** (DOCKET-50398-8) MENDOCINO POWER PLANT, UNITS 1 AND 2. Environmental Report, Construction Permit Stage. (Pacific Gas and Electric Co., San Francisco, Calif.). 28 Sep 1971. 120p. (DOCKET-50399-8). Dep. NTIS.

Information concerning chemical, radioactive, and thermal discharges from the reactor is presented. The effects of reactor operations on the environment are analyzed. (D.C.C.)

**56974** (DOCKET-50400-1) SHEARON HARRIS NUCLEAR POWER PLANT, UNITS 1, 2, 3, AND 4. License Application. (Carolina Power and Light Co., Raleigh, N. C.). 7 Sep 1971. 36p. (DOCKET-50401-1; DOCKET-50402-1; DOCKET-50403-1). Dep. NTIS.

Applications for construction permits and operating licenses for Shearon Harris Power Reactor Units 1, 2, 3, and 4 are presented. The 1970 Annual Report for the Carolina Power and Light Company is included. (D.C.C.)

**56975** CONSISTENCY IN SITING PRACTICES REGARDING NUCLEAR PLANTS. Ergen, William K. (Oak Ridge National Lab., Tenn.). pp 1-9 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

Experience shows that various methods of evaluating nuclear-power-plant sites with respect to the surrounding population yield rather similar results, though the methods may be quite different. The methods all use certain fundamental facts, such as Sutton's equation for atmospheric diffusion; they have to be consistent with previous practice; they have to be reasonably simple; demographic facts put limits on the variation in the population distributions likely to be encountered; and economic considerations militate against certain types of sites. As an example, for 12 representative sites, "characteristics" are derived by weighting the population by $r^{-n}$ (r distance from the reactor) and by integrating the weighted population over r. Drastic variations are introduced by varying n between 1.5 and 3, but nevertheless, when the sites are ordered according to their characteristics, the result depends only very little on n. 12 references. **56976** NUCLEAR FACILITY SITING IN THE UNITED STATES. Goldman, Morton I. pp 10-16 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

XUM

Problems concerning the selection of appropriate sites for power reactors are described. The effects of public opinion on the site selection are discussed. (D.C.C.)

**56977** ENVIRONMENTAL CONSEQUENCES FROM THE NORMAL OPERATION OF AN URBAN NUCLEAR POWER PLANT. Bergstroem, Stig O. W. (Aktiebolaget Atomenergi, Studsvik, Sweden). pp 29-55 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

An official Swedish study on the economical and hygienic consequences of urban siting has been started. It was triggered by a license application for the construction of a combined district heating and power producing plant close to the center of Stockholm. Plans for similar plants exist in the cities of Gothenburg, Malmö, Norrköping and Gävle. The study has been limited to two main designs, both of roughly 500 MW(e) capacity, one BWR and one PWR, with two alternative containment systems, rock cavern and surface building. A final report is to be delivered in the summer of 1971, but a continuation is foreseen, covering the problems of very large plants and of advanced reactor designs sited in industrial areas. The work has started with a general study of how the environment is affected by normal releases and by standardized accidental releases as the site is moved towards the center of a simple standard population distribution. Later on the effect of more complex population distribution assumptions will be studied. Different kinds of radiological dose criteria will be discussed and a comparison with the corresponding criteria for pollutants from conventional power plants will be attempted. The environmental impact of normal operations is described. Normal is then defined as all states where proper authorities permit the plant to operate. Health effects of such releases as are judged permissible and probable, respectively, will be discussed. 8 references. (auth)

**56978** RADIOIODINE DISTRIBUTION IN THE TARAPUR POWER REACTOR ENVIRONMENT DURING COMMISSIONING AND INITIAL OPERATIONS. Bhat, I. S.; Osinski, J.; Chandramouli, S.; Kamath, P. R. (TAPS Colony, Boisar, India). pp 361-71 of Health Physics Aspects of Nuclear Facility Siting. Vol. II. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

The liquid radioactive wastes from the Tarapur Power Reactor are discharged to the sea along with the hot condenser coolant seawater. The gaseous wastes are released through the 113 m tall stack. It has been observed that 70 to 90% of the total activity in the radwaste is due to radioiodines. The radioiodine levels in various environmental samples both from the sea and from deposition on land are presented. 3 references. (D.C.C.)

**56979** RADIOLOGICAL SURVEILLANCE STUDIES AT A BWR NUCLEAR POWER STATION: ESTIMATED DOSE RATES. Blanchard, R. L.; Krieger, H. L.; Kolde, H. E.; Kahn, B. (Bureau of Radiological Health, Cincinnati). pp 372-84 of Health Physics Aspects of Nuclear Facility Siting. Vol. II. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

Techniques for estimating off-site dose rates are presented using effluent data from an operating nuclear power plant. The critical exposure pathway appears to be, as expected, via external radiation from fission-produced radioactive noble gases that are released from the stack. This exposure was measured directly in the environment with a sensitive tissue-equivalent ionization chamber. Exposures via other paths could not be measured directly, but were estimated by measuring radionuclide concentrations in airborne and liquid effluents from the station. The following exposure routes were considered: drinking milk from cows that grazed in the vicinity; eating leafy vegetables grown in the vicinity; eating beef from steer that grazed in the vicinity; inhalation of radioactive gases and particles; eating fish from the river below the point of liquid waste discharge; and drinking water from the river below the point of liquid waste discharge. The dose rate attributable to external radiation from the noble gases was a fraction of the background value, and all the other estimated dose rates were considerably lower. 18 references. (auth)

**56980** DERIVATION OF GASEOUS RELEASE LIMITS FOR THE BROWNS FERRY NUCLEAR PLANT. Belvin, E. A.; Smith, J. M.; Montgomery, T. L.; Oppold, J. A. (Tennessee Valley Authority, Muscle Shoals, Ala.). pp 385-408 of Health Physics Aspects of Nuclear Facility Siting. Vol. II. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

The methods used for calculation of the radioactive gaseous release limits for the Browns Ferry Power Reactor are described. Operational limits are determined for normal releases of low-level radiogases from three 1,098-MW(e) boiling water reactors. The methods employed in these calculations are expanded from those used in the past for calculation of release limits from boiling water reactors. Release limits are derived for both radioactive noble gases and radioiodine. In deriving the noble gas limits, both the external whole body gamma exposure from the noble gases and the internal exposure from the particulate daughters are considered. Since ventilation air is discharged through reactor building and turbine building roof ventilators during normal operation, it is necessary to compute release limits for the noble gases and radioiodines for both the plant stack (assuming a point, elevated release) and the reactor building complex (using a ground level, volume release). Consequently, the overall site release limit is presented in the form of an equation which assures exposures to the general population which will not exceed the AEC guidelines. The Browns Ferry Nuclear Plant Technical Specifications for gaseous releases were prepared using the information presented. 12 references. (auth)

**56981** PUBLIC HEALTH SERVICE ROLE IN PROVIDING INFORMATION RELATIVE TO THE NUCLEAR POWER CONTROVERSY. Martin, J. E.; Harward, E. D.; Weaver, C. L. (Bureau of Radiological Health, Rockville, Md.). pp 724-35 of Health Physics Aspects of Nuclear Facility Siting. Vol. III. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

The results of several extensive studies of the effects of radioactivity discharges from nuclear facilities on the environment and the dose to the population are summarized. Also discussed are the impact that this information has had on the current debate over nuclear power and the types of studies and programs that will be conducted in the future to provide data on this subject. Public Health Service studies have been of value because a polarization of viewpoints on nuclear power has made the credibility of information furnished by either side suspect by the other. One major conclusion reached is that the success or failure of nuclear power may well depend on the availability of credible, non-biased, reliable data such as that provided by health agency programs. 26 references. **56982** (ANL-7791) INTEGRAL MEASUREMENTS IN EBR-II OF CAPTURE RATES, FISSION RATES, AND ALPHA FOR $^{233}U$, $^{235}U$, $^{238}U$, $^{239}Pu$, $^{240}Pu$, AND $^{242}Pu$. Heinrich, R. R.; Williams, J.; Madson, A. A.; Dudey, N. D. (Argonne National Lab., Ill.). Jul 1971. Contract W-31-109-eng-38. 32p. Dep. NTIS.

Integral capture rates, fission rates, and their ratio, alpha, were determined for $^{233}U$, $^{235}U$, $^{238}U$, $^{239}Pu$, $^{240}Pu$, and $^{242}Pu$ as a function of position in EBR-II. A total of 64 samples were irradiated in EBR-II over a period of 6 to 12 months for accumulated exposures ranging from 2000 to 10,000 MWd. Fission rates were determined by assaying the fission product $^{137}Cs$, and capture rates were determined by mass-spectrometric and alpha-spectrometric analysis. Breeding potentials for the six isotopes were calculated from the alpha values determined in the core and blanket of EBR-II. 14 references. (auth)

**56983** (NP-18992) LECTURES HELD BY THE NORWEGIAN ATOMIC ENERGY ASSOCIATION, AUTUMN 1970, AND SPRING 1971, NORSK ATOMENERGIFORENING, POLYTEKNISK FORENING, OSLO (NORWAY) 1971. (Institutt for Atomenergi, [Kjeller] (Norway)). 65p. Dep. NTIS (U. S. Sales Only).

The texts of four lectures, two in English and two in Swedish, are presented. The first is a lecture by F. R. Farmer on the safety of nuclear power plants. The second, by S. O. W. Bergstroem (in Swedish), is on environmental aspects of nuclear power. The third, by S. Eklund (in Swedish), is on international cooperation in nuclear power. The fourth, by J. C. Charlton, is on trends in the use of radioisotopes, especially in medicine. (Norway)

**56984** (STI/PUB-194/4) POWER AND RESEARCH REACTORS IN MEMBER STATES. 1971 Edition. (International Atomic Energy Agency, Vienna (Austria)). 1971. 85p. IAEA $2.00.

XUM

A comprehensive list of land-based nuclear power and research reactors in the Member States of the International Atomic Energy Agency is presented. The list includes data on all reactors in operation, under construction, and planned. The cumulative electric power generated up to December 1970 is given for operating plants, and the growth of installed capacities of power reactors and the increase in the number of research reactors are illustrated. A reactor name index is included. (H.D.R.)

**56985** TWO-DIMENSIONAL TIME-DEPENDENT ANALYSIS OF PERFORATED END CAPS FOR NUCLEAR REACTOR PRESSURE VESSELS BY THE FINITE ELEMENT METHOD. Stefanou, G. D. (City Univ., London); Yu, C. W.; England, G. L. pp H3/3.1-16 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The design of prestressed concrete pressure vessels for nuclear reactors, and in particular, the design of the end caps to the cylinders increasingly call for more sophisticated and better analytical techniques. A method is proposed to analyze the mode of action of the end slabs, assuming constant elevated temperature and radial compression. These simplified assumptions represent reasonably realistic operating conditions. If required, more complex operating conditions can be incorporated. A special feature of the proposed analysis is the method by which an elastic solution can be modified to take account of the time-dependent effects such as creep and shrinkage at ambient and under elevated temperatures. The elastic solution is based on the two-dimensional finite element formulation using triangular plate elements. After obtaining the initial elastic state of stress, a complete elastic, thermoelastic and time-dependent solution is achieved in a step-by-step manner, based on the "Rate of Creep" approach, and using small time intervals during which the stresses are assumed constant. The technique was used to analyze slab models tested and reported elsewhere. It was shown that the proposed method estimates the deformational behavior of the models with an acceptable degree of accuracy. The redistribution of stress as a result of thermal creep predicted by the method also agreed well with the cracking pattern of the models. It is also seen that the proposed method, which is quite general, takes into account loading history. In addition, it has the advantage of economizing in computer time. (auth)

**56986** BEHAVIOR OF END SLABS IN CYLINDRICAL PRESTRESSED CONCRETE PRESSURE VESSELS. Langan, D.; Garas, F. K. (Taylor Woodrow Construction Ltd., Southall, Eng.). pp H3/4.1-40 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The general behavior and shear failure mechanism of restrained thick slabs which form the end closures of cylindrical prestressed concrete pressure vessels are examined. Typical results from a five year parametric study of over 20 model pilecaps are presented. The effects of bonded reinforcement, lined and unlined penetrations, span to depth ratio, concrete strength, level of hoop prestress and boundary conditions were investigated. The factors which may influence the representivity of end slab tests and the effect of the significant parameters on the overload and ultimate load behavior of the full scale structures are discussed. The components of internal shear resistance which balance the total shear force along the failure plane are described. Simplified design methods for determining the ultimate shear strength of end slabs are considered and related to the available test data. 18 references. (auth)

**56987** GENERAL CALCULATION OF PRESTRESSED CONCRETE REACTOR PRESSURE VESSELS WITH CONSIDERATION OF NON-LINEAR STRESS-EXPANSION LAWS BY THE METHOD OF DYNAMIC RELAXATION. Schnellenbach, G. (Ruhr-Univ., Bochum, Ger.). pp H3/7.1-20 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The dynamic relaxation method is applied for three-dimensional calculations of prestressed concrete pressure vessels. The theory for elastic solutions with the dynamic relaxation method described only as far as necessary to understand computation processes with constitutive laws different from linear elasticity. Some remarks are made on the computation of three-dimensional temperature distributions and the calculation of resulting stresses. Assumptions and the computation process for the creep calculation are outlined. An elasto-plastic calculation with the dynamic relaxation method is described with an example of a plane problem using a nonlinear constitutive law basing on Prandtl–Reusz theory. Assumptions for calculations of prestressed concrete pressure vessels with cracked zones are outlined. 10 references. (auth)

**56988** CALCULATION OF TIME-DEPENDENT STRESSES IN PCPVS BY AN APPROXIMATE METHOD. England, G. L. (Kings Coll., London); Allen, S. J. pp H3/8.1-25 of Structural Mechanics in Reactor Technology. vVol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The calculation of time-varying stresses in materials subject to nonhomogeneous creep is discussed. Economic solutions are sought using a general theory based on a power variational principle. This permits approximate solutions to the time-varying stresses, in real and complex structures, to be obtained with little effort from a minimum of input data. It is shown that conventional finite element stiffness analyses may be used to provide the necessary input data to the creep problem; these take the form of a set of independent stress distributions throughout the structure. Then, using a flexibility approach these stress distributions are optimized to achieve the best possible fit to the true solutions during the time-dependent phase of the problem. Finally, the theory is applied to two problems and solutions are presented for (a) a thin plate subject to in-plane edge loading and nonuniform temperature distribution, (b) a short cylindrical prestressed concrete reactor pressure vessel, with end caps, subjected to internal pressure and temperature crossfall through the walls and caps. (auth)

**56989** NOTE ON A PRESTRESSED CONCRETE PRESSURE VESSEL FOR THE INSTITUTO DE PESQUISAS RADIOACTIVAS. de Souza e Silva, R.; Pinheiro, R. B. (Instituto de Pesquisas Radioactivas, Belo-Horizonte, Brazil). pp H4/5.1-12 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The studies concerning the prestressed concrete pressure vessel for a natural uranium heavy water moderated and cooled power reactor are described. For circumferential prestress, the method of exterior high strength steel strips was adopted. A modified system of the Swedish approach for the top removable lid and the thermal insulation was adopted. The stress analysis was performed by a finite elements program which uses TRIA-3 axisymmetric elements. Creep and shrinkage were also investigated. 17 references. (auth)

**56990** DESIGN CONCEPT AND ANALYSIS OF CYLINDRICAL PRESTRESSED CONCRETE REACTOR PRESSURE VESSELS WITH AXIAL RIBS. Sebock, F. (Hungarian Academy of Sciences, Budapest). pp H4/7.1-25 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Research work is reported on circular cylindrical shells with axial ribs. Rib interstices are filled out with a good shielding and heat insulating material without inherent strength. Prestress is due to axial wires led in ducts in the ribs and tangential ones wound around rib crests. For the vessel a structural analysis was worked out based on the conventional energy method. As primary members, the hinged short circular cylindrical shell and the beam supported elastically on the tangential prestressing wires are chosen. All loads are expanded in Fourier series. Equality of displacements yields for each wave period a system of linear equations. (auth)

**56991** SCANDINAVIAN PCRV MODEL PROJECT: STRESS CALCULATION AND EXPERIMENTAL VERIFICATION. Andersen, S. I. (Danish Atomic Energy Commission, Copenhagen); Hamre, E.; Tarandi, T. pp H5/3.1-16 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Part of a joint development program by Denmark, Finland, Norway, and Sweden in the field of prestressed concrete vessels for water reactors is described. PCRV's for water reactors are characterized by their relatively high ratio of wall thickness to radius

XUM

and, to the Scandinavian design, by a removable top closure that permits refueling to be done in the traditional LWR manner. The results of the theoretical and experimental structural analysis obtained during testing of the Scandinavian PCRV model vessel are presented. Testing of the model vessel showed good agreement with theoretical predictions. 8 references. (auth)

**56992** INVESTIGATION ON A PRESTRESSED CONCRETE REACTOR VESSEL UNDER INTERNAL GAS PRESSURE. MODE OF RUPTURE. Lenschow, R. (Norges Tekniske Hoegskole, Trondheim, Norway). pp H5/7.1-17 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Tests to rupture were performed on 2 models of prestressed concrete pressure vessels. The mode of rupture of the vessels loaded by internal gas-pressure was studied. Model No. 1 was a model in a scale 1:3.6, of the Scandinavian PCRV-model, except for the removable lid. The vessel had an inside diameter of 55 cm and an inside height of 111 cm. The cylindrical wall thickness was 30 cm and the top and bottom slabs were 33 cm. The reference pressure was 85 bar. Model No. 2 was equal to No. 1, but had no bonded reinforcement in the cylindrical wall. The models were instrumented with vibrating wire strain gauges in the concrete and electrical resistance strain gauges on the reinforcement and on the lining and thermocouples registered concrete temperature. Both models were loaded with an internal gas-pressure to failure. Model No. 1 failed by an extensive leakage at 270 kp/cm$^2$, model No. 2, however, exploded at 267 kp/cm$^2$ internal overpressure. Both models had a significant deformations and cracks before failure. The maximum measured deflections were about 25 times the deflections by the reference pressure. The test results are interpreted and compared with computed values. Calculation of ultimate load is discussed. (auth)

**56993** THEORETICAL AND EXPERIMENTAL INVESTIGATIONS ON THE STRESS-STRAIN BEHAVIOR OF PRESTRESSED CONCRETE REACTOR PRESSURE VESSELS. Servit, R. (Technical Univ., Prague). pp H5/8.1-10 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The stress–strain behavior of a thick-walled cylindrical prestressed concrete pressure vessel with originally designed secantial cable arrangement was investigated. Using the finite difference method with displacements expressed as curvilinear, cylindrical coordinates are derived and computed taking into account geometric irregularities. The experimental solution by photoelasticity verified the computed stress field in the environs of the holes. (auth)

**56994** MATRIX DISPLACEMENT METHOD ON PRE- AND POST-BUCKLING ANALYSIS OF LINERS FOR REACTOR VESSELS. Yang, T. Y. (Purdue Univ., Lafayette, Ind.). pp H6/2.1-22 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

A matrix displacement method is suggested for the solution of instability problems for liners of nuclear containment vessels. The method uses the incremental stiffness formulations for the plate and shell discrete elements to predict the pre- and post-buckling behavior by either an iterative or an incremental procedure. The inclusion of initial displacement terms in the element formulations allows the method to account for the possible initial displacement of the liner caused by constructional inaccuracies. Applications are illustrated by using the formulation for a doubly curved shell discrete element. 12 references. (auth)

**56995** LINER PLATE BUCKLING AND BEHAVIOR OF STUD AND RIB TYPE ANCHORS. Doyle, J. M. (Univ. of Chicago); Chu, S. L. pp H6/3.1-14 of Structural Mechanics in Reactor Technology. Vol. 3, Pt. H. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The evaluation of forces and deformations of liner plate anchors in containment structures is studied. These forces and deformations are due to buckling, and hence, reduction in load carrying capacity of a panel of the liner plate. Specifically, the behavior of headed studs and of continuous rib type anchors is investigated. The stiffness characteristics of the anchors are based on experimental evidence, and are nonlinear. Parameters which are varied include the plate thickness, yield stress and anchor spacing. The results of several representative configurations are presented from which behavior trends can be observed. It is found that an increase in yield stress of an amount often encountered in practice causes a large increase in anchor force and deformation. On the other hand, a plate thickness increase of 15% results in a much smaller increase of anchor force and displacement. (auth)

**56996** DETECTION OF BOILING IN NUCLEAR REACTORS. Saxe, R. F.; Sides, W. H. Jr.; Foster, R. G. Jr. (North Carolina State Univ., Raleigh). J. Nucl. Energy; 25: 139-53(Apr 1971).

The relative sensitivities of two possible methods for the detection of boiling in reactors were measured, under near ideal conditions, and it was shown that the acoustical method is more sensitive than the neutron-flux noise method by a factor of at least $10^3$ or $10^4$. An upper limit for the amount of boiling void was measured as 0.4 ml and the neutron-flux noise measurements were calibrated in terms of reactivity fluctuations so that these results could be applied to other reactors. (auth) (UK)

**56997** RAPSODIE AS AN IRRADIATION REACTOR. Bull. Inform. Sci. Tech. (Paris); No. 153-154, 118-29(Nov-Dec 1970).

The Rapsodie irradiation characteristics obtained were: fission and capture cross sections and specific power of $^{235}U$, $^{238}U$, $^{239}Pu$, and $^{240}Pu$; thermal and hydraulic characteristics. The ICN 3 irradiation assembly of fissile pins was developed which has a geometry different to that of the fuel pins. The fissile device of type ICN 1 with a movable capsule is intended for the long term irradiation of samples in the core. The IRZ 4 device was developed from the preceding one for irradiation in the nickel reflector. The ICN2 and IFZ3 devices allow various materials to be irradiated. Structural materials were irradiated between 400 and 700°C in an IVZ3 type device. An in-pile creep device was also studied. (France)

**56998** CONSTRUCTION AND ENGINEERING OF PFR. Cambell, R. H. Nucl. Eng. Int.; 16: No. 183, 636-40(Aug 1971).

The system of control under which the PFR was designed, developed, and constructed is outlined. The method of construction is described and construction progress to mid 1971 is recorded. The work still to be done in completing and commissioning the reactor is reviewed. (auth) (UK)

**56999** NUCLEAR POWER AND INTERNATIONAL COOPERATION. Eklund, S. (International Atomic Energy Agency, Vienna). Tek. Ukebl.; 118: No. 35, 17-20(26 Aug 1971). (In Norwegian).

Following a general consideration of the world's energy resources and their rational exploitation, their different effects on the environment are considered. The short term and long term demand for uranium is analyzed and the known reserves estimated. Based on these figures, and on recent results of new prospecting it is found unlikely that any dramatic increase in price will occur within the foreseeable future. Brief reviews of reprocessing and enrichment capacities and plans are given, also mentioning European enrichment cooperation. A consideration of the reactor field leads to the conclusion that nuclear power will become increasingly attractive. The possibility of enormous reactor-based agro-industrial complexes in coastal desert areas, based on nuclear power and desalination is mentioned. The economic potential of peaceful nuclear explosions is examined. Finally a realist opinion that reactor development will increase the technological gap between developed and developing countries is expressed. (Norway)

**57000** LEIDI; A COMPUTER PROGRAM FOR THE POWER DISTRIBUTION WITH RESPECT TO MATERIALS AND PROCESSES WITHIN A REACTOR. Faber, C. (INTERATOM, Bensberg, Ger.). Atomwirt., Atomtech.; 16: No. 6, 304-5(Jun 1971). (In German).

The computer program LEIDI is based on a one-dimensional model. It permits the calculation of local power densities for various materials. In addition, it allows the breakdown of local power density with regard to nuclear processes. Neutron flux is based on a diffusion calculation. Since the one-dimensional model permits only rough estimates, a two-dimensional computer program is under development. (H.B.G.)

**57001** HIGH LEVEL OR LOW LEVEL IT'S A ROCKY ROAD FOR RADWASTES. Owens, Ken. Elec. Light Power (Boston); 49: No. 7, 29-38(May 1971).

The controversy over radioactive waste discharges to the environment from nuclear power plants is examined. Licensing procedures and regulations governing effluent discharge levels and waste handling and disposal are discussed. The anticipated growth in waste production is indicated, and waste management services performed by private companies are tabulated. (H.D.R.)

**57002** CONVENTIONAL AND NUCLEAR THERMAL ENERGY. Hannothiaux, Andre (Electricite de France, Paris). Rev. Fr. Energ.; No. 230, 246-53(Mar-Apr 1971). (In French).

The evolution of the nuclear policies of the EDF (Electricite de France) during the past 25 years is presented. The initial motivations in 1946 and the resulting experimental program are recalled. After being associated with Marcoule in the recovering of energy from the plutonium producing reactors G1, G2, and G3, EDF undertook the construction at Chinon of the first nuclear power stations. Their expertise extended into both the classical and nuclear aspects of the projects, the CEA acting in an advisory capacity. The economic criteria which led to the adopting by the EDF of the American light water (PWR and BWR) systems for power stations envisaged under the VI plan are discussed. This decision was taken in spite of the technical success of the St. Laurent 1 project. Investigations envisaged or presently being carried out with heavy water or fast reactors are also enumerated. (France)

**57003** HOW SHOULD FUTURE NUCLEAR ENERGY BE SUPPORTED BY THE FEDERAL REPUBLIC OF GERMANY? Schuster, G. (Bundesministerium fuer Bildung und Wissenschaft, Bonn). Atomwirt., Atomtech.; 16: No. 8-9, 410-12(Aug-Sep 1971). (In German).

At the present time, light water reactors are established for power plants, and the fast breeder, probably cooled by sodium, claims priority for the future. Whether or not the high-temperature gas-cooled reactor should be developed as an intermediate step is discussed. Because of previous experiences with gas turbines in the primary circuit and with helium in the production of gas from coal as well as in metallurgy, Germany possesses a promising position. Analysis of cost and risk, however, practically prohibits any single European nation or industrial company to support the necessary research and development. Therefore, international cooperation becomes mandatory for West-European countries. Examples for the beginning of such collective efforts are given. (H.B.G.)

**57004** APPLICATION OF NUCLEAR ENERGY FROM THE STANDPOINT OF THE REACTOR CONSTRUCTION INDUSTRY. Goeschel, H. (Siemens AG, Erlangen, Ger.). Atomwirt., Atomtech.; 16: No. 8-9, 412-13(Aug-Sep 1971). (In German).

The positive aspects of nuclear energy application are discussed. It serves as a substitute for fossil fuel and plants can be located close to population centers. It permits an increase of plant unit size from 600 MW for fossil fuel to at least 1200 MW for nuclear energy. Nuclear plant safety requirements far exceed those of conventional plants. It requires close cooperation between West European nations as to further research and development. (H.B.G.)

**57005** ELECTRICITY IN THE MODERN INDUSTRIAL SOCIETY. Kletsch, E. (Nordwestdeutsche Kraftwerke AG, Hamburg). Atomwirt., Atomtech.; 16: No. 8-9, 414-17(Aug-Sep 1971). (In German).

Within an industrial society, electric energy must be doubled every decade. An analysis shows that West Germany will soon become unable to build the necessary installations because of lack of personnel and equipment. Projections show that energy demand should be supplied at the base level by nuclear energy; up to a medium level by coal; and peaks by natural gas. The ease and safety of storing sufficient nuclear energy is emphasized. In addition, discussed are the market for nuclear power plants, large scale distribution system for energy, safety, environment, and economy. (H.B.G.)

**57006** POSSIBILITIES FOR INTERNATIONAL COOPERATION IN THE AREA OF NUCLEAR ENERGY. Mandel, H. (Rheinisch-Westfaelisches Elektrizitaetswerk AG, Essen). Atomwirt., Atomtech.; 16: No. 8-9, 418-26(Aug-Sep 1971). (In German).

Efforts to lower the cost of nuclear energy should concentrate on construction and operation of nuclear power plants including all parts of the fuel cycle. Also included must be research and development of new reactor types. Rising costs of development as well as the rapidly growing market for nuclear power plants necessitate an analysis of possibilities for the lowering of costs through international cooperation. Such a cooperation should extend to reactor construction, fuel element industry, electricity supply systems, and research centers and administrative agencies. (tr-auth)

**57007** ADVANCED COMPUTER GRAPHICS. ECONOMICS, TECHNIQUES, AND APPLICATIONS. International Symposium Held at London, England, April 14-16, 1970. Parslow, R. D.; Green, R. Elliot (eds.). New York; Plenum Publishing Corporation (1971). 1242p. $47.50. (CONF-700445).

A separate abstract is included for one of the 62 papers presented. The paper describes the use of graphic display computer systems for power reactor design and information retrieval. (D.C.C.)

*For an abstract of an individual paper see: 57008.*

**57008** APPLICATION OF COMPUTER GENERATED GRAPHS AND DIAGRAMS TO THE DEVELOPMENT OF ADVANCED NUCLEAR REACTORS. Cardwell, D. W. (Oak Ridge National Lab., Tenn.). pp 555-73 of Advanced Computer Graphics. /Parslow, R. D. (ed.). New York; Plenum Publishing Corp. (1971).

From International symposium on computer graphics; London, England (14 Apr 1970).

The use of computer systems with graphic displays for the design of advanced power reactors is described. Data acquisition and processing systems with graphic displays are also described for information retrieval systems. 7 references. (D.C.C.)

**57009** TRANSACTIONS OF THE INTERNATIONAL ASSOCIATION FOR HYDRAULIC RESEARCH. PART 2. Symposium Held in Stockholm, August 23-26, 1970. Vaellingby, Sweden; Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970). 315p. (In English and French). (CONF-700846-(Pt.2)).

A separate abstract is included for one of the 11 sessions discussed. The session presented discusses flow characteristics of pumps for power reactors. (D.C.C.)

*For an abstract of an individual section see: 57039.*

**57010** NUCLEAR REACTOR. (to English Electric Co. Ltd.). French Patent 1,568,881. 21 Apr 1969. Filed 6 Feb 1968. (In French).

A nuclear reactor is described consisting of graphite moderator pilings and a lateral restraint structure encircling the pilings. In the graphite columns there are fuel channels. The structure is supported inside a pressurized concrete vessel. The support is circumferentially positioned by pins. (J.S.R.)

**57011** PFR COMPONENTS. Scott, R. W. (British Nuclear Forum, London). Nucl. Eng. Int.; 16: No. 183, 646-50(Aug 1971).

Special features of design, materials, fabrication, and assembly of PFR components to ensure reliable operation in Na are described. Among the components considered are those for the core, heat-exchanger systems, fuel-handling, shielding, control and coolant purification. (UK)

**57012** PLACE OF FAST REACTORS IN THE UK POWER PROGRAMME. Grieves, J. O. (Central Electricity Generating Board, London). Nucl. Eng. Int.; 16: No. 183, 630-1(Aug 1971).

A program for the introduction of the first commercial fast breeder reactor into the CEGB system, in relation to the completion of the Prototype Fast Reactor at Dounreay, is outlined. This envisages site selection in 1972 and commercial operation in 1979. The problems and decisions involved are discussed. (UK)

**57013** TECHNICAL DESCRIPTION OF PFR. Henry, K. J. (United Kingdom Atomic Energy Authority, Risley, Eng.). Nucl. Eng. Int.; 16: No. 183, 632-6(Aug 1971).

Descriptions, accompanied by detailed illustrations, are presented for the core, primary circuit, fuel handling system, sodium purity control, secondary and steam circuits, turbine generator plant, instrumentation and plant control of the PFR reactor. Brief outlines are given of the method of assembly of the reactor vessel and of commissioning plans. (UK)

**57014** ORGANIZATION AND FINANCING OF NUCLEAR RESEARCH AND TECHNOLOGY IN THE FEDERAL REPUBLIC OF GERMANY. Weber, A. Atomwirt., Atomtech.; 16: No. 8-9, 444-6(Aug-Sep 1971). (In German).

The Ministry for Education and Science absorbed the previously existing Ministry for Atomic Energy. Of the 4 billion DM budget, 1.3 billion was allocated for nuclear energy. The nuclear energy allocations for 1971 are detailed in regard to large nuclear research installations, reactor development, advisory organizations, and international cooperation. (H.B.G.)

**57015** HETEROGENEOUS NUCLEAR REACTOR. (to Brown Boveri/Krupp Reaktorbau GmbH). French Patent 1,567,592. 8 Apr 1969. Priority date 2 Jun 1967, Germany. (In French).

A heterogeneous reactor is described in which the different fuel elements contribute a high reactivity and have eventually excess reactivity in the cold state. The control of the power is done with absorbing rods. The specific reactors considered are high temperature reactors with fertile elements and reactive elements. The

XUM

sliding absorbing rods are in the shape of crossed clads and cap the elements with high associated reactivity. (J.S.R.)

**57016** GERMAN-BENELUX FAST BREEDER PROJECT AND FUTURE DEVELOPMENTS IN EUROPEAN FAST BREEDER REACTORS. Haefele, W. (Inst. for Applied Reactor Physics, Karlsruhe, Ger.). J. Brit. Nucl. Energy Soc.; 10: No. 3, 169-75(Jul 1971).

The philosophy behind the development of the German fast reactor project is briefly summarized. Main objectives of the SNR 300 prototype reactor and the more important features of its design are described. Other aspects discussed include safety, siting, sodium component development, international cooperation, fuel cycles and costs. (UK)

## *Kinetics and Dynamics*

**57017** (BAW-3647-22) PHYSICS VERIFICATION PROGRAM PART III, TASK 5. Quarterly Technical Report, April-June 1971. Baldwin, M. N. (Babcock and Wilcox Co., Lynchburg, Va. Research and Development Div.). Sep 1971. Contract AT(30-1)-3647. 26p. Dep. NTIS.

An experimental program to correlate the response of all-solid, self-powered, in-core neutron flux detectors to power density profiles of a critical assembly is described. The experimental assembly, a water-moderated, slightly enriched, $UO_2$ lattice, perturbed by Ag-In-Cd poison pins and dissolved boric acid, is arranged to mock up fuel elements of a commercial pressurized water reactor. Results obtained during the second calendar quarter are presented. They will serve to check analytical techniques for relating detector signals and power profiles in commercial power reactors. (auth)

**57018** (CONF-710302-(Vol.1), pp 452-63) WORK OF THE COMMITTEE ON COMPUTER CODE COORDINATION. Hannum, W. H.; Lewellen, J. W. (Division of Reactor Development and Technology (AEC), Washington, D. C. Reactor Physics Branch).
From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A committee was assembled in March 1969 at the request of the Advisory Committee for Reactor Physics to consider the general question of how the development of neutronic coding could be better coordinated with the fast reactor community. The factual history of the committee in its various forms and its charter, conclusions, and general working arrangements are given. Orientation toward the purpose for the committee, the significant recommendations from the committee, and suggestions as to the future course in co ordinated computer code development are presented. (auth)

**57019** (CONF-710302-(Vol.2), pp 1065-85) COMPARISON CALCULATIONS FOR A LWR BENCHMARK PACKAGE USING ENDF/B-I AND -II DATA. Olhoeft, J. E. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Energy Systems Div.).
From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A package of benchmark problems was generated to test modifications to production nuclear codes for light water reactors. The selected benchmark problems fall into three general classes: (1) critical experiments to evaluate fundamental integral quantities in static calculations; (2) single pellet depletion calculations to evaluate irradiated fuel isotopics; and (3) depletion sequence calculations to evaluate key parameters of importance for PWR reactors. This set of benchmark problems is useful to test the effects on thermal reactors of cross section differences between the version I and version II library tapes of ENDF/B. The results of this test for classes (1) and (3) are discussed. 5 references. (auth)

**57020** (EUR-4709) TRACE: FUEL CYCLE COMPUTER CODE FOR FAST REACTOR ANALYSIS. Graziani, G. (European Atomic Energy Community, Ispra (Italy). Joint Nuclear Research Center). Aug 1971. 34p. Dep. NTIS (U. S. Sales Only). EUR F.Fr. 5.60.

A two-dimensional computer program written for the IBM 360/65 which calculates the fuel input requirements and the neutron physics behavior of the equilibrium fuel cycle of a fast reactor using a partial refuelling scheme is described. (auth)

**57021** (JAERI-Memo-4449) DELIGHT: THE POINT REACTIVITY BURNUP CODE FOR HTGR LATTICES. Shindo, Ryuichi; Hirano, Mitsumasa; Aruga, Takeo (Japan Atomic Energy Research Inst., Tokyo). May 1971. 55p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

The code, DELIGHT, was developed to analyze the burnup characteristics of the lattices with fuel matrices composed of coated fuel particles. The lattice is assumed to be homogeneous. The number of neutron energy groups is 61 for fast neutrons (10 MeV ~ 2.38 eV) and 50 for thermal neutrons (2.38 eV ~ 0 eV). The slowing down of fast neutrons is treated by the discontinuous slowing-down model, while the scattering of thermal neutrons by graphite and/or other moderator nuclides is dealt with scattering law for free gas. The calculations of criticality and burnup are based on few energy groups (maximum 10 for fast or thermal neutrons) and the nuclide chains of thorium-uranium and uranium-plutonium are taken in for burnup calculation. The space shielding effect of coated fuel particles for fast neutrons is considered for the calculation of resonance absorptions. Few group constants of the lattice can also be processed by the code for the use of reactor-physics analyses of HTGR cores. 9 references. (auth) (Japan)

**57022** (MRR-73) SIMULATION OF THE HYDRODYNAMICS OF BOILING WATER REACTORS. Wagner, H. (Technische Hochschule, Munich (West Germany). Institut fuer Mess- und Regelungstechnik). Jul 1970. 87p. (In German). Dep. NTIS (U. S. Sales Only).

The one-dimension non-linear dynamics of a boiling water reactor with natural or forced circulation, limited to pure hydrodynamic processes, were studied. Feedbacks of the reactor power by means of neutron kinetics were not considered. By means of a separation expression for the site and time dependence of the pressure, a dynamic pressure feedback to the hydrodynamics in the reactor perturbations could be obtained. The coolant values were reduced to pure time functions. The special advantage of this method lies in the elimination of pressure wave propagation effects with the concomitant high computation time because of the great propagation velocity of pressure perturbations. The feedback of water level changes to the system dynamics was considered. The equations for site and time variable two-phase backlash were treated in the two-phase perturbation range. In order to simulate as well as possible the natural circulation behavior of boiling water reactors, the incorporation of the driving force determining the coolant circulation because of the density variation of the coolant is necessary. In the present model this was accomplished by consideration of the coolant density corresponding to the prevailing coolant enthalpy in the return pipes and in the uncooled zone of the reactor core. The formulation of time-changing dead-time terms in the subcooled return flow yields the feedback of enthalpy changes (which can originate by perturbations in the heat exchanger of disturbances in the coolant feed) to the reactor inlet enthalpy. The consideration of pressure and water level feedback permits the complete application of the model both to the direct circuits of the boiling water and to the indirect circuits. 45 references. (tr-auth)

**57023** POWER REACTOR STATISTICAL DIAGNOSTIC TECHNIQUES. Kemeny, L. G. (Univ. of New South Wales, Kensington). At. Energy Aust.; 14: No. 2, 8-13(Apr 1971).

Aspects of a program involving analysis of stochastic models for reactor signal sources are discussed. Power reactor dynamics studies using HIFAR involve measurement of many system fluctuating parameters from reactor noise sources, which are analysed statistically. Techniques involved in out-of-pile simulation and experiment are briefly described. An outline is given of the work of a joint noise analysis laboratory utilizing ISAC and SNEDAC data acquisition systems for analysis of fluctuating signals. (Australia)

**57024** ATTEMPT TO USE STEADY-STATE DATA FOR DETERMINING CRITICAL HEAT FLUX IN TRANSIENT CONDITIONS. Hassid, A. (CISE, Milan); Rychlicki, R. Energ. Nucl. (Milan); 18: No. 6, 333-45(Jun 1971).

The way to use steady-state data together with the MATRA code for predicting critical heat flux in transient conditions resulting from a loss of flow and/or power surge accidents for nuclear reactor safety assessment is described. MATRA code was developed in connection with safety studies for a CIRENE type reactor, to simulate the voiding of a constant area channel in which a steam-water mixture flows. A systematic comparison was made with a set of data obtained in different conditions (round tube with axial uniform and non uniform power distribution, 36 rod cluster with uniform axial power distribution). To derive critical heat flux in transient conditions, the experimental data obtained in steady-state conditions were used. The results of calculations are in satisfactory agreement with experimental data, except in some special cases. 10 references. (auth)

## *Control Systems*

**57025** DEVELOPMENT OF REACTOR IN-CORE NEUTRON MONITOR. Yokota, Mitsuo (Japan Atomic Energy Research

Inst., Tokai); Shirayama, Shinpei; Kasai, Makoto. Keisoku To Seigyo; 10: No. 1, 50-7(Jan 1971). (In Japanese).

For the core of Japan Power Demonstration Reactor (JPDR), application of in-core neutron monitor was planned at beginning of construction, and development of their domestic production has been pursued because they are considered to be expendables. The detector is composed of a sensor, mineral-oxide insulated cables to transmit signal, and connectors to connect with external cables. The sensor is an ionization chamber internally coated with natural boron and filled with 1 atm argon. As pre-test prior to in-core test in a power reactor, performance test of the sensor, treatment of the mineral-oxide insulated cables and check up of thermal characteristics of the detector were conducted. Practical test was carried out in the JPDR of BWR type and 45 MW(t), and saturation current characteristics, linearity, frequency response and sensitivity were checked. The results are summarized. (Japan)

## Shielding

**57026** (RCN–146) RAGA: A MONTE CARLO PROGRAM FOR CALCULATION OF GAMMA-RAY TRANSPORT IN A REACTOR SHIELD FOR MULTI-REGION SLAB GEOMETRY, USING EXPONENTIAL TRANSFORMATION. Verschuur, K. A.; Molenaar, J.; den Houting, A. W. (Reactor Centrum Nederland, Petten). Apr 1971. 25p. Dep. NTIS (U. S. Sales Only).

The ALGOL program RAGA is a Monte Carlo program which calculates the gamma ray flux-, energy absorption- and dose rate distribution in a reactor shield with multiregion slab geometry. Importance sampling is performed by exponential transformation of the track length distribution function and of the source distribution, by splitting, and Russian Roulette. The program is in operation on a 48K Philips Electrologica X8 computer. The calculation time for a reactor shield with a thickness of the order of 250 cm is about 10 minutes. (auth)

**57027** (RCN–147) EXPERIMENTAL STUDY OF THE NEUTRON ATTENUATION IN CONCRETE SHIELDS FOR FAST AND THERMAL REACTORS, WITH THE AID OF SIMULATED CONCRETE CONFIGURATIONS. Verschuur, K. A.; Quaadvliet, W. H. J. (Reactor Centrum Nederland, Petten). Apr 1971. 59p. Dep. NTIS (U. S. Sales Only).

Fundamental measurements were done on the shielding properties of concrete with various iron contents in a thermal and a fast reactor spectrum. The purpose of the experiments was to get insight in the influence of the iron on the shielding properties of concrete and to prepare a set of well defined measurements to test shielding programs. The concrete was simulated by layers of glass, polythene and iron. The "fast reactor spectrum" was attained with an iron filter. The measurements were carried out in a lid tank shielding facility with a fission plate, placed in an Argonaut type reactor. 4 references. (auth)

## Cooling Systems

**57028** (ANL/EBR–27) OPERATING EXPERIENCE WITH SODIUM PUMPS AT EBR-II. EBR-II PROJECT. Davis, J. R.; Deegan, G. E.; Leman, J. D.; Perry, W. H. (Argonne National Lab., Idaho Falls, Idaho). Oct 1970. Contract W-31-109-eng-38. 53p. Dep. NTIS.

Several types and sizes of sodium pumps have been used at EBR-II since initial operation of the primary sodium system in April 1963. Two 4500-gpm centrifugal pumps provide flow in the primary sodium system, and one 6500-gpm linear-induction electromagnetic (EM) pump provides the main flow in the secondary sodium system. A 500-gpm permanent-magnet dc EM pump operates continuously in the primary system to ensure removal of decay heat from the reactor if both primary pumps are lost. Smaller pumps in sodium use are two 100-gpm dc EM pumps, a 100-gpm ac EM pump (for NaK), two ac linear-induction EM pumps, and several EM sampling pumps. The measured hydraulic performance of all pumps has been adequate for their applications at EBR-II. Modification of the main primary-sodium pumps eliminated binding of both pumps which occurred during initial testing. Repair of the main secondary pump and an increase in differential pressure across the pump duct resulted in successful operation to flow rates needed for 62.5-MW(t) operation. Several auxiliary pumps have operated trouble-free since they were installed. Others have had to be replaced or repaired because they failed in service. (auth)

**57029** (RDT-E–5-1-T) PRESSURIZER FOR PRESSURIZED WATER REACTORS. (Division of Reactor Development and Technology (AEC), Washington, D. C.). Dec 1970. 45p. RSO.

The requirements for design, fabrication, testing, and inspection of an electrically heated pressurizer for pressurized water nuclear reactors using either direct immersion or non-immersion type heaters are presented. (auth)

**57030** (RDT-E–5-2-T) ELECTRIC HEATER AND CONNECTOR ASSEMBLY FOR PRESSURIZER FOR PRESSURIZED WATER REACTOR. (Division of Reactor Development and Technology (AEC), Washington, D. C.). Dec 1970. 25p. RSO.

The requirements for design, fabrication, testing and inspection of a single electric heater and connector assembly for pressurizers for pressurized water nuclear reactors are presented. (auth)

**57031** (WCAP–7755) TOPICAL REPORT: INTERCHANNEL THERMAL MIXING WITH MIXING VANE GRIDS. Cadek, F. F. (Westinghouse Electric Corp., Pittsburgh, Pa.). Sep 1971. 38p.

The experimental results and data analysis of a series of mixing tests using top, split mixing vane grids on 20 inch axial spacing are presented. These tests were conducted in pressurized water loops at Reynolds numbers similar to that of a PWR core under single and two phase (subcooled boiling) flow conditions. The thermal diffusion coefficient, TDC, is determined by comparing the THINC code predictions with the measured subchannel exit temperatures. TDC is found to be independent of Reynolds number, mass velocity, pressure and quality over the ranges tested. The two phase runs (local, subcooled boiling) fell within the scatter of the single phase runs. A conservative value of TDC = 0.038 is recommended for current design use. This represents a lower limit value of all the test runs. 11 references. (auth)

**57032** DENSITY MEASUREMENTS OF STEAM–WATER MIXTURES FLOWING IN A TUBULAR CHANNEL UNDER ADIABATIC AND HEATED CONDITIONS. Agostini, G.; Era, A.; Premoli, A. (CISE, Milan). Energ. Nucl. (Milan); 18: No. 5, 295-310(May 1971).

The experimental results of a systematic investigation concerning the density of steam-water mixtures flowing under adiabatic and heated conditions are presented. Measurements were carried out by means of the quick closing valve technique, in the following conditions: (1) Test section: vertical tube ID 0.91 cm; (2) Pressure: 30; 50; 70 kg/cm$^2$; (3) Specific mass flowrate: 40 ÷ 350 g/cm$^2$s; (4) Adiabatic conditions: channel length: 414 cm; quality: 0 ÷ 0.80; (5) Heated conditions: heated length: 100 ÷ 410 cm; inlet quality: −0.15; −0.02; +0.10; exit quality: up to heat transfer crisis; heat flux: 0 ÷ 300 W/cm$^2$. A preliminary analysis is also given of data and of main parameters affecting two-phase mixture density. 10 references. (auth)

**57033** SYSTEM OF RADIOACTIVE PRODUCTS CONTROL IN GAS COOLANT OF NUCLEAR REACTORS. Moravek, J.; Pietrik, I.; Hladky, E.; Vespalec, R. Jad. Energ.; 17: No. 5, 150-7(May 1971). (In Czech).

A dosimetric control system for the coolant in gas cooled nuclear reactors is described. Main attention is devoted to the control of gas fission products by detection of delayed neutrons and by gas chromatography. These controls provide information about contamination of the reactor core by fissionable material and information about conditions of fuel elements. These data ensure timely determination of risk in operation of a nuclear power plant. (auth)

**57034** HEAT AND MASS TRANSFER AS RELATED TO CORROSION PRODUCT DEPOSITION. Kabanov, L. (CISE, Milan). Energ. Nucl. (Milan); 18: No. 5, 285-94(May 1971).

The main factors affecting the formation of corrosion product (crud) deposits are discussed, and the significance of boiling and heat flux for this process is underlined. The available experimental results and correlations for determining the amount of deposit are presented, as well as the connection between crud deposition and thermal performance of heating elements. Special consideration is given to subcooled boiling, where the heat flux, supplied by latent heat on dependence of subcooling, is fairly important for determining the amount of crud deposits. The peculiarity of deposition relevant to very high and temporary increases in crud concentration is pointed out as well. Finally the thermal effects of deposits are considered, taking into account both the intensification of heat transfer and the addition of thermal resistance. 22 references. (auth)

**57035** TRANSACTIONS OF THE INTERNATIONAL ASSOCIATION FOR HYDRAULIC RESEARCH. PART 1. Symposium Held in Stockholm, August 23–26, 1970. Vaellingby, Sweden;

XUM

Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970). 575p. (In English and French). (CONF-700846-(Pt.1)).

Separate abstracts are included for 3 of the 48 papers presented on flow characteristics and performance of power plant equipment. (D.C.C.)

*For abstracts of individual papers see: 57036–57038.*

**57036** SURGE AND WATER HAMMER PROBLEMS IN THE COOLING WATER SYSTEM OF LARGE THERMAL POWER PLANTS. Jansa, B. (Vattenbyggnadsbyraan, Goteborg). pp J.1.1-8 of Transactions of the International Association for Hydraulic Research. Part 1. Vaellingby, Sweden; Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970).

From fifth symposium of the International Association for Hydraulic Research; Stockholm, Sweden (23 Aug 1970). See CONF-700846-(Pt.1).

Design criteria for calculating cooling water flow through condensers are stated in respect of level-conditions, surges, and vacuum risks. The influence of rotating parts in the axial flow pumps at the moment of power failure is discussed and the method of calculating cooling water flow through a system of tunnels and shafts including the effect of pump characteristics is described. The criteria have been used for design work at Oskarshamn nuclear power station and two other new Swedish thermal oil fired power stations. (auth)

**57037** WATER JET PUMPS FOR REACTORS. Geijerstam, E. af (Aktiebolaget Atomenergi, Studsvik, Sweden). pp J.3.1-12 of Transactions of the International Association for Hydraulic Research. Part 1. Vaellingby, Sweden; Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970).

From fifth symposium of the International Association for Hydraulic Research; Stockholm, Sweden (23 Aug 1970). See CONF-700846-(Pt.1).

Efficiency for water jet pumps is derived theoretically and tests made at about 30°C and 210°C are described. Small differences in momentum efficiency were obtained, indicating that the friction losses are low. Best efficiencies are 35% at flow ratio 2 decreasing to 26% at flow ratio 4. Phenomena in the mixing chamber and in the diffuser are discussed. (auth)

**57038** PROBLEMS OF REACTOR CIRCULATING PUMPS. Florjancic, D.; Brun, J.; Frei, A. (Sulzer Bros. Ltd., Winterthur, Switzerland). pp J.4.1-12 of Transactions of the International Association for Hydraulic Research. Part 1. Vaellingby, Sweden; Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970).

From fifth symposium of the International Association for Hydraulic Research; Stockholm, Sweden (23 Aug 1970). See CONF-700846-(Pt.1).

A semi-sphere was chosen as pump casing for larger reactor circulating pumps in order to keep the bending stresses to a minimum. The stress distribution due to the forces on the inlet, outlet and cover was tested. To this casing form the hydraulic parts were tested as regards efficiency and suction characteristic for the questionable specific speed range. Comparison of the results of analytical calculating methods, photoelastic experiments and strain gauge measurements on a model casing gave a design value for prototypes. The shaft seal, which is the most sensitive part of the pump, was developed in long term tests under operating conditions. Design was developed for hydrostatic and hydrodynamic shaft seals, which offers a reliable solution in operation of circulating pumps. 2 references. (auth)

**57039** PUMPS AND PUMP SCHEMES. pp 237-46 of Transactions of the International Association for Hydraulic Research. Part 2. Vaellingby, Sweden; Svenska Centralkommitten foer Internationella Ingenjoerskongresser (1970). (In French and English).

From fifth symposium of the International Association for Hydraulic Research; Stockholm, Sweden (23 Aug 1970). See CONF-700846-(Pt.2).

Technical discussions during one session of the symposium are covered. The papers discussed were: Surge and Waterhammer Problems in the Cooling Water Systems of Large Thermal Power Plants (B. Jansa, Sweden) and Problems of Reactor Circulating Pumps (D. Florjancic et. al., Switzerland). To the paper Water Jet Pumps for Reactors (E. af Geijerstam, Sweden) a correction is given. (auth)

**57040** STATE OF HELIUM TECHNOLOGY FOR HIGH TEMPERATURE REACTORS. von der Decken, C.-B. (Kernforschungsanlage, Juelich, Ger.); Mueller, H.-W.; Muser, W. H. Atomwirt., Atomtech.; 16: No. 8-9, 468-72(Aug-Sep 1971). (In German).

Selection of a cooling gas for high temperature reactors necessarily leads to helium from the standpoint of neutron physics, heat technology, and corrosion chemistry. Helium technology comprises experiences with Peach Bottom, Dragon, and AVR. These experiences especially focus on chemical impurities, friction values, heat transfer, heat shielding, acoustical oscillations, leak proofing of valves, and the design of gas compressors. For the concept of the spherical-pile reactor, general problems of helium technology can be considered solved. (tr-auth)

**57041** IMPROVEMENTS TO GAS COOLED NUCLEAR REACTORS. (to Atomic Power Constructions Ltd.). French Patent 1,567,560. 8 Apr 1969. Priority date 31 May 1967, Great Britain. (In French).

An improved gas-cooled reactor is described. The reactor consists of a core, a pressurized vessel around the core, at least one coolant flow line across the core, and a coolant chamber. This chamber has at least one inlet and at least two outlets for the coolant. It has a control device to regulate the coolant flow across one of the outlets. (J.S.R.)

**57042** GAS ELUTION IN A WATER-COOLED REACTOR PRIMARY CIRCUIT WITH GASEOUS PRESSURIZER. Bodnar, Yu. F. At. Energ. (USSR); 31: No. 2, 150-1(Aug 1971). (In Russian).

The conditions are examined for gas elution in the primary loop of a water-cooled reactor with a gaseous pressurizer. The temperature in the pressurizer should be maintained below the temperature of the heat exchange fluid in the primary loop. Temperature conditions should be selected so as to ensure absence of local boiling of the water. In order to dissolve bubbles it is essential to lower the temperature in the loop to a value below $T_K$. Here $T_K$ is the maximum temperature for an equilibrium state of a heterogeneous system at a given nitrogen concentration in the water. (K.S.W.)

**57043** LEAK PROOF MECHANICAL DEVICE FOR NUCLEAR REACTOR PRESSURE VESSELS. Serafini, A. (to SNAM Progetti S.p.A.). French Patent 2,003,480. 7 Nov 1969. Priority date 8 Mar 1968, Italy. (In French).

A leak proof mechanical device to produce coolant barriers circulating at the interior of the pressure vessel of liquid sodium reactors is described. This device is characterized by the fact that it contains a series of metallic piston segments of a special type. The piston segments alternate with spacing segments. The piston segments are placed between the internal wall of the pressure vessel and the external wall of the cylinder, and between the inlet and outlet coolant pipes. (J.S.R.)

**57044** METHANE DIFFUSION: AN EXAMINATION OF THE COMMERCIAL ADVANCED GAS COOLED REACTORS. Hawtin, P.; Klaschka, J. T.; Huber, R. A. (Atomic Energy Research Establishment, Harwell, Eng.). J. Brit. Nucl. Energy Soc.; 10: No. 3, 237-47(Jul 1971).

The addition of a mixture of $CH_4$ and CO to the $CO_2$ coolant of a commercial advanced gas cooled reactor is one suggested method for inhibiting the rate of radiolytic corrosion of the graphite moderator. However, under certain circumstances, in-pore mass transport effects can lead to a marked reduction of $CH_4$ concentration within the pores of a graphite moderator block in a commercial AGR. A mathematical model based on an earlier model used in safety studies in MAGNOX reactors is developed to estimate these effects quantitatively. The basic model assumes cylindrical symmetry and is slightly non-linear due to the nature of the radiolytic destruction term. Results computed from this model are presented for a typical commercial AGR. These results are compared with values obtained from a linear approximation and the validity of the approximation is demonstrated. The degree of nonlinearity of the model is dependent on the values of parameters in the radiolytic destruction term. A series of graphs are given which enable the validity of the linear approximation to be tested without the need to solve the non-linear equation. Calculations carried out on the linear model are described. Results are presented in a generalized form which enables the user to specify reactor operating parameters without reference to the basic differential equation. Results calculated from the cylindrical model involve the assumption of an inner and an outer radius. They are therefore specific to a particular reactor. A further simplification is introduced into the theory which enables the effect of variations in the graphite thickness to be readily determined. The range of graphite thickness over which this approximation is valid is described. (auth) (UK)

## *Fuels*

**57045** (GEAP-10385) HIGH BURNUP PERFORMANCE OF POWDER AND PELLET MIXED-OXIDE FUEL. Perry, K. J.; Baily, W. E. (General Electric Co., Sunnyvale, Calif. Breeder

Reactor Dept.). Jul 1971. Contract AT(04-3)-189. 60p. Dep. NTIS.

The performance at high burnup (~148,000 MWd/Te) of powder and pellet mixed-oxide fuel was investigated. Fuel-cladding reaction resulted in the uniform loss of 0.003 to 0.004 inch of 347 stainless steel from the inside surface of the cladding at inside surface temperatures in excess of 1300°F for both types of fuel. Nonuniform cladding attack of 0.005 inch was observed in the pellet pin. 20 references. (auth)

**57046** (GEAP-13722) PERFORMANCE TESTS OF SODIUM-FILLED POWDER AND PELLET OXIDE FUEL UNDER TRANSIENT OVERPOWER. Hikido, T.; Field, J. H. (General Electric Co., San Jose, Calif. Breeder Reactor Dept.). Jul 1971. Contract AT(04-3)-189. 56p. Dep. NTIS.

The performance of sodium-filled fuel pins in power transients was investigated using two experimental capsules in the TREAT (transient) facility. Each capsule contained three slightly enriched 0.250-inch o.d., stainless steel clad $UO_2$ fuel specimens. The three specimens (reference gas-bonded pellet, sodium-filled pellet, and sodium-filled powder) arranged side-by-side, were compared with regard to fuel temperatures, mechanical deformations, and post-irradiation appearance. There were no failures even though over fifty area percent of the gas-bonded pellet fuel specimen melted. The increased heat transfer afforded by the sodium resulted in significantly lower fuel temperatures in those two fuel pins. 12 references. (auth)

**57047** (JAERI-Memo-4157, pp 2-22) JPDR IRRADIATION EXPERIMENT OF ARTIFICIALLY PIN-HOLED NUCLEAR FUEL RODS. Ishiwatari, Nasumi (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

From operating experience with LWR power plants, it comes to be recognized that failure of loaded fuel rods is a matter of probability, and that the consequential release of fission products is inevitable. The experiment is aimed to get coefficients of release rate of the fission products into primary circuit water and into off gas system, and also to confirm detection method by isolating a fuel assembly likely to contain failed fuel rods into a container. The experiment was executed by loading of a failed fuel rod into the BWR type JPDR core. The fuel rod was designed to be a replica of other fuel rods consisted of $UO_2$ pellets and clad with Zircaloy-2. Two pin-holes of 0.5 mm dia. were made artificially at diametrical positions in plenum of the rod. The release of fission products was measured under light burnup, thermal flux where the failed fuel rod was located was (1 to 3) $\times 10^{13}$ n/cm$^3$. sec. The acquired release rate coefficients of the fission products were as follows: $^{131}I : 3 \times 10^{-11}$, $^{133}Xe : 1 \times 10^{-9}$, $^{137}Cs : 8 \times 10^{-9}$ and so on. These values are conditional as the released quantity was measured from reactor water for I and Cs and from the off gas system for Kr and Xe. The method to detect the likely fuel assembly to contain failed fuel rods was confirmed with the same artificially failed fuel rod. In this case, both $^{131}I$ and $^{137}Cs$ were measured, and proved to be useful signals. 12 references. (Japan)

**57048** (ORNL-TM-3359) ROD: A NUCLEAR AND FUEL-CYCLE ANALYSIS CODE FOR CIRCULATING-FUEL REACTORS. Bauman, H. F.; Cunningham III, G. W.; Lucius, J. L.; Kerr, H. T.; Craven, C. W. Jr. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 244p. Dep. NTIS.

ROD (Reactor Optimum Design) is a computer code for simultaneously optimizing the core design and performing the fuel-cycle analysis for circulating-fuel reactors. It consists of a multigroup diffusion calculation, including multiple thermal groups with neutron upscatter, in one-dimension or in two-dimensional synthesis, combined with an equilibrium fuel-cycle calculation. Cross sections in the CITATION format are required. The equilibrium calculation is a detailed model of the fuel cycle, including the effects of processing and of nuclear transmutation and decay. Fuel-cycle costs and fission-product concentrations are calculated, the fission products by an independent calculation from internally stored two-group cross sections. Special features of ROD are an optimization routine based on the gradient-projection method, a flux-plotting option, and a subprogram for simple time-dependent calculations based on reaction rates from the main program. **57049** (RDT-E-13-15-T) FUEL ASSEMBLIES FOR PRESSURIZED WATER REACTORS. (Division of Reactor Development and Technology (AEC), Washington, D. C.). Jul 1971. 47p. RSO.

The requirements for fuel assemblies for pressurized water reactors typical of those (including associated clustered control rod assemblies or burnable poison rod assemblies) in commercial electric power utility service are presented. Specifically, these requirements cover design, materials, process and personnel qualification, fabrication, assembly, quality assurance, test, inspection and examination, cleaning, packaging, and shipping. A fuel assembly is defined as a fabricated assembly of fuel rod support structures (skeletons). Only Zircaloy clad fuel rods containing sintered uranium dioxide pellets are covered. (auth)

**57050** (UJV-2551-RT) RADIATION EXPERIMENT ON TUBULAR FUEL ELEMENT WITH FINNED SURFACE. II. EXPERIMENTAL RESULTS. Derian, L.; Kadlec, J. (Ceskoslovenska Akademie Ved, Rez. Ustav Jaderneho Vyzkumu). 1971. 45p. (In Czech). Dep. NTIS (U. S. Sales Only).

The second irradiation experiment with a test model of the fuel tube for the heavy-water moderated gas-cooled KS type reactor is described and the results of this experiment are given. The aim of this experiment was to check the shape stability of the fuel tube and the stage of its technological development during the irradiation and after thermal cycling. The experiment was carried out in the reactor loop of the Nuclear Research Institute at Rez and the element tested was irradiated during 594 hours at reactor power of 4 MW. The test element was operated at average thermal fuel load of 13.4 kW/kg and at maximum surface temperature of 400°C. Total radiation stability of the test element and long-term canning tightness were confirmed. The element was inspected and cut, and metallographical analysis was carried out after the irradiation. No changes due to radiation were found in examining the element. High grade joints of uranium with the can were confirmed after element cutting and metallographical examination. Experimental measurements were compared to proposed values calculated in the evaluation. 10 references. (auth)

**57051** CALCULATION OF STRESSES IN THE GRAPHITE-FUEL TUBES OF A HIGH TEMPERATURE REACTOR. Jezernik, A.; Head, J. L. (Imperial Coll. of Science and Tech., London). Atomkernenergie; 18: No. 1, 51-60(Aug 1971).

The calculation of the time-dependent stresses in a graphite fuel tube of a High Temperature Gas-Cooled Reactor (HTGCR) is presented using a CDC 6600 computer. By way of an example, the analysis is presented of a fuel tube made from a particular graphite (Dragon-Pechiney G5) during a life of approximately 600 days in the research reactor Dragon, a 20 MW(t) reactor. The results of the computer calculation are compared with experimental results. A flow chart and the bulk of the main computer program are presented. It should be noted that the method is applicable to some other mechanical engineering problems. With some changes, it is possible, for example, to calculate the time-dependent stresses in steel tubes under internal or external pressure and with a radial temperature gradient. The thermal creep of steel must of course be calculated using a different creep law. 11 references. (auth)

**57052** COATED PARTICLE FUELS. Rose, K. S. B. (Atomic Energy Research Establishment, Harwell, Eng.). J. Inst. Nucl. Eng.; 12: No. 4, 101-5(Jul-Aug 1971).

The fuels and coatings described were developed for use in High Temperature Gas Cooled Reactors. Their small size gives the advantage that high reactor ratings can be achieved without the high center temperatures which would occur with fuel pins. The composition and purpose of the materials used, fuel kernel (fuel is $UO_2$, 800 $\mu$m diameter), buffer layer, seal layer, silicon carbide and pyrocarbon layers, are described and the differences between coated particle performance in British, American and German reactors are tabulated. Fabrication of the particles is noted. Initially irradiation causes a decrease in the kernel size of porous fuels, but at higher burnups, accommodation of the fission products causes it to swell slowly. The proportion of fission products leaving the kernel depends on its temperature; at the highest temperatures, most of the Xe, Kr, Cs, Sr, and Ba migrate. Some of the problems posed by internal CO pressure are discussed. Properties of the pyrocarbon are described, in particular its density as related to porosity, polished sections under the optical microscope, x ray measurements, mechanical properties and irradiation effects. Silicon carbide is more stable under irradiation and less variable in properties than pyrocarbon. Possible uses for the coated particle fuels are discussed. (UK)

**57053** STUDIES ABOUT USE OF DIRECTLY-COOLED COATED-PARTICLE AGGREGATES AS FUEL ELEMENTS. Barthels, A.; Boettcher, A.; Gyarmati, E.; (and others) (Kernforschungsanlage, Juelich, Ger.). Atomwirt. Atomtech.; 16: No. 4, 187-8(Apr 1971). (In German).

Temperature behavior of coated-particle fuel elements was determined mathematically and studied experimentally. Results show that coated particles can be used for gas-cooled and also for water-cooled research reactors. To maintain porosity between the coated particles for sufficient cooling, they were covered by a SiC layer. Following irradiation in the Oak Ridge HFIR at 850°C and $6 \times 10^{21}$

XUM

$n/cm^2$, the particles maintained a stable configuration. The SiC cover was not damaged. (H.B.G.)

## Auxiliary and Emergency Systems

**57054** (ANL/EBR-30) EQUIPMENT FOR REMOTE MEASUREMENT OF BOW, LENGTH, AND WEIGHT OF IRRADIATED EXPERIMENTAL CAPSULES AND ELEMENTS AT EBR-II. EBR-II PROJECT. Rizzie, J. W. (Argonne National Lab., Idaho Falls, Idaho). Jun 1970. Contract W-31-109-eng-38. 25p. Dep. NTIS.

The measurement equipment is used in the air-cell complex of the Fuels and Examination Facility at the EBR-II site to support the irradiation program of the EBR-II Project. The device for measuring bow and length and the remotely controlled balance provide physical data from irradiated experimental elements or capsules that can be used to determine the experiment integrity and help evaluate the results of the irradiation cycle. A gross change in weight of an irradiated capsule or element before and after irradiation is a definite indication of a defected capsule or element cladding. Bow and length measurements are used to qualify capsules or elements for reconstitution (for continued irradiation in EBR-II subassembly form) and to analytically determine the stress exerted on the subassembly hexagonal tube by the enclosed elements or capsules. The bow of the irradiated element or capsule is measured vertically by mechanically locating the centerline of the subject and comparing this location with the centerline of a known straight standard. Bow is mechanically encoded in X and Y coordinates and later converted to an angle and radius from a fixed position on the capsule or element. Lengths of capsules and elements are measured with a dial indicator, which is calibrated with a standard-length Invar rod. Capsule and element weights are measured remotely using an electromechanical balance with digital readout. (auth)

**57055** (JAERI-Memo-4157, pp 84-8) RESEARCH AND DEVELOPMENT PROGRAM OF FUEL FAILURE DETECTION FOR FAST BREEDER REACTOR IN JAERI. Sakai, Eiji (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

A research and development program of fuel failure detection for LMFBR is described. Graphite is used for a neutron moderating system for delayed neutron method, while neutron detection efficiency and effect of $\gamma$ background are checked. FFD in LMFBR is carried out under high $\gamma$-ray background by measurement of fission products leached in coolant sodium or cover gas. Improvement of S/N ratio of $BF_3$ and $^{10}B$ neutron detectors is undertaken with pulse shape discrimination between those of $\gamma$-ray and neutrons. As for $\gamma$-ray measurement of fission products double diode Compton suppression spectrometers seem to be hopeful. It is planned to check effectiveness of the spectrometer by measuring actual $\gamma$-ray from the fission products in the coolant and the cover gas and being applied to precipitator detection. 7 references. (Japan)

**57056** (JAERI-Memo-4157, pp 89-100) PRESENT STATUS OF FUEL FAILURE DETECTION AND LOCATION METHOD IN VARIOUS COUNTRIES IN THE WORLD. Mochizuki, Keiichi (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

Present state of fuel failure detection and location method in various foreign countries is reviewed in relation to its application for Na-cooled fast breeder reactors. Associated problems, sensitivity and required research and development work are described. Definition of sensitivity, the fuel failure detectors equipped in foreign Na-cooled fast reactors, and further research and development work are discussed. 74 references. (Japan)

**57057** (NEDO-10320(Suppl.1)) GENERAL ELECTRIC PRESSURE SUPPRESSION CONTAINMENT ANALYTICAL MODEL. Licensing Topical Report. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). May 1971. 24p.

Clarification of analytical modeling methods used to simulate the short term transient in a pressure suppression type containment following a loss of coolant accident in boiling water reactors is presented. Models discussed include: vessel blowdown model; drywell model; vent clearing model; vent flow model; and suppression chamber model. (D.C.C.)

**57058** FAST REACTOR TOP ACTING AS A SAFETY VALVE IN CASE OF A SUDDEN PRESSURE INCREASE. (to Commissariat a l'Energie Atomique). French Patent 1,572,466. 19 May 1969. Filed 6 May 1968. (In French).

A fast reactor top acting as a safety valve in case of sudden pressure increase is described. The top itself consists of thin material covered by a heat insulator. It has good ductility and very good resilience. Beams of a material with the same coefficient of expansion as the head itself are sunk in the heat insulator and kept against the head by clamps. The beams have very low resilience. (J.S.R.)

## Operation and Economics

**57059** (70-CNA-628) PROBLEMS OF COMPARING POWER REACTORS FOR SPECIFIC APPLICATION. Guard, Robin F. W. (Canatom Ltd., Montreal (Quebec)). 1970. 18p. (CONF-700564-7). Dep. NTIS (U. S. Sales Only).

From tenth annual international conference of the Canadian Nuclear Association; Toronto, Canada (24 May 1970).

Financial aspects associated with the construction and operation of power reactors are discussed. Effects of reactor types and fuel cycles on the costs of power reactors are compared. 8 references. (D.C.C.)

**57060** (JUL-736-RG) OPTIMIZATION OF THE FUEL CYCLE AND CORE SECTIONING OF A 2500-MW(th) THORIUM HIGH-TEMPERATURE REACTOR WITH MULTIZONE LOADING. Markowski, Baldur (Kernforschungsanlage, Juelich (West Germany). Institut fuer Reaktorentwicklung). Feb 1971. 84p. (In German). Dep. NTIS (U. S. Sales Only).

For a pebble-bed reactor of 2500 MW(t) used also for the production of process heat, the possibilities for an optimization were investigated with respect to the fuel cycle costs and to the thermodynamic properties. These properties are dependent on the zone sectioning and design. It was shown that the most important results of the single zone optimization can be transferred to the multizone core. The power flattening was obtained best by reduction of the thorium input to the exterior zone. In order to attain a satisfactory temperature and power distribution a core sectioning into two zones of suitable design was used. The flattening of the radial power density distribution has a rise of the specific fuel cycle costs of about 0.02 Dpf/kWhr in comparison with the single zone calculation. 18 references. (auth)

**57061** (MLM-1851) TECHNICAL AND ECONOMIC PARAMETERS AFFECTING FAST BREEDER REACTOR DEPLOYMENT. O'Hara, F. A. (Mound Lab., Miamisburg, Ohio). 13 Sep 1971. Contract AT(33-1)-Gen-53. 198p. Dep. NTIS.

The effects of various technical and economic parameters on LMFBR deployment plans were studied to assess the best future "mix" of light water reactors and fast breeder reactors which will result in minimum cumulative nuclear generating costs discounted to the year 1985. Projected growth in domestic nuclear generating capacity was taken from various predictions and the future domestic nuclear generating capacity was assumed to consist only of light water reactors and liquid metal cooled fast breeder reactors. Technical characteristics representing the two reactor types were taken as fixed, typical values. The light water reactor characteristics represent a composite between PWRs and BWRs, whereas a recent follow-on design was used as the reference for LMFBRs. Annual domestic power generation costs are calculated as a function of the installed capacity of both light water and fast breeder reactors in each particular year, the unit costs of each reactor type, the load factor, plutonium requirements, plutonium price and discount rate, and other factors. The cumulative nuclear generating costs are then computed as the sum of the discounted annual costs. (auth)

**57062** (ORNL-4682, pp 240-1) REACTOR EVALUATION STUDIES. (Oak Ridge National Lab., Tenn.).

In Chemical Technology Division annual progress report.

Computer program analysis of nuclear power plant fuel cycle economics is reviewed. The optimum economic schedule for introducing nuclear power plants into existing power systems is discussed. (D.C.C.)

**57063** (ORNL-TM-3276) CONCEPT: COMPUTERIZED CONCEPTUAL COST ESTIMATES FOR STEAM-ELECTRIC POWER PLANTS. Phase I User's Manual. DeLozier, R. C.; Reynolds, L. D.; Bowers, H. I. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 140p. Dep. NTIS.

The computer code CONCEPT was developed to provide con-

ceptual capital cost estimates for single-unit nuclear and fossil-fueled power plants. Cost estimates can be made with this code as a function of plant type, size, location, and date of operation. Output from the code includes a detailed breakdown of the estimate into direct and indirect costs according to the USAEC accounting system. The cost model presented is for PWR plants only. 9 references. (auth)

**57064** FUEL AND FUEL CYCLE FOR PFR. Bishop, J. F. W.; Kemp, E. F. Nucl. Eng. Int.; 16: No. 183, 643-5 (Aug 1971).

High burn-up and the ability for failed fuel to remain in the reactor pending a convenient discharge are the salient requirements for fast reactor fuel. Valuable irradiation experience was obtained in DFR and it is now possible to characterize events leading to pin failure in PFR oxide pins. Operation of PFR will provide adequate statistical guidance on the low failure rates expected in the fuel and will also provide the high flux facility required for complete clarification of the phenomenon of decreasing density of metal components subjected to an intense fast neutron flux. Consideration is given to reprocessing requirements of PFR fuel. (auth) (UK)

**57065** GAS-BREEDER MEMORANDUM. Dalle Donne, M. (Kernforschungszentrum, Karlsruhe, Ger.). Atomwirt., Atomtech.; 16: No. 8-9, 430(Aug-Sep 1971). (In German).

The nuclear research centers in Karlsruhe and Juelich, in cooperation with several German industrial firms, conducted a preliminary study of various types of gas-cooled fast breeder reactors. Following a survey of all reported reactor types, a closer analysis was restricted to three only. For these three types, the main characteristics were calculated and compared with data applying to an advanced sodium-cooled breeder reactor. It was concluded that gas-cooled fast breeders do not represent a goal of the distant future but a concept that is competitive with the first generation of sodium-cooled reactors. (H.B.G.)

**57066** NUCLEAR POWER REACTORS: THE PROBLEMS OF ACCESSIBILITY FOR TESTING AND REPAIR AND THE INFLUENCE OF EXPERIENCE ON THE DESIGN. Fletcher, P. T. (Atomic Power Constructions Ltd., Surrey, Eng.). Proc. Inst. Mech. Eng. (London); 184: 1179-1200(1969-70).

Experiences in dealing with engineering problems in Magnox reactors by performing remote operations under radiation conditions are discussed. Detailed descriptions are given of the procedures adopted after the following incidents: a fuel melt failure in one channel of a Chapelcross reactor, occurring during start up after off-load refuelling; failure of the charge machine grab to secure a fuel element when load changing in Tokai-Mura during a maintenance shutdown; dislodgement of a charge pan, and the jamming of a charge tube in Trawsfynydd-2 reactor; dislodgement of part of cover plates and damage to exposed insulation of two main gas ducts of Tokai-Mura, discovered during routine boiler inspection. The lessons learned from these and other incidents, and ways in which new advances in design of reactors and components will preclude such incidents, are briefly discussed. (UK)

**57067** INFLUENCE OF IRRADIATION CONDITIONS ON CALIFORNIUM FORMATION IN NUCLEAR REACTORS. Eberle, S. H.; Bleyl, H.-J. (Univ., Karlsruhe, Ger. Kernforschungszentrum, Karlsruhe, Ger.). Radiochim. Acta; 15: No. 4, 180-7 (Jun 1971). (In German).

The yields of nuclides obtained on irradiation of $^{242}$Pu, $^{243}$Am, and $^{244}$Cm in a nuclear reactor are calculated as a function of the absolute value of thermal flux, relative epithermal flux, and on/off schedule as parameters. At constant thermal neutron dose, the $^{252}$Cf production rate increases exponentially with increasing epithermal flux; hence, the yield may differ by several powers of ten, depending on this factor. The absolute value of the thermal flux has only a small effect, an increase by a factor of ten (from $2.5 \times 10^{14}$ to $2.5 \times 10^{15}$ $N_{th}/cm^2 \cdot sec$) results in only about 30% more Californium at the same neutron dose. The on/off-schedule of the reactor has no practical importance if the down-time is not more than half the on-time. The numerical results of the calculations are given as yield curves of the nuclides. (auth)

**57070** (CEA-CONF-1796) PROBLEMS OF EXPLOSIONS INSIDE CONTAINMENT VESSELS. [Sep 1970]. 23p. (In French). (CONF-710903-3). Dep. NTIS (U. S. Sales Only).

From first international conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Some elementary ideas about explosions and pressure waves are presented in the aim of identifying the simpler tests to be performed for finding elementary laws of explosion containment. The scale effect is discussed for production, propagation and containment of pressure waves; it appears necessary to conduct simulated tests at various scales. The low pressure explosions with gas mixtures appear useful for simulating nuclear core explosions. Some unpublished CEA results on structural behaviors under explosion are summarized. A correlation law is given for published American results on open tubes. (auth)

**57071** (CONF-710302-(Vol.1)) PROCEEDINGS OF CONFERENCE ON NEW DEVELOPMENTS IN REACTOR MATHEMATICS AND APPLICATIONS, IDAHO FALLS, IDAHO, MARCH 29-31, 1971. (American Nuclear Society, Hinsdale, Ill. American Nuclear Society. Eastern Idaho Section). 569p. Dep. NTIS.

Included are 35 papers on mathematical methods used in reactor safety calculations and the development of modular programming systems. A separate abstract was prepared for each of 26 papers. Nine papers were previously abstracted for Nuclear Science Abstracts and may be located under CEA-CONF-1772 and CONF-710302 in the Report Number Index. (H.D.R.)

**57072** (CONF-710302-(Vol.1), pp 1-24) LIQUID METAL FAST REACTOR ACCIDENTS. Wolfe, B. (Hanford Engineering Development Lab., Richland, Wash.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Hypothetical accidents considered in the safety evaluation of sodium cooled fast reactors are discussed. Reactivity excursions, core voiding, sodium fuel interactions, and after heat removal are described, and phenomena which significantly decrease the effects of such accidents are examined. 9 references. (H.D.R.)

**57073** (CONF-710302-(Vol.1), pp 25-49) PRESSURE GENERATION BY MOLTEN FUEL-COOLANT INTERACTIONS UNDER LMFBR ACCIDENT CONDITIONS. Cho, D. H.; Ivins, R. O.; Wright, R. W. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A comprehensive analysis of pressure generation by molten fuel-coolant interactions is presented, incorporating various limiting rate processes. Pressure-time histories are calculated considering a 35 cm long molten zone in an FFTF subassembly, and parametric effects are discussed. 10 references. (auth)

XUM

**57074** (CONF-710302-(Vol.1), pp 50-78) AN EVALUATION OF FUEL-COOLANT INTERACTIONS DURING DISASSEMBLY OF AN LMFBR. Lorenzini, P. G.; Flanagan, G. F. (Atomics International, Canoga Park, Calif.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A model which calculates the feedback from fuel-coolant interactions during the disassembly of the core is presented. The model is incorporated in the computer code, FISFAX. The FISFAX code does not use the Bethe-Tait disassembly model, and therefore it is no longer necessary to assume that the core is homogeneous. By calculating the FCI feedback during the core disassembly, the reactivity feedback can be time dependent. Calculations presented show that this feedback is a rapidly varying function of time, and can provide a negative reactivity feedback as well as the customary positive feedback. The negative reactivity feedback resulting from the FCI was the principal mechanism for terminating the excursion in the cases presented. The FISFAX model is described first, followed by some results of analyses using the code. 16 references. (auth)

**57075** (CONF-710302-(Vol.1), pp 79-96) FISSION GAS AND MOLTEN FUEL EJECTION FROM FAILED FUEL RODS IN AN LMFBR. Carelli, Mario D. (Westinghouse Electric Corp., Madison, Pa. Advanced Reactors Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Two computer codes are described for use in analyzing the effects of fuel rod failure in a Liquid Metal Fast Breeder Reactor (LMFBR). The code FIGAFRO investigates the characteristics of fission gas ejection, while the code FIDES studies a molten fuel ejection. Their applicability to the possible accidents occurring during the fuel rod lifetime is discussed, and the main features of the physical models employed and of the solution methods adopted are described. Typical results of the ejection characteristics, which constitute the necessary basis to investigate the consequences of the failure and the possibility of its propagation, are also illustrated. (auth)

**57076** (CONF-710302-(Vol.1), pp 102-19) LOCAL FLOW BLOCKAGE EFFECTS IN AN LMFBR FUEL PIN BUNDLE. Moore, R. W. (Babcock and Wilcox Co., Lynchburg, Va.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The determination of the effects of a localized blockage within a fuel pin bundle requires (1) a knowledge of the blockage geometry and (2) a method to calculate the coolant velocity and temperature distributions in the affected channels. A calculational tool was developed to determine the coolant velocity and temperature distributions resulting from a blockage. This computer program (BLOCKO) was written in Fortran for the CDC 6600. Application was made to numerous types of hypothetical blockages described by the number of blocked coolant channels, the axial blockage length, the flow area reduction in each channel and the hydraulic diameter reduction in each channel. **57077** (CONF-710302-(Vol.1), pp 120-7) SAS2A LMFBR ACCIDENT ANALYSIS CODE. Dunn, F. E.; Heames, T. J.; Pizzica, P. A.; Fischer, G. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The SAS2A accident analysis code is an upgraded multi-channel version of the SAS1A code. It predicts accident behavior, starting from an unfaulted normal operating condition, through a transient caused by a coolant flow perturbation or a reactivity insertion, and through any resulting core disassembly. SAS2A uses physically meaningful models to explicitly calculate accident behavior. The models are verified by comparison with in-pile and out-of-pile experiments. 9 references. (auth)

**57078** (CONF-710302-(Vol.1), pp 128-51) TWO-DIMENSIONAL FAST-REACTOR DISASSEMBLY ANALYSIS WITH SPACE-TIME KINETICS. Sha, W. T.; Daly, T. A.; Lindeman, A. J.; Fuller, E. L.; Meneley, D. A.; Leaf, G. K. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A two-dimensional (r-z), space-time-energy-dependent computational method was developed for use in LMFBR disassembly analyses. The model consists of multigroup neutronics based on a flux factorization technique, hydrodynamics, energy balance, and an energy-density-dependent equation of state. Reactivity feedbacks due to Doppler broadening and material motion are taken into account. The Eulerian coordinate system is used in the neutronics; the hydrodynamics, energy balance, and equations of state are formulated based on the Lagrangian coordinate frame. An algorithm transformation of temperature and reactor material contents from the Lagrangian (deformed mesh) to Eulerian (fixed mesh), or vice versa, was also developed. A unique feature of this model is the ability to account for large reactor material motion during a disassembly accident. For most accident conditions, this model predicts a higher energy yield than would be computed by using point neutron kinetics. 6 references. (auth)

**57079** (CONF-710302-(Vol.1), pp 152-66) NUMERICAL STABILITY PROBLEMS IN THE VENUS DISASSEMBLY CODE. Jackson, J. F.; Nicholson, R. B.; Sha, W. T. (Argonne National Lab., Idaho Falls, Idaho).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The VENUS computer program calculates the behavior of an LMFBR during a disassembly accident. The power and energy release are determined using a standard point kinetics model that accounts for reactivity feedback due to Doppler broadening and material motion. The disassembly motion is calculated by a direct finite difference solution of a set of two-dimensional (r-z) hydrodynamics equations. This allows the use of a density dependent energy-pressure relationship (equation of state) to link the kinetics and hydrodynamics equations. Temporal and spatial oscillations in the calculated pressures were observed in applying the code to various types of excursions. An example of such oscillations is shown. The total energy release is often not greatly affected by these pressure spikes, unless they become extremely large. Although the energy is usually the primary result, in some instances one is interested in actual physical pressure oscillations, and is therefore faced with the difficulty of eliminating possible numerical instabilities in order to see the true oscillations. In some cases, using a time step that is too large will cause the pressure calculations to become completely unstable, causing the calculation to terminate in a computer overflow. A time step selection criterion that has been found to give good results for a broad range of accidents is presented. 7 references. (auth)

**57080** (CONF-710302-(Vol.1), pp 167-79) AN AXIAL KINETICS MODEL FOR FAST REACTOR DISASSEMBLY ACCIDENTS. Mills, Joseph C.; Kastenberg, William E. (California Univ., Los Angeles).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A physical model describing the transient behavior of moderate accidents in fast liquid metal cooled reactors is postulated. The physical model was transformed into a preliminary computational tool used for analyzing accidents with sodium-fuel interactions during the nuclear power transient. Calculations performed for typical 1,000 MW(e) LMFBR's indicate reasonable results and yield an accurate representation of the physics. 17 references. (auth)

**57081** (CONF-710302-(Vol.1), pp 180-98) COMPARISON BETWEEN MOMENTUM INTEGRAL AND COMPRESSIBLE MODELS FOR SODIUM VOIDING CALCULATIONS IN LMFBR's. MacFarlane, D. R.; Siegmann, E. R. (Argonne National Lab., Ill.); Eggen, D. T. (Northwestern Univ., Evanston, Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Some results obtained with a new compressible sodium voiding model which was developed for calculating the two-phase flow in LMFBR coolant channels are presented and compared with similar calculations performed using the older momentum integral model. It was recognized that computer calculations using a compressible model would probably be considerably more costly due to the much reduced time steps which are generally required in practical computing algorithms using such models. Accordingly, a secondary purpose of the work was to investigate how severe restrictions of this type would be in limiting the use of the compressible model in place of the momentum integral model in a large computer code such as SAS1A. The describing equations and assumptions for the two models, a brief description of the methods of solving the equations for each, and finally, a comparison of results obtained for some typical bench mark-type problems each using each of the two calculational schemes are presented. 6 references. (auth)

**57082** (CONF-710302-(Vol.1), pp 215-40) COOLANT VOIDING TRANSIENTS IN LMFBR's. Tilbrook, R. W. (Westinghouse Electric Corp., Madison, Pa. Advanced Reactors Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A code, PASET, is described for use in studying sodium voiding in a LMFBR due to either loss of coolant or fuel/sodium interaction incidents. Its range of validity is discussed and its application to accident scoping studies and the identification of data requirements is illustrated. 13 references. (auth)

**57083** (CONF-710302-(Vol.1), pp 241-58) CONSEQUENCES OF MOLTEN FUEL EJECTION IN A LMFBR. Graham, John; Versteeg, Joost (Westinghouse Electric Corp., Madison, Pa. Advanced Reactors Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The possibility of a progressive failure of fuel rods starting from a single failed rod and leading to gross core damage has been postulated as an initiator for a LMFBR accident. In order to scope the magnitude of potential damage effects and calculate the effective time-scale of the several events, the case of the failure of an over-enriched fuel rod was examined. The objective of the work was to study the consequences of the possible ejection of molten fuel into the sodium coolant and to determine whether a serious potential for a propagation of the failure existed. 12 references. (auth)

**57084** (CONF-710302-(Vol.1), pp 259-81) MODELING AND APPLICATION OF THE ADIABATIC APPROXIMATION FOR ANALYZING ROD DROP EXCURSIONS. Stirn, R. C.; Woolley, J. A.; Cheng, H. S. (General Electric Co., San Jose, Calif.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The modeling and application of an adiabatic model to analyze control rod drop excursions are presented. A description of the solution of the neutron kinetics equations in two space dimensions using the adiabatic approximations is given, and a comparison between a one-dimensional space-time and adiabatic solution to a rod drop transient is also presented. In addition, a control rod drop excursion for a large boiling water reactor (BWR) is analyzed in RZ-coordinates using linear and non-linear reactivity feedback mechanisms. It is demonstrated that the adiabatic model is accurate for analyzing prompt critical rod drop excursions in the startup power range. Furthermore, it is also shown that the spatial effects of non-linear reactivity feedback mechanisms must be properly accounted for in calculating these prompt critical transients, or large errors in the analysis could result. 13 references. **57085** (CONF-710302-(Vol.1), pp 282-95) SAFETY ANALYSES OF PRESSURIZED WATER REACTORS. Margolis, Stephen G. (State Univ. of New York, Buffalo).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Numerical methods for dealing with hydrodynamic problems involving the propagation of pressure waves are reviewed. Difficulties associated with solving pressurized water reactor loss-of-coolant problems using these methods are discussed. (H.D.R.)

**57086** (CONF-710302-(Vol.1), pp 356-9) STABILITY CALCULATIONAL PROCEDURE FOR FLOW-INDUCED VIBRATIONS OF REACTOR INTERNALS IN PARALLEL FLOW. Lowe, P. A. (Combustion Engineering, Inc., [Windsor, Conn.]); Zanoni, E. A. (Bettis Atomic Power Lab., Pittsburgh, Pa.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

An analysis method designed to calculate and predict the presence of dynamic instabilities of a structure which is acted upon by a fluid flowing parallel to the principal axis of the structure is presented. In modeling the physical situation, it is assumed that the structural displacements are small and that the fluid velocity is composed of a steady-state component and a small time varying perturbation component. These assumptions allow the transient fluid conservation equations for the flow channels contiguous to the structure to be linearized about a steady-state operating condition. The linearized equations are then solved to establish the fluid-induced forces and moments which act upon the structure. These forces and moments are introduced into the differential equations which govern the dynamics of the structure. The dynamic equations, coupled with a boundary constraint which describes the fluid conditions at the downstream end of the structure, represent the system's characteristic equation. They are manipulated into a convenient form with standard matrix techniques, and then analyzed by numerically evaluating the system's complex eigenvalues. 7 references. (auth)

**57087** (CONF-710302-(Vol.1), pp 436-51) PRESCON: A DIGITAL COMPUTER PROGRAM FOR CONTAINMENT PRESSURE TRANSIENTS. Elliott, J. N.; Odlozinski, G. (Atomic Energy of Canada Ltd., Chalk River (Ontario)); D'Arcy, D. F. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The simple explicit numerical method used in the PRESCON code for calculating transient pressures in CANDU reactor containment systems following a major failure of the heat transport system is described. Results obtained with the PRESCON code are compared to results obtained with the method of characteristics for a subsonic flow problem. (H.D.R.)

**57088** (GEAP-13639-1) CORE DESIGN DEVELOPMENT NEEDS IN RELATION TO FUEL FAILURE PROPAGATION, SODIUM BOILING, AND CLAD/FUEL-SODIUM THERMAL INTERACTION. McWethy, L. M.; Pluta, P. R.; Sherer, D. B. (comps.) (General Electric Co., Sunnyvale, Calif. Breeder Reactor Dept.). Oct 1970. Contract AT(04-3)-189. 133p. Dep. NTIS.

A comprehensive assessment of LMFBR safety-related core design information needs was conducted. A basic hypothesis was that core performance under off-design and accident conditions will affect the choice of core design parameters. The economic consequences of fuel failure effects and random accidents were compared with fault tree results based on a "mean-annual-cost" concept. It is concluded that fuel failure effects dominate the expected cost penalties. Principal development recommendations are for integral tests of: (1) fuel failure propagation; and (2) loss-of-cooling consequences. 35 references. (auth)

**57089** (GEAP-13639-2) CORE DESIGN DEVELOPMENT NEEDS IN RELATION TO FUEL FAILURE PROPAGATION, SODIUM BOILING, AND CLAD/FUEL-SODIUM THERMAL INTERACTION. McWethy, L. M.; Pluta, P. R.; Sherer, D. B. (comps.) (General Electric Co., Sunnyvale, Calif. Breeder Reactor Dept.). Oct 1970. Contract AT(04-3)-189. 382p. Dep. NTIS.

Details of the review and analysis of specific phenomena identified by a fault tree analysis as having a major impact on LMFBR safety and core design are presented. Fuel failure propagation effects dominate the events which most affect core performance under off-design or accident conditions. (H.D.R.)

**57090** (ORNL-4717, pp 91-107) NUCLEAR SAFETY. (Oak Ridge National Lab., Tenn.).

In Reactor Chemistry Division annual progress for period May 31, 1971.

The status of projects on the effects of chemical processes and properties on reactor safety is reported. Brief summaries are included on fuel coating properties, fission product removal from reactor systems, fuel element failure mechanisms, and steam-graphite reactions. (H.D.R.)

**57091** (ORNL-NSIC-94) COMPILATION OF NATIONAL AND INTERNATIONAL NUCLEAR STANDARDS (EXCLUDING U.S. ACTIVITIES). 7th Edition, 1971. Information Gathered to Dec. 31, 1970. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 129p. Dep. NTIS.

All known national and international nuclear standards activities are tabulated. Standards activities of all national organizations, technical societies and government agencies are listed alphabetically by country. Standards activities are included for: Australia, Austria, Belgium, Canada, Denmark, France, Germany, Hungary, India, Israel, Italy, Japan, Netherlands, Norway, Pakistan, Republic of South Africa, Sweden, United Kingdom, and Yugoslavia. International organizations activities include: Bureau Venitas, European Organization for Nuclear Research, European Atomic Energy Community, International Air Transport Association, IAEA, International Commission on Radiological Protection, International Commission on Radiation Units and Measurements, International Electrotechnical Commission, Intergovernmental Maritime Consulative Organization, International Organization for Standardization, Floyds, Organization for Economic Cooperation and Development, European Nuclear Energy Agency, and United Nations. 18 references. **57092** (ORNL-TM-3483) ORNL NUCLEAR SAFETY RESEARCH AND DEVELOPMENT PROGRAM BIMONTHLY REPORT FOR MAY-JUNE 1971. Cottrell, Wm. B. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 112p. Dep. NTIS.

The accomplishments during the months of May and June in the research and development program on nuclear safety are summarized. Much of this work is in general support of water-cooled power reactor technology, including LOFT and industry programs, and reflects current safety problems, such as measurements of prompt fuel element failure phenomena and the problems associated with the long-term operation of containment spray systems. Several projects are also conducted in support of the high-temperature gas-cooled reactor (HTGR) and liquid-metal fast breeder reactor (LMFBR) programs. Other major projects are those on primary piping and steel pressure-vessel technology. They also include experimental investigations of the attachment of nozzles to shells and the implementation of joint AEC-PVRC programs on heavy-section steel technology and nuclear piping, pumps, and valves. Seismic considerations of particular significance in nuclear plant design are being evaluated in the seismic program.

XUM

Several of the above projects are also directly related to the AEC's standards program, which entails development of engineering safeguards and the establishment of codes and standards for government-owned or -sponsored reactor facilities. The recent activities of NSIC and the Nuclear Safety journal in behalf of the nuclear community are also discussed. Of particular interest in both of these activities is the recent emphasis on environmental effects. (auth)

**57093** (ORNL-TM-3504) CORE MELT-THROUGH IN LMFBR'S: A CONDENSED REVIEW. Fontana, M. H. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 30p. (CONF-701102-24). Dep. NTIS.

From Meeting of the American Nuclear Society; Washington, D. C. (15 Nov 1970).

The problem of postaccident heat removal and core melt-through in liquid-metal fast breeder reactors must be considered in the context of the particular reactor design, and in light of a realistic sequence of events leading to the melt-through accident. If the integrity of the ultimate Na containment vessel and stand-by decay-heat removal systems could be assured for the energy release that might accompany the core disassembly accident, it should be possible to control further melt-through of the structure by core debris. If it must be assumed that Na cooling would not be available then a much more difficult situation occurs. The mixture of molten fuel and structural materials would melt through the primary vessel and fall upon the structure below. The interaction of molten fuel with the structural materials must be known to evaluate the dispersion and dilution of the molten mass. Unless proved otherwise by experiment, contact with concrete should be avoided because of the possibility of violent spalling due to steam generation from the water of hydration. Also, concrete made with limestone aggregate would generate enough $CO_2$ to overpressurize the containment in a few hours. Both of these effects would cause violent mixing of the molten pool, thereby increasing transfer of the heat and fission products to the surface. The radiant heat load on structures above the melt could cause failure if additional cooling is not available. Internal convection circulation greatly enhances heat and mass transfer and must be considered. There have been several methods mentioned to contain the core melt-through accident. Zivi has proposed a bed of depleted $UO_2$ which would suffer sacrificial melting as the molten mass of $UO_2$-steel progresses downward. Jansen et al. have calculated 24 ft to be the maximum depth to which the FFTF core could penetrate in a deep layer of basaltic concrete, considering the effects of solution of contiguous materials in the molten mass. Gilby has suggested a core catching system in which troughs are spaced and staggered to catch molten core material; cooling being maintained by the "sea of sodium" used in the pot-type PFR design. The ultimate heat dump would be the emergency decay-heat removal systems. These and other designs are reviewed, and recommendations made on experimental data required to ensure the validity of the designs. 30 references. (auth)

**57094** (RISO-M-1391) HEATING IN A REACTOR FUEL ELEMENT ROD UNDER TRANSIENT CONDITIONS. PART I. HEAT CONDUCTION PROGRAM. Abel-Larsen, H.; Larsen, M. Lolk (Danish Atomic Energy Commission, Risoe, Research Establishment). 1 Jul 1971. 57p. Dep. NTIS (U. S. Sales Only).

A computer program to solve the transient and steady-state heat conduction equation in a two dimensional cylindrical geometry by the finite difference method is described. The program uses the alternating directional implicit (ADI) method, which is always stable i.e., the integration is independent of time steps. The resulting three-diagonal matrix can be solved directly by a simple algorithm. Complicated heat conduction problems, as those in reactor fuel elements, can be solved. The program takes into account materials with different conductivities, heat conduction and radiation in gaps between materials and heat transfer to coolants and radiation between cooling surfaces. This is achieved by calculating effective conductivities between adjacent mesh points. The program does not treat coolants with phase changes. The program has an operational status at the Burroughs B6500 computer. Computer time requirements are moderate. A complete listing of the program is presented. (auth)

**57095** (WCAP-7422) TOPICAL REPORT: WESTINGHOUSE PWR CORE BEHAVIOR FOLLOWING A LOSS OF COOLANT ACCIDENT. (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.). Aug 1971. 174p.

A complete description is presented of the behavior of a PWR core during a loss of coolant accident. Detailed discussions of the codes and assumptions used in the analysis are discussed as well as the experimental verification of the codes or correlations used in the code. The improved analytical techniques that have been developed to analyze the loss of coolant accident are described. These are the BLODWN-2 code which replaces the BLODWN-1 code for the core internals analysis, and the SATAN V code which replaces the FLASH-R code for evaluating the pertinent parameters for the core cooling analysis such as core flow and pressure. A transition boiling heat transfer correlation for evaluating the heat removal from the fuel rod after DNB has also been incorporated. A parameter study is presented that shows the sensitivity to the various important core cooling phenomenon. (31 references) (auth)

**57096** (WCAP-7722) TOPICAL REPORT: SAFETY RELATED RESEARCH AND DEVELOPMENT FOR WESTINGHOUSE PRESSURIZED WATER REACTORS. PROGRAM SUMMARIES, SPRING 1971. Boyer, G. D. (comp.) (Westinghouse Electric Corp., Pittsburgh, Pa.). 1971. 67p.

The status of pressurized water reactor safety related research and development programs is summarized. The programs summarized include: (1) core stability evaluation; (2) ice condenser containment; (3) high power density fuel development; (4) in-core detector program; (5) gross failed fuel program; (6) full length emergency cooling heat transfer test; (7) blowdown forces program; (8) reactor vessel thermal shock program; (9) reactor containment fan cooler components tests; and (10) testing of engineered safeguards equipment. (H.D.R.)

**57097** (WCAP-7744) TOPICAL REPORT: ENVIRONMENTAL TESTING OF ENGINEERED SAFETY FEATURES RELATED EQUIPMENT (NSSS: STANDARD SCOPE). Locante, J.; Igne, E. G. (Westinghouse Electric Corp., Pittsburgh, Pa.). Aug 1971. 39p.

A program was undertaken in order to ensure the continued operability of the reactor safety related equipment in the post accident environments of temperature, pressure, chemistry, and radiation. The objectives of this program were met by measuring the performance or characteristics of the safety related equipment during or after exposure to the anticipated post accident containment conditions. The results of the overall test program on process instrumentation and control equipment and on valve motor operators indicate that the safeguards equipment will operate satisfactorily during and following exposure to the containment post accident environments of temperature, pressure, chemistry, and radiation. Discussions of the testing performed and results obtained and on the post accident containment conditions selected for the environmental testing program are included. (auth)

**57098** ENERGY PRODUCTION AND ENVIRONMENT. AN ANALYSIS WITH SPECIAL CONSIDERATION OF NUCLEAR ENERGY. Gruemm, H. (Oesterreichische Studiengesellschaft fuer Atomenergie GmbH., Seibersdorf, Austria). Atomwirt., Atomtech.; 16: No. 6, 278-88(Jun 1971). (In German).

Discussed are the hazards resulting from energy production at the present time and in the future. The following factors are analyzed: available energy deposits; necessity of nuclear energy to cover future requirements; environmental burden caused by burning of fossil fuels; comparison of environmental burden between fossil fuel and nuclear power production; environmental burden in case of reactor incidents; and proposals for further studies about protection of the environment. 38 references. (tr-auth)

**57099** RADIATION INJURIES AND RADIATION PROTECTION. Hug, O. (Univ., Munich). Atomwirt., Atomtech.; 16: No. 6, 294-300(Jun 1971). (In German).

Unrealistic exaggeration of radiation hazards is as damaging as underestimation of the problem. Radiations that are associated with nuclear power plants require constant monitoring. When the existing standards and regulations are properly applied in health physics, reduction of permissible doses by a factor of 10, as suggested by several agencies, appears unwarranted. Under such conditions, radiation burden is significantly lower than variations in the level of background radiation. The conclusions are derived from an analysis of the following factors: dose-effect relationship, late injuries, leukemia risk, malignant tumors, time factor in radiocarcinogenesis, special susceptibility of developing organisms, and genetic effects. (H.B.G.)

**57100** RADIOIODINE IN NUCLEAR POWER REACTORS. Hladky, E. Bull. EGU; 12: No. 3-4, 39-47(Mar 1971). (In Czech).

The experience is summarized with the problems of radioiodine in nuclear power plants operating in the world. The subject is divided into the following parts: the mechanism of radioiodine release and forms of its existence, its adsorption on structural materials, radioiodine removal, and its detection. (INIS)

**57101** BEHAVIOR OF LIGHT WATER REACTORS UNDER LOSS OF COOLING MEDIUM. Agemar, F.; Hartl, R.; Hicken, E.

XUM

(AEG-Telefunken, Frankfurt am Main). Atomwirt., Atomtech.; 16: No. 6, 302-4(Jun 1971). (In German).

An experimental research program is outlined for the determination of thermohydraulic processes in reactor cores. The program comprises four phases. The first one concerns preliminary theoretical and experimental studies of the primary cooling system after sudden rupture. Methods are developed for the measurement of two-phase flow and fast transients of pressure as well as temperature. The second phase, planned for spring 1972, comprises studies of tubes and fuel elements with interior cooling flow as to initial current, pressure, heat production, flow resistance, and heat conduction. In the third phase, the expected transients will be examined with test fuel elements of original size. Geometry effects will be excluded to obtain reliable data about tube temperatures and heat transfer coefficients. The last phase studies not only transients in the primary circuit but also effects of the low-pressure emergency cooling system. (H.B.G.)

**57102** USE OF COMPUTERS IN INVESTIGATIONS ON HYDRODYNAMIC ASPECTS OF REACTOR SAFETY PROBLEMS. Hoskin, N. E. (Atomic Weapons Research Establishment, Aldermaston, Eng.). pp 12.1-5 of Computational Physics. Vols. I and II. London; Her Majesty's Stationery Office (1969).

From Conference on computational physics; Culham, England (28 Jul 1969). See CONF-690706-(Vols.1 and 2).

In order to assess the damage potential of various hypothetical accident conditions in reactors much experimental work has been carried out. The study of explosion containment has included observation of the dynamic response of scale models in which the energy release in the core was simulated by detonation of high explosive. Investigation of fuel-coolant interaction has involved experiments on the pressure generation by water impact upon molten aluminum. The use of large computer codes in the analysis of these experiments is demonstrated and the relative advantages of such direct calculations are discussed. (auth) (UK)

**57103** HEALTH PHYSICS ASPECTS OF NUCLEAR FACILITY SITING. VOLUME I. Proceedings of the Fifth Annual Health Physics Society Midyear Topical Symposium, Idaho Falls, Idaho, November 3-6, 1970. Voilleque, Paul G.; Baldwin, Burton R. (comps.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971). 259p. (CONF-701106-(Vol.1)).

Sixteen articles are included; separate abstracts were prepared for 14. The remaining two articles on power reactor siting in various countries and possible contamination of groundwater systems near a 300 GeV proton accelerator were previously published in NSA as 25: 31482 and 7778, respectively. (P.C.H.)

**57104** FISSION PRODUCT RELEASE DURING A LOCA. Walker, D. H. (Idaho Nuclear Corp., Idaho Falls). pp 113-29 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

In determining the site boundary distances required to meet the loss-of-coolant accident dose limits for water cooled power reactors, potential doses to the thyroid from inhalation of released iodine are generally the limiting consideration. One useful method of representing the fraction of the core iodine inventory that might reach the environment for various conditions is an iodine attenuation diagram. The fraction of the iodine removed in each of the processes in the transport of iodine from the core, through the reactor system to the containment, and through the containment to the environment can be represented on the diagram. Various assumptions regarding radioiodine removal by a particular process of the transport chain can be evaluated quickly through use of the diagram. The attenuation diagrams presented show that application of the guidelines of 10 CFR-100 and TID-14844 to a 1000 MW(e) water-cooled reactor leads to a potential release of $10^4$ to $10^5$ curies of I-131 in the event of an MHA. A second attenuation diagram shows I-131 releases to the environment following an MHA may be as low as 10 curies if current indications regarding the release and transport of radioactivity are correct. Additional definitive analytical and experimental studies are required before the conservatism in current reactor licensing practices can be relaxed. Information presented indicates that noble gases and iodines are the principal fission product species present in the containment atmosphere and available for leakage following a loss-of-coolant accident. Containment designs for current reactor plants incorporate systems for fission product removal. These systems will remove most of the radioiodine from the containment atmosphere in the first few minutes following an accident. However, some small fraction (0.1 to 10%) of the iodine will be present for substantially longer times as persistent iodine species that are not easily removed by the containment removal systems and thus are available for leakage for longer times. Current information indicates these species are principally methyl iodide ($CH_3I$) and hypoiodous acid (HIO). Methyl iodide probably retains its chemical form in leaking from the containment to the environment. Little is known concerning the behavior of hypoiodous acid once it reaches the environment. However, available information indicates it likely decomposes to other chemical forms of iodine. 16 references. (auth)

**57105** EFFECTS OF AEROSOL AGGLOMERATION ON REACTOR DOSE EVALUATIONS. Koontz, R.; Baurmash, L.; Morewitz, H. (Atomics International, Canoga Park, Calif.). Contract AT(04-3)-701. pp 130-50 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

Equations have been written and solved numerically which predict the behavior of aerosols including time dependent size distribution of the mass leaked from a containment system after various hypothetical Liquid Metal Fast Breeder Reactor accidents. The results show that high concentration, small diameter aerosols are not stable and agglomerate to form larger particles with increased settling velocities. The mass and particle concentration in the primary containment vessel is reduced rapidly, decreasing the amount of material and the number of particles which leak to the secondary containment system, where dilution and fallout further reduce the material available for leakage to the environs. The amount of material which leaks is shown to be a function of the released mass concentration. The distribution of particles and the mass leaking from the outer containment vessel are computed and from these data the number of particles which contribute to the dose at the site boundaries can be estimated. These data can be used in conjunction with the size dependent efficiency of retention in the lung as specified by the ICRP Task Group on Lung Dynamics to estimate the dose. 7 references. (auth)

**57106** LEAKAGE FROM A RUPTURED CONTAINMENT AFTER ACCIDENTAL DEPRESSURISATION OF A GAS COOLED REACTOR. Charlesworth, F. R.; Mercer, A.; Jackson, E. W. pp 151-70 of Health Physics Aspects of Nuclear Facility Siting. Vol. I. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

Gas cooled reactors in the U.K. have typically a single pressure containment system. In the event of a depressurization accident it is not expected that any significant emission of fission products will occur during the rundown of pressure. However, if a fuel fire ensues or significant fuel cladding rupture occurs fission products will be released to the primary reactor containment and would have direct access to atmosphere through the breach. Leakage of gaseous and volatile fission products outwards through the breach would be accompanied by the inleakage of air. The reaction of hot graphite with oxygen increases with temperature and becomes exothermic. This reaction poses long term fuel integrity problems for metallic uranium fuel elements and for uranium dioxide fuels. It is of considerable importance to determine the possible modes of gaseous exchange that may obtain with breached primary pressure circuits. The mechanics of exchange processes through such breaches are being investigated and models devised to assist in the assessment of hazard from escaping fission products. The time scale and magnitude of events are discussed and the consequences of leakage examined. The experiments are being extended to determine possible modes of inert gas feed to the breached pressure circuit, together with the operation of high efficiency gas filters, to minimize the escape of fission products through the breach and to keep the graphite/oxygen reaction to a minimum. As a longer term aim the design of ducts and closures will be studied to optimize advantageous factors which may influence gaseous exchange flows. The application of the analysis to other situations (e.g., openings in secondary containment systems, fires involving radioactive materials) is discussed. 6 references. (auth)

**57107** INFLUENCE OF $PuO_2$ PARTICLE SIZE OF MIXED OXIDE FUEL IN RELATION TO FAST REACTOR SAFETY. Takahashi, Ryoichi; Matsuoka, Yoshinori; Shindo, Masuo (Tokyo Inst. of Tech.). Bull. Tokyo Inst. Technol. (Engl. Ed.); No. 102, 33-43(Mar 1971).

An elementary heat transport process is considered in order to study the influence of $PuO_2$ particle size on power transients. It

XUM

is shown that the particle size limit of $PuO_2$ is about 80 $\mu$ for a very severe accident. (auth) (Japan)

57108 EARTHQUAKE FORCES ON EQUIPMENT IN NUCLEAR POWER PLANTS. Hadjian, Asadour H. (Bechtel Corp., Vernon, Calif.). J. Power Div., Amer. Soc. Civil Eng.; 97: No. PO3, 649-65(Jul 1971).

Earthquake stress resisting design requirements for Class 1 structures and equipment of power reactors are described. Methods of analyzing earthquake stress characteristics and stress effects on reactor structures and equipment are presented. 14 references. (D.C.C.)

57109 (ANL-7771) MATERIALS-COOLANT INTERACTIONS RELEVANT TO EBR-II. Ruther, W. E.; Claar, T. D.; Greenberg, S.; Strain, R. V. (Argonne National Lab., Ill.). Apr 1971. Contract W-31-109-eng-38. 43p. Dep. NTIS.

Investigations of six bellows that had failed in Na service indicated that Na penetration of inclusion stringers led to perforation in three of them. Excessive travel of the valve stem was probably the cause of failure of two others. The sixth failure, the only one causing a reactor shutdown, was ascribed to a defect introduced in the manufacturing process. Investigations of failures in a Na sampler and in a tool for in-reactor cutting of sensor leads of an instrumented subassembly showed that the presence of Na was not deleterious. Type 304L stainless steel fuel cladding and Type 304 stainless steel hexagonal cans exposed to EBR-II primary coolant showed no selective attack or microstructural change that could be attributed to the Na or to the procedure for postirradiation removal of Na. Slow migration of carbon was observed from Type 304 stainless steel foils (C > 0.04%) into Type 304L stainless steel foils (C < 0.02%) immersed in the EBR-II primary Na. During this experiment, the measured concentration of carbon in the primary Na varied from 0.4 to 1.3 ppM. Corrosion of nickel exposed for 380 days to ~920°F primary Na was 0.08 mg/cm$^2$. Deliberately defected mixed-oxide fuel elements exhibited only minor dimensional changes when exposed to 700°F Na. In other ex-reactor Na exposures: free-machining stainless steels were unsuitable for reactor use; modified Belloseal valves were not affected by 5000 cycles in 700°F Na; brazed joints retained their shear strength in a 2-month test at 850°C; dissolved tin (1500 ppM) in the Na did not penetrate stainless steel in 1-month tests at 1020 and 1200°F; and nitridation of Type 304 stainless steel was insignificant under simulated conditions of the EBR-II gas/liquid interface. 12 references. 57112 (HEDL-TME-71-31) SODIUM FIRES ANALYSES FOR THE FAST FLUX TEST FACILITY. Hale, J. P.; Shire, P. R. (Hanford Engineering Development Lab., Richland, Wash.). 12 Feb 1971. Contract AT(45-1)-2170. 52p. Dep. NTIS.

Summaries of sodium fire cases of practical value for sodium cooled reactor plant safety are reviewed. Sodium pool fire calculations are reported in depth. Surveys of pool and spray fire calculation methods and experimental progress are summarized where applicable to the present plant design parameters. For the pool fire calculations various accident conditions are investigated: two-cell configuration in air atmosphere, release of sodium and fission products due to fuel handling, and closed cells with low oxygen atmosphere. Time history curves display the thermal transients to near ambient conditions at the end of 20 to 100 hours. Spray fires are treated for low oxygen conditions. 20 references. (auth)

57113 (HEDL-TME-71-33) RADIOLOGICAL EVALUATION OF A HYPOTHETICAL CORE DISRUPTIVE ACCIDENT. Fies, C. L. (Hanford Engineering Development Lab., Richland, Wash.). Feb 1971. Contract AT(45-1)-2170. 37p. Dep. NTIS.

A mechanistic analysis of the radiological consequences of the hypothetical core disruptive accident for the FTR indicate that the containment structures, together with the isolation characteristics of the site, are more than adequate to protect the general public from excessive radiation exposure. The potential radiation exposure resulting from a hypothetical core disruptive accident is analyzed. 23 references. (auth)

57114 (HEDL-TME-71-58) PRELIMINARY OUTLINE OF FTR NUCLEAR SYSTEMS START-UP TESTS. Fleischman, R. M. (Hanford Engineering Development Lab., Richland, Wash.). Aug 1971. Contract AT(45-1)-2170. 31p. Dep. NTIS.

Preliminary outlines of anticipated FFTF startup tests related to Nuclear Systems are presented. For each test brief sections on Purpose, Test Description, Plant Status, and Special Equipment are provided. The test outlines, as given, are intended to serve as a "working" outline for the development of a more detailed FFTF startup testing program. (auth)

57115 (HEDL-TME-71-65) CROSS SECTIONS FOR PRELIMINARY DESIGN OF FTR, FTR SET NO. 200. Nelson, J. V. (Hanford Engineering Development Lab., Richland, Wash.). Aug 1971. Contract AT(45-1)-2170. 19p. Dep. NTIS.

A 26 group cross section library, designated FTR Set #200, which has been used in Fast Test Reactor (FTR) design calculations and in the analyses of critical experiments in support of the design of FTR is presented. (auth)

57116 (INR-1303) REACTOR EWA-10 INFORMATION. (Institute of Nuclear Research, Warsaw (Poland)). 1971. 74p. (In Polish). Dep. NTIS (U. S. Sales Only).

The main parameters and characteristics of the EWA-10 reactor are presented. The technical and formal requirements to be fulfilled in the case of irradiations and research in reactor EWA-10 are also included. (auth)

57117 (JAERI-Memo-4157, pp 23-43) FUEL FAILURE DETECTOR IN JRR-3. Tsunoda, Junsaku (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

A fuel failure detecting equipment, with which the JRR (Japanese Research Reactor)-3 is equipped, is called Failed Fuel Detector, and detects fuel failure by monitoring of gaseous fission products released into primary coolant. It is capable of identifying individual failed fuel rods out of 246 fuel rods loaded into the JRR-3 core, using a matrix method. The failed fuel detector system is described. (Japan)

57118 (JAERI-Memo-4157, pp 44-50) GAMMA-RAY SPECTROSCOPY OF HEAVY WATER AND He-GAS IN JRR-3 FUEL FAILURE. Nemoto, Tsuyoshi (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

Measurement was carried out with a previously failed fuel by loading it again into the Japan Research Reactor (JRR)-3 core, a heavy water moderated and cooled natural uranium type reactor. The aim was to assess basic data to predict fuel failure with $\gamma$-ray spectrum. Separated gas in FFD gas water separators, separated heavy water, coolant heavy water and cover gas were measured

for their γ-ray spectra, and contained nuclides were detected. Certain fission product nuclides were measured for their concentration. Iodine in the coolant was separated with ion exchange resin, and was measured. In the separated gas, Kr-85m, 87, 88, 89, 90; Xe-135, 137, 138, 139; Cs-138, 139; Rb-89, 90 and A-41 were detected. A-41 comes from A-40 existed in He gas as impurity and is made radioactive by neutrons. In comparison with γ measurements for the cover gas and the separated gas, it was found that significant gaseous fission products remained still in the water. From the γ spectrograph of the heavy water contaminated but not by the failed fuel, it was found that initial detection of fuel failure is difficult from the coolant because of high radiation from Na-24 mostly, and Mn-56 and Mg-27 partly. Iodine detection was unsuccessful. Ge(Li activated) γ detectors with high energy resolution were confirmed to be more useful means to detect fuel failure than GM counters of FFD measuring β ray. (Japan)

**57119** (JAERI-Memo-4157, pp 51-65) STUDY ON JRR-4 DELAYED NEUTRON-TYPE FUEL FAILURE DETECTOR. Onishi, Nobuaki (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

Japan Research Reactor-4 is a swimming pool type light water cooled reactor with MTR type fuel of 90% enriched uranium. Equipment to detect fuel failure is designed for measurement of delayed neutrons from failed fuels. The failed fuel detector intakes 10 l/min from primary cooling water. Delay time is 60 sec from core to measuring tank. Present counting rate is 500 cpm, and the experiment is aimed to know origin of the counting rate. Pulse height of 5 $BF_3$ counters was analyzed, and discrimination level was set at the value at which the counting rate was not affected from pile-up of γ-ray. Correlation between counting rate for delayed neutrons and coolant mass flow was measured. The experiment revealed lack of evaluation method to estimate bare $^{235}U$ quantity in pile from the counting rate, and equipment optimization for the failed fuel detection is necessary. (Japan)

**57120** (ORNL-TM-3569) HIGH FLUX ISOTOPE REACTOR QUARTERLY REPORT: APRIL, MAY, AND JUNE OF 1971. McCord, R. V.; Corbett, B. L. (Oak Ridge National Lab., Tenn.). 3 Sep 1971. 26p. Dep. NTIS.

Operation of the HFIR was routine with an on-stream time of 96.1%. An unusual amount of maintenance was required on the pneumatic instrumentation. This has been attributed to debris from the air dryers caused by the increase in pressure and duty cycle required to supply air to the TRU facility. Special filters were installed in the air system and this is expected to reduce the maintenance required on the pneumatic instrumentation. About 5 mg of plutonia–thoria microspheres were released in an activation analysis irradiation tube. The system was successfully decontaminated with very little radiation exposure to personnel. (auth)

**57121** (RCN-145) PRESSURIZED WATER LOOP IN THE HIGH FLUX REACTOR AT PETTEN. van der Kleij, N.; Vader, D. C.; Visser, J. F. J. (Reactor Centrum Nederland, Petten). Jun 1971. 20p. Dep. NTIS (U. S. Sales Only).

A description is given of an in-pile loop for the irradiation of fuel pins under similar working conditions as in Pressurized Water Reactors. The working pressure of the loop is 140 bar and the water temperature at the inlet of the in-pile section is 280°C. The water flow is approx. 15 $m^3$/hr, depending on the hydraulic characteristics of the experiments. The in-pile section of the loop can be loaded with two fuel bundles. A great number of irradiations have been carried out with different linear powers and burnup. The maximum linear power and burnup have been 1200 W/cm and 16,000 MWD/tonne resp. A short survey of the operational experience and irradiation programmes up to the end of 1970 is presented. The working conditions, flowsheet and lay-out of the loop are discussed to some detail, with emphasis on the in-pile part of the loop. (auth)

**57122** TECHNICAL SURVEY NO. 5: REACTOR IRRADIATION SERVICES. Nucl. Eng. Int.; 16: 469-92(Jun 1971).

The survey comprises 5 articles describing the irradiation facilities of major organizations, a folding chart which lists the parameters of irradiation facilities throughout the world, and a tabulated guide giving addresses, availability etc. of these facilities. The following services are described: testing of fuels in the Halden reactor, which is based on extensive use of in-core instrumentation; commercial irradiation activities of the UKAEA, including planning, preirradiation and postirradiation examination, and special facilities in DFR, SGHWR, and AGR; irradiation rigs and loops used in CEA reactors, Triton, Melusine, Siloe, Pegase and Osiris; and facilities supplied with TRIGA reactor systems for isotope production, in-core irradiation, neutron radiography, use of dry irradiation facilities, thermal columns and neutron beams. Finally the development and progress of the Fast Flux Test Facility are discussed. Descriptions are given of the isolated test loops, the reactor and cooling system, and the fuel cycle. (UK)

**57123** SPECTROCALORIMETRIC MEASUREMENTS IN THE CORE OF THE HEAVY WATER REACTOR RA AT VINCA. Kott, J. (ŠKODA Works, Pilsen, Czech.); Jirousek, V.; Nemec, J.; Dach, K.; Radak, B. Bull. Boris Kidric Inst. Nucl. Sci., Chem.; 21: No. 2, 7-19(May 1970).

The measurements of the photon field in the RA reactor with the ŠKODA reactor spectrocalorimeters are described. The design of calorimeters and the basic spectrocalorimetric theory are given briefly. Results obtained in the VK-1 and VK-5 experimental holes of the RA reactor are presented and compared to the ones (for graphite) obtained at the same place. The intercomparison of the RA results with the values for other reactors (VVR-S and EWA-10) obtained by the calorimeters of the same design is also given and discussed. (auth)

**57124** MEASUREMENT OF REACTOR POWER BY DETERMINATION OF $^{17}N$ NEUTRONS IN THE COOLING MEDIUM WITH TRACK DETECTORS. Nedelik, A.; Gruenwald, H. (ASTRA-Reaktor Institut, Seibersdorf, Austria). Atomwirt., Atomtech.; 16: No. 6, 301(Jun 1971). (In German).

The power of ASTRA, a 5 MW pool reactor, was measured with a special track detector. Several pellets of highly enriched uranium oxide were attached to glass slides and placed on the outlet of the primary cooling system. Moderation of the $^{17}N$ neutrons from the $^{17}O(n,p)^{17}N$ reaction produced sufficient thermal neutrons to cause fission in the uranium pellets. Following etching, fission product tracks in the glass could be easily counted under the microscope. The dosimeter yielded 70 tracks/$cm^2$/MWh. The simple inexpensive dosimeter proved suitable for assessment of reactor power. (H.B.G.)

**57125** SPECTRAL DISTRIBUTION OF NEUTRONS FROM THE REACTOR HORIZONTAL CHANNEL OF THE INSTITUTE OF NUCLEAR RESEARCH, REZ, MEASURED BY MEANS OF THE CRYSTAL SPECTROMETER KSN-2. Vratislav, S. (Faculty of Applied and Nuclear Physics, Prague). Jad. Energ.; 17: No. 6, 191-4(Jun 1971). (In Czech).

The spectral distribution of neutrons from the reactor horizontal channel of the Institute of Nuclear Research, Řež, was measured by the crystal spectrometer KSN-2. The Cu crystal was employed as monochromator. The mosaic spread of the single crystal as well as the correction factors to be applied to the measured value obtained, are given. The neutron spectral distribution was approximated by a Maxwellian distribution in the range of energy 0.01 to 0.1 eV.with the value $E_0 = 0.031$ eV, which corresponds to the neutron gas temperature $T = (361 \pm 11)°K$. (auth)

**57126** DETERMINATION OF INTERMEDIATE NEUTRON ENERGY SPECTRUM FOR A POOL-TYPE REACTOR. Weng, Pao-shan; Lee, Ming-huei (National Tsing Hua Univ., Hsinchu, Taiwan). Atomkernenergie; 18: No. 1, 25-9(Aug 1971).

The quadruple foil technique was used for the determination of intermediate neutron energy spectrum in the core center of THOR. The relationship between the differential resonance flux and the activities of resonance detectors was derived. A comparison between the quadruple foil technique and the cadmium ratio method is given. The correction factors involved such as self-shielding, reactor startup, perturbation, power level, and cadmium transmission are discussed in detail. A full description of resonance detectors and the associated parameters are given. The analysis of the intermediate neutron spectrum indicates that the spectrum in the core center of THOR is very close to a 1/E spectrum. 17 references. (auth)

**57127** ISOTOPES AND RADIATION TECHNOLOGY. VOLUME 9, NUMBER 1. Baker, P. S.; Lafferty, R. H. Jr.; Gerrard, Martha; (and others) (eds.). One of Four Quarterly Technical Progress Reviews Published for the Division of Technical Information, USAEC. Oak Ridge, Tenn.; Oak Ridge National Laboratory (1971). 132p. GPO $0.70.

Current literature reviews and special review articles are presented on isotope production, development, and applications, process radiation development, and radiation preservation and sterilization. A separate abstract was prepared for each of 11 reviews. (H.D.R.)

*For abstracts of individual papers see: 54443, 54506, 54507, 54739, 54906–54908, 55065, 55107, 55811, and 57128.*

**57128** ATOMICS INTERNATIONAL'S L-88 NUCLEAR REACTOR FOR NEUTRON RADIOGRAPHY. Henrie, J. O. (Atomics

XUM

International, Canoga Park, Calif.). Isotop. Radiat. Technol.; 9: No. 1, 41-4(Fall 1971).

The L-88 reactor is designed expressly for neutron radiography. The reactor core provides a maximum ratio of collimated-neutron-beam strength to reactor thermal power. The low thermal-power requirements result in system simplicity and compactness, which in turn hold the initial costs and subsequent operating and maintenance costs to a minimum and allow the use of a sealed reactor system, since no refueling is required in its lifetime of 20 years or more. The complete reactor system is shipped in three preassembled packages (reactor, console, and cooler) designed for rapid, minimum-effort installation. The reactor can be moved to a new location with comparatively little difficulty. The L-88 reactor can be provided with highly flexible experimental facilities for other nondestructive testing as well as for research in physics, chemistry, and biology. The characteristics of the L-88 reactor are summarized. (auth)

**57129** HIGH-POWER RADIATION LOOP IN THE IRT NUCLEAR REACTOR AT TBILISI. Kiknadze, G. I.; Andronikashvili, E. L.; Bedbenov, V. C.; (and others). At. Energ. (USSR); 31: No. 2, 143-5(Aug 1971). (In Russian).

A high-power loop is described for use in the IRT research reactor at Tiblisi which utilizes 2.6 liters of the eutectic alloy of indium-gallium as the gamma-carrier. The maximum radiation power of this loop amounted to 300,000 gram-equivalents of radium during a thermal power level of the reactor of 5,000 MW. Compactness and simplicity distinguish this loop from its predecessors of 1963 and 1969. (K.S.W.)

**57130** PNEUMATIC LOADING AND UNLOADING OF CHANNELS FOR IRRADIATION IN THE IRT-M REACTOR. Ambardanishvili, T. C.; Zakomornyi, G. V.; Kiasashvili, G. D.; (and others). At. Energ. (USSR); 31: No. 2, 147-50(Aug 1971). (In Russian).

The system designed for pneumatic loading/unloading of vertical channels in the IRT-M reactor in Tiblisi is described. The channel for sample irradiation may be located in the core or reflector and consists of two coaxial steel tubes. A working gas is used to move samples to some location determined by a sensor. A distributing device equipped with microswitches gives direction to the pneumatic rabbit. A loading unit is provided with a valve mechanism for admitting the working gas to the system. The complete operation of the system is explained in some detail. (K.S.W.)

**57131** EXPERIENCE OF LEGAL PROCEEDINGS FOR SITING A RESEARCH REACTOR IN AN URBAN AREA. Lorio, Philip M. (Columbia Univ., New York). pp 716-23 of Health Physics Aspects of Nuclear Facility Siting. Vol. III. /Voilleque, Paul G. (comp.). Idaho Falls, Idaho; Burton R. Baldwin, Publications Chairman (1971).

From fifth annual midyear topical symposium on health physics aspects of nuclear facility siting; Idaho Falls, Idaho (3 Nov 1970).

Procedures for licensing a U. S. research reactor located in an urban area are listed and discussed. (D.C.C.)

## Rocket and Space Reactors

**57132** (AI-AEC-Memo-12715(Del.)) REFERENCE ZIRCONIUM HYDRIDE REACTOR. Maki, L. M.; Donovan, E. J. Jr. (Atomics International, Canoga Park, Calif.). 15 Jun 1969. Contract AT-(04-3)-701. 66p. Dep. NTIS.

A conceptual design of a reference zirconium hydride (ZrH) nuclear reactor suitable for relatively high power, long duration space applications is presented. The design is based on the technology of the zirconium hydride moderated, $^{235}U$ fueled, NaK-cooled reactor type as typified by the SNAP 8 reactor. The design evolved has a minimum performance capability of 600 kW(t) for 20,000 hours at 1300°F, is suitable for use with a number of candidate power conversion systems, and can be operated with either a shadow shield or within a fully enclosed ($4\pi$) radiation shield. 12 references. (auth)

**57133** (ORNL-TM-3366) MORSE MONTE CARLO SHIELDING CALCULATIONS FOR THE ZIRCONIUM HYDRIDE REFERENCE REACTOR. Burgart, C. E. (Oak Ridge National Lab., Tenn.). 26 Aug 1971. 23p. (CONF-710304-13). Dep. NTIS.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

DOT-SPACETRAN transport calculations and MORSE Monte Carlo calculations of a lithium-hydride and tungsten shield for a SNAP reactor were compared. Transport of both neutrons and gamma rays was considered. Several forms of importance sampling were utilized in the MORSE calculations. Quantities internal to the shield, as well as dose at several points outside of the configuration, were in satisfactory agreement with similar DOT calculations. 9 references. (auth)

**57134** DESIGN AND OPTIMIZATION OF A FAST HEAT PIPE THERMIONIC REACTOR. Hanke, H. (Univ., Stuttgart). Atomkernenergie; 18: No. 1, 61-9(Aug 1971). (In German).

The concept of an energy supply plant for space vehicles, consisting of a fast reactor has heat source and out-of-core thermionic converters heated and cooled by heat pipes, is designed and optimized. The criterion for optimization is the cost-to-power-ratio. The costs are given by the price of the fissile material and the expense for the transport of the device into orbit. The reactor power is limited by the maximum tolerable values for the temperature at the free surface of a cell and for the output current of a single converter. If the composition of core and reflector, and the converter output is given, it is possible, applying the reflector saving concept, to construct an analytical correlation between the geometric parameters as well as between these and the reactor power output. Therefore it is possible to optimize these parameters with a very small effort for calculation. 33 references. (auth)

## Process Heat and Desalination Reactors

**57135** TECHNICAL-ECONOMIC CONSIDERATIONS OF HEAT SUPPLY FROM POWER STATIONS WITH LIGHT WATER REACTORS. Hromek, R. (Federal Ministry of Fuel and Power, Prague). Jad. Energ.; 17: No. 6, 181-4(Jun 1971). (In Czech).

Problems related to nuclear central heating stations and the calculation system for economic expenses (costs) for heat and electric power in power stations with light water pressure reactors are discussed. The basic effectivity criterion is mentioned for heat supply from nuclear power stations for public purposes. The detailed calculation system is suitable also for the solution of problems having a general character in other sectors of nuclear economics. (auth)

## Marine and Portable Power Reactors

**57136** (DOCKET-50238-83) N. S. SAVANNAH. Supplement No. 1 to Safety Analysis Report Fuel Shuffle with Core II. (Maritime Administration, Washington, D. C.). 20 Sep 1971. 126p. Dep. NTIS.

Operating limits for the reactor following fuel shuffle procedures with Core 2 are presented. (D.C.C.)

**57137** (DOCKET-50238-84) N. S. SAVANNAH. Dropping of Fuel Element. (Maritime Administration, Washington, D. C.). 29 Sep 1971. 3p. Dep. NTIS.

The accidental dropping of a fuel element into the spent fuel pool is described. Recovery and repair procedures are discussed. Possible causes for the fuel element drop incident are listed. (D.C.C.)

**57138** NUCLEAR POWER VERSUS CONVENTIONAL SYSTEMS FOR NUCLEAR SHIPS. Motor Ship; 52: No. 613, 124-5(Aug 1971).

A comparative study is made of building and operating costs for nuclear and conventional container ships with speeds of 23-29 knots and a capacity of 1800 standard 20 ft containers. It is concluded that nuclear power is not yet economically viable for this application. (UK)

**57139** OPERATIONAL RESULTS FOR 1970 OF THE NUCLEAR SHIP OTTO HAHN. Atomwirt., Atomtech.; 16: No. 8-9, 452(Aug-Sep 1971). (In German).

In 1970, the nuclear ship Otto Hahn obtained permission for the first time to enter foreign ports. During the year, 15 voyages were undertaken; of these, 10 involved commercial transportation of phosphate, two were devoted to research, and the other two to testing. The ship performed satisfactorily. Two minor problems were encountered which involved a pump and the filter system. To reduce corrosion in the primary circuit, the addition of hydrazine/levoxin was found most effective. (H.B.G.)

## Reactor Theory

*Refer also to abstracts 57019 and 57071.*

**57140** (CONF-710302–(Vol.1), pp 464-71) CONVERSION OF THE ARGONNE REACTOR COMPUTATION (ARC) SYSTEM TO CONTROL DATA 6000 AND 7000 SERIES EQUIPMENT. Lindeman, A. J.; Just, L. C. (Argonne National Lab., Ill.); Lee, R. H. (Control Data Corp., Oak Brook, Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The Argonne Reactor Computation (ARC) System is a collection of computational programs embedded in a modular environment so as to facilitate reactor physics calculations that involve many independent computations. The ARC System was designed for and implemented on the IBM System/360 computer with the MVT (multiprogramming with a variable number of tasks) Operating System. Project EXODUS was launched to examine the practicability of producing a version of the ARC System operable on CDC machinery. The system requirements, both hardware and software, as well as the ARC System's dependencies on the System/360 and the capability of the 6000 and 7000 series to support the ARC System were determined. (auth)

**57141** (CONF-710302–(Vol.1), pp 472-7) USER EXPERIENCE WITH DATATRAN AT LASL. McGirt, Frank; Alcouffe, Raymond E. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Los Alamos Scientific Laboratory (LASL) assessed the problems involved in adapting existing modular programming systems to the LASL CDC-6600 computers. Of the modular systems available, the DATATRAN system was chosen for investigation first since there seemed to be no extreme demands made on computer hardware or software by DATATRAN. In addition, DATATRAN was designed for the CDC-6600 computer. 8 references. (auth)

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The capabilities of the Argonne Reactor Computation (ARC) system are briefly described. The performance of the system in meeting the needs of both standard and non-standard uses is reviewed. 8 references. (H.D.R.)

**57143** (CONF-710302–(Vol.1), pp 494-504) EXPERIENCE WITH THE MODULARIZATION OF ITERATION PROCEDURES IN ENGINEERING APPLICATIONS. Schmidt, Reiner (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The convergence module U4 for solving engineering problems requiring iteration procedures is described. The performance of U4 is compared to that of other methods. (H.D.R.)

**57144** (CONF-710302–(Vol.1), pp 505-7) PSKIT: A CDC-6600 COMPUTER PROGRAMMING PACKAGE PROVIDING EASY USE OF FINK/PANTRY. Bohl, H. Jr. (Bettis Atomic Power Lab., Pittsburgh, Pa.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The programming package PSKIT is described as a FORTRAN IV service program that makes the use of the dynamic storage allocators FINK and PANTRY quite simple. PSKIT provides input functions to read files from File Manager store and to read CARDS-type cards and provides output functions to write files into File Manager store. Sandwiched in between these functions are one or more compute functions. All of the functions are controlled through built-in directive paths or directive paths input on cards. 5 references. (auth)

**57145** (CONF-710302–(Vol.1), pp 508-15) JOSHUA TERMINAL SYSTEM. Jensen, J. C.; Boyce, R. L.; Suich, J. E.; Haywood, R. C. (Du Pont de Nemours (E. I.) and Co., Aiken, S. C. Savannah River Lab.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A major design goal of the JOSHUA system is to enable users to execute modules and access the extensive data base with remote display terminals. The JOSHUA Terminal System (JTS) was developed to provide the terminal facilities required for module execution and data base manipulation. The capabilities of the JTS, implementation, and some experience with the system are described. (auth)

**57146** (CONF-710302–(Vol.1), pp 516-30) NETWORK ORGANIZATION OF AN AUTOMATED NUCLEAR DESIGN SYSTEM. O'Shea, D. M.; Lee, R. R.; Ancona, A.; Rohan, P. E. (Combustion Engineering, Inc., Windsor, Conn.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The design of nuclear reactors for power generation places increasing emphasis on the sophisticated use of large and complex computer calculations. Efficient use of the third generation computers being employed for these calculations requires a heavy emphasis on the development of computer code systems to provide the flexibility and accuracy required. These needs can be satisfied by an automated design system that provides a means to sequentially execute a number of distinct calculations and for manipulation of the data used in the calculation. A new structure for an automated design system called a network organization is described that offers several advantages over existing systems. (auth)

**57147** (CONF-710302–(Vol.2)) PROCEEDINGS OF CONFERENCE ON NEW DEVELOPMENTS IN REACTOR MATHEMATICS AND APPLICATIONS, IDAHO FALLS, IDAHO, MARCH 29–31, 1971. (American Nuclear Society, Hinsdale, Ill. American Nuclear Society. Eastern Idaho Section). 566p. Dep. NTIS.

Included are 43 papers on transport theory calculations, the Monte Carlo method, reactor physics codes, and ENDF/B and associated processing codes. A separate abstract was prepared for each of 33 papers. Five papers were previously abstracted for Nuclear Science Abstracts. They may be located under CONF-710302, CEA-CONF-1755, CEA-CONF-1762, and DP-MS-70-78 in the Report Number Index. (H.D.R.)

*For abstracts of individual papers see: 57019, 57148–57178, and 57191.*

**57148** (CONF-710302–(Vol.2), pp 557-60) $S_n$ PROGRAMMING TECHNIQUES. Pfeifer, C. J. (Bettis Atomic Power Lab., Pittsburgh, Pa.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The desire for greater accuracy in the calculation of neutron flux distributions in a reactor has led to the development of computer programs to solve the two-dimensional neutron transport equation using the $S_n$ method. Some programming methods are discussed which can be used to solve the problems encountered in the implementation of such a program, especially if that program is to provide the capability to solve very large problems. A large problem is defined as one consisting of fifty or sixty thousand mesh elements and perhaps two or three hundred angles per quadrant, thus requiring a solution for approximately fifty million unknowns per energy group. These large problems occur in shielding calculations requiring many mesh elements to cover very large distances and in core "truth" calculations when extreme geometric detail is desired. It is assumed that the mathematics of the solution of the finite difference approximation to both the diffusion and transport equations is well known and only the programming of these solutions is discussed. (auth)

**57149** (CONF-710302–(Vol.2), pp 561-4) NEW FORM OF THE $P_3$ APPROXIMATION. Selengut, D. S. (Knolls Atomic Power Lab., Schenectady, N. Y.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The $P_3$ approximation to the transport equation in three dimensions involves a total of 16 first-order differential equations to determine the 16 moments of the neutron angular distribution. The complexity has apparently precluded the writing of any computer program, in spite of the potentially significant improvement over diffusion theory. A widely used alternative is the simplified $P_3$ approximation due to Gelbard, which involves the neglect of the tensor character of the higher angular flux moments, but permits the flux calculation to be put in the form of a pair of coupled diffusion equations. The complete $P_3$ equations are developed in a form which retains the computational advantage of the simplified theory. Isotropic scattering and sources are assumed, and cross sections are taken to be constant within each region. (auth)

**57150** (CONF-710302–(Vol.2), pp 565-76) CONVERGENCE OF THE WEIGHTED DIAMOND DIFFERENCE APPROXIMATIONS TO THE DISCRETE ORDINATE EQUATIONS. Madsen, N. K. (Bettis Atomic Power Lab., Pittsburgh, Pa.).

XUM

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The class of difference methods commonly known as the weighted diamond difference approximations is examined. These approximations are considered for vacuum, reflecting, and periodic boundary conditions in x-y geometry. It is shown that all of the difference schemes considered (with several exceptions) lead to nonsingular systems of algebraic equations. This guarantees the existence of a unique solution to each set of difference equations. The exceptional cases yield singular systems of difference equations. It is also shown that for any of the above boundary conditions the solution of a weighted diamond difference scheme converges to the solution of the discrete ordinate equations. The convergence is shown in a discrete $L_2$ norm and convergence rates are established. (auth)

**57151** (CONF-710302-(Vol.2), pp 577-607) ELIMINATION OF RAY EFFECTS BY CONVERTING DISCRETE ORDINATE EQUATIONS TO SPHERICAL HARMONIC-LIKE EQUATIONS. Lathrop, K. D. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Remedies are considered for the ray effect which is a flux distortion producing defect of the discrete ordinates approximation to the transport equation. It is shown how to formulate multidimensional discrete ordinate equations equivalent to spherical harmonic equations and relate the order of the equivalent spherical harmonic equations to the degree of precision of the numerical quadrature. Numerical results for this kind of remedy are given in three test problems, including a problem with material discontinuities. The use of orthonormal polynomials is shown to permit the formulation of discrete ordinates approximations which have properties "like" those of the highest order spherical harmonic equations consistent with the number of directions in the discrete ordinates approximation. These formulations also eliminate ray effects. It is concluded that the partially effective remedy of using more, specially chosen, directions is the most practical remedy for most applications, but that for especially difficult situations or for reference calculations, the defect-eliminating spherical harmonic-like formulations should be available for use. 15 references. (auth)

**57152** (CONF-710302-(Vol.2), pp 608-16) DP-O METHOD ACCORDING TO A VARIATIONAL TREATMENT THAT EXTENDS ITS APPLICABILITY TO ALL GEOMETRIES. Amster, Harvey; Paveri-Fontana, Stefano L. (California Univ., Berkeley. Dept. of Nuclear Engineering).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

DP-O equations for neutron flux calculations for general three-dimensional geometries are derived from the variational principle that yields the standard P-1 equations. The DP-O approximation for the leakage term in the transport equation is examined. 8 references. (H.D.R.)

**57153** (CONF-710302-(Vol.2), pp 617-24) ARRANGEMENT OF ORDINATES IN DEEP-PENETRATION CYLINDRICAL AND X-Y $S_n$ CALCULATIONS. Gelbard, E. M. (Bettis Atomic Power Lab., Pittsburgh, Pa.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A broad class of problems are selected and ordinate arrays for routine use in problems which belong to this broad class are developed. Specifically the problems dealt with are deep-penetration (i.e., shielding) neutron transport problems in one-dimensional cylindrical configurations, or in X-Y configurations without significant voids. (auth)

**57154** (CONF-710302-(Vol.2), pp 625-43) SYNTHETIC TRANSPORT THEORY METHOD. Crawford, Bruce W.; Friedman, Jack P. (Knolls Atomic Power Lab., Schenectady, N. Y.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The synthetic transport theory method is extended to two-dimensional XY and RZ geometries with either a multigroup or few group energy structure. The method is verified through several benchmark problem solutions and comparisons. 12 references. (H.D.R.)

**57155** (CONF-710302-(Vol.2), pp 644-54) MODIFIED COLLISION PROBABILITY METHOD FOR NON-UNIFORM LATTICES. Leonard, A.; McDaniel, C. T.; Petrick, W. P. (General Electric Co., San Jose, Calif.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A new method for the determination of multigroup, two-dimensional neutron distributions in non-uniform lattices is described. The method is similar to the usual collision probability approach except for two important differences. First, the only first-flight probabilities that are required are those for paths within homogeneous components of the lattice, e.g., a fuel rod or the water region in the bundle interior. The second modification is that multiple scatterings within each "mesh" region are precalculated by a successive generation technique which accounts for the spatial distribution of each scattering generation in the fuel rod and energy transfer in the moderator by use of matrix algebra. (auth)

**57156** (CONF-710302-(Vol.2), pp 655-78) NODAL INTEGRAL TRANSPORT METHOD FOR CALCULATION OF TWO-DIMENSIONAL POWER DISTRIBUTIONS IN NON-UNIFORM LATTICES. Cheng, H. S.; McDaniel, C. T.; Leonard, A. (General Electric Co., San Jose, Calif.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A nodal integral transport method for the solution of the two-dimensional steady-state multigroup integral transport equations with linearly anisotropic scattering for heterogeneous systems in cartesian geometry is presented. The method consists of the division of a system of interest into subregions or "nodes" and the specification of neutronic coupling between nodes by means of a variant of collision probability method. Instead of using a set of formal node-to-node transport kernels to describe integral neutron transport, one assigns a set of partial currents and first-collision sources (direct fission or external sources plus indirect scattering sources) to each node and precalculates a set of escape and transmission probabilities for each node, with provisions for a linear spatial variation and $P_1$ angular distribution of the partial currents and collision sources. The coupling between nodes is then specified by applying the law of neutron conservation to each node and adjacent neighbors in terms of the set of partial currents, collision sources, and escape and transmission probabilities. It is also shown that the conventional integral transport equations may be reduced to equivalent partial current equations in an integral sense. Thus, the solution of the multigroup partial current equations is equivalent to the solution of the conventional multigroup integral transport equations. Comparisons against a series of available critical experiments and Gundremmingen (KRB) gamma-scan data illustrate the accuracy of the method. 12 references. (auth)

**57157** (CONF-710302-(Vol.2), pp 679-700) NON-ITERATIVE METHOD FOR TIME DEPENDENT TRANSPORT. Reed, Wm. H. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A numerical method for time dependent transport theory is presented. This method is explicit in the sense that no iterative matrix inversions need be performed over a time step. It is unconditionally stable but relatively inaccurate. Two acceleration devices designed to improve the accuracy of this and other methods are presented. The effectiveness of this method and these acceleration devices is illustrated by a set of test problems in one space dimension. (auth)

**57158** (CONF-710302-(Vol.2), pp 701-22) TIME DISCRETIZATION OF THE NEUTRON TRANSPORT EQUATION. Morante, Aldo Belleni (Florence Univ. (Italy). Istituto Matematico).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

It is shown that, if only the time variable of the transport equation is discretized, the neutron density at $t = k\tau$ ($k = 1, 2, \ldots$; $\tau$ = time step) can be given explicitly as a function of the initial neutron distribution. By using the theory of semigroups the method is proved to be convergent and the error is evaluated. 14 references. (auth)

**57159** (CONF-710302-(Vol.2), pp 723-38) APPLICATION OF FINITE ELEMENT SOLUTION TECHNIQUE TO NEUTRON DIFFUSION AND TRANSPORT EQUATIONS. Ohnishi, T. (Hitachi Ltd., Kawasaki (Japan). Atomic Energy Research Lab.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A finite element method was applied to the solution of neutron diffusion and transport equations. The finite element method is one of the variational approximations. The essence of the method is the division of the domain under consideration into a number of nonoverlapping small subregions of known geometric shape (which are called "finite elements") and the use of the unique base functions which are constructed in each finite element. The finite element approximation is also considered as an extension of Ritz finite difference approximation. Two-dimensional x-y geometry and the triangular finite element are examined. Other multidimensional geometries, however, are also objects of the application of the finite element method and various kinds of finite elements are considered. (auth)

**57160** (CONF-710302-(Vol.2), pp 771-81) MACHINE GENERATION OF MONTE CARLO SAMPLING FUNCTIONS. Steinberg, Herbert A.; Troubetzkoy, Eugene S. (Mathematical Applications Group, Inc., White Plains, N. Y.); Kalos, Malvin H. (Mathematical Applications Group, Inc., White Plains, N. Y. New York Univ., N. Y. Courant Inst. of Mathematical Sciences).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A scheme for the automatic generation of importance functions for three-dimensional Monte Carlo problems is described. The procedure involves generation of a sequence of closed surfaces, starting at the detector, on which the importance functions are estimated to be independent of position. Using a recursive Monte Carlo, the adjoint function is estimated sequentially from surface to surface. (H.D.R.)

**57161** (CONF-710302-(Vol.2), pp 794-7) NON-LINEAR MONTE CARLO. Brooks, Joan; Kalos, M. H.; Steinberg, H. A.; Troubetzkoy, E. S. (Mathematical Applications Group, Inc., White Plains, N. Y.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A Monte Carlo solution to the photon transport equation was developed and programmed for a pure scattering medium which exhibits both ordinary and stimulated Compton scattering. This latter phenomenon is a property of Bose particles, namely that the differential scattering probability is a linear function of intensity at the scattered momentum. (auth)

**57162** (CONF-710302-(Vol.2), pp 803-32) SOME APPLICATIONS OF THE MONTE CARLO METHOD AT THE EURATOM RESEARCH CENTER, ISPRA. Matthes, W. (European Atomic Energy Community, Ispra (Italy). Joint Nuclear Reserch Center).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Two independent games of two different kinds of particles are considered with the condition that the expectation value of some estimator in the two games should be equal. This leads directly to the Monte Carlo game for the adjoint flux and provides a large arbitrariness for the adjoint game. This arbitrariness can be used to find "adjoint games" with smaller variances. This method is applied to the calculation of the neutron flux in an annular air gap in the water shield of a reactor. (auth)

**57163** (CONF-710302-(Vol.2), pp 857-70) COMPARISON OF 3 METHODS TO CONTROL THE LEAKAGE OF PARTICLES IN A MONTE CARLO GAME. Borgwaldt, H. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Estimating with a Monte Carlo code quantities which depend primarily on neutrons which have performed many collisions in a system becomes difficult when a high probability for neutron leakage has to be faced. This may necessitate the use of track length truncation as a non-analogue method for treating neutron leakage, in order to improve the statistics for neutrons with high numbers of collisions. Kschwendt and Rief have shown the advantage of track length truncation (Expected Leakage Probability method, ELP) in estimating time-dependent neutron leakage from bare spheres. The same type of test problem was investigated. It is demonstrated that a considerable improvement over the ELP method can be achieved by combining track length truncation with a technique of angular biassing which promotes inward scattering in the immediate vicinity of all outer boundaries. (auth)

**57164** (CONF-710302-(Vol.2), pp 871-6) MONTE CARLO SAMPLING WITH CONTINUOUSLY VARYING CROSS SECTIONS ALONG FLIGHT PATHS. Carter, L. L.; Cashwell, E. D.; Taylor, W. M. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

In systems where the total cross section is continuously changing along the flight path of a particle, the straightforward sampling approach is to compute the number of mean free paths to each collision point numerically. The numerical computation generally requires a considerable amount of computation time. An alternative sampling scheme which avoids the numerical integration altogether is investigated. (auth)

**57165** (CONF-710302-(Vol.2), pp 877-86) CURRENT STATUS OF ENDF/B PROCESSING CODES. Dannels, R. A. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Energy Systems Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The history and development philosophy of the Evaluated Nuclear Data File are presented. The ENDF/B data manipulation and library preparation codes are discussed. (H.D.R.)

**57166** (CONF-710302-(Vol.2), pp 887-900) DANISH MONTE CARLO WORK IN REACTOR PHYSICS AND RELATED AREAS. Kirkegaard, Peter (Danish Atomic Energy Commission, Risoe. Research Establishment).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

A survey of the application of Monte Carlo methods in Denmark is presented. Attention is focused on problems in reactor physics, but also related topics are discussed. 10 references. (auth)

**57167** (CONF-710302-(Vol.2), pp 901-12) COMPUTER PERFORMANCE MEASUREMENTS USING THE ARGONNE BENCHMARK PROBLEM COLLECTION: A STATUS REPORT. Butler, M. K. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Argonne has in the past undertaken "crash" benchmark problem collection efforts in conjunction with each proposed computer system acquisition. It was decided to initiate a small continuing benchmark research project in conjunction with the ongoing development of software monitoring techniques and the design and construction of a hardware monitor. Development of the benchmark collection was initiated in two separate but related sections. The first consists of those problems representative of and essential to the Laboratory's discipline-oriented research programs and reactor development activities. The second consists of a sample job stream simulating the Laboratory's computing workload. 8 references. (auth)

**57168** (CONF-710302-(Vol.2), pp 920-38) ALTERNATIVE APPROACH TO CORE CALCULATIONS FOR BOILING WATER REACTORS. Jonsson, A. (Vattenbyggnadsbyran, Stockholm (Sweden)).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The coarse mesh (or nodal) method is widely accepted as an inexpensive and practical tool for core calculations. However, the simplifications made in this approach lead to a situation where a number of parameters have to be determined by reference either to empirical relationships or to a more or less complete range of situations studied with a more exact means of solving the diffusion equation. This situation may well have a bearing on the accuracy that can be achieved in predicted power distributions and reactivity. An approach is described that can claim accuracies similar to conventional difference solutions and yet be as economic to execute as the coarse mesh method. 8 references. (auth)

**57169** (CONF-710302-(Vol.2), pp 939-52) DISCUSSION ABOUT THE NUCLEAR REACTOR CORE ANALYSIS CODE CITATION. Vondy, D. R.; Fowler, T. B.; Cunningham III, G. W. (Oak Ridge National Lab., Tenn.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The CITATION computer code was developed for analysis of nuclear reactor cores. Emphasis was placed on rapid solution of finite-difference diffusion theory neutronics problems of reasonable size in up to three geometric dimensions. Development effort added fuel management capability for fuel cycle analysis. Techniques of calculation which have been implemented are discussed and results of calculations are presented. 8 references. (auth)

**57170** (CONF-710302-(Vol.2), pp 953-67) APPLICATIONS OF SPACE-ENERGY FACTORIZATION TO THE SOLUTION OF STATIC FAST-REACTOR NEUTRONICS PROBLEMS. Stacey, W. M. Jr.; Henryson II, H. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The space-energy factorization method, in which the neutron flux is factored into a spectral and a spatial function and equations for each are solved iteratively, was extended and applied to a number of problems of interest in fast-reactor physics. An extension which uses several spectral functions, rather than a single spectral function as in the original method, was examined. Applications to many-group and two-dimensional neutron diffusion theory problems were investigated. Numerical results are presented which indicate the potential of the space-energy factorization method in fast-reactor analysis. (auth)

**57171** (CONF-710302-(Vol.2), pp 968-82) NEW MULTIGROUP CROSS SECTION CODE, MC$^2$-2. Toppel, B. J. (Argonne National Lab., Ill.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

XUM

The $MC^2$-2 code is intended to provide multigroup cross sections for critical experiment analysis, core calculations, and shielding applications. The code is planned so that approximate cross sections may be rapidly generated by relaxing the rigor of the basic algorithms. The $MC^2$-2 code is described by means of comparisons with $MC^2$ algorithms. 21 references. (H.D.R.)

**57172** (CONF-710302–(Vol.2), pp 983-90) AUTOMATED MODULAR LIGHT WATER REACTOR CALCULATION CODE PACKAGE. Karin, S.; Meyer, P. E.; Steinke, R. G. (ESZ Associates, Inc., Ann Arbor, Mich.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The POWER-B Code Package is a lifetime calculational tool for light water reactors. It is designed to be used in scoping studies for bid evaluation, fuel cycle analysis, and analysis of day to day reactor operation. It is modular in form; the modules are automatically linked by a driver program so that no module manipulation by the user is required. The input to the code consists of a physical description of the reactor to be analyzed and a small set of parameters describing the calculational options to be used. This input is checked internally to insure that it is logically consistent and physically reasonable. All of the input is edited and processed into a common form to be used by individual modules. The important output can be divided into three types: (1) the lifetime of the reactor with the current fuel loading; (2) the thermal hydraulic performance limits throughout the lifetime of the reactor; and (3) the isotopic composition on an assembly basis throughout the lifetime of the reactor. 15 references. (auth)

**57173** (CONF-710302–(Vol.2), pp 991-1003) ENDF/B LIBRARY: A CURRENT STATUS REPORT. Drake, Marvin K. (Brookhaven National Lab., Upton, N. Y.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The development of the Evaluated Nuclear Data File (ENDF) library is reviewed. The formats and contents of ENDF/A and ENDF/B sections of the library are described, and the data included in ENDF/B-II are discussed. (H.D.R.)

**57174** (CONF-710302–(Vol.2), pp 1004-15) PSYCHE: PHYSICS CHECKING OF THE ENDF/B EVALUATED NUCLEAR DATA FILE. Raymund, Mahlon (Brookhaven National Lab., Upton, N. Y.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The CHECKER Code checks formats, smoothness of tabulated curves, and some order-of-magnitude properties of ENDF/B data. PSYCHE is programmed to do physics tests on data which has already passed the CHECKER tests. The standard nuclide data used for many of the simple tests is presented. The most important tests performed and details on information printouts are described. Some of the programming philosophy is discussed, with a summary of actual achievement in the development of the working code. 14 references. (auth)

**57175** (CONF-710302–(Vol.2), pp 1016-23) GENERATING MOMENTS OF THE PHOTON PRODUCTION MATRICES AND SOURCES FROM ENDF DATA: THE LAPHAN CODE. Dudziak, Donald J.; Seamon, Robert E. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The function of the LAPHAN code is to obtain pointwise cross sections from the data given in ENDF Files 12, 13, 14, and 15; to apply suitable weighting functions over specified photon and neutron groups; and to construct microscopic photon production matrices. For each material considered, the number of matrices is $L + 1$, where $L \leq 4$ is the order of the Legendre expansion required. As an option, the code will combine the microscopic matrices with the appropriate atom-number densities and will operate with the resulting macroscopic matrices on the corresponding moments of the flux density vectors, in order to provide spatially dependent moments of the photon source terms for transport calculations. 5 references. (auth)

**57176** (CONF-710302–(Vol.2), pp 1024-30) ENDF/B CROSS SECTION PREPARATION AND TESTING IN THE JOSHUA SYSTEM. Finch, D. R.; Honeck, H. C.; Stewart II, J. W.; Baxter, W. V. (Du Pont de Nemours (E. I.) and Co., Aiken, S. C. Savannah River Lab.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

The features of the JOSHUA Cross Section Subsystem and the communication features that enable the subsystem to function smoothly are described. An example taken from ENDF/B-II data testing is followed through the Cross Section Subsystem to demonstrate the methods available. (auth)

**57177** (CONF-710302–(Vol.2), pp 1031-46) ETOG-2 AND ETOT–ENDF/B DATA PROCESSOR PROGRAMS TO PRODUCE EPITHERMAL AND THERMAL MULTIGROUP LIBRARIES. Kusner, Daniel E.; Beard, Charles L. Jr. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Energy Systems Div.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

To use data in the various multigroup spectrum codes required for reactor analysis, additional linking codes are necessary. These linking codes process the ENDF data files and prepare data necessary for the generation of the required multigroup libraries. ETOG and ETOT are two such linking programs. ETOG produces data necessary for the generation of fast libraries while ETOT produces data necessary for the generation of thermal libraries. 19 references. (auth)

**57178** (CONF-710302–(Vol.2), pp 1053-64) STATUS OF DATA TESTING USING THE ENDF/B LIBRARY. Alter, Harry; Hubner, Robert S. (Atomics International, Canoga Park, Calif.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

With the distribution of the second version of the ENDF/B data files, the comprehensive data testing program, which began with the Version 1 files, was continued. The term "data testing" is understood to relate comparisons of specific integral parameters measured in a reactor or shielding environment with values calculated using the ENDF/B data files. Specific reactors or shield systems for which sets of well established experimental data had been defined and compiled were designated as "benchmarks." A report on the status of testing the ENDF/B-2 data files with a set of ten benchmark fast critical assemblies is presented. (auth)

**57179** MOMENTS OF THE DISTRIBUTION FUNCTION OF THE NEUTRON DENSITY. Zima, T. E.; Kostritsa, A. A.; Neimotin, E. I. At. Energ. (USSR); 31: No. 2, 154-6(Aug 1971). (In Russian).

The determination of moments of the distribution function of the neutron density by Marshak's equation does not require a knowledge of the function or its Fourier-form. It is sufficient to know the value of the Fourier-form and its derivative at the coordinate origin. The mathematical development involves the kinetic equation for a distribution function, in the case of a plane geometry with a local pulsed neutron source. (K.S.W.)

**57180** RECENT STUDY OF NUCLEAR REACTOR OPTIMIZATION. Hara, Fumio (Tokyo Univ.). Seisan Kenkyu; 22: No. 10, 425-36(Oct 1970). (In Japanese).

Methodology for optimization of nuclear reactor design is examined. The fluctuation of neutron flux, caused by the statistic property of neutron transport and the fluctuation of reactor parameters, is estimated on the basis of theories of probability and statistics. Moreover, the problem of statistic optimization of nuclear reactor design in steady state operation is dealt with by application of the following methods: mode variation method or more generalized mode optimization method; semi-linear, nonlinear programming and phase plane method. Methods for maximizing heat output, flattening neutron flux distribution, maximizing fuel conversion rate and minimizing output protrusion are discussed. Constituent parameters of the optimum reactor are calculated by application of the mode optimization method and the phase plane method. Especially the mode optimization method enables optimization of a reactor statistically. (Japan)

**57181** (BNWL–1609) BNW PROGRAM NOISE. Seybold, G. D. (Battelle Pacific Northwest Labs., Richland, Wash.). Jul 1971. Contract AT(45-1)-1830. 54p. Dep. NTIS.

A computer code, NOISE, is presented which serves as an aid in determining reactor parameters from data obtained in zero-power reactor noise experiments. The code uses a nonlinear least-squares fitting package to provide the best estimate of these reactor parameters. Special options are available which allow for specification of the theoretical model, modifications of the experimental data in order to put them in units describable by the theory, and plotting features which illustrate the experimental measurements along with the best least-squares fit to the measurements. (auth)

**57182** (JAERI-Memo-4481) SDRC: THE ULTRA-FINE SPECTRUM CALCULATION CODE IN RESONANCE ENERGY REGION. Suzuki, Tomoo (Japan Atomic Energy Research Inst., Tokyo). Jun 1971. 30p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

For the detailed study of heterogeneity effects in hexagonal lattices of pin-typed fuels and coolant, the ultra-fine spectrum calculation code SDRC has been developed. For heavy nuclides, the ultrahigh resolution data are used on which the JAERI-fast set was based. The code was developed from the U.K.'s code SDR, so that it could treat the two-region hexagonal lattices. Though it deals only with the resonance region, the heterogeneity effects in the lattices can be examined in detail, in all the energy region, when used with the fine spectrum code ESELEM-3 mainly for the fission spectrum region. From the calculations, it was confirmed that the ratio of the flux in fuel region to the total flux in a cell does not change much with the energy. From these results, a simple method was developed for obtaining the effective cross sections for the heterogeneous systems in few group structures. This method was incorporated in the criticality calculation code EXPANDA-5 with one-dimensional diffusion model for less than 30 energy groups. To prepare the microscopic cross sections as the input data for SDRC, the auxiliary codes LTSDR, COMPLETION and PRESDRJ were also made. The subprogram BINPUT originally developed by D.C. Bindon to accept the data cards punched in free-format was introduced in the SDRC. IBM-360/J75 is used because the temporary memory storages of direct access type are necessary for SDRC. (auth) (Japan)

**57183** (ORNL-TM-2496(Rev.2)) NUCLEAR REACTOR CORE ANALYSIS CODE: CITATION. Fowler, T. B.; Vondy, D. R.; Cunningham, G. W. (Oak Ridge National Lab., Tenn.). Jul 1971. Contract W-7405-eng-26. 251p. Dep. NTIS.

The CITATION code is used for solving problems involving the finite-difference diffusion-theory representation of neutron transport theory. The code is designed to solve depletion problems with or without elaborate refueling treatment for multi-cycle analysis. Macroscopic cross sections may be used to solve usual eigenvalue problems. The adjoint flux may be determined and extensive first-order perturbation results obtained. The code will treat point, one, two or three space dimensions. Data storage is allocated for solution of neutronics problems with minimum input/output of data during the iterative process. Only relatively small problems (few space-energy points) may be solved on a computer having a small memory. Moderately large problems in two or three space dimensions are solved with an IBM-360/75 having directly addressible extended core storage and with an IBM-360/91 having a large memory (375,000 short words). Instructions to the user about input data requirements, information about using the code, as details of local implementation, a list of the input data for a simple problem and selected results obtained for it, and the mathematical formulations which are programmed are presented. (auth)

**57184** CONSIDERATIONS ON THE HETEROGENEOUS METHODS FOR CORE PHYSICS AFTER THE SECOND EACRP MEETING IN PARIS. Bonalumi, R.; Bozzola, S. (CISE, Milan). Energ. Nucl. (Milan); 18: No. 5, 271-84(May 1971).

The major achievements in the heterogeneous theory of nuclear reactors are summarized. The calculation of dipolar heterogeneous parameters is discussed, along with the closely related subject of the homogenized cell diffusion coefficients, for which corrections to Benoist's practical formulas are proposed. A new theory by Berna is outlined and the comparison of heterogeneous calculations with experiments is presented. 10 references. (auth)

**57185** INVESTIGATION OF THE AREA-RATIO METHOD OF PULSED REACTIVITY DETERMINATION. Kosaly, G.; Valko, J. (Central Research Inst. for Physics, Budapest). J. Nucl. Energy; 25: No. 7, 297-315(Jul 1971).

The theoretical interpretation of the area-ratio method of pulsed reactivity determination starting from transport theory is given. It is shown that the removal of prompt harmonics does not necessarily improve the method unless the reactor is bare and homogeneous. Reviewing the theory of the extrapolated area-ratio method, several difficulties are pointed out that are encountered in the application of this method to heavily reflected systems. Numerical experiments were performed simulating the above measuring methods in two-group diffusion approximation. Results indicate that the simple area-ratio method is superior to its extrapolated version in the case of heavily reflected reactors. (auth) (UK)

**57186** RELATION BETWEEN SOLUTIONS OF NON-STATIONARY AND QUASI-CRITICAL TRANSPORT EQUATIONS. Abramov, B. D. At. Energ. (USSR); 31: No. 2, 153-4(Aug 1971). (In Russian).

Noncritical reactors in a single-velocity approximation may be described by equations of two types: nonstationary transport equations allowing for delayed neutrons, or a quasi-critical equation involving the $k_{eff}$. The mathematical development shows that the true neutron distribution in a nonstationary reactor may be determined from a solution of the quasi-critical equation. (K.S.W.)

## Dynamics

**57187** (EUR-4673) COSTANZA (R,Z). Vincenti, E.; Clusaz, A. (European Atomic Energy Community, Ispra (Italy). Joint Nuclear Research Center). 15 Mar 1971. 78p. Dep. NTIS (U. S. Sales Only). EUR F,Fr. 13.08.

The code COSTANZA (R, Z) written in FORTRAN for IBM 360/65 solves the kinetic diffusion equations in two groups and two dimensions (radial and axial for a cylindrical reactor). The neutronic calculation is coupled with the calculation of the heat transmission from the fuel to the cladding and to the coolant, and with the thermohydraulics of channels with forced circulation of a single phase coolant. Fuel elements of prismatic shape are considered. Up to 6 groups of delayed neutrons are allowed. Temperature feedback of fuel and coolant are considered independently and affect the nuclear constants. Control rod movement or diffused poison concentrations are simulated by externally imposed variations of the thermal absorption cross section in the different regions of the reactors. Inlet temperatures and mass flow in the coolant channels may be varied according to any externally given time table. Before starting the transient, initial calculations put the reactor in criticality conditions at a given power level in equilibrium with the temperature feedback. (auth)

**57188** SUFFICIENT AND NECESSARY CONDITIONS OF ASYMPTOTIC STABILITY OF NONLINEAR SPACE–TIME REACTOR DYNAMICS. Yu, Dahsoong (Univ. of Oklahoma, Norman). Atomkernenergie; 18: No. 1, 1-10(Aug 1971).

For the nonlinear space-time reactor dynamics with positive feedback, a computational method is developed for the determination of the domain asymptotic stability (DAS) in the state space. A new derivation of the coupling coefficients is presented to reduce the nonlinear space-time reactor dynamics equation to a finite set of nonlinear ordinary differential equations. Zubov's method of constructing the Lyapunov functions and an optimum search technique are then used to determine and improve the extent of the DAS of the nonlinear space-time reactor dynamics problem. The influence of the coupling coefficient on the size of the DAS is also explicitly determined. Criteria of stability of the multiple equilibrium solutions are also obtained by the perturbation method. 22 references. (auth)

## Experimental Applications

**57189** PULSED-SOURCE INVESTIGATIONS. I. THE EFFECT OF VOIDS ON THE NEUTRON TRANSPORT IN A DIFFUSING MEDIUM. Dance, K. D.; Connolly, T. J. (Stanford Univ., Calif.). J. Nucl. Energy; 25: 155-77(Apr 1971).

Pulsed-source measurements were conducted on rectangular graphite systems containing a transverse void gap. The principal objectives were to obtain experimental measurements of neutron transport in a void-containing medium of simple configuration, to provide a basis for comparison with analytical methods, and also to provide a sensitive test of the validity of the steps in transforming the time-dependent, pulsed-source measurements to time-independent neutron transport parameters. The measurements were conducted in graphite assemblies formed of two identical parallel slabs with an intervening gap. Slab widths were 29.21 and 43.82 cm; the gap widths were 2.54, 5.08, 7.62 and 10.16 cm. It was found that the pulsed-source measurements of time-dependent leakage could not be used directly to predict steady-state leakage and a theory was developed to interpret pulsed-source measurements in terms of diffusion coefficients appropriate for steady-state leakage calculations. Specifically, a "time delay" correction was developed and applied to the experimental decay constants so that they could be used for determining diffusion coefficients. The results of the experiments and the theoretical treatment are in good agreement, but the theory showed that pulsed-source measurements in systems with voids will not yield rigorously discrete eigenvalues and cannot be extended to achieve results to any arbitrarily high degree of accuracy. (auth) (UK)

**57190** PULSED-SOURCE INVESTIGATIONS. II. THE EFFECT OF CYLINDRICAL VOID CHANNELS IN A NEUTRON DIFFUSING MEDIUM. Bull, S. R.; Connolly, T. J. (Stanford Univ., Calif.). J. Nucl. Energy; 25: 179-87(Apr 1971).

Consistent experimental measurements of the neutron leakage

XUM

from cavity-containing media were made and interpreted in terms of effective diffusion parameters. The technique employed was the pulsed-source method, in which the diffusion coefficient is inferred from the asymptotic decay constant curve. The ranges of pertinent variables (e.g., size and shape of the medium, cavity size, cavity spacing) were made large enough to afford a sound basis for checking the adequacy of various theoretical treatments of the problem. The graphite assembly used enabled construction of solid graphite systems or lattices of cylindrical void channels with seven different combinations of channel spacing and diameter (void fractions ranging from 0.0371 to 0.3801). The experimental results are compared with other analytical results and discussed in the light of the recent measurements. (auth) (UK)

## Reactor Components, Fuels, and Accessories

**57191** (CONF-710302–(Vol.2), pp 1086-1101) FUTURE PROSPECTS IN COMPUTER TECHNOLOGY. Worlton, William J. (Los Alamos Scientific Lab., N. Mex.).

From Meeting on new development in reactor mathematics and applications; Idaho Falls, Idaho (29 Mar 1971).

Since the early 1950's, improvements in computer circuits, storage elements, and logical design have contributed to an increase of about an order of magnitude in computing speed every five years. Whether or not this same exponential growth rate can be maintained indefinitely in the future was the subject of several reviews during the 1960's. These papers considered the question of ultimate bounds on computing speed imposed by the laws of physics, as well as the more immediate problems of technology. These results are summarized. Trends and prospects in the areas of storage, architecture, and input–output are reviewed. Some industry-wide trends are noted. 31 references. (auth)

**57192** (JAERI-Memo–4157) PROCEEDINGS OF FUEL FAILURE DETECTION SYMPOSIUM. Sakai, Eiji; Kitahara, Tanemichi (eds.) (Japan Atomic Energy Research Inst., Tokyo). Oct 1970. 113p. (In Japanese and English). (CONF-690128).

Separate abstracts are included for each of the 7 papers presented on the development and performance of fuel element failure detection systems. (D.C.C.)

*For abstracts of individual papers see: 57047, 57055, 57056, 57117–57119, and 57193.*

**57193** (JAERI-Memo–4157, pp 66-83) FUEL FAILURE DETECTOR EXPERIMENT IN A He GAS INPILE LOOP, USE OF PRECIPITATOR AND GAS-CHROMATOGRAPH. Kitahara, Tanemichi (Japan Atomic Energy Research Inst., Tokyo). (In Japanese and English).

From Fuel failure detection symposium; Tokyo, Japan (31 Jan 1969).

Characteristics of failed fuel detectors with a preciptitator and gas chromatography were measured and checked in a He-gas loop called TLG-1 inpile gas loop. A foil of 19.3% enriched uranium and aluminum alloy was irradiated in the loop, and elapsed time for gas arrival from an irradiation point to a sampling point was 10 to 20 seconds. Saturation voltages of the precipitator with different diameter cylinders were measured, and found to be two places as large as calculated values by Long et al. Half-life was 18 ± 2 minutes, and γ-ray spectrography showed that main nuclides are $^{88}$Rb (half-life 17.7 min), $^{89}$Rb (half-life, 15.4 min) and $^{138}$Cs (half-life : 33 min). The nuclides were as expected. Precipitation efficiency obtained was between 10 and 50%. The gas chromatogram FFD with cycles of 4 minutes gave good separation between Kr and $^{138}$Xe. $^{135}$Xe concentration in sample gas was $8.2 \times 10^{-4}$ μci/cc i.e., $2.4 \times 10^{-16}$ mol%, and was detected satisfactorily. The associated problem is small amount of sampled gas, and therefore small counting rate. The counting rates were 12,000 cpm with the precipitator detection and 800 cpm with the gas chromatograph detection. But reduction in short lived nuclides gives better response to the gas chromatograph detection. Hereafter it is planned that response of each FFD is studied when fuels with different behaviors of fission product release are irradiated. Besides, simulation experiment will be carried out for the case of application to Na-cooled fast reactor. 7 references. (Japan)

**57194** TEMPERATURE DISTRIBUTION IN IRRADIATED OXIDE FUEL WITH DISPERSED BURNABLE POISON. Flipot, A. J.; Delbrassine, A.; Gilissen, R. (CEN/SCK, Mol, Belgium). Nucl. Eng. Int.; 16: 329-33(Apr 1971).

The temperature distribution in an irradiated pellet can be calculated from data such as linear power, thermal conductivity and, in particular, the determination of a specific isothermal line. Such lines can be detected using the method of dispersed monitors. The influence of some irradiation parameters and the characteristics of alumina as a monitor are discussed. Some comments regarding the $UO_2$–$Dy_2O_3$–$Al_2O_3$ system and especially about the eutectic temperature (1915°C) are mentioned. The liquid phase, formed from 1915°C onwards, increases the formation rate of the columnar structure, which allows one to detect the 1915°C eutectic isotherm to within about 0.1 mm. (au h) (UK)

**57195** INSULATING DEVICE FOR A FUEL ELEMENT. Droussent, Roger; Houyvet, Alain (to Commissariat a l'Energie Atomique). French Patent 1,528,864. 21 Mar 1970. Filed 22 Feb 1968. (In French).

A metallic joint capable of maintaining the tightness of a fuel element during a 500°C rise or fall of temperature is described. The joint consists of a hard metal circular knife working with a soft metal circular gate. (J.S.R.)

**57196** STUDIES ON THE SELF-SHIELDING OF HIGHLY DILUTED RESONANCE ABSORBERS. Huettel, G. (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Kernenergie; 14: No. 3, 73-9(Mar 1971). (In German).

The self-shielding of the resonance absorption of highly diluted absorbers was measured by a reactivity technique using a pile oscillator in an annular zero-power reactor. The reactivities of the materials were determined by the two-spectra method with a sensitivity of $\Delta\delta \approx 5 \times 10^{6}$ and an accuracy of $\Delta(\Sigma_a V) = 0.04$ mm². The results indicate a substantial change even in the regions of smallest concentration. The courses of self-shielding determined experimentally were found in a good agreement with perturbation theoretical multigroup calculations. (auth)

**57197** DEVICE FOR THE REFUELLING OF A NUCLEAR REACTOR. (to English Electric Co. Ltd.). French Patent 1,569,263. 21 Apr 1969. Priority date 16 Jun 1967, Great Britian. (In French).

Refueling devices which consists of access wells penetrating the biological shield of the reactor are described. The refueling device is arranged to communicate with the core at the interior of the biological shield. Each of the access wells is cooled by liquid coolant when the reloading machine is in contact with the access wells. The access wells also have removable protection plugs which are the access for electrical cables. (J.S.R.)

**57198** FUEL CARTRIDGE WITH HELICAL CROSS-PIECES. Andersson, H. O.; Ekwall, P. A. (to Allmanna Svenska Elektriska AB). French Patent 1,579,744. 21 Jul 1969. Priority date 4 Sep 1967, Sweden. (In French).

A fuel cartridge is described in which there are two types of fuel rods. The first type of rod has a helical cross piece and the second does not. Arrangement in the cartridge is such that each type of rod is surrounded by the other type. (J.S.R.)

**57199** RADIATION PROTECTING SHIELD FOR NUCLEAR REACTORS. (to English Electric Co. Ltd.). French Patent 1,567,656. 8 Apr 1969. Priority date 6 Jun 1967, Great Britian. (In French).

A movable radiation shield to be used above access wells is described. The shield is composed of alternating square and round slabs. The square slabs have arc indentations to receive the circular slabs. (J.S.R.)

**57200** UNIFORM MOTION HYDRAULIC CONTROL DEVICE IN PARTICULAR FOR CONTROLLING CONTROL RODS IN NUCLEAR REACTORS. (to Gesellschaft fuer Kernforschung mbH). French Patent 1,568,335. 14 Apr 1969. Priority date 3 Mar 1967, Germany. (In French).

A uniform-motion hydraulic device for the control of reactor control rods is described. The pistons with the corresponding guide cylinders are set up as hydraulic potentiometers arranged in parallel. The intermediate intakes are connected to the regulator which maintains the differential pressure at a constant ratio. (J.S.R.)

**57201** NONDESTRUCTIVE DETERMINATION OF AVERAGE BURNUP FOR IRRADIATED FUEL RODS. Takayanagi, Hiroshi; Adachi, Mamoru (Japan Atomic Energy Research Inst., Tokai). Nippon Genshiryoku Gakkaishi; 13: No. 7, 374-9(Jul 1971). (In Japanese).

A nondestructive measurement on average burnup of irradiated fuel rods with use of a Ge(Li) detector is described. In order to obtain the average burnup directly and to simplify measurement

and analysis, the γ-ray spectrum from the irradiated fuel rod was measured by scanning along the whole length of the rod. The total absorption peaks for the 0.662 MeV ($^{137}$Cs) and the 2.18 MeV ($^{144}$Pr) γ-rays were used in the analysis, and the peak areas were estimated by Covell's method. The absolute value of average burnup was determined by comparison of the peak area with that of a standard fuel rod. The accuracy of the nondestructive measurement is discussed on the basis of an accurate value from destructive analysis. The result shows that it is possible to give the average burnup with good accuracy when the ratio of the peak height for $^{137}$Cs to the Compton background is larger than about 1.5, that is, after about 1 year of cooling. 14 references. (auth)

**57202** PLUTONIUM RECYCLE DEVELOPMENTS. **Astley, Wayne C. (Philadelphia Electric Co.); Walke, Gerald J.; Ladesich, John. Nucl. News; 14: No. 8, 29-32(Aug 1971).**

This status report represents the viewpoint of the Committee on Nuclear Fuels of the Edison Electric Institute. Plutonium utilization in the HTGR, BWR's, and PWR's is discussed. (M.C.G.)

**57203** PRESTRESSED CONCRETE PRESSURE VESSEL. **Margen, P. H. E. (to AB Atomenergi). French Patent 1,577,543. 30 Jun 1969. Priority date 1 Jul 1967, Germany. (In French).**

A pressurized prestressed concrete vessel for reactors is described. The vessel consists of a relatively thin lining of steel surrounded by pressure container. The steel lining is surrounded by concrete blocks. These blocks are held in place by prestressed steel stays. (J.S.R.)

**57204** TRAVEL END COMMUTATOR DEVICE AND POSITION INDICATORS FOR CONTROLLING THE RODS OF NUCLEAR REACTORS. **(to Licentia Patent Verwaltungs GmbH). French Patent 1,567,270. 8 Apr 1969. Priority date 14 Mar 1967, Germany. (In French).**

A position indicator and a travel end commutator device for controlling reactor rods are described. The apparatus have a reproducer mechanism for the transmission of the rod movement to the travel end commutator device and/or to position indicators. The reproducer mechanism is a measurement gear consisting of a threaded rod which is mobile in an integral screw support. The gear is connected to a cogged wheel movable axially. (J.S.R.)

**57205** STUDY OF INTERFERENCE OF "BLACK" ABSORBERS IN A MODERATING MEDIUM USING PULSED-NEUTRON METHOD. **Yurova, L. N.; Romodanov, V. L.; Fedorovich, V. A. At. Energ. (USSR); 31: No. 1, 67-8(Jul 1971). (In Russian).**

Individual Cd rods were successively moved along the radius of a cylinder, measuring the decay constant of thermal neutrons at various positions. The interaction between two rods was investigated when positioned in the center and shifted along the radius. The coefficient of interference for all positions of the absorbers was calculated. (K.S.W.)

**57206** MEASUREMENT OF "BLACK" ABSORBERS OF EQUIVALENT SIZES AND IDENTICAL EFFICIENCY IN A MODERATING MEDIUM BY A PULSED-SOURCE TECHNIQUE. **Yurova, L. N.; Romodanov, V. L.; Fedorovich, V. A. At. Energ. (USSR); 31: No. 1, 65-7(Jul 1971). (In Russian).**

Nuclear reactor regulating rods may be cylindrical, cruciform, Y-form, or other shape in cross section. A comparison was made of the effectiveness of neutron interaction with control rods ("black" absorbers) of various shapes. (K.S.W.)

**57207** NUCLEAR MATERIALS AND SOME ASPECTS OF MACHINING. **Datta, D. K.; Ratnam, V. V. (BARC, Bombay). Mach. Build. Ind.; 7: No. 5, 74-81(1968).**

The criteria of selection of various nuclear materials such as fissile, fertile, canning, structural, moderator, reflector, control, shielding materials, and coolants are given. The hazards involved in handling these materials are classified. A few aspects of the machining of some of the materials being handled at Trombay are discussed. (Indian Sci. Abstr.)

**57208** IMPROVEMENTS TO THE CORES OF NEUTRON SLOWING DOWN NUCLEAR REACTORS. **(to Atomic Power Constructions Ltd.). French Patent 1,569,730. 28 Apr 1969. Priority date 8 Mar 1967, Great Britian. (In French).**

A neutron moderating core for a nuclear reactor is described which consists of columns of blocks of a neutron moderating material. The distance between adjacent columns is kept constant by pins set in grooves in the blocks. The grooves extend the length of a block wall. Its length is less than that of the blocks between its ends. Each pin has a length less than that of the corresponding pin groove. (J.S.R.)

**57209** DEVICE WITH PROTECTING SHIELDS FOR A NUCLEAR REACTOR. **(to English Electric Co. Ltd.). French Patent 1,567,688. 8 Apr 1969. Priority date 6 Jun 1967, Great Britian. (In French).**

A supplementary shield in the shape of a ring is proposed for use during the refueling of a reactor. The ring shield is at the base of the refueling device and its use reduces significantly the thickness of the shielding slabs. (J.S.R.)

**57210** LOADING AND UNLOADING MACHINE. **de Temple, Bernhard (to Gesellschaft fuer Kernforschung mbH). German Patent 1,464,988. 17 Jul 1969. Filed 31 Dec 1964. (In German).**

A method for the insertion and removal of fuel elements from reactor cores is described. Lifting, lowering, and grasping of the elements are controlled by a guidance plate. The guidance plate can be located outside of the reactor containment vessel and can be mechanically coupled with the lifting and lowering mechanism of the reactor. (H.B.G.)

57226 (COO-2118-19) ILLIAC III REFERENCE MANUAL. VOLUME IV. SUPERVISOR ORGANIZATION. Report No. 472. McCormick, B. H.; Nordmann, B. J. Jr. (eds.) (Illinois Univ., Urbana. Dept. of Computer Science). 12 Aug 1971. Contracts AT(11-1)-1018; AT(11-1)-2118. 55p. Dep. NTIS.

57227 (COO-2118-21) ILLIAC III REFERENCE MANUAL. VOLUME III. INPUT/OUTPUT. Report No. 473. McCormick, B. H.; Nordmann, B. J. Jr. (eds.) (Illinois Univ., Urbana. Dept. of Computer Science). 13 Aug 1971. Contracts AT(11-1)-1018; AT(11-1)-2118. 127p. Dep. NTIS.

57228 (DP-929(Rev.1)(Suppl.3)) PUBLICATIONS, 1970. Hilborn, H. S. (comp.) (Du Pont de Nemours (E.I.) and Co., Aiken, S. C. Savannah River Lab.). Aug 1971. Contract AT(07-2)-1. 23p. Dep. NTIS.

57229 (EUR-4483) CHEMOTHERAPY OF LEUKEMIA AND CHEMICAL PROTECTION AGAINST IONIZING RADIATIONS. Final Report. Garattini, S.; Donelli, M. G.; Franchi, G.; Guaitani, A.; (and others) [European Atomic Energy Community, Ispra (Italy). Joint Nuclear Research Center]. 1970. 66p. NTIS (U. S. Sales Only).

57230 (HEDL-TME-71-108) TGO, A LINEAR PROGRAMMING MODEL FOR OPTIMIZING A POWER TRANSMISSION GRID. Omberg, R. P. (Hanford Engineering Development Lab., Richland, Wash.). Jul 1971. Contract AT(45-1)-2170. 90p. Dep. NTIS.

57231 (IS-2305) USE OF SIMPLOTTER: A HIGH-LEVEL PLOTTING SYSTEM. Scranton, D. G.; Manchester, E. G. (Ames Lab., Iowa). Jun 1971. Contract W-7405-eng-82. 103p. Dep. NTIS.

57232 (IS-T-494) AN OPTICAL MIXING SPECTROSCOPIC STUDY OF INTERFACIAL FLUCTUATIONS. Dechow, Frederick John (Ames Lab., Iowa). Aug 1971. Contract W-7405-eng-82. 120p. Dep. NTIS.
Thesis.

57233 (LA-4545) USE OF A MAGNETIC FIELD TO MEASURE PARTICLE VELOCITY. I. BASIC CONCEPTS AND EXPLORATORY EXPERIMENTS. Fritz, J. N.; Caird, R. S.; McQueen, R. G. (Los Alamos Scientific Lab., N. Mex.). Oct 1970. Contract W-7405-eng-36. 14p. Dep. NTIS.

57234 (LA-4721) DYNAMIC BUFFER ALLOCATION ON THE CDC 6600: THE DYNBUF PROGRAM. Vigil, John C. (Los Alamos Scientific Lab., N. Mex.). Sep 1971. Contract W-7405-eng-36. 9p. Dep. NTIS.

57235 (LA-4728) SUBROUTINE PACKAGE FOR CALCULATING WITH B-SPLINES. de Boor, Carl (Los Alamos Scientific Lab., N. Mex.). Aug 1971. Contract W-7405-eng-36. 12p. Dep. NTIS.

57236 (LA-tr-71-73) DECOLORING CYANOPHYCENE ALGAE BY EXTRACTION OF THEIR PIGMENTS. Clement, Genevieve; Meyer, Colette; Rebeller, Michel. Translated for Los Alamos Scientific Lab., N. Mex., from French Patent 1,591,570. 6p. Dep. NTIS.

57237 (LBL-133) REACTIVE SCATTERING OF $N_2O$ MOLECULAR BEAMS FROM CLEAN AND CARBON COVERED (100) PLATINUM SINGLE CRYSTAL SURFACES. West, L. A.; Somorjai, G. A. (California Univ., Berkeley. Lawrence Berkeley Lab.). Jul 1971. Contract W-7405-eng-48. 17p. (CONF-711005-3). Dep. NTIS.
From International conference on solid surfaces; Boston, Mass. (11 Oct 1971).

**57238** (MLM-OP-71003) REACTION DIFFUSION IN THE SILVER-ZINC AND SILVER-ALUMINUM SYSTEMS. Braun, Japnell D.; Powell, Gordon W. (Mound Lab., Miamisburg, Ohio). [1968]. Contract AT(33-1)-Gen-53. 9p. (CONF-710902-2). Dep. NTIS.
From fourth annual meeting of the International Metallographic Society; Denver, Colo. (21 Sep 1971).

**57239** (MLM-OP-71004) TECHNIQUE FOR THE METALLOGRAPHIC PREPARATION OF LEAD. Downs, Gene L.; Jones, V. Dean (Mound Lab., Miamisburg, Ohio). [nd]. Contract AT(33-1)-Gen-53. 13p. (CONF-710902-3). Dep. NTIS.
From fourth annual meeting of the International Metallographic Society; Denver, Colo. (21 Sep 1971).

**57240** (MLM-OP-71007) EVALUATION OF THE USE OF A QUANTITATIVE IMAGE ANALYZER TO DETERMINE MICROHARDNESS VALUES. Teaney, P. E.; Selle, J. E. (Mound Lab., Miamisburg, Ohio). [nd]. Contract AT(33-1)-Gen-53. 20p. (CONF-710902-6). Dep. NTIS.
From fourth annual meeting of the International Metallographic Society; Denver, Colo. (21 Sep 1971).

**57241** (NYO-1480-179) SIZE EFFECTS IN THE THREE DIMENSIONAL ISING LATTICE. Jennette, Robert L.; Kalos, Malvin; Percus, Jerome (New York Univ., N. Y. AEC Computing and Applied Mathematics Center). Jun 1971. Contract AT(30-1)-1480. 75p. Dep. NTIS.

**57242** (NYO-3406-20) PHOTON STATISTICS OF LINEAR COHERENT AMPLIFICATION OF SPONTANEOUSLY EMITTED LIGHT. Technical Report No. 11. Cantrell, C. D. (Princeton Univ., N. J. Dept. of Physics). 1 Aug 1971. Contract AT(30-1)-3406. 29p. Dep. NTIS.

**57243** (NYO-3406-22) RESEARCH PROGRESS AT THE MARINE BIOLOGICAL LABORATORY, SUMMER 1971. Technical Report No. 12. Reynolds, Geo. T. (Princeton Univ., N. J. Elementary Particles Lab.). 18 Sep 1971. Contract AT(30-1)-3406. 36p. Dep. NTIS.

**57244** (NYO-3489-22) CELLULAR BASIS OF MAMMALIAN CALCIUM HOMEOSTASIS. Rasmussen, Howard (Pennsylvania Univ., Philadelphia. Dept. of Biochemistry). [1971]. Contract AT(30-1)-3489. 44p. Dep. NTIS.

**57245** (ORNL-4685) ANALYSIS OF ROUND, TURBULENT, BUOYANT JETS DISCHARGED TO FLOWING STRATIFIED AMBIENTS. Hirst, E. A. (Oak Ridge National Lab., Tenn.). Jun 1971. Contract W-7405-eng-26. 37p. Dep. NTIS.

**57246** (ORNL-NSF-EP-8) OAK RIDGE AIR QUALITY INDEX. Thomas, W. A.; Babcock, L. R. Jr.; Shults, W. D. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 10p. Dep. NTIS.

**57247** (ORNL-TM-2713(Rev.1)) TUBE IDENTIFIER: A PHYSICAL DESCRIPTION OF TUBES TESTED IN THE OSW PROGRAM ON IMPROVED HEAT-TRANSFER SYSTEM FOR EVAPORATORS: ADVANCED LTV HEAT-TRANSFER SURFACES. Hoffman, H. W.; Alexander, L. G. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 36p. Dep. NTIS.

**57248** (ORNL-TM-2933) DIGITAL COMPUTER CODE FOR SIMULATING LARGE MULTISTAGE FLASH EVAPORATOR DESALTING PLANT DYNAMICS. Delene, J. G.; Ball, S. J. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 98p. Dep. NTIS.

**57249** (ORNL-TM-3536) CYTOFLUOROGRAPH SYSTEM. East, J. K.; Harris, W. W.; Moore, E. C.; Bell, P. R. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 9p. Dep. NTIS.

**57250** (ORNL-TM-3547) FOURIER ANALYSIS OF UNEQUALLY SPACED DATA. Patterson, M. R.; Hammerling, F. D. (Oak Ridge National Lab., Tenn.). 20 Sep 1971. 19p. Dep. NTIS.

**57251** (ORNL-tr-2509) FREEZE ETCHING OF CORRESPONDING FRACTURE MOIETIES: A NEW APPROACH TO MEMBRANE STRUCTURES. Sleytr, Uwe. Translated by R. Gregg Mansfield (Oak Ridge National Lab., Tenn.), from Protoplasma; 70: 101-17(1970). 16p. Dep. NTIS.

**57252** (ORNL-tr-2525) PLANNING AND EXECUTION OF THE MT. ENASAN TUNNEL. Esaki, Kenichiro; Nagatomo, Seiki. Translated for Oak Ridge National Lab., Tenn., from Doboku Gakkaishi; 54: 2-9(1969). 17p. Dep. NTIS.

**57253** (ORO-3195-41) SEQUENTIAL ADSORPTION ANALYSIS OF RADIOIODINATED PSEUDOGLOBULINS AS ILLUSTRATED BY THE IMMUNOLOGICAL DISTINCTION BETWEEN BRAIN AND LIVER MITOCHONDRIA. Day, Eugene D.; McMillan, Paul N.; Mickey, Don D. (Duke Univ., Durham, N. C. Dept. of Microbiology and Immunology). [1971]. Contract AT(40-1)-3195. 19p. Dep. NTIS.

**57254** (ORO-3195-42) SPECIFICITY AND CROSS-REACTIVITY OF ANTISYNAPTOSOME ANTIBODIES AS DETERMINED BY SEQUENTIAL ADSORPTION ANALYSIS. Mickey, Don D.; McMillan, Paul N.; Appel, Stanley H.; Day, Eugene D. (Duke Univ., Durham, N. C. Dept. of Microbiology and Immunology). [1971]. Contract AT(40-1)-3195. 26p. Dep. NTIS.

**57255** (ORO-3195-43) SPECIFICITY AND CROSS-REACTIVITY OF ANTIMYELIN ANTIBODIES AS DETERMINED BY SEQUENTIAL ADSORPTION ANALYSIS. McMillan, Paul N.; Mickey, Don D.; Kaufman, Bernard; Day, Eugene D. (Duke Univ., Durham, N. C. Medical Center). [1971]. Contract AT(40-1)-3195. 21p. Dep. NTIS.

**57256** (ORO-3195-44) ZONAL CENTRIFUGE PROFILE ANALYSIS OF MSD MUTANT MOUSE BRAIN. THE LOSS OF THE THREE-PEAK MYELIN PROFILE WITH THE ONSET OF SYMPTOMS. Day, Eugene D.; Mickey, Don D.; McMillan, Paul N.; Meier, Hans (Duke Univ., Durham, N. C. Dept. of Microbiology and Immunology. Jackson Lab., Bar Harbor, Maine). [1971]. Contract AT(40-1)-3195. 29p. Dep. NTIS.

**57257** (ORO-3195-45) FLOTATION-FRACTIONATION OF LATE FETAL, NEONATAL, AND ADULT RAT BRAIN IN ISO-OSMOTIC FICOLL-SUCROSE DENSITY-GRADIENTS. A PRELIMINARY REPORT ON THE PROBABLE ISOLATION OF GLIAL CELL MEMBRANES. Mickey, Don D.; McMillan, Paul N.; Day, Eugene D. (Duke Univ., Durham, N. C. Dept. of Microbiology and Immunology). [1971]. Contract AT(40-1)-3195. 16p. Dep. NTIS.

**57258** (ORO-3195-46) ISOLATION AND BIOCHEMICAL CHARACTERIZATION OF THREE SUBFRACTIONS OF ADULT RAT CENTRAL NERVOUS TISSUE MYELIN. McMillan, Paul N.; Mickey, Don D.; Kaufman, Bernard; Day, Eugene D. (Duke Univ., Durham, N. C. Medical Center). [1971]. Contract AT(40-1)-3195. 21p. Dep. NTIS.

**57259** (ORO-3195-47) CELLULAR AND SUBCELLULAR FRACTIONATION OF BRAIN TISSUE. Appel, Stanley H.; Day, Eugene D.; Mickey, Don D. (Duke Univ., Durham, N. C. Medical Center). [1971]. Contract AT(40-1)-3195. 51p. Dep. NTIS.

**57260** (ORO-3195-48) INCORPORATION OF [$^{14}$C]-GLUCOSAMINE INTO SYNAPTOSOMES IN VITRO. Festoff, B. W.; Appel, Stanley H.; Day, Eugene (Duke Univ., Durham, N. C. Medical Center). [1971]. Contract AT(40-1)-3195. 39p. Dep. NTIS.

**57261** (ORO-3195-49) HETEROGENEITY OF CENTRAL NERVOUS SYSTEM MYELIN AS DISCERNED BY ISOTOPIC LABELING AND CHEMICAL ANALYSIS. Daniel, Amiram; Day, Eugene D.; Kaufman, Bernard (Duke Univ., Durham, N. C. Dept. of Microbiology and Immunology). [1971]. Contract AT(40-1)-3195. 32p. Dep. NTIS.

**57262** (ORO-3195-50) VIRUS-CELL RELATIONSHIPS IN DOG BRAIN TUMORS INDUCED WITH SCHMIDT-RUPPIN ROUS SARCOMA VIRUS. Bigner, Darell D.; Vick, Nicholas A.; Kvedar, John P.; Mahaley, M. S. Jr.; Day, Eugene D. [Duke Univ., Durham, N. C. Medical Center]. [1971]. 27p. Dep. NTIS.

**57263** (ORO-3195-51) IN VITRO DEMONSTRATION OF CELL-MEDIATED IMMUNITY TO HUMAN BRAIN TUMORS. Levy, Nelson L.; Mahaley, M. S. Jr.; Day, Eugene D. (Duke Univ., Durham, N. C. Medical Center). [1971]. Contract AT(40-1)-3195. 28p. Dep. NTIS.

XUM

**57264** (ORO-3553-17) FLUORESCENCE PROPERTIES OF PYRIDOXAL-5-PHOSPHATE ENZYMES. Progress Report, June 1, 1970–May 1, 1971. (Tennessee Univ., Knoxville). 25 May 1971. Contract AT(40-1)-3553. 19p. Dep. NTIS.

**57265** (ORO-3883-3) [STUDIES ON THE BIOCHEMISTRY OF DEVELOPMENT IN THE DIPTERA.] Comprehensive Progress Report, January 1, 1969–September 15, 1971. Dobrogosz, Walter J. (North Carolina State Univ., Raleigh. Dept. of Microbiology). Contract AT(40-1)-3883. 7p. Dep. NTIS.

**57266** (RLO-1929-16) TRACKING AND TELEMETRY SYSTEM FOR WILDLIFE RESEARCH. Varney, Joel R. (Montana Cooperative Wildlife Research Unit, Missoula). [1971]. 6p. (CONF-710438-1). Dep. NTIS.
From National telemetering conference; Washington, D. C. (12 Apr 1971).

**57267** (SC-DR-710438) DEVELOPMENT OF PROCESSES FOR THE HOT PRESSING OF SILICON–GERMANIUM THERMOELECTRIC ELEMENTS. Dungan, R. H.; Smith, J. C. (Sandia Labs., Albuquerque, N. Mex.). Aug 1971. 30p. Dep. NTIS.

**57268** (SC-DR-710463) CURRENT SHAPING TECHNIQUES FOR HIGH-VOLTAGE CAPACITOR BANKS. Tucker, William K. (Sandia Labs., Albuquerque, N. Mex.). Aug 1971. 19p. Dep. NTIS.

**57269** (SC-DR-710472) FREQUENCY-FILTERING THEORY FOR THE PROPAGATION OF STRESS PULSES IN COMPOSITE MATERIALS. Drumheller, D. S. (Sandia Labs., Albuquerque, N. Mex.). Jul 1971. 25p. Dep. NTIS.

**57270** (SC-M-710527) EDIT PROGRAM OPERATING MANUAL FOR THE PLAYBACK EXECUTIVE SYSTEM. Fienning, William C. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 30p. Dep. NTIS.

**57271** (SC-RR-710475) RECEIVING PROPERTIES OF AN ASYMMETRIC CYLINDRICAL ANTENNA. Licking, L. D. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 18p. Dep. NTIS.

**57272** (SC-RR-710483) EFFECTS OF RF ACTIVATED INERT GAS PLASMAS ON CRITICAL SURFACE TENSION AND BONDABILITY OF POLYDIMETHYL SILICONES AND POLYETHYLENE. Sowell, R. R.; DeLollis, N. J.; Gregory, H. J.; Montoya, O. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 12p. Dep. NTIS.

**57273** (SC-RR-710519) RESPONSE OF A SHORT MONOPOLE ANTENNA MOUNTED ON THE SKIN OF A FINITE-LENGTH CYLINDER. Licking, L. D. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 14p. Dep. NTIS.

**57274** (SC-RR-710541) DENSITY OF THE NEUTRAL ATMOSPHERE ABOVE 100 km, KAUAI, MAY–JUNE 1970. Woods, R. O. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 18p. Dep. NTIS.

**57275** (SC-T-713060) INTERACTIONS AMONG VARIOUS CARBONS IN THE COURSE OF HEAT TREATMENT. Cornualt, P.; Du Chaffaut, F.; Rappeneau, J.; Yvars, M.; Fillatre, A. Translated for Sandia Labs., Albuquerque, N. Mex., from Carbon; 6: 857-76(1968). 38p. Dep. NTIS.

**57276** (SC-T-713061) DIFFUSION-CONTROLLED GROWTH OF TWO-PHASE COVERING LAYERS IN BINARY SYSTEMS. Fromm, Eckehard. Translated for Sandia Labs., Albuquerque, N. Mex., from Z. Metallk.; 57: 60-5(1966). 20p. Dep. NTIS.

**57277** (SC-T-713063) TRANSMISSION LINE CONSTANTS OF COUPLED MICROSTRIP. Braeckelmann, Walter. Translated by R. J. Erlandson (Sandia Labs., Albuquerque, N. Mex.), from NTZ-Nachrtech. Z.; 24: No. 3, 157-60(Mar 1971). 10p. Dep. NTIS.

**57278** (SC-T-713066) CARBON BLACK FORMATION IN THE THERMAL DECOMPOSITION OF HYDROCARBONS. Rafal'kes, I. S.; Tesner, P. A. Translated by Pat Newman (Sandia Labs., Albuquerque, N. Mex.), from Tr., Vses. Nauch.-Issled. Inst. Prir. Gazov; No. 3, 3-33(1958). 54p. Dep. NTIS.

**57279** (SC-T-713067) MEASUREMENT PROGRAM AND CALIBRATION STANDARDS FOR MICROSTRIP MEASUREMENTS WITH AN AUTOMATIC NETWORK ANALYZER. Reich, Volker. Translated by Pat Newman (Sandia Labs., Albuquerque, N. Mex.), from NTZ-Nachrtech. Z.; 24: No. 5, 255-9(1971). 20p. Dep. NTIS.

**57280** (SCL-DR-69-155) PNEUMATIC HAMMER DEVELOPMENT. Barr, V. C. (Sandia Labs., Livermore, Calif.). Sep 1971. Contract AT(29-1)-789. 74p. Dep. NTIS.

**57281** (SRO-641-2) RADIOACTIVE TRACER STUDIES OF SOIL AND LITTER ARTHROPOD FOOD CHAINS. Summary Report, November 1, 1968–October 31, 1971. Crossley, D. A. Jr. (Georgia Univ., Athens). 10 Aug 1971. Contract AT(38-1)-641. 87p. Dep. NTIS.

**57282** (TID-25789) ANNUAL TECHNICAL PROGRESS REPORT, OCTOBER 1, 1970–JUNE 1, 1971. PART 1. (Illinois Univ., Urbana. Dept. of Computer Science). 3 Jun 1971. Contract AT(11-1)-2118. 46p. Dep. NTIS.

**57283** (TID-25790) PLANETARY QUARANTINE PROGRAM. Twenty-First Quarterly Report of Progress for Period Ending June 30, 1971. (Sandia Labs., Albuquerque, N. Mex.). Contract W-12,853. 85p. Dep. NTIS.

**57284** (TID-25802) CONTROL OF LYMPHOCYTE GROWTH IN RESPONSE TO PHYTOHEMAGGLUTININ STIMULATION. Rubin, Arnold D. (Mount Sinai School of Medicine, New York). [1970]. Contract AT(30-1)-3833. 14p. Dep. NTIS.

**57285** (TRG-Report-1813) TRESS: A FINITE ELEMENT CODE FOR STRESS ANALYSIS PROBLEMS. Collier, W. D.; Ellington, J. P.; Rees, P. M. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group). 1971. 77p. Dep. NTIS (U. S. Sales Only). UK 50p.

**57286** (UCLA-12-832) ISOLATION OF HIGH MOLECULAR WEIGHT RNAs FROM CULTURED NEURAL TUMOR CELLS. Edwards, Ross B.; de Vellis, Jean (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). [1971]. Contract AT(40-1)-Gen-12. 6p. Dep. NTIS.

**57287** (UCRL-51075) NUMERICAL CALCULATION (SOC) vs EXPERIMENTAL DATA FOR WESTERLY GRANITE. Brown, Stephen R. (California Univ., Livermore. Lawrence Radiation Lab.). 22 Jun 1971. 55p. Dep. NTIS.

**57288** (UCRL-51088) DYE LASER PERFORMANCE ENHANCEMENT BY CHEMICAL QUENCHING OF THE TRIPLET STATE. Marling, John B. (California Univ., Livermore. Lawrence Radiation Lab.). 6 Jul 1971. Contract W-7405-eng-48. 101p. Dep. NTIS.
Thesis.

**57289** (UCRL-51098) LOW-VELOCITY AIR GUN AND HOPKINSON SPLIT-BAR FACILITY. Wasley, Richard J.; Cast, John C.; Hoge, Kenneth G.; Breithaupt, R. Don (California Univ., Livermore. Lawrence Radiation Lab.). 16 Jul 1971. Contract W-7405-eng-48. 16p. Dep. NTIS.

**57290** (UCRL-Trans-10539) APPROXIMATIVE METHOD OF CALCULATING PHYSICAL QUANTITIES BEHIND A SHOCK-WAVE FRONT. Kuropatenko, V. R. Translated by T. Watt for Univ. of California, Lawrence Radiation Lab., Livermore, from Chislennye Metody Mekh. Sploshnoi Sredy; 1: No. 5, 77-83(1970). 17p. Dep. NTIS.

**57291** (UR-49-1515) DETERMINATION BY X-RAY DIFFRACTION OF CRYSTAL STRUCTURES OF SILVER DIETHYLPHOSPHATE AND POTASSIUM O, O-DIBENZYLPHOSPHORODITHIOATE. Hazel, John P. (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1971. 50p. Dep. NTIS.
Thesis.

**57292** (UR-49-1516) THERMODYNAMIC AND CONFORMATIONAL ASPECTS OF THE NOVOBIOCIN–SERUM ALBUMIN COMPLEX. Brand III, Joseph G. (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1971. 133p. Dep. NTIS.
Thesis.

**57293** (UR-49-1517) INTERACTIONS OF SULFATE AND PHOSPHATE ANIONS WITH ALKALINE EARTH CATIONS IN

CRYSTALS. Murfitt, Robert Roscoe (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1971. 116p. Dep. NTIS.
Thesis.

**57294** (WASH–1132) SCIENCE AND SOCIETY. A Bibliography. Voress, Hugh E. (comp.) (Division of Headquarters Services (AEC), Washington, D. C.). Jul 1971. 21p. (TID–3916(Suppl.1)). GPO $0.35.

**57295** (Y–1790) PROPERTIES OF CARBON DERIVED FROM INDENE COMPOUNDS. Smith, W. E.; Horne, O. J. Jr.; Napier, B. Jr.; Larson, E. A.; Harper, W. L. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 15 Sep 1971. Contract W-7405-eng-26. 134p. Dep. NTIS.

**57296** (Y-IA–92) PRIMARY FREQUENCY STANDARDS IN THE Y-12 PHYSICAL AND ELECTRICAL STANDARDS LABORATORY. Wolny, R. F. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 20 Sep 1971. Contract W-7405-eng-26. 13p. Dep. NTIS.

# CORPORATE AUTHOR INDEX

In the Corporate Author Index, technical report literature is indexed by the organization or institution responsible for issuing the report. Entries are given for all report literature and for published literature for which a corporate author approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate author gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

## A

AKADEMIYA NAUK SSSR, LENINGRAD. FIZIKO-TEKHNICHESKII INSTITUT.
Determination of the boundary of high frequency wave absorption between the electron cyclotron and the low hybrid frequency, 25:56224 (AEC-tr-7270)

AKADEMIYA NAUK SSSR, MOSCOW. INSTITUT FIZICHESKOI KHIMII.
Nature and properties of trapped electrons in polar substances, 25:54593 (CONF-700652-(Vol.2), pp 261-93)

AKADEMIYA NAUK SSSR, MOSCOW. INSTITUT FIZIKI.
Excitation of longitudinal electromagnetic waves in a bound plasma during injection of relativistic electron beams, 25:56232 (NP-19020)
Problems of injection of relativistic electron beams into plasma, 25:56166 (NP-19012)

AKADEMIYA NAUK SSSR, NOVOSIBIRSK. INSTITUT YADERNOI FIZIKI.
Charge-exchange method of proton injection into accelerators and accumulators, 25:56590 (LA-tr-71-46)

AKADEMIYA NAUK UKRAINSKOI SSR, KHARKOV. FIZIKO-TEKHNICHESKII INSTITUT.
Resonance effects in magnetic configurations having a helical magnetic axis, with allowance for toroidality, 25:56209 (CTO-764)

ALABAMA POWER CO., BIRMINGHAM.
Joseph M. Farley Nuclear Plant, Units No. 1 and No. 2. Preliminary safety analysis report, amendment No. 20, 25:56964 (DOCKET-50348-24)
Joseph M. Farley Nuclear Plant, Units No. 1 and No. 2. Preliminary safety analysis report, amendment No. 22, 25:56966 (DOCKET-50348-26)
Joseph M. Farley Nuclear Plants, Units 1 and 2. Preliminary safety analysis report, amendment 21, 25:56965 (DOCKET-50348-25)

ALBERTA UNIV., EDMONTON. DEPT. OF CHEMISTRY.
Progress and problems in the radiolysis of alcohols, 25:54629 (CONF-700652-(Vol.3), pp 479-521)

AMERICAN NUCLEAR SOCIETY, HINSDALE, ILL.
Conference on new developments in reactor mathematics and applications, Idaho Falls, Idaho, 3/71, 25:57147 (CONF-710302-(Vol.2))
Conference on new developments in reactor mathematics and applications, Idaho Falls, Idaho, 3/71, 25:57071 (CONF-710302-(Vol.1))

AMERICAN NUCLEAR SOCIETY. EASTERN IDAHO SECTION.
Conference on new developments in reactor mathematics and applications, Idaho Falls, Idaho, 3/71, 25:57147 (CONF-710302-(Vol.2))
Conference on new developments in reactor mathematics and applications, Idaho Falls, Idaho, 3/71, 25:57071 (CONF-710302-(Vol.1))

AMES LAB., IOWA.
An optical mixing spectroscopic study of interfacial fluctuations, 25:57232 (IS-T-494)
Small angle tilt and twist grain boundary strengthening in yttrium, 25:55430 (IS-T-459)
Survey of environmental radioactivity, 1--6/71, 25:55152 (IS-2658)
Thermodynamics of formation of compounds in the Ce--Mg, Nd--Mg, Gd--Mg, Dy--Mg, Er--Mg, and Lu--Mg systems from vapor pressure measurements, 25:55525 (IS-T-462)
Use of simplotter: a high-level plotting system, 25:57231 (IS-2305)

ARGONNE NATIONAL LAB., IDAHO FALLS, IDAHO.
Equipment for remote measurement of bow, length, and weight of irradiated experimental capsules and elements at EBR-II. EBR-II Project, 25:57054 (ANL-EBR-30)
Numerical stability problems in the VENUS disassembly code, 25:57079 (CONF-710302-(Vol.1), pp 152-66)
Operating experience with sodium pumps at EBR-II. EBR-II Project, 25:57028 (ANL-EBR-27)

ARGONNE NATIONAL LAB., ILL.
Analysis of fuel failure experiments with TREAT, 25:57110 (CONF-710302-(Vol.1), pp 97-101)
Applications of space-energy factorization to the solution of static fast-reactor neutronics problems, 25:57170 (CONF-710302-(Vol.2), pp 953-67)
ARC system cross-section homogenization and modification capabilities, 25:56614 (ANL-7714)
Behavior and calibration of devices for monitoring impurities in sodium, 25:55069 (ANL-7804)

Machine generation of monte carlo sampling functions, 25:57160 (CONF-710302-(Vol.2), pp 771-81)

NEW YORK UNIV., N.Y. SCHOOL OF MEDICINE.
Prog. rpt. on effects of $^{3}H$-thymidine as a DNA label in rat liver, 25:55110 (TID-25801)

NIAGARA MOHAWK POWER CORP., SYRACUSE, N. Y.
Nine Mile Point Nuclear Station. Broken pins in turbine wheel, 25:56902 (DOCKET-50220-74)
Nine Mile Point Nuclear Station. Semiannual operation reports for 1970 corrections, 25:56901 (DOCKET-50220-73)

NORDISK INSTITUT FOR TEORETISK ATOMFYSIK, COPENHAGEN (DENMARK).
Pion--nucleon scattering theory, 25:56496 (CERN-71-14, pp 101-54)

NORTH CAROLINA STATE UNIV., RALEIGH. DEPT. OF MICROBIOLOGY.
Prog. rpt. on biochemistry of development in the diptera, 1/1/69--9/15/71, 25:57265 (ORO-3883-3)

NORTH CAROLINA UNIV., CHAPEL HILL.
Prog. rpt., 4--6/71, 25:56748 (ORO-2408-45)

NORTHERN INDIANA PUBLIC SERVICE CO., HAMMOND.
Bailly Generating Station, Nuclear I. Preliminary safety analysis report, Amendment 13, 25:56970 (DOCKET-50367-21)
Bailly Generating Station, Nuclear I. Preliminary safety analysis report, amendment No. 14, 25:56971 (DOCKET-50367-22)

NORTHERN STATES POWER CO., MINNEAPOLIS, MINN.
Monticello Nuclear Generating Plant, Unit 1. Emergency core cooling system to new AEC interim acceptance criteria, 25:56946 (DOCKET-50263-83)
Monticello Nuclear Generating Plant, Unit 1. Inoperability of the high pressure coolant injection system, 25:56912 (DOCKET-50263-82)
Monticello Nuclear Generating Plant, Unit 1. Inoperability of the High Pressure Coolant Injection System, 25:56913 (DOCKET-50263-84)
Monticello Nuclear Generating Plant, Unit No. 1. Unusual occurrences, September 5, 1971 and September 9, 1971, 25:56914 (DOCKET-50263-85)
Prairie Island Nuclear Generating Plant, Units 1 and 2. Final safety analysis report, Amendment No. 11, 25:56953 (DOCKET-50282-40)

NORTHWESTERN UNIV., EVANSTON, ILL.
Comparison between momentum integral and compressible models for sodium voiding calculations in LMFBR, 25:57081 (CONF-710302-(Vol.1), pp 180-98)

NUCLEAR AUDIT AND TESTING CO., WASHINGTON, D.C.
Analysis of the safeguards capabilities of material balance accounting systems in selected uranium and plutonium scrap processing, 25:54968 (IAEA-R-878-F)

NUCLEAR FUEL SERVICES, INC., WEST VALLEY, N.Y.
West Valley Reprocessing Plant. Addendum, site environmental studies, 25:54710 (DOCKET-50201-86)

NUCLEAR MATERIALS AND EQUIPMENT CORP., APOLLO, PA.
Glovebox fire-resistant materials and fire suppression tests, 25:54939 (CONF-710401-, pp 17-25)

## O

OAK RIDGE GASEOUS DIFFUSION PLANT, TENN.
Solid-state automatic beam positioner for mass spectrometers, 25:55075 (K-1817)

OAK RIDGE NATIONAL LAB., TENN.
Analysis of round, turbulent, buoyant jets discharged to flowing stratified ambients, 25:57245 (ORNL-4685)
Aqueous studies, 25:54535 (ORNL-4717, pp 57-82)
Chemical applications of nuclear explosives, 25:54816 (ORNL-4682, pp 182-6)
Chemical behavior salt reactor experiment, 25:54533 (ORNL-4717, pp 29-41)
Chemical Engineering Research, 25:54719 (ORNL-4682, pp 229-39)
Chemical support for high temperature gas-cooled reactors, 25:55647 (ORNL-4717, pp 83-90)
Chemical Technology Division annual progress report for the period ending March 31, 1971, 25:54711 (ORNL-4682)
Compilation of national and international nuclear standards (excluding U.S. activities). 7th Edition, 1971. Information gathered to Dec. 31, 1970, 25:57091 (ORNL-NSIC-94)
Computer code for simulating large MSF evaporator desalting plant dynamics, 25:57248 (ORNL-TM-2933)
CONCEPT: computerized conceptual cost estimates for steam--electric power plants. Phase I user's manual, 25:57063 (ORNL-TM-3276)
Convergence of the discrete ordinates method for anisotropically scattering multiplying particles in a subcritical slab, 25:56264 (ORNL-TM-3553)
Conversion studies in the LMFBR fuel cycle, 25:54717 (ORNL-4682, pp 160-2)
Core melt-through in LMFBR's: a condensed review, 25:57093 (ORNL-TM-3504)
Cytofluorograph system, 25:57249 (ORNL-TM-3536)
Development of aqueous processes for LMFBR fuels, 25:54713 (ORNL-4682, pp 39-79)
Development of methods for reprocessing HTGR fuels, 25:54714 (ORNL-4682, pp 80-94)
Development of the thorium fuel cycle, 25:54716 (ORNL-4682, pp 133-43)
Discussion about the nuclear reactor core analysis code citation, 25:57169 (CONF-710302-(Vol.2), pp 939-52)
Energies and intensities of gamma rays emitted by a $^{226}Ra$ source, 25:55041 (ORNL-TM-3509)
Engineering evaluation of LMFBR fuel shipment, 25:54972 (ORNL-TM-2723)
Fourier analysis of unequally spaced data, 25:57250 (ORNL-TM-3547)
Isotopes and radiation technology, Vol. 9, No. 1, 1971, 25:57127
keV neutron capture γ ray spectra, 25:56655 (ORNL-TM-3379)
Measurements of the neutron fission and absorption cross sections of $^{239}Pu$ over the energy region 0.02 eV to 30 keV, Part II, 25:56746 (ORNL-4707)
Miscellaneous programs, 25:54396 (ORNL-4682, pp 242-9)
Molten salt breeder studies, 25:54534 (ORNL-4717, pp 43-56)
Molten salt chemistry, 25:54532 (ORNL-4717, pp 1-27)
Molten-salt reactor processing, 25:54712 (ORNL-4682, pp 1-38)
MORSE Monte Carlo shielding calculations for the zirconium hydride reference reactor, 25:57133 (ORNL-TM-3366)
MORSEC: revised cross-section module for MORSE multigroup Monte Carlo code, 25:56263 (ORNL-4716)
Nuclear reactor core analysis code: CITATION, 25:57183 (ORNL-TM-2496(Rev.2))
Nuclear safety, 25:57090 (ORNL-4717, pp 91-107)
Oak Ridge Air Quality Index, 25:57246 (ORNL-NSF-EP-8)
ORNL multi-ampere ion source, 25:56208 (CONF-711012-9)
ORNL nuclear safety research and development program bimonthly report for May--June 1971, 25:57092 (ORNL-TM-3483)
Preparation and properties of actinide oxides, 25:55594 (ORNL-4682, pp 218-28)
Preparation of $^{233}UO_2$ for Light-Water Breeder Reactors, 25:55593 (ORNL-4682, pp 163-7)
Prog. rpt. on chemistry, annual, 5/31/71, 25:54531 (ORNL-4717)

XUM

Prog. rpt. on high flux isotope reactor, 4--6/71, 25:57120 (ORNL-TM-3569)
Reactor evaluation studies, 25:57062 (ORNL-4682, pp 240-1)
Regularization method of unfolding x-ray spectrum, 25:56134 (ORNL-TM-3582)
ROD: a nuclear and fuel-cycle analysis code for circulating-fuel reactors, 25:57048 (ORNL-TM-3359)
Safety analysis of waste disposal by hydraulic fracturing at Oak Ridge, 25:54971 (ORNL-4665)
Salt mine repository, 25:54758 (ORNL-4717, pp 109-15)
Selected abstracts of world literature on production and industrial uses of radioisotopes, 25:54894 (ORNL-IIC-37(Pt.2))
Separations chemistry research, 25:54718 (ORNL-4682, pp 168-81)
Sol-gel processes for the uranium fuel cycle, 25:55592 (ORNL-4682, pp 144-59)
Special researches, 25:54599 (ORNL-4717, p 117-24)
Spectrophotometric studies of solutions of lanthanides and actinides, 25:54578 (ORNL-4682, pp 215-17)
Techniques used at Oak Ridge National Laboratory for unfolding neutron and gamma-ray pulse-height spectra, 25:54436 (ORNL-TM-3463)
Total gamma-ray energy spectrum above 1 MeV from neutron interactions in $^{233}U$ and $^{235}U$, 25:56745 (ORNL-4691)
Transuranium-element processing, 25:54671 (ORNL-4682, pp 114-32)
Tube identifier: physical description of tubes tested in OSW program on improved heat-transfer system for evaporators, 25:57247 (ORNL-TM-2713(Rev.1))
Waste treatment and disposal, 25:54715 (ORNL-4682, pp 95-113)

OESTERREICHISCHE STUDIENGESELLSCHAFT FUER ATOMENERGIE G.M.B.H., SEIBERSDORF. INSTITUT FUER REAKTORTECHNIK.
Investigations of the dynamics of heat transfer. II, 25:54877 (SGAE-RT-38/1971)

OHIO STATE UNIV., COLUMBUS. DEPT. OF PHYSICS.
Symmetry breaking in the hard-meson current algebraic tree-graph theory, 25:56535 (ORO-3992-7)

OREGON STATE UNIV., CORVALLIS. DEPT. OF PHYSICS.
Low energy nuclear research, 25:56689 (RLO-1062-711)

## P

PACIFIC GAS AND ELECTRIC CO., SAN FRANCISCO, CALIF.
Humboldt Bay Power Plant, Unit No. 3. Technical specifications proposed change No. 36, 25:56932 (DOCKET-50133-68)
Mendocino Power Plant, Units 1 and 2. Environmental report, construction permit stage, 25:56973 (DOCKET-50398-8)

PADUCAH GASEOUS DIFFUSION PLANT, KY.
Additional testing of ten-ton uranium hexafluoride cylinders, 25:54970 (KY-631)

PANAMETRICS, INC., WALTHAM, MASS.
Prog. rpt. on ultrasonic thermometry in LMFBR systems, 12/68, 25:55078 (NYO-3906-5)

PARIS UNIV. (FRANCE). FACULTE DES SCIENCES.
Improvements to the planar electrostatic analyzer for slow electrons, 25:55072 (FRNC-TH-54)
Investigation of strange meson resonances produced in association with nucleon in 3 GeV K-nucleon interactions, 25:56426 (FRNC-TH-53)
Mechanical behavior of alloys $UMo_{1.5}Al_{0.05}Sn_{0.05}$ and Sicral $F_5$ (adjusted uranium) between 20 and 600°C, 25:55429 (CEA-R-4177)
Regge poles and $\pi$--N scattering at low and intermediate energies, 25:56497 (FRNC-TH-33)
Theoretical and experimental study of nonlinear processes in a plasma, 25:56229 (EUR-CEA-FC-602)

PARIS UNIV., ORSAY (FRANCE). FACULTE DES SCIENCES.
Contribution to study of plasmas. An ultra rapid photometric camera, 25:56132 (CEA-R-4079)
Kinematic study of reaction between hadrons (stable and unstable), 25:56474 (FRNC-TH-63)
Nuclear reactions induced by $\alpha$ particles with energies between 70 and 160 MeV in light nuclei, 25:56685 (FRNC-TH-48)
Polarization parameter measurement in proton--proton elastic scattering from 0.5 to 1.2 GeV, 25:56412 (CEA-R-4193)

PARIS UNIV., ORSAY (FRANCE). LABORATOIRE DE PHYSICO-CHIMIE DES RAYONNEMENTS.
Postluminescence of organic solid solutions, 25:54598 (CONF-700652-(Vol.2), pp 423-75)

PARIS UNIV., ORSAY (FRANCE). INSTITUT DE PHYSIQUE NUCLEAIRE.
Microscopic theory of nucleon--nucleus scattering and optical potential, 25:56822 (LYCEN-7104, C1.1-13)
Resolution of the N-body problem in the hyperspherical formalism, 25:56390 (LYCEN-7104, S5.1-53)

PARIS UNIV., ORSAY (FRANCE). LABORATOIRE DE L'ACCELERATEUR LINEAIRE.
Space charge effects in beam--beam crossing, 25:56592 (LAL-RT-43-70)
Status report on ACO, 25:56591 (LAL-RT-42-70)

PARIS UNIV., ORSAY (FRANCE). LABORATOIRE DE PHYSIQUE DES PLASMAS.
Saturation and damping of echoes of electron plasma waves, 25:56226 (CEA-CONF-1804)

PARIS UNIV., ORSAY (FRANCE). LABORATOIRE DE PHYSIQUE THEORIQUE ET HAUTES ENERGIES.
Short-range correlations, 25:56824 (LYCEN-7104, C4.1-17)

PENNSYLVANIA UNIV., PHILADELPHIA. DEPT. OF BIOCHEMISTRY.
Cellular basis of mammalian calcium homeostasis, 25:57244 (NYO-3489-22)

PHILADELPHIA ELECTRIC CO., PA.
Limerick Generating Station, Units 1 and 2, 25:56968 (DOCKET-50352-20)
Limerick Generating Station, Units 1 and 2. Preliminary safety analysis report, Amendment No. 11, 25:56967 (DOCKET-50352-19)

PHYSIKALISCH-TECHNISCHE BUNDESANSTALT, BRUNSWICK (WEST GERMANY).
Theoretical investigation on diffraction of slow neutrons, 25:56615 (FMRB-37/71)

PORTLAND GENERAL ELECTRIC CO., OREG.
Trojan Nuclear Plant. Interim statement of general policy and procedure: Implementation of the national environmental policy act of 1969, 25:56963 (DOCKET-50344-22)

POWER AUTHORITY OF THE STATE OF NEW YORK.
James A. Fitzpatrick Nuclear Power Plant. Final safety analysis report, Supplement No. 1, 25:56961 (DOCKET-50333-30)

POWER REACTOR DEVELOPMENT CO., DETROIT, MICH.
Enrico Fermi Atomic Power Plant. Amended change request No. 16, supplement No. 1, 25:56930 (DOCKET-50016-128)
Enrico Fermi Atomic Power Plant. Amended change request No. 15, supplement No. 1, 25:56929 (DOCKET-50016-127)

PRINCETON UNIV., N.J. DEPT. OF PHYSICS.
Photon statistics of linear coherent amplification of spontaneously emitted light, 25:57242 (NYO-3406-20)

Lagrangian formalism for neutral massive spin 3 fields, 25:56548 (ORO-3992-1)

## T

TECHNICAL UNIV., LODZ (POLAND). INST. OF RADIATION CHEMISTRY.
Role of ions in the radiolysis of hydrocarbons, 25:54630 (CONF-700652-(Vol.3), pp 523-98)
TECHNISCHE HOCHSCHULE, MUNICH (WEST GERMANY). INSTITUT FUER MESS- UND REGELUNGSTECHNIK.
Simulation of the hydrodynamics of boiling water reactors, 25:57022 (MRR-73)
TENNESSEE UNIV., KNOXVILLE.
Prog. rpt. on fluorescence properties of pyridoxal-5-phosphate enzymes, annual, 6/1/70--5/1/71, 25:57264 (ORO-3553-17)
TEXAS UNIV., AUSTIN. CENTER FOR PARTICLE THEORY.
Action-at-a-distance, 25:56550 (ORO-3992-14)
Black-body radiation and generalized theory of physical dimensions, 25:56453 (ORO-3992-42)
Breaking of conformal symmetry and renormalization of nonpolynomial theories, 25:56549 (ORO-3992-9)
Comments on analyses of anti pn → 3π, 25:56485 (ORO-3992-66)
Gauge invariant chiral Lagrangian and anti pp annihilations, 25:56538 (ORO-3992-2)
Lagrangian formalism for neutral massive spin 3 fields, 25:56548 (ORO-3992-1)
Scalar mesons in broken chiral symmetry, 25:56539 (ORO-3992-11)
Symmetry breaking in the hard-meson current algebraic tree-graph theory, 25:56535 (ORO-3992-7)
Two variable crossing symmetric expansion of the ππ scattering amplitude and low-energy parameter sum rules, 25:56484 (ORO-3992-10)
TEXAS UNIV., AUSTIN. CENTER FOR PLASMA PHYSICS AND THERMONUCLEAR RESEARCH.
Prog. rpt. on Texas Turbulent Torus Experiment, annual, 5/71, 25:56123 (ORO-4087-1)
TEXAS UNIV., AUSTIN. DEPT. OF PHYSICS.
Interpretation of angular distribution in terms of complex mass particles, 25:56499 (ORO-3992-8)
Phenomenology of complex spin tachyons, 25:56500 (ORO-3992-18)

XUM

TEXAS UNIV., AUSTIN. PLASMA RESEARCH LAB.
Prog. rpt. on quasistatic ion cyclotron wave studies, 8/71, 25:56233 (ORO-3871-6)
TOKYO UNIV. (JAPAN). INST. FOR NUCLEAR STUDY.
Computer control of an accelerator, 25:56597 (SJC-A-71-3)
Method of correction on a spectrum distorted by accidental coincidence in an address-matrix of a counter array, 25:54997 (INSJ-128)
Table of bands in even--even nuclei, 25:56651 (INSJ-127)
TOULOUSE UNIV. (FRANCE).
Simulation of electron avalanche in He by Monte Carlo type calculation, 25:56265 (ORNL-tr-2518)

## U

UNION CARBIDE CORP., OAK RIDGE, TENN. Y-12 PLANT.
Primary frequency standards in the Y-12 Physical and Electrical Standards Laboratory, 25:57296 (Y-IA-92)
Properties of carbon derived from indene compounds, 25:57295 (Y-1790)
UNITED KINGDOM ATOMIC ENERGY AUTHORITY, DOUNREAY (SCOTLAND). REACTOR GROUP.
Remote-readout balance for use in a highly radioactive environment, 25:55080 (TRG-Report-2086)
UNITED KINGDOM ATOMIC ENERGY AUTHORITY, RISLEY (ENGLAND). REACTOR GROUP.
TRESS: a finite element code for stress analysis problems, 25:57285 (TRG-Report-1813)
UNITED NUCLEAR CORP., NEW HAVEN, CONN. COMMERCIAL PRODUCTS DIV.
Prog. rpt. on fabrication and evaluation of isotopic source assay system, 7--10/70, 25:55070 (BHO-67-2)
UNIVERSITY COLL., LONDON (ENGLAND).
Scattering of pions from nuclei, 25:56811 (CERN-71-14, pp 289-378)

## V

VATTENBYGGNADSBYRAN, STOCKHOLM (SWEDEN).
Alternative approach to core calculations for boiling water reactors, 25:57168 (CONF-710302-(Vol.2), pp 920-38)
VETERANS ADMINISTRATION HOSPITAL, HINES, ILL.
Metabolism and removal of radiostrontium in man, 25:55109 (COO-1231-67)
VIRGINIA ELECTRIC AND POWER CO., RICHMOND.
Surry Power Station, Units 1 and 2. Final safety analysis report, Amendment 25, 25:56949 (DOCKET-50280-46)
Surry Power Station, Units 1 and 2. Preliminary safety analysis report, Amendment 2, 25:56951 (DOCKET-50280-48)
Surry Power Station, Units 1 and 2. Reasons why the construction permits should not be suspended pending environmental review, 25:56952 (DOCKET-50280-49)
Surry Power Station, Units No. 1 and No. 2. Additional information concerning the quality assurance program, 25:56950 (DOCKET-50280-47)
VITRO/HANFORD ENGINEERING SERVICES, RICHLAND, WASH.
Filtration for the exhaust ventilation of plutonium recovery facilities, 25:54947 (CONF-710401-, pp 118-32)
Fire detection systems in gloveboxes, 25:54955 (CONF-710401-, pp 221-36)

## W

WASHINGTON STATE UNIV., PULLMAN.
Adsorption and absorption of hydrogen by niobium, 25:55434 (RLO-2221-T-7-3)
WASHINGTON STATE UNIV., PULLMAN. DEPT. OF PHYSICS.
Electron stimulated desorption of excited neutrals: CO on W, 25:55435 (RLO-2221-T-7-4)
WASHINGTON UNIV., ST. LOUIS, MO. LAB. FOR SPACE PHYSICS.
Comments of a paper on elastically scattered recoil nuclei in solid state detectors, 25:54999 (N-71-26447)
Nuclear interaction tracks in minerals and their implications for extraterrestrial materials, 25:55669 (N-71-26344)
WESTERN WASHINGTON STATE COLL., BELLINGHAM.
Prog. rpt. on fission studies on elements below Po, 7/70--6/71, 25:56750 (RLO-1759-25)
WESTINGHOUSE ELECTRIC CORP., MADISON, PA. ADVANCED REACTORS DIV.
Consequences of molten fuel ejection in a LMFBR, 25:57083 (CONF-710302-(Vol.1), pp 241-58)
Coolant voiding transients in LMFBR's, 25:57082 (CONF-710302-(Vol.1), pp 215-40)
Fission gas and molten fuel ejection from failed fuel rods in an LMFBR, 25:57075 (CONF-710302-(Vol.1), pp 79-96)
Sodium technology program progress report for the period ending May 31, 1971, 25:55379 (WARD-4210-T-1-2)
WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Environmental testing of engineered safety features related equipment, 25:57097 (WCAP-7744)
Interchannel thermal mixing with mixing vane grids, 25:57031 (WCAP-7755)
Plant Instrumentation Program. Final quarterly progress report for the period ending March 31, 1971, 25:55004 (WCAP-7562-4)
Robert Emmett Ginna Nuclear Power Plant, Unit No. 1. A review of fuel rod integrity at the Ginna facility, 25:56940 (DOCKET-50244-78)
Safety related research and development for pressurized water reactors, 25:57096 (WCAP-7722)
WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA. NUCLEAR ENERGY SYSTEMS DIV.
Comparison calculations for a LWR benchmark package using ENDF/B-1 and -II data, 25:57019 (CONF-710302-(Vol.2), pp 1065-85)
Current status of ENDF/B processing codes, 25:57165 (CONF-710302-(Vol.2), pp 877-86)
ETOG-2 and ETOT--ENDF/B data processor programs to produce epithermal and thermal multigroup libraries, 25:57177 (CONF-710302-(Vol.2), pp 1031-46)
WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA. PWR SYSTEMS DIV.
Experience with the modularization of iteration procedures in engineering applications, 25:57143 (CONF-710302-(Vol.1), pp 494-504)
Topical report: Westinghouse PWR core behavior following a loss of coolant accident, 25:57095 (WCAP-7422)
WISCONSIN ELECTRIC POWER CO., MILWAUKEE.
Point Beach Nuclear Plant, Unit No. 1. Environmental studies, report No. PBR-2, 25:56947 (DOCKET-50266-55)
WISCONSIN PUBLIC SERVICE CORP., GREEN BAY.
Kewaunee Nuclear Power Plant. Final safety analysis report, Amendment 10, 25:56957 (DOCKET-50305-25)
WOLLONGONG UNIV. COLL. (AUSTRALIA).
Experimental investigation of fission, 25:56743 (NP-18966)

## Y

YANKEE ATOMIC ELECTRIC CO., WESTBORO, MASS.
Yankee Nuclear Power Station. Operation report No. 128, August 1971, 25:56897 (DOCKET-50029-158)

## Z

XUM

# PERSONAL AUTHOR INDEX

Authors' names are indexed in the form appearing in the abstracted publication. Each entry under an author's name gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. The following changes in spelling have been introduced to reduce some of the confusion which might result from omitting the accents:

| | | |
|---|---|---|
| Germanic | ä | appears as ae |
| Germanic | ö | oe |
| Germanic | ü | ue |
| Scandinavian | ϕ | oe |

# SUBJECT INDEX

Cross references are included in cumulative subject indexes and in *Subject Headings Used by the USAEC Division of Technical Information* (USAEC report TID-5001).

The reader is also referred to *Guide to Abstracting and Indexing for Nuclear Science Abstracts* (USAEC report TID-4576).

Most headings in the subject index are specific materials, things, and processes. The headings are followed by modifiers that describe the properties of, or processes applied to, the headings.

All index entries cite *NSA* volume and abstract numbers; volume number precedes the colon and the abstract number follows it. The designation (R) following the abstract number indicates a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. Report numbers, where applicable, are included in parentheses after the abstract number of the citation. Published literature (journal article or book) can be identified by the absence of a report number.

Ideas presented in the original literature, rather than key words, have been indexed. The indexers have selected what seemed the most probable and logical place to look for typical information. Since it is not always possible to anticipate where a user would look for information, the cumulative indexes include numerous cross references. Consideration of synonymous or closely related terms will prove valuable.

Information is indexed for the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use or to the general class headings that include the specific headings. For example, information on boiler design for the Fermi Fast Breeder Reactor would be indexed under the headings BOILERS and FERMI FAST BREEDER REACTOR but not necessarily under the headings REACTORS, FAST or REACTORS, BREEDER.

General or broad headings are reserved for general summaries, reviews, comprehensive reports, and similar literature.

## Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings; e.g., AMINO ACIDS rather than ACIDS, AMINO; HELIUM ISOTOPES He-4 rather than HELIUM—ISOTOPES He-4 or HELIUM—He-4 ISOTOPES. Note, however, that in some cases parenthetic modifying terms or inverted headings such as NEUTRONS, FAST, are used where the alphabetical arrangement of a direct entry would cause information to be scattered. In addition, organic compounds are usually entered in the index in the inverted form to facilitate grouping like or related compounds with the parent compounds; e.g., BENZENE, BROMO- rather than BROMOBENZENE. In general, the nomenclature used is that of the subject indexes to *Chemical Abstracts*.

## Alphabetization

Subject headings are alphabetized word by word. Parenthetic qualifiers, numbers, and Greek letters within subject headings are disregarded in alphabetizing unless there are two or more headings that are otherwise identical, in which case the qualifier, numerical progression, or spelled names for the Greek letters determine the order.

Examples:

M-Capture
  see ELECTRON CAPTURE
MAGNESIUM
MAGNESIUM ALLOYS AND SYSTEMS
MANGANESE FLUORIDES
MANGANESE FLUORIDES $MnF_2$
MESONS
MESONS ($\pi$)
MESONS ($\rho$)
1-PENTANOL
2-PENTANOL

## Modifying Phrases

The modifiers appearing under a subject heading are written specifically to show the relation between the item being indexed and the heading. The modifier therefore contains a maximum of useful information. Although the modifier begins with the word judged to be of greatest use to the greatest number of users, there is still need for the searcher to consider all modifiers under the heading(s) of interest.

Modifiers usually form meaningful phrases when combined with the subject heading. Some are intended to be read following the subject heading, e.g., the entry HYDROGEN—sorption by charcoal should be read "hydrogen sorption by charcoal." As a result of placing the important word first, however, many modifiers must be rearranged for smooth reading, e.g., FORMALDEHYDE—yields in radiolysis of ethyl ether, effects of deuterium on, should be read "effects of deuterium on formaldehyde yields in radiolysis of ethyl ether" and URANIUM—crystal structure of, effect of cooling rate on allotropic transformations in, should be read "effect of cooling rate on allotropic transformations in crystal structure of uranium."

Special characters are added to modifiers in the fields of physics and reactor technology; if the modifier does not establish the experimental or theoretical character of a reference, a symbol (E), (T), or (E/T) is placed immediately after the modifying phrase and before the abstract number.

XUM

### Physical States and Configurations of Materials

The specific physical state, if other than normal, or the geometric configuration of the material is included in the modifying phrase; e.g., information on liquid metals is indexed under the specific metal with "liquid" in the modifier and carbon crucibles is indexed under CARBON with "crucibles" appropriately placed in the modifier. The information on carbon crucibles is also indexed under CRUCIBLES.

### Nomenclature of Inorganic Compounds

Inorganic compounds are indexed to subject headings in the direct form. Cations are listed in the order of increasing valence for polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., SODIUM ALUMINUM SILICATES and POTASSIUM SODIUM SULFATES. If more than one anionic species is presented in a compound, the anions are arranged alphabetically, e.g., BERYLLIUM FLUORIDE HYDROXIDES.

### Nomenclature of Organic Compounds

Organic compounds are indexed by subject headings based on the indexes to *Chemical Abstracts* except in the area of enzymes, in which specific enzymes, named according to the 1964 recommendations of the International Union of Biochemistry, are used. In many cases nonproprietary names for drugs are used as subject headings, and cross references are made from the systematic chemical names. Subject headings for hormones appear in the inverted style at HORMONES.

### Nomenclature of Life Sciences

Subject headings for plants are names of phyla with one exception: members of the Phylum Tracheophyta are indexed under class or subclass names. Scientific names (genus and species) are used as the initial, or file, word in the modifying phrase. Scientific names are omitted only when the name is not available in the literature or cannot be found in available references.

Subject headings for animals are the names of phyla with the following exceptions: (1) members of Phylum Arthropoda and Phylum Chordata are indexed under appropriate class name, and (2) common names are used for members of Class Mammalia.

Subject headings are entered for various classes of commodities, and specific products are identified in the file-word position of the modifier. In the following examples, approved subject headings are capitalized and typical modifier file words are listed in lower case.

| Example 1 | Example 2 |
|---|---|
| CEREALS | MEATS |
| bread | beef |
| flour | fish |
| oats | mutton |
| rice | pork |
| rye | poultry |
| wheat | seafood |

Diseases, pathological conditions, and in vitro studies of atypical cells and tissues are indexed under subject headings for the organism affected, under the appropriate anatomical structure of physiological phenomenon affected, and under the appropriate disease heading. Subject headings for diseases (defined as any deviation from the norm) are DISEASES; DISEASES, INFECTIOUS; DISEASES, NEOPLASTIC; DISEASES, PHYSIOLOGICAL; DISEASES, PLANT; and DISEASES, TRAUMATIC.

Diseases of mixed etiology are treated in the following manner: neoplastic diseases that are also classified as infectious or physiological are indexed under DISEASES, NEOPLASTIC; diseases in which a microorganism is the etiologic agent are classified under DISEASES, INFECTIOUS; physiological anomalies that are neither neoplastic nor infectious are indexed under DISEASES, PHYSIOLOGICAL; the acute radiation syndrome, nonspecific radiation injuries, trauma, and wounds or incisions inflicted mechanically are indexed under DISEASES, TRAUMATIC.

Specific diseases or pathological conditions are named in the file-word position of the modifier, in the author's terminology, and are set off from the remainder of the modifier by commas. Neoplasms are designated as benign or malignant in the file-word position when more specific information is not available.

### Multicomponent Alloys and Other Systems

Multicomponent alloys and systems, except well-known trade names, are indexed under a subject heading for each component in the form "element systems" for nonmetals or "element alloys and systems" for metals. The modifier begins with element symbols for each component arranged alphabetically. In addition, if significance is placed on the base metal of the alloy, this is indicated by adding "-base" to the element symbol.

Example: A 1.5C, 12Cr, 0.25V, 0.8Mo, bal Fe alloy is indexed as

```
CARBON SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
CHROMIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V,...
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
MOLYBDENUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
VANADIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
```

Well-known alloys, such as ZIRCALOY-2, are indexed under the trade name; cross references from each component of the alloy to the trade name appear in cumulative indexes.

Multicomponent systems in which nonmetallic elements are present in large percentage and which are commonly referred to as systems or mixtures are indexed in a manner similar to alloys.

Example: A tungsten–silicon preparation is indexed as

```
TUNGSTEN ALLOYS AND SYSTEMS
  Si--W, ...
SILICON SYSTEMS
  Si--W, ...
```

Multicompound systems and mixtures of inorganic compounds are indexed under the subject heading for each component compound; the modifiers begin with an alphabetical listing of compound formulas.

Example: A lead titanate–lead zirconate mixture is indexed as

```
LEAD TITANATES
  PbTiO3--PbZrO3
LEAD ZIRCONATES
  PbTiO3--PbZrO3
```

XUM

A mixed system of compounds and elements is indexed by a combined form of the preceding conventions; e.g., a dispersion of copper and alumina would be indexed as

ALUMINUM OXIDES
  $Al_2O_3$—Cu, ...
COPPER ALLOYS AND SYSTEMS
  $Al_2O_3$—Cu, ...

Mixtures of organic compounds are indexed under subject headings for each component of the mixture; the modifiers begin with an alphabetical listing of compound names.

Example:

ACETIC ACID
  acetic acid—$BF_3$, ...
BORON FLUORIDES
  acetic acid—$BF_3$, ...

Example:

BENZENE, CHLORO-
  bromophenol—chlorobenzene, ...
PHENOL, BROMO-
  bromophenol—chlorobenzene, ...

If modifiers for alloys and systems are included with other modifiers under the same subject heading, they are filed last.

Example:

CARBON SYSTEMS
  deposition on nuclear fuel particles
  molecular structure of
  neutron total cross section for
  sorptive properties for xenon
  Young's modulus for
  Al—C—Cr, superconductivity in
  B—C, phase studies for
  C—U—Zr, fabrication and physical properties of

## Nomenclature of High Energy Physics

Information on particle-particle events is indexed under subject headings for the specific particles involved. The modifier file word *interactions* is followed by the specific interaction written in symbolic form. Particle nomenclature and symbols follow that of Rosenfeld, et al. *Data on Particles and Resonant States,* UCRL-8030 (latest revision). For consistency the incident particle is always written first. The mass (in MeV) of a resonance state is included in parentheses after the symbol to avoid ambiguity. Hyperfragments are indicated in modifiers as in the following examples: $\Lambda$-$He^5$, $\Sigma$-$H^3$, $\Lambda\Lambda$-$Be^{10}$. The superscript on the right indicates the total number of baryons in the composite system.

Examples:

MESONS ($\pi^-$)
  interactions $\pi^- + p \rightarrow \Lambda + K^+ + \pi^-$ at 6 GeV/c in hydrogen bubble chamber, $\Lambda$K(1700) enhancement in, (E)
BARYONS, RESONANCE (N*)
  production of $\Delta^{++}(1236)$ and $\Delta^0(1236)$ from $K^- + p \rightarrow K^- + p + \pi^+ + \pi^-$ interactions at 2.63 and 2.70 GeV/c, (E)
HYPERFRAGMENTS
  binding energy of $\Lambda\Lambda$-$He^6$, three-body $\alpha$—$\Lambda$—$\Lambda$ model for

Subject headings are also provided for specific models and theories.

Examples:

ELEMENTARY PARTICLE MODELS (TRIPLET)
  hadron total cross sections in quark, numerical analysis of
CURRENT ALGEBRA
  PCAC hypothesis for $A_1$ and rho dominance in $\pi \rightarrow e + \nu + \gamma$ decay
REGGE POLE THEORY
  predictions for polarization in $K^- + p \rightarrow$ anti $K^0 + n$, $\pi^- + p \rightarrow \pi^0 + n$, and $\pi^- + p \rightarrow$ eta + n interactions at high energies
SYMMETRY GROUPS
  SU(2) × SU(4) intermediate-coupling model for nucleon and hyperon isobars

## Nomenclature of Reactor Technology

Subject headings for reactors are of three types:

(1) Specific reactors, e.g., ARGONNE RESEARCH REACTOR, SAXTON POWER REACTOR

(2) Reactors having a common physics or engineering characteristic, e.g., REACTORS, FAST; REACTORS, ORGANIC-COOLED; REACTORS, PRESSURIZED-WATER

(3) Reactors having a common purpose, e.g., REACTORS, POWER; REACTORS, RESEARCH

Information on specific reactors, type (1), is indexed under the one specific subject heading. Information on classes or types of reactors, types (2) (characteristics) and (3) (purpose), is indexed under all applicable headings. For example, information on a heavy-water-moderated organic-cooled power reactor is indexed under REACTORS, HEAVY WATER-MODERATED; REACTORS, ORGANIC-COOLED; and REACTORS, POWER.

Subject headings exist for selected reactor components, e.g., REACTOR FUEL ELEMENTS. When applicable, headings for components are indexed even though they may have been included in a modifier under a type (1) or (2) heading. The materials in reactor components are indexed when the information is peculiar to the material.

Modifier file words under reactor headings are of two primary types: one type expresses reactor characteristics, e.g., reactivity; the other, components, e.g., control rod. If no subject heading appears for a reactor component, the heading REACTORS is used, and the component is used as the modifier file word.

radiolysis of gaseous, liquid, and solid, review on, 25:54629 (CONF-700652-(Vol.3), pp 479-521)
radiolysis of, production of aliphatic aldehydes by γ, 25:54625(P)
ALDEHYDES
radioinduced production of aliphatic, from alcohols, γ, 25:54625(P)
ALGINIC ACID
sodium salt, effects on distribution of mixed cesium and strontium radioisotopes in man following ingestion, 25:55113
ALKALI METAL BROMATES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
ALKALI METAL HALIDES
impurity location in crystals of, by axial channeling of helium ions and protons, 25:56337
ALKALI METAL HYDROXIDES
radiation effects on aqueous solutions of, reply to paper on formation of ozonide ions from γ, 25:54609
ALKALI METAL NITRATES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
ALKALI METAL SULFATES
corrosive effects on transition metals, relations with polarization, 25:55373 (CONF-690452-, Paper 6)
reactions with alloys and oxides containing chromium, nickel, and cobalt at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
ALKALI METALS
corrosive effects of liquid, on reactor components, review of, 25:55392
determination in fission product mixtures by ion exchange and β counting, 25:54449
ALKALINE EARTH IONS
reactions with phosphate and sulfate ions in crystals, 25:57293 (UR-49-1517)
ALKALINE EARTH METALS
determination in fission product mixtures by ion exchange and β counting, 25:54449
ALKALINE PHOSPHATASE
effectiveness in comparison with gold-198 scanning for diagnosis of human liver cancer, 25:55276
radiation effects on activity of rat bone marrow, effects of dose on x, 25:55330
ALLOYS
book: Corrosion in Nuclear Applications, 25:55388
book: Emissive Properties of Materials (Handbook), 25:56346
crystal disorder--order transformation in, kinetics of, 25:55552
diffusion in, data tabulations on, 25:55509
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
radiation effects on stress relaxation in, model for fast neutron, 25:55579 (WAPD-TM-943)
ALPHA PARTICLES
detection and measurement of artificial, in presence of natural alpha radiation, sensitive method for, 25:54762
dosimetry of, triacetate cellulose track detectors for, 25:55026
effects on creep in Type 316 stainless steel at 750°C, relations with injected helium content, 25:55574 (JAERI-Memo-4408)
effects on crystals and polymeric solutions of anthracene, 25:54600(R) (UCLA-34-P-88-32)
effects on hafnium compounds and tungsten at 6 MeV, Moessbauer-effect evidence for radiation damage from Coulomb-excitation, 25:56369
effects on sodium nitrate at 20 MeV, 25:56318
effects on survival of hamster cells, effects of dose on RBE for, 25:55207 (NYO-2740-8, pp 220-59)
energy scale for, comparison with γ-ray energy scale, 25:56773
energy-loss measurement in tissue-equivalent gas, calculation of straggling parameters from, 25:56279
interaction tracks in mica and extraterrestrial materials, (E), 25:55669 (N-71-26344)
observations of solar 0.5-MeV/nucleon, during 1967 at widely separated locations, (E), 25:55956
reactions (α, He-6) with magnesium-26, neon-22, and oxygen-18 at 42 MeV, angular distributions for, (E), 25:56665
reactions (α,2α) with beryllium-9 at 42.8 and 49.2 MeV, analysis using impulse approximation, (E), 25:56674
reactions (α,2α) with oxygen-16 at 46 and 52.5 MeV, analysis using impulse approximation, (E), 25:56674
reactions (α,2n) with uranium-235, production of plutonium-237 by, 25:54674
reactions (α,Be-7) and (α,Li-6) with carbon-12 and oxygen-16 at 42 MeV, cross sections for, (E), 25:56659
reactions (α,C-12) and (α,Li-6) with magnesium-24 at 42 MeV, cross sections for, (E), 25:56659
reactions (α,C-12) and (α,O-16) with silicon-28 at 42 MeV, cross sections for, (E), 25:56659
reactions (α,d) and (α,p) with light nuclei at 25 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56677
reactions (α,d) with strontium-87 at 25 MeV, angular distributions for, (E), 25:56779
reactions (α,f) with bismuth-209, thorium-232, and uranium-238 at 20 to 34 MeV, cross sections and delayed neutron yields for, (E), 25:56803
reactions (α,f) with thorium-230 at 25.7 and 29.5 MeV, analysis using renormalized Fermi gas model and collective potential energy surface, (T), 25:56856
reactions (α,f) with thorium-232 at 26.4 MeV, liquid-drop analysis of, (E/T), 25:56786
reactions (α,f) with Z = 29 to 67 nuclei at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
reactions (α,γ) on neon-20, magnesium-24 photodisintegration rates from, 25:55703
reactions (α,γ) with silicon-28 and oxygen-16; rates for, (E), 25:55704
reactions (α,n) with barium-134 at 15 to 28 MeV, superconductivity model calculations of isomeric-cross-section ratios for, (T), 25:56765
reactions (α,n) with silicon-29 at 2.8 to 4.1 MeV, excitation function for, (E), 25:56752(R) (SUNI-14)
reactions (α,p) with bismuth-209 at 26.5 to 60 MeV, angular distributions, excitation functions, and recoil ranges for, (E), 25:56799
reactions (α,p) with carbon-12 at 11.3 to 26.3 MeV, angular distributions and excitation functions for, (E), 25:56675
reactions (α,p) with carbon-12 at 8.5 to 10.5 MeV, angular distributions for, (E), 25:56681
reactions (α,p) with iron-54 at 9.86, 10.02, and 10.40 MeV, p--γ angular correlations from, (E), 25:56700
reactions (α,xnypzα) with neodymium-142 at 104 MeV, gamma spectra from, (E), 25:56761
reactions with air, mobility of ions from, 25:54801
reactions with aluminum and silicon at 160 MeV, cross sections and fission mechanism for lithium-9, carbon-16, and nitrogen-17 production in, (E/T), 25:56685 (FRNC-TH-48)
reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for production of stable and neutron-deficient nuclei in, (E/T), 25:56685 (FRNC-TH-48)
reactions with carbon-12 and nitrogen-14 at 70 and 90 MeV, cross sections for, (E), 25:56652 (LYCEN-7104, S2.1-2)
reactions with chromium and titanium, production of chromium-51 by, 25:54691
reactions with scandium and titanium, production of vanadium-48 by, 25:54677
scattering by carbon-12 at 8.5 to 10.5 MeV, angular distributions for elastic and inelastic, (E), 25:56681
scattering by helium-4 below 100 MeV, analysis using nonlocal separable potential, (T), 25:56852
scattering by light nuclei at 104 MeV, nuclear deformation study from differential cross sections for elastic and inelastic, (E), 25:56687 (KFK-1397)
scattering by nuclei, role of isoscalar transition operator in inelastic, (T), 25:56876
scattering by oxygen-18 at 13.5 to 17.0 MeV, alpha and gamma spectra and α--γ angular correlations in inelastic, (E), 25:56672
scattering by yttrium-89 at 20 MeV, angular distribution for elastic, (E), 25:56778
scattering by zinc-64, -66, and -70 at 27.2 MeV, distorted-wave analysis of differential cross sections for elastic and inelastic, (T), 25:56726
spectra measurements of, triacetate cellulose track detectors for, 25:55026
ALPHA SOURCES
calibration of polonium-210, with γ-ray energy scale, 25:56773
detection in blood and bone marrow of miners using nuclear emulsions, 25:55236
preparation of neptunium, thorium, or uranium, by

XUM

electrodeposition, 25:54673
ALUMINUM
abundance in primary cosmic radiation, (E), 25:55911
alpha reactions at 160 MeV, cross sections and fission mechanism for lithium-9, carbon-16, and nitrogen-17 production in, (E/T), 25:56685 (FRNC-TH-48)
alpha reactions at 70 to 160 MeV, cross sections and fission mechanism for production of stable and neutron deficient nuclei in, (E/T), 25:56685 (FRNC-TH-48)
analysis of pure, for calcium by nondestructive alpha activation, 25:54522
bremsstrahlung buildup factor for, dependence on position of shielding between source and detector, 25:56280
cracks in, optimization of radiographic method for detection of, 25:54929
determination in aluminum electrolytic bath by 14-MeV neutron activation simultaneously with oxygen and fluorine, 25:54503
determination in animal tissues and plants by separation and neutron activation, 25:54514
determination in glass, by simultaneous measurement of scattered α particles and prompt protons, 25:56752(R) (SUNI-14)
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
deuteron reactions at 80 MeV with foils of, cross sections for electron capture in, (E), 25:55862
effects of compounds of, on bubble formation during annealing of doped tungsten, 25:55511
effects on separation of impurities from niobium by vacuum melting, 25:55403
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
electron mean free path in foils of, fast, (E), 25:56281
electron reactions at 0.5 to 15 keV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
mechanical properties of chemical vapor deposited rings of, design of apparatus for testing, 25:55440
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
proton reactions at 1.5 to 4.5 MeV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
proton reactions at 155 and 600 MeV with foils of, cross sections for electron capture in, (E), 25:55862
radiation effects on adhesion of epoxy cemented specimen couples of, gamma, 25:55666
radiation effects on electronic properties of anodized electrode of, 25:54601
radiation effects on magnetoresistance of single crystals of, orientation dependence and annealing of 3-MeV electron, (E/T), 25:56334
radiation effects on, fast neutron, 25:54599 (ORNL-4717, p 117-24)
reactions with uranium oxides at 450°C, identification of phases in, 25:55609(T) (ORNL-tr-2456)
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
surface wetting of molten, on boron nitride, mechanisms of, 25:55469
thermal expansion of quenched, 25:55499
ALUMINUM ALLOYS AND SYSTEMS
porosity of, effects of annealing and crystallization on micro-, 25:55462
preparation by granule metallurgy, evaluation of, 25:55404
Ag--Al, diffusion in, 25:57238 (MLM-OP-71003)
Ag--Al, superconductivity in hcp phases of, (E), 25:56096
Al--$Al_2O_3$, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
Al--Cr, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al--Cr, solidification and phase transformations in, nonequilibrium, 25:55535
Al--Cr, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Cr--Mo, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Cr--Mo--Ni-base--W, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Cr--Ni-base--Ti, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Al--Cr--Ni-base--Ti, mechanical properties of dispersion-strengthened, at high temperatures, 25:55483
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Cu--Y, phase studies of, 25:55561
Al--Fe, magnetic properties of, 25:56358
Al--Fe--Ti, mechanical properties at 550 to 1100°C, 25:55501
Al--Fe--Ti, phase studies of, 25:55501
Al--Ga--Ni, optical constants for β-phase NiGa/sub 1-y/Al/sub y/ intermetallic compound in, 25:56352
Al--Ge--V, phase formation in $V_3Al_{sub\ x}Ge_{sub\ 1-x}$ with A15 structure, 25:55539
Al--La--rare earths, crystal field levels, superconducting transition temperature, and exchange parameters of, (T), 25:56359
Al--La--Tm, crystal field levels of La/sub 1-x/Tm/sub x/$Al_2$, (E), 25:56359
Al--Mg--Zr, cracking and mechanical properties of welded joints of, effects of long-term heating at 70°C on, 25:55470
Al--Mn, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al--Mo, solidification and phase transformations in, nonequilibrium, 25:55535
Al--Mo, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Mo--Sn--Ti-base--Zr, welding of, properties of joints produced by friction, 25:55409
Al--Mo--Sn--U-base, tensile properties of dilute, at 23 to 600°C, 25:55429 (CEA-R-4177)
Al--Mo--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Mo--Ti--V, diffusion of hydrogen in, at 450 to 600°F, effects of stress on, 25:55476
Al--Mo--Ti-base, embrittlement of two-phase, mechanisms of, 25:55450
Al--Nb, niobium-93 NMR in $Nb_3Al$, 25:56373
Al--Ni--V, phase equilibria in intermetallic compounds of, 25:55562
Al--Pd, optical constants for β-phase PdAl intermetallic compound in, 25:56352
Al--Si, analysis of standard, by neutron activation, 25:54455
Al--Sn--Ti, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Al--Ti, inflammability correlation of powdered, 25:55473
Al--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Ti--V, fabrication and tensile properties of composites, parts, and preforms of powder metallurgy, 25:55415
Al--Ti--V, mechanical properties at 550 to 1100°C, 25:55501
Al--Ti--V, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Al--Ti--V, microstructure and properties of pressure-sintered powders of, 25:55413
Al--Ti--V, phase equilibria and properties along TiAl--$V_3Al$, section, 25:55537
Al--Ti--V, phase studies of, 25:55501
Al--Ti--V, properties of thin-film diffusion brazed joints in, corrosion, mechanical, and metallurgical, 25:55477
Al--Ti--V, sintering of powdered, electrically-activated pressure method for, 25:55413
Al--Ti-base--V, tensile properties of, effects of oxygen additions on, 25:55471
Al--Ti-base--V, welding of, properties of joints produced by friction, 25:55409
Al--Zr, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al-base--Mn, binding energy and entropy of vacancies in, 25:54587(R) (AECL-3909)
Al-base--Mo, thermal expansion of quenched, 25:55499
Al-base--Zr, thermal expansion of quenched, 25:55499
Au--Al, search for superconductivity in fcc phases of, (E), 25:56096
ALUMINUM IONS
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
ALUMINUM ISOTOPES Al-26
abundance in lunar materials, (E), 25:55772
ALUMINUM ISOTOPES Al-27
deuteron reactions (d,p) at 12 MeV, l values, spectra, and DWBA analysis of differential cross sections for, (E), 25:56709
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
proton reactions at high energies, isobar model for analysis of meson (π) production in, 25:56530
ALUMINUM ISOTOPES Al-28
energy levels from aluminum-27 (d,p) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:56709
ALUMINUM NITRIDES
evaporation behavior at 1500 to 1800°K, 25:55607 (JUL-739-PC)
formation heat of, 25:55607 (JUL-739-PC)
ALUMINUM OXIDES
decomposition oxygen pressures over test samples of, at high temperatures and low pressures, 25:55428 (BNWL-B-108)
effects of surface coating of, on phase composition of rhenium--tungsten alloys at 1500 to 1900°C, 25:55465

XUM

fabrication of small grains of, for thermoluminescent dosimetry, 25:55055(P)
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
properties of container materials of, for sodium hydroxide--nitrogen oxide processing of carbide fuels, 25:55376 (CONF-690452-, Paper 9)
properties of cordierite-strengthened refractories of, mechanical and thermal, 25:55621
properties of metal fiber reinforced composites of, review on, 25:55608(T) (LB/G-3074)
$Al_2O_3$--Cu, production of fine powders of, Microgel process for, 25:55419
$Al_2O_3$--$Dy_2O_3$--$UO_2$, temperature distribution in irradiated fuels of, use of eutectic isotherm for monitoring, (E), 25:57194
$Al_2O_3$--$Fe_2O_3$, production of fine powders of, Microgel process for, 25:55419
$Al_2O_3$--Mo, deformation mechanisms in, effects of temperature on, 25:55455
$Al_2O_3$--Ni, production of fine powders of, Microgel process for, 25:55419
Al--$Al_2O_3$, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487

ALUMINUM PHOSPHATES
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)

ALUMINUM SILICIDES
deposition of zinc-plated, on refractory metals for corrosion protection, method for, 25:55398(P)

AMERICIUM
separation from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
spectra of trivalent, in calcium tungstate, 25:54578 (ORNL-4682, pp 215-17)

AMERICIUM ISOTOPES Am-232
electron capture decay of, plutonium-232 delayed fission from, (E), 25:56744(T) (NP-tr-1936)

AMERICIUM ISOTOPES Am-234
electron capture decay of, plutonium-234 delayed fission from, (E), 25:56744(T) (NP-tr-1936)

AMERICIUM ISOTOPES Am-238
electron-capture decay scheme, (E), 25:56792

AMERICIUM ISOTOPES Am-241
alpha decay of, gamma energies and absolute branching intensities for, (E), 25:56753 (UCRL-51087)
decay of, efficiency of scintillation counting measurement of, 25:54700
effects on chromosomes in liver of hamsters following injection, RBE for aberrant, 25:55188
excretion in urine of man following inhalation as oxide, effects of DTPA on, 25:55118
production of aerosols of oxides of, for inhalation studies in dogs, 25:54982
toxicity to hamsters following intraperitoneal injection, 25:55188

AMERICIUM ISOTOPES Am-243
energy levels from gamma inelastic scattering, (E), 25:56738 (JINR-P15-5959)
photon inelastic scattering by, production of spontaneously fissioning isomers in, (E), 25:56738 (JINR-P15-5959)
production of spontaneously fissioning isomers in gamma inelastic scattering, (E), 25:56738 (JINR-P15-5959)

AMES RESEARCH REACTOR
radiation monitoring of environs of, during 1971, 25:55152 (IS-2658)

AMINO ACIDS
radiation effects on content of, in proteins of processed food, 25:55364
radiolysis of, rate constants for hydrogen atom reactions following electron, 25:55132

AMINOPTERIN
effects on mutation induction in uv irradiated Bacillus subtilis, 25:55189

AMMETERS
design of d-c, for weak currents, 25:55071 (CEA-N-1433)

AMMONIA
complexes with benzoic acid and cobalt perchlorate, radiolysis of, oxidation by hydroxyl radical of benzoatopentaamminecobalt(III) from $\gamma$ and electron pulse, 25:54669
effects on radiolysis of N-acetylglycine, 25:54650
neutron spectra in solid anhydrous, time dependence following fast pulses, 25:56629
radiolysis at 0.1 to 760 Torr, kinetic study of species formed during electron pulse, 25:54661

AMPHIBIA
Leptodactylus occelatus, radiation effects on water distribution and permeability in muscle cells of, x, 25:55323

AMPLIFIERS
design of d-c, for weak currents, 25:55071 (CEA-N-1433)

ANALYTICAL CHEMISTRY
book: Ion Exchange in Analytical Chemistry, 25:54397

ANGIOSPERMIDAE
Allium sp., radiation effects on sprouting, spoilage molds, and sugar content of bulbs of, $\gamma$, 25:55354
Arachis hypogaea, radioinduced mutations for improved yield of, x, 25:55181
Beta sp., radiation effects on chromatin and RNA polymerase activity in, effects of dose and washing on $\gamma$, 25:55351
Citrus sp., radioinduced mutations for increased resistance to low temperature, x, 25:55181
Crepis capillaris, radioinduced chromosome aberrations in seeds of, effects of time of administration on additive or protective effects of ethylenimine on x, 25:55260
Crepis capillaris, radioinduced mutations in seeds of, effects of water content on $\gamma$ and x, 25:55167
Crepis capillaris, radioinduced premutational oxygen-sensitive changes in chromosomes of seeds of, $\gamma$, 25:55168
Hordeum distichon, radioinduced mutations in seeds of, effects of ethylenimine on x, 25:55261
Hordeum sp., radioinduced chromosome aberrations in seeds of, method for metaphase analysis of x, 25:55175
Hordeum sp., radioinduced mutations in, effects of developmental stage and dose on, 25:55190
Linum sp., radioinduced mutations for chlorophyll in, dose dependence of $\gamma$, 25:55177
Phaseolus limensis, radiation effects on yield of, effects of developmental stage on $\gamma$, 25:55349
Pyrus sp., selection of compact x-radioinduced mutants of, for grafting on rootstocks, 25:55174
Raphanus sativus, radioinduced inhibition of seed germination in, effects of very high dose rate on RBE for x, 25:55350
Tradescantia sp., radiation effects on pollen and stamen hairs of, RBE for neutron, 25:55206 (NYO-2740-8, pp 147-219)
Triticum aestivum, radioinduced mutations in seeds of, effects of ethylenimine on x, 25:55261
Triticum aestivum, respiration rate in seedlings of, effects of age, light, radiation, and temperature on, 25:55348
Triticum durum, radioinduced chromosome aberrations in seeds of, effects of prolonged storage on repeated-exposure x, 25:55169
Triticum sp., strontium-90 content of seeds of hybrid, in relation to phenotype, 25:55223
Vicia faba, chromosome translocation induction in, comparison of effectiveness of ionizing radiation and chemicals for, 25:55191
Zea mays, radioinduced mutations in, effects of developmental stage and dose on, 25:55190

ANGIOTENSINS
radioimmunoassay in blood plasma of man with hypertension and with renal transplants, 25:55141

ANIMALS
strontium-90 toxicity to, extrapolation to man of data for long-term, 25:55319 (UCD-472-118)

ANTARCTIC REGION
strontium-90 content of snow in, 1955 and 1964 measurements of, 25:54788

ANTENNAS
receiving properties of asymmetric cylindrical, 25:57271 (SC-RR-710475)
response of short monopole, on skin of finite cylinders, 25:57273 (SC-RR-710519)

ANTHRACENE
radiation effects on crystals and polymeric solutions of, $\alpha$, 25:54600(R) (UCLA-34-P-88-32)

ANTIBODIES
cross reactivity of antimyelin, sequential absorption analysis of, 25:57255 (ORO-3195-43)
cross reactivity of antisynaptosome, sequential absorption analysis of, 25:57254 (ORO-3195-42)
production of human thyroid, following technetium-99m scintiscanning, immunofluorescent tests on, 25:55292

ANTIMONY
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
determination by x-ray counting after neutron activation, 25:54692(R) (NYO-3417-15)
determination in lead-base alloys by neutron activation and radiochemical separation, 25:54515
determination of trace amounts of, in air by neutron activation and $\gamma$ spectrometry, 25:54456
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation simultaneously with arsenic from aqueous solutions by solvent extraction using tribenzylamine, 25:54515

ANTIMONY ALLOYS AND SYSTEMS
Ag--Sb, superconductivity in hcp phases of, (E), 25:56096
Cu--Sb, superconductivity in, with $DO_3$ structure, (E), 25:56096
In--Sb, radioinduced defects and electron mobility changes in InSb single crystals, annealing of fast-neutron, 25:56317

ANTIMONY ISOTOPES
energy levels of, shell-model calculations with Tabakin potential, (T), 25:56666
yields from uranium proton fission, (E), 25:56757

ANTIMONY ISOTOPES Sb-121
energy levels from tin-120 proton elastic scattering, spectroscopic factors for isobaric analog, (E), 25:56769

XUM

ANTIMONY ISOTOPES Sb-124
beta decay of, β-γ angular correlations and matrix elements for nonunique first-forbidden, (E), 25:56776
ANTIMONY ISOTOPES Sb-125
energy levels from tin-124 proton elastic scattering, spectroscopic factors for isobaric analog, (E), 25:56769
ARCHAEOLOGICAL SPECIMENS
age of, effects of geophysical variables on fission track method for estimation, 25:54760
ARCTIC REGION
radio-wave propagation across polar cap during PCA, proton anomaly of very long, (E), 25:55996
ARGON
electric conductivity of, at pressure of 50 atm, (E/T), 25:56139
gold-198 ranges in, from gold-197(n,γ) recoil, 25:56269
helium-ion range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
meson (μ⁻) reactions with, x-ray emission from, (E), 25:55830
nuclear charge radius of, determination from x-ray emission in argon--meson (μ⁻) reactions, 25:55830
oxygen-ion reactions at 10 to 40 MeV with, cross sections for electron capture in, 25:55869
oxygen-ion reactions at 7 to 40 MeV with, cross sections for electron capture and loss in, (E), 25:55870
plasma of, analytical and physical properties of microwave-excited, (E), 25:56158
plasma of, electron velocity distribution function for homogeneous, (T), 25:56186
plasma of, electron--ion recombination rate coefficients for, (T), 25:56182
plasma of, instabilities and turbulence in arcs in magnetic fields, (E/T), 25:56196(R) (N-71-25028)
plasma of, Langmuir probe performance for diagnostics of shock-heated, (E/T), 25:56144
plasma of, spectroscopic diagnostics of arc, (E/T), 25:56139
plasma of, temperature distribution and thermal conductivity in arc, (E), 25:56140
plasma of, transport properties of partially ionized, (T), 25:56183
proton range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
proton reactions at 20 to 120 keV with, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
scattering by nitrogen molecules, rainbow oscillations in differential cross sections for, (E), 25:55852
solubility in liquid sodium at 330 to 550°C, 25:54583
ARGON IONS
atomic oscillator strength for Ar VIII, 3d--4p transition, (E/T), 25:55776
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
reactions with metal surfaces and neodymium oxides at 30 keV, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
ARGON ISOTOPES Ar-38
abundance in Sikhote--Alin meteorite, (E), 25:55671
ARGON ISOTOPES Ar-40
diffusion from meteorites, lunar materials, and terrestrial rocks, (E), 25:55672
lithium-6 reactions (Li-6,d) at 22 MeV, angular distributions for, (E), 25:56714
neutron reactions (n,α) at 14.4 MeV, α spectra, cross sections, and Q-value for, (E), 25:56718
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
ARGON SYSTEMS
Ar--H, meson(μ⁻) reactions with, meson transfer from hydrogen to argon and x-ray emission in, (E), 25:55830
ARKANSAS NUCLEAR ONE POWER REACTOR
design parameters of, revised and additional data on, 25:56959 (DOCKET-50313-31)
operations aspects of, revised and additional data on, 25:56959 (DOCKET-50313-31)
personnel for, technical qualifications of operating, 25:56959 (DOCKET-50313-31)
ARSENIC
determination by x-ray counting after neutron activation, 25:54692(R) (NYO-3417-15)
determination in lead-base alloys by neutron activation and radiochemical separation, 25:54515
determination in meteorites and meteoritic phases by neutron activation and γ spectrometry, 25:54477
determination in yttrium oxide by emission spectrometry, 25:54419
separation simultaneously with antimony from aqueous solutions by solvent extraction using tribenzylamine, 25:54515
ARSENIC ISOTOPES As-75
energy levels and transitions from neutron inelastic scattering, (E), 25:56752(R) (SUNI-14)
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
ASPHALT
density of highway surface, tabulation of US state highway departments' uses of radiometric gages for measuring, 25:54907
ASTRON DEVICE
plasma equilibrium calculational methods for, 25:56207
ASTRONAUTS
radioinduced light flashes in eyes of, following exposure to cosmic mesons (μ), 25:55341
ASTROPHYSICS
supermassive objects in, (T), 25:55798
ATLANTIC OCEAN
plutonium-239 content of organisms of, 25:55161
ATMOSPHERE
density of neutral, above 100 km, 25:57274 (SC-RR-710541)
diffusion and deposition of iodomethane gas, molecular iodine gas, and uranin dye in, 25:54795
diffusion in Casaccia, Italy, smoke plume photography studies of, 25:54783
diffusion of plumes and puffs in, krypton-85 tracer studies of, 25:54908
fallout monitoring in Swiss, following Dec. 1968 and Sept. 1969 Chinese nuclear explosions, 25:54791
fallout monitoring of ground-level, in north Germany and north Norway during 1970 and 1971, 25:54785
gravity-wave generation in, by solar eclipse, (E/T), 25:56016
ion balance in, effects of natural radioactive products on, 25:54786
ion mass and mobility in, methods for measuring, 25:54800
ionization by terrestrial gamma radiation, vertical distribution of, 25:54790
ionization in, produced by penetration of energetic charged particles, (T), 25:55983
krypton-85 content of global, forecasts to year 2000 of, 25:54781(T) (JPRS-53174)
plutonium particle release to, effects of thermal stress on nature and quantity of, 25:54546
quality index for, 25:57246 (ORNL-NSF-EP-8)
radioactivity in, measurements for determining strontium-89/strontium-90 fractionation factor in fallout, 25:54803
radioactivity monitoring in, data processing system for, 25:55006
radioactivity monitoring in, review of current methods for, 25:54784
radon concentration in, electrostatic sampler and detector system for measuring, 25:55032
radon content of Plovdiv, Bulgaria, during 1966 to 1969, 25:54792
radon decay products in ground-level, model for propagation of, 25:54787
radon washout from, method for measuring, 25:54802
ATMOSPHERES
management and surveillance of inert-gas, for ANL fuels center, 25:54945 (CONF-710401-, pp 98-105)
ATMOSPHERIC PRECIPITATION
radiation monitoring in environs of Ames Research Reactor during 1971, 25:55152 (IS-2658)
ATOMIC BEAMS
detection of, surface-barrier detector for, 25:55007(P)
ATOMIC ENERGY
engineering consultants in, Canadian, 25:57211 (70-CNA-657)
ATOMIC ENERGY, LEGAL ASPECTS
handbook on nuclear law in Latin America, 25:55252 (NP-18752)
legislation for biomedical addition to Los Alamos Meson Physics Facility, 25:55299 (LA-4490)
regulations for medical irradiation facilities, review of Japanese, 25:54852
regulations for overland shipping of sealed gamma sources, description of French, 25:54976
treaties for control of nuclear weapons, history and principles of, 25:54829
ATOMIC PHYSICS
energy states and statistics of atomic systems, 25:56397
quantum theory of spontaneous emission in presence of external radiation, 25:55883
research at University of North Carolina April 1 to June 30, 1971, 25:56748(R) (ORO-2408-45)
wave functions for, calculation of, 25:55889
ATOMIC STRUCTURE
theory of, survey of use of Lie groups in, 25:55882 (NYO-1447-64)
ATOMS
electron configurations in, highly restricted partitions and angular-momentum states of equivalent-particle, (T), 25:56848
electron correlation energies in, methods for calculation of, 25:55890
electron reactions at low energies with, review of total and momentum-transfer cross sections for, (E), 25:55856
electron reactions with, computer control system for studying, 25:55094
electron scattering by, computational procedures for multichannel resonances in, 25:55861
electron scattering by, polarized-orbital method for, 25:55871
energies of s eigenstates of, calculation using static screened Coulomb potential, 25:55884
energy levels of, perturbation theory for decaying,

25:55886
energy-level transitions in, probability of radiative Auger-type, (T), 25:55888
energy-level transitions of Z = 57 through 92, probabilities of L x-ray, (E), 25:55823
neutron elastic scattering by, analysis of many-particle distribution functions in Sunakawa model for multiple, (T), 25:56637
nuclear charge distribution of electronic and muonic, relation of isotope shifts to, 25:55821
perturbation energies and wave functions for, error bounds for nth-order Rayleigh--Schroedinger, 25:55891
photon emission from systems of N identical two-level, rotating-wave approximation and spontaneous, (T), 25:55887
photon emission from systems of N identical two-level, many-body aspects and inhomogeneous broadening in master-equation approach to spontaneous, 25:55885
photon emission in presence of external radiation, spontaneous, (T), 25:55883
spectra of Z = 20 through 94, relative intensities of K x-ray emission lines of, (E), 25:55827
ATPase
radiation effects on activity of rat bone marrow, effects of dose on x, 25:55330
AURORAE
activity in, correlation patterns with radiation-belt electron intensity, (E/T), 25:55979
arcs in nighttime, simultaneous spectrographic triangulation on Mar. 23-24, 1969 of SAR and hydrogen, (E), 25:55971
charged-particle density and precipitation in polar-cap, sounding-rocket observations of, (E), 25:56031
creation of elecron-beam-produced artifial, magnetospheric magnetic-field configuration from, (E), 25:55961
occurrence over Alaska, Feb. 14-15, 1958, form-position, orientation, and motion plots of, (E), 25:55954
production of artificial, ground-based optical observations of electron-beam, 25:55962
spectra in, enhancement and excitation mechanisms of oxygen infrared, (E/T), 25:56018
AURORAL ZONE
electric field in nighttime and daytime, Langmuir-probe measurement of vector, 25:55960
electromagnetic-wave emission in relation to auroral cosmic-noise absorption, vlf, (E/T), 25:55999
magnetic substorm in, over Alaska associated with plasma-sheet behavior, (E), 25:55955
magnetic substorm structure in, effect of intensification of westward electrojet current on, (E/T), 25:56029
magnetic substorms in, relation to generation of magnetospheric sudden commencements, (E/T), 25:56026
proton precipitation in and radar echoes from, simultaneous observations of, (E), 25:55963
radio-wave propagation across, anomaly of very long, (E), 25:55996
AVES
Gallus sp., radiation effects on blood vessels in, in relation to mechanisms of acute injury, whole-body γ, 25:55324
Gallus sp., radiation effects on leukosis and Rous sarcoma frequency in, effects of sex on x, 25:55329
Gallus sp., radioinduced cardiovascular anomalies in embryos of, additive effects of hypothermia on x, 25:55333

## B

BACKGROUND RADIATION
levels in environment of nuclear power plants, effects of long-term release of radioactivity on, 25:55200
BACTERIOPHAGES
lambda, radioinduced inactivation of, role of DNA cross-links in sensitizing effects of psoralen on uv, 25:55361
T4, radioinduced mutations in, recombination in mutant crosses following uv, 25:55173
BAILLY POWER REACTOR, UNIT 1
design parameters of, requested additional information on, 25:56971 (DOCKET-50367-22)
design parameters of, revised and additional data on, 25:56970 (DOCKET-50367-21)
operations aspects of, requested additional information on, 25:56971 (DOCKET-50367-22)
operations aspects of, revised and additional data on, 25:56970 (DOCKET-50367-21)
BALANCES
readout device for use in radioactive environments, design of remote-, 25:55080 (TRG-Report-2086)
BARIUM
analysis of minerals containing, for strontium by atomic absorption spectroscopy, 25:54413
determination in feldspar by neutron activation and γ spectrometry, 25:54494
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
distribution between bismuth--lead eutectic and MSBR fuel solvent, reductive extraction, 25:54534 (ORNL-4717, pp 43-56)
separation from other alkaline earths by ionophoresis on filter paper and poly(vinyl alcohol), 25:54725
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
BARIUM ALLOYS AND SYSTEMS
Ba--Na, phase diagram of, 25:55526
Ba--Pr-base, phase diagram of, 25:55567
BARIUM FLUORIDES
positron lifetimes in, empirical model for calculation of, 25:55834
BARIUM ISOTOPES Ba-134
alpha reactions (α,n) at 15 to 28 MeV, superconductivity-model calculations of isomeric-cross-section ratios for, (T), 25:56765
BARIUM ISOTOPES Ba-138
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
proton elastic scattering with isobaric analog excitation, shell-model analysis of, (E/T), 25:56769
BARIUM ISOTOPES Ba-140
determination as measure of fast neutron flux, standard for, 25:54444
BARIUM SULFATES
radioinduced paramagnetic centers in doped crystals of, EPR and annealing of gamma, 25:56339
BARYONS
coupling constants between pseudoscalar mesons and, in SU(3) strong coupling baryon bootstrap model, 25:56503
equation of state for ultradense matter of, (T), 25:55689
interactions with pseudoscalar mesons, tables of coefficients for partial-wave analysis of vector meson and 1/2+ baryon production in, (T), 25:56501 (RHEL/R-224)
mass relations in broken SU(3) symmetry, 25:56477
model for, pseudovector isospinor heavy-boson, 25:56477
BARYONS, RESONANCE
reactions with stable and unstable hadrons, kinematic study of, (T), 25:56474 (FRNC-TH-63)
BARYONS, RESONANCE (N*)
mass and width of complex-spin negative-mass-squared tachyon, in angular distributions of π + N charge-exchange interactions at 5.9 to 18.2 GeV/c, (T), 25:56500 (ORO-3992-18)
mass and width of N(1470) in four-prong π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56428 (IFA-HE-75)
mass and width of negative-mass-squared, in π− + p → π0 + n interactions at 5.9 to 18.2 GeV/c, (T), 25:56499 (ORO-3992-8)
production in K+ + p interactions at 10 GeV/c in hydrogen bubble chamber, review of, (E), 25:56435
production of complex-spin negative-mass-squared tachyon, in angular distributions of π + N charge-exchange interactions at 5.9 to 18.2 GeV/c, (T), 25:56500 (ORO-3992-18)
production of Δ(1236) and N(1518) in n + p → p + n interactions at 8 and 19 GeV/c, spark chamber study of, (E), 25:56415 (NP-18888)
production of Δ(1236) in e + n interactions in e + d interactions at high energies, cross sections for, (E), 25:56405 (DESY-71/33)
production of Δ(1236), Δ(1640), N(1470) in four-prong π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56428 (IFA-HE-75)
production of Δ++ in π− + p → π− + Δ++ + π− and p + p → p + Δ++ + π− interactions, Cherenkov mechanism for cross section behavior for, (T), 25:56498 (IFA-HE-76)
production of N(1470) and N(1688) in n + p → 2p + π− interactions at 2 to 30 GeV, Reggeized one-pion-exchange model for diffraction, (T), 25:56521 (JINR-P1-5975)
production of negative-mass-squared, in π− + p → π0 + n interactions at 5.9 to 18.2 GeV/c, interpretation of angular distribution for, (T), 25:56499 (ORO-3992-8)
BARYONS, RESONANCE (Y*)
mass and width of Λπ+(2000) enhancement in π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56427 (IFA-HE-73)
production of Σ+(1385), Σ-(1385), and Λπ+(2000) and ΛK(1800) enhancements in π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, cross sections for, (E), 25:56427 (IFA-HE-73)
spectra of, harmonic oscillator quark model for, 25:56507
BASALT
age of, use of neutron activation in argon--potassium method of estimation of, 25:54765
analysis of Columbia River, by activation and γ spectrometry, 25:54460
thorium content in Australian and Hawaiian, 25:54495
uranium content in Australian and Hawaiian, 25:54495
BEAVER VALLEY POWER REACTOR, UNIT 1
effluents from, effects on environment of chemical, radioactive, and thermal, 25:56962 (DOCKET-50334-25)
site for, geological, hydrological, and meteorological data for, 25:56962 (DOCKET-50334-25)

XUM

BELLOWS
corrosion by liquid sodium of stainless steel, 25:57109 (ANL-7771)
BENZENE
neutron diffusion constant and cooling coefficient for, calculation using modified classical monatomic gas model, (T), 25:56631
radiation effects on sorption on magnesium sulfate incorporating sulfur-35, gas chromatographic studies of, 25:54603
radiolysis of aqueous solutions of, 25:54631 (CONF-700652-(Vol.3), pp 601-48)
reactions of solid, with carbon-14 ions at 5 to 100 eV, hydrocarbon yields from, 25:54703
reactions of solid, with carbon-14 ions at 5, 31, and 100 eV, partial degradation of carbon-14-labeled 1,3,5-cycloheptatriene from, 25:54702
BENZOIC ACID
complexes with ammonia and cobalt perchlorates, radiolysis of, oxidation by hydroxyl radical of benzoatopentaamminecobalt(III) from γ and electron pulse, 25:54669
BERKELIUM
purification by oxidation and solvent extraction, 25:54671 (ORNL-4682, pp 114-32)
BERKELIUM ISOTOPES Bk-249
energy-level transitions in, nuclear structure effects on internal conversion of M1, 25:56756
BERKELIUM OXIDES
decomposition oxygen pressures over nonstoichiometric samples of, at 852 to 1150°C and $10^{-7}$ to $10^{-20}$ atm, 25:55428 (BNWL-B-108)
BERYLLIUM
abundance in solar atmosphere, (E/T), 25:55750
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination in rocks by alpha activation and prompt γ counting, 25:54467
mechanical properties of sheets of, relations with microstructure, 25:55510
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
x-ray scattering by, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
BERYLLIUM ALLOYS AND SYSTEMS
porosity of, effects of annealing and crystallization on micro-, 25:55462
Be--Cu-base, microstructure of, potentiostatic studies on, 25:55555
Be--Cu-base, radiation effects on aging and precipitation in, neutron, 25:55583
Be--Cu-base--Ni, microstructure of, potentiostatic studies on, 25:55555
Be--Fe-base, phase transitions in 400°C annealing of, Moessbauer-effect study of, 25:56378
BERYLLIUM FLUORIDES
$BeF_2$--$CeF_3$--LiF, phase equilibria in, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF, thermodynamics of mixing in molten, electrochemical measurements of, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF--$ThF_4$, liquidus temperature of, 25:54534 (ORNL-4717, pp 43-56)
$BeF_2$--LiF--$ThF_4$, plutonium trifluoride solubility and absorption spectra in molten, effects of oxide on, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of protactinium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of uranium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$BeF_2$--NaF, electric conductivity of molten, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--NaF, glass transition temperatures of molten, 25:54532 (ORNL-4717, pp 1-27)
BERYLLIUM IONS
energy levels of $Be^{2+}$, positions and widths of autoionizing, (T), 25:55820
x-ray scattering by Be II, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
BERYLLIUM ISOTOPES Be-7
production in alpha reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
separation from rainwater by countercurrent electrophoresis, 25:54742
BERYLLIUM ISOTOPES Be-8
energy levels of, microscopic description using cluster model, 25:56654 (LYCEN-7104, S13.1-11)
BERYLLIUM ISOTOPES Be-9
abundance in Galaxy, (T), 25:55781
alpha reactions (α,2α) at 42.8 and 49.2 MeV, analysis using impulse approximation, (E/T), 25:56674
energy levels of, microscopic description using cluster model, 25:56654 (LYCEN-7104, S13.1-11)
helium-3 reactions (He-3,n) at 8 MeV, neutron spectra from, (E), 25:56679
neutron energy distribution in, transition region function for, (T), 25:56622
neutron thermalization in polycrystalline, Monte Carlo method for calculating, (T), 25:56619 (RT/FI-(70)49)
BERYLLIUM OXIDES
properties of oxide-strengthened refractories of, mechanical and thermal, 25:55621
BETA DECAY
induced tensor contribution in allowed, calculation using impulse approximation, (T), 25:56861
parity nonconservation in, effect on γ circular polarization, 25:56855
second-class currents in, G-parity properties of, (T), 25:56854
BETA PARTICLES
detection in water, development of Cherenkov detectors for, 25:55031
dose distribution in bones of beagle dogs following strontium-90--yttrium-90 ingestion, 25:55319 (UCD-472-118)
dose to organs of mice following inhalation of niobium-95 and zirconium-95, effects of chemical form of inhaled particles on, 25:55125
effectiveness for therapy of squamous epithelial cancer of mouth in comparison with ametohepazon, gamma radiation, 5-fluorouracil, and radium, 25:55345
monitoring in atmosphere at Plovdiv, Bulgaria during 1966 to 1969, 25:54792
BETA SOURCES
activity of pure, liquid scintillators for absolute measurement of, 25:54697
BETA SPECTROMETERS
design of electron--positron pair, for neutron capture spectroscopy, 25:55040 (NP-18994)
energy distributions in electrostatic, calculations of, 25:55084
performance and testing of electrostatic, 25:55083
spectra from electrostatic, method for evaluation of, 25:55082
BIBLIOGRAPHIES
on electrical discharge machining and electrochemical machining, 25:54834 (WAPD-331)
on Finnish radiology, 25:55274
on national and international nuclear standards, 25:57091 (ORNL-NSIC-94)
on production and industrial uses of radioisotopes, April through June 1971, 25:54894 (ORNL-IIC-37(Pt.2))
on radiative lifetimes, 25:57215 (CEA-Bib-198)
on science and society, 25:57294 (WASH-1182)
BIG ROCK POINT POWER REACTOR
emergency core cooling system for, performance evaluation and design modifications for, 25:56935 (DOCKET-50155-92)
BINDING ENERGY
calculation of nuclear, using energy-density functional, 25:56853
BIOCHEMISTRY
tracer techniques in, 25 year summary of, 25:55107
BIOLOGICAL MATERIALS
analysis for lead by irradiation with 30-MeV α particles and track registration of α particles from decay of resulting polonium, 25:54452
analysis for trace mercury by neutron activation and radiochemical separation, 25:54508
analysis of fluid, for iodine by neutron activation, ion exchange, and γ spectrometry, semi-automated, 25:54516
BIOLOGICAL MODELS
development for promethium-147 metabolism in man and swine, 25:55108 (BNWL-SA-3747)
use of mathematical, for analysis of kinetics of radioligand assays, 25:55145
BIOLOGY
research program on marine, Princeton Univ, 25:57243(R) (NYO-3406-22)
tracer techniques in, 25 year summary of, 25:55107
BIOPHYSICS
research at Columbia Univ., July 1, 1971, 25:55205(R) (NYO-2740-8)
BIPHENYL, CHLORO-
determination in rat adipose tissue by neutron activation and radiochemical separation, 25:54500
BISMUTH
analysis for chlorides, photometric, 25:54407
determination in standard rocks and quartzes by neutron activation and radiochemical separation, 25:54454
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in silicate rocks by neutron activation and radiochemical separations, 25:54489
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
solute distribution in, on crystallization in reductive extraction of metals from molten fluoride mixtures, 25:54534 (ORNL-4717, pp 43-56)
solvent properties for actinides and lanthanides, 25:54712 (ORNL-4682, pp 1-38)

XUM

BISMUTH ALLOYS AND SYSTEMS
Bi--Cd--Sn, electric transport of tin isotopes in 300°C melts of, 25:56349
Bi--In, superplastic properties of eutectic, 25:55456
Bi--Li, solvent properties for rare earths and thorium, 25:54712 (ORNL-4682, pp 1-38)
Bi--Mn, properties as extractant for rare earths from MSBR fuel solvent, 25:54534 (ORNL-4717, pp 43-56)
Bi--Pr-base, phase diagram of, 25:55567
Bi--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
BISMUTH ISOTOPES
energy levels of neutron-deficient, survey of data on low-lying, 25:56798
BISMUTH ISOTOPES Bi-204
energy-level scheme from polonium-204 decay, 25:56798
BISMUTH ISOTOPES Bi-209
alpha fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
alpha reactions (α,p) at 26.5 to 60 MeV, angular distributions, excitation functions, and recoil ranges for, (E), 25:56799
carbon-12 fission at 62 and 82 MeV, liquid-drop analysis of, (E/T), 25:56786
energy levels from lead-208 proton elastic scattering, spectroscopic factors for isobaric analog, (E), 25:56769
energy levels of, shell-model analysis of nonnormal, (T), 25:56763
helium-3 fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
BISMUTH ISOTOPES Bi-214
content in sand and clay soils, performance of airborne gamma spectrometer system for measuring, 25:54768
effects on ion balance in atmosphere, 25:54786
BITUMINOUS MATERIALS
radioactive waste fixation in, mixer-evaporator and plant design for, 25:54981
BLACK BODY RADIATION
theory for, physical dimensions in generalized, (T), 25:56453 (ORO-3992-42)
BLACK HOLES
parameters of, (T), 25:55803
relaxation of, (T), 25:55803
BLOOD
alpha detection in, of miners using nuclear emulsions, 25:55236
flow in liver of dogs, use of xenon-133 clearance technique in measurement of, 25:55123
radiation effects on human, use of additional treatment with iron and steroid preparations for reducing therapeutic, 25:55303
radiation effects on pulmonary circulation in rabbits, acute x, 25:55327
BLOOD PLASMA
angiotensin radioimmunoassay in human, effects of hypertension and renal transplants on, 25:55141
radioimmunoassay of arginine vasopressin in human, use of double antibody technique for, 25:55142
strontium-90 content of, in beagle dogs following prolonged ingestion, 25:55319 (UCD-472-118)
BLOOD SERUM
analysis for iodine by neutron activation and radiochemical separation, 25:54509
analysis for thyroxine and triiodothyronine by activation and ion exchange, 25:54453
triiodothyronine radioimmunoassay in human, effects of hyperthyroidism and hypothyroidism on, 25:55146
BLOOD VESSELS
radiation effects on, in chickens in relation to mechanisms of acute injury, whole-body γ, 25:55324
radioinduced anomalies in chick embryo, additive effects of hypothermia on x, 25:55333
scanning of cerebral, comparison of angiography with iodine-131 for, 25:55289
scanning of human pulmonary, for diagnosis of pulmonary hypertension, effectiveness of two-phase scintigraphy method with iodine-131-labeled albumen and technetium-99m-labeled albumen for, 25:55284
BODY FLUIDS
analysis for iodine by neutron activation and radiochemical separation, 25:54509
BOHUNICE POWER REACTOR, UNIT 1
fuel assemblies for, hydrodynamics of rod type, (E), 25:56880 (ZJE-104)
fuel elements for, irradiation testing of tubular finned, 25:57050 (UJV-2551-RT)
BOHUNICE POWER REACTOR, UNIT 2
fuel assemblies for, hydrodynamics of rod type, (E), 25:56880 (ZJE-104)
BOILERS
design of forced flow steam, heated by pressurized water from nuclear reactors, 25:54836(P)
heat transfer in forced-convection water, effects of surface crud deposits on, (E), 25:54861 (AEEW-R-705)
BOILING
detection in reactors, sensitivity of methods for, (E), 25:56996
effects on crud deposition, 25:57034
heat transfer during subcooled, measurement of burnout, 25:54871 (IFA-TR-58)
initiation in superheated sodium, effects of heating surface material and roughness on, (E), 25:54868(T) (EURFNR-897)
model for wick-, in porous magnetite deposits on heating surfaces, (T), 25:54862 (AEEW-R-711)
occurrence of film, on surfaces immersed in boiling high-boiling-point organic compounds, 25:54879
BONE MARROW
alpha detection in, of miners using nuclear emulsions, 25:55236
radiation effects on enzyme activity and hematopoietic tissues in rat, effects of dose on x, 25:55330
radiation effects on hematopoiesis in active, effects of dose fractionation on, 25:55326
BONES
analysis for lead by irradiation with 30-MeV α particles and track registration of α particles from decay of resulting polonium, 25:54452
analysis of diseased and normal human, for calcium, phosphorus, and sodium by neutron activation methods, 25:55106
radiation dose distribution in beagle dog, strontium-90--yttrium-90 β, 25:55319 (UCD-472-118)
radiation effects on beagle dog, estimation of hazards to man from model for long-term low dose radium-226, 25:55319 (UCD-472-118)
radiation effects on calcium metabolism in rat, effects of sex on, 25:55331
radiotherapy of lymphogranulomatosis of, effectiveness of γ and x, 25:55301
scanning of human, use of thulium-167 for, 25:55279
BORATES
borates--boric acid, equilibria at high temperatures, 25:54535 (ORNL-4717, pp 57-82)
BORIC ACID
borates--boric acid, equilibria at high temperatures, 25:54535 (ORNL-4717, pp 57-82)
BORON
abundance in solar atmosphere, (E/T), 25:55750
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination by neutron capture γ spectroscopy, 25:54462
determination by spectroscopy of prompt γ radiation following neutron capture, 25:54451
determination in borate glasses by neutron absorption method, 25:54437(T) (RFP-Trans-82)
determination in glass and tourmaline, by measuresent of prompt proton spectra from (d,p) reactions, 25:56752(R) (SUNI-14)
determination in glass, by simultaneous measurement of scattered α particles and prompt protons, 25:56752(R) (SUNI-14)
determination in semiconductor silicon by alpha or proton activation, 25:54528
determination in yttrium oxide by emission spectrometry, 25:54419
effects on magnetoresistance in graphite, 25:56319
effects on thermal conductivity of polycrystalline graphite, 25:55635
surface wetting of molten, on boron nitride, mechanisms of, 25:55469
BORON CARBIDES
radioinduced defects in polycrystalline, neutron, 25:55650
radioinduced swelling of, development of gas pycnometer for measuring, 25:54599 (ORNL-4717, p 117-24)
BORON FLUORIDES
solubility of gaseous, in fluoride melts, 25:54532 (ORNL-4717, pp 1-27)
BORON IONS
energy levels of $B^{3+}$, positions and widths of autoionizing, (T), 25:55820
x-ray scattering by three- and four-electron, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
BORON ISOTOPES B-10
abundance in Galaxy, (T), 25:55781
abundance in solar atmosphere, (E/T), 25:55750
determination of abundance relative to boron-11, by method using $Rb_2BO_2^+$ ion, 25:54432
deuteron reactions (d,α) at 0.4 to 1.5 MeV with subsequent alpha decay, reaction mechanisms of, (E), 25:56673
deuteron reactions (d,nγ) at 3 MeV, n-γ coincidence spectra from, (E), 25:56752(R) (SUNI-14)
proton inelastic scattering at 3.5 to 5 MeV, excitation functions for, (E), 25:56679
BORON ISOTOPES B-11
abundance in Galaxy, (T), 25:55781
abundance in solar atmosphere, (E/T), 25:55750
determination of abundance relative to boron-10 by method using $Rb_2BO_2^+$ ion, 25:54432
energy levels from intermediate resonances in nitrogen-14 ($n,2\alpha$) reactions, spin assignments for, (E), 25:56680
helium-3 inelastic scattering at 26 MeV, helium-3 spectra from, (E), 25:56679
helium-3 reactions (He-3,t) at 26 MeV, triton spectra

XUM

from, (E), 25:56679
BORON NITRIDES
evaporation behavior at 1500 to 1800°K, 25:55607 (JUL-739-PC)
formation heat of, 25:55607 (JUL-739-PC)
wetting of surfaces of, by molten aluminum, boron, chromium, silicon, and titanium, mechanisms of, 25:55469
BORON OXIDES
density, enthalpy, and viscosity of molten $B_2O_3$, to 2000°C, 25:55625
BOSONS
Bose--Einstein condensation in one and two dimensions, possible existence of, 25:56049
existence of pseudovector isospinor heavy, 25:56477
ground-state energy of many-particle system of, 25:56050
hydrodynamics of Bose fluid in terms of action-angle variables in quantum statistics, 25:56051
production from intermediate nucleon isobar decay in nucleon reactions with light nuclei, model for, 25:56525
BOSONS, INTERMEDIATE-VECTOR
existence of spin-0 charged, indefinite metric for, (T), 25:56547 (NYO-1932(2)-200)
production in ν + p interactions in proton electromagnetic field at 30 to 400 GeV, total cross sections for, (T), 25:56473
BRAIN
calcium-45 uptake by microsomes, synaptosomes, and synaptic vesicles of rat, 25:55120
fractionation of, cellular and subcellular, 25:57259 (ORO-3195-47)
radiation effects on olfactory bulb cells of rat, electron microscopy of x, 25:55336
radioactivity distribution in neuronal and glial-enriched fractions of, following in vitro and in vivo administration of tritium-labeled leucine, 25:55119
respiratory rate of slices of rat, in $D_2O$, 25:55121
scanning of blood vessels in human, comparison of angiography with iodine-131 for, 25:55289
scanning of human, for diagnosis of neurological disorders, role of prescanning cerebral angiography and pneumography in, 25:55281
scanning of human, using chromium-51 or ytterbium-169-labeled EDTA, 25:55272
transplantation of γ-irradiated bovine fascia in dogs, for filling dura mater defects, 25:55148
BRASS
mechanical properties of chemical vapor deposited rings of, design of apparatus for testing, 25:55440
BREMSSTRAHLUNG
buildup factor dependence on position of shielding between source and detector, 25:56280
dose field parameters for high energy, effects of electron component of beam on, 25:55209
effects on human skin following therapy of bone sarcomas, pathological, 25:55338
production in n + p interactions at 14.1 MeV, relativistically covariant models for cross sections for, (T), 25:56526
production in polarized and unpolarized electron scattering by nuclei with multipole moments, effects of nuclear structure on, (T), 25:56862
reactions (γ,f) with plutonium-239 and uranium-238, delay time for isomeric fission in, (E), 25:56801
BROMINE
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
effects on thermal conductivity of polycrystalline graphite, 25:55635
BROMINE ISOTOPES Br-79
energy levels from neutron inelastic scattering, spin--parity assignments for, (E), 25:56698
energy-level transitions from neutron inelastic scattering, branching ratios for, (E), 25:56698
BROMINE ISOTOPES Br-80
reactions of recoil isomeric, with bromocyclopropane, formation of allyl bromide from isomerization, 25:54690
BROMINE ISOTOPES Br-81
energy levels from neutron inelastic scattering, spin--parity assignments for, (E), 25:56698
energy-level transitions from neutron inelastic scattering, branching ratios for, (E), 25:56698
BROMINE ISOTOPES Br-87
beta decay of, high-energy γ transitions from neutron-unbound states in, (E), 25:56703
BROMINE SYSTEMS
Br--cyclopropane, neutron reactions (n,γ) with, products from reactions of recoil bromine-80m from, 25:54690
BROWNS FERRY POWER REACTOR, UNIT 1
radioactive effluents from, release limits for gaseous, 25:56980
BROWNS FERRY POWER REACTOR, UNIT 2
radioactive effluents from, release limits for gaseous, 25:56980
BROWNS FERRY POWER REACTOR, UNIT 3
radioactive effluents from, release limits for gaseous, 25:56980
BRUNSWICK POWER REACTOR, UNIT 1
emergency core cooling system for, performance requirements for, 25:56960 (DOCKET-50324-22)
BRUNSWICK POWER REACTOR, UNIT 2
emergency core cooling system for, performance requirements for, 25:56960 (DOCKET-50324-22)
BUGEY REACTORS (EDF-5)
pressure vessel for, testing of model of, 25:56886
BUILDING MATERIALS
book: Corrosion in Nuclear Applications, 25:55388
radiation effects on space-vehicle, studies of nuclear and space, 25:55576 (N-71-25034)
BULGARIA
radiation monitoring of atmosphere at Plovdiv, during 1966 to 1969, 25:54792
BUTADIENE
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
1,3-BUTADIENE
radiation effects on single crystals of, ESR studies of radicals from γ, 25:54639
radiation effects on, adsorbed on silica gel, ESR studies of radicals from γ, 25:54640
BUTANE
radiolysis of liquid, effects of oxygen and sulfur hexafluoride on yields from γ, 25:54659
radiolysis of mixtures of normal and deuterated, effects of oxygen on yields from γ, 25:54659
butane--$N_2O$, radiolysis of, effects of oxygen on yields of nitrogen from γ, 25:54659
1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-1-(2-THIENYL)-
complexes with iron, spectrophotometric study of, 25:54692(R) (NYO-3417-15)
solvent properties for rare earths, synergistic effects of 2,4-pentanedione on, 25:54731
solvent properties for uranium, 25:54751
BUTYRIC ACID, AMINO-
radiation effects on in vitro rat liver uptake of, γ, 25:55126
BUTYRIC ACID, 2-AMINO-4-(METHYLSELENYL)-
effectiveness of selenium-75-labeled, for scintiscanning of human pancreas, 25:55271(T) (LB/G-3059)
radiochemical purity and stability of selenium-75-labeled, 25:54698

## C

CABLES
design of superconducting energy transmission, 25:56111(P)
production of superconducting energy transmission, method for, 25:56111(P)
CADARACHE REACTORS
loop for Pegase, description of high-temperature in-pile, 25:54840
CADARACHE REACTORS (RAPSODIE)
radiation effects testing in, facilities and equipment for, 25:56997
CADMIUM
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
association equilibria with bromide or chloride in molten calcium nitrate hydrate, 25:54535 (ORNL-4717, pp 57-82)
determination by controlled potential coulometry using rotated mercury cell, 25:54427
determination in fission product mixtures by ion exchange and polarography or β counting, 25:54449
determination in isoquinoline formate by polarography, 25:54421
determination in standard rocks and quartzes by neutron activation and radiochemical separation, 25:54454
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in silicate rocks by neutron activation and radiochemical separations, 25:54489
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
effects of vapors of, on hydrogen isotope exchange at 300 to 500°C, 25:54552
effects on radiolysis of crystalline silver oxalate, 25:54638
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
nuclear quadrupole interaction of cadmium-111 247-keV level in, 25:56363
potential for, method for modeling l = 2 component of, 25:56387
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
CADMIUM ALLOYS AND SYSTEMS
Ag--Cd, oxidation at 600 to 800°C, mechanisms of internal, 25:55381
Ag--Cd, search for superconductivity in fcc phases of, (E), 25:56096
Au--Cd, search for superconductivity in fcc phases of,

(E), 25:56096
Bi--Cd--Sn, electric transport of tin isotopes in 300°C melts of, 25:56349
Cd--Pb, diffusion in molten, kinetics of mutual, 25:55449
CADMIUM IONS
implantation in gallium arsenide at 60 keV, lattice damage induced in, 25:56287
radioinduced reduction in doped alkali-metal halide crystals, magneto-optical study of x-,, 25:56320
CADMIUM ISOTOPES Cd-107
energy levels from indium-107 decay, (E), 25:56759
CADMIUM ISOTOPES Cd-111
nuclear quadrupole interaction of 247-keV level in pure cadmium metal, 25:56363
CADMIUM ISOTOPES Cd-114
deuteron elastic and inelastic scattering at 13.6 MeV, strong-coupling analysis of, (T), 25:56780
energy-level transitions from indium-114 electron-capture decay, effects of Coulomb fragmentation in indium iodides on line profiles of, (E), 25:54696
CADMIUM SULFIDES
defects in wurtzite single crystals of, studies of growth and radioinduced, 25:56286
neutron scattering by crystals of, anomalous transmission from suppression of (n,γ) reaction in resonant, 25:56627
radiation damage in, luminescence and electric resistivity study of thermal-neutron, 25:56307
CADMIUM TELLURIDES
radiation damage in, luminescence and electric resistivity study of thermal-neutron, 25:56307
radiation effects on cathodoluminescence spectrum of, electron, 25:56290
CAFFEINE
radiosensitizing effects on Escherichia coli, effects of temperature on uv and x, 25:55357
CALCITES
analysis for trace elements in sample coexisting with dolomite by neutron activation and γ spectrometry, 25:54497
CALCIUM
analysis for calcium-44/calcium-40 by neutron activation, 25:54492
content of diseased and normal human bones, neutron activation determination of, 25:55106
determination by nondestructive alpha activation, 25:54522
determination in stony meteorites by proton and bremsstrahlung activation, 25:54466
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
determination in yttrium oxide by emission spectrometry, 25:54419
radiation effects on rat bone metabolism of, effects of hormonal mechanism and sex on, 25:55331
separation from other alkaline earths by ionophoresis on filter paper and poly(vinyl alcohol), 25:54725
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
sorption by soils, effects of soil exchange sites on differential, 25:54778
CALCIUM ALLOYS AND SYSTEMS
C--Ca--Ce--Mg--Si, analysis for tellurium by gravimetry, 25:54416
CALCIUM CARBONATES
decomposition oxygen pressures over test samples of, at high temperatures and low pressures, 25:55428 (BNWL-B-108)
CALCIUM FLUORIDES
positron lifetimes in, empirical model for calculation of, 25:55834
CALCIUM ISOTOPES Ca-40
determination of abundance of, relative to calcium-44 by neutron activation, 25:54492
meson ($\mu^-$) capture by, photon asymmetry for radiative, (E), 25:56705
neon-20 reactions (Ne-20,O-16) at 63 and 73.7 MeV, cross sections for, (E), 25:56721
photon reactions (γ,n) with, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
proton elastic scattering by, phase-shift analysis of polarization effects in, (T), 25:56678
proton reactions (p,2p) at 600 MeV, distorted-wave impulse-approximation analysis of cross sections from, (E/T), 25:56711
proton reactions (p,2p) at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
CALCIUM ISOTOPES Ca-41
energy levels from potassium-39 (He-3,p) reaction, γ decay properties of isobaric analog, (E), 25:56715
CALCIUM ISOTOPES Ca-44
determination of abundance of, relative to calcium-40 by neutron activation, 25:54492
energy levels from argon-40 (Li-6,d) reactions, configurations of low-lying, (E), 25:56714
CALCIUM ISOTOPES Ca-45
radioactivity of, liquid scintillators for absolute measurement of, 25:54697
uptake by brain microsomes, synaptosomes, and synaptic vesicles, 25:55120
CALCIUM OXIDES
CaO--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
CaO--$ZrO_2$, crystal structure of, polymorphic transformations in, 25:55641
CaO--$ZrO_2$, densification by hot pressing, 25:55600
CALCIUM PHOSPHATES
effects on distribution of mixed cesium and strontium radioisotopes in man following ingestion, 25:55113
CALCIUM ZIRCONATES
thermal conductivity at high temperatures, 25:55637
$CaZrO_3$--$ZrO_2$, crystal structure of, polymorphic transformations in, 25:55641
CALIFORNIUM
purification by oxidation and solvent extraction, 25:54671 (ORNL-4682, pp 114-32)
CALIFORNIUM ISOTOPES Cf-249
energy levels of, Davydov-model calculations of spins for, (T), 25:56785
CALIFORNIUM ISOTOPES Cf-252
effects on survival of hamster cells, RBE of, 25:55207 (NYO-2740-8, pp 220-59)
fission of, prompt neutron yield for spontaneous, (E), 25:56743 (NP-18966)
performance of neutron source of, in seabed mineral prospecting, 25:54913
production in reactors, effects of irradiation conditions on, 25:57067
use as neutron source in nuclear methods for seabed mineral exploration, 25:54887(R) (BNWL-1308-6)
use as source for low-flux neutron radiography, 25:54887(R) (BNWL-1308-6)
uses of, 25:54396 (ORNL-4682, pp 242-9)
CALIFORNIUM OXIDES
preparation and identification of, 25:54671 (ORNL-4682, pp 114-32)
CALORIMETERS
design and performance of adiabatic, for studying thermal behavior of saturated heavy water, 25:55092
CAMERAS
performance of ultrarapid photometric, for plasma diagnostics, 25:56132 (CEA-R-4079)
CANADA
radioactive contamination of environment by nuclear industry in, biological significance of, 25:55194 (70-CNA-641)
CARBIDES
diffusion in, data tabulations on, 25:55509
preparation by sol-gel process, 25:55594 (ORNL-4682, pp 218-28)
carbides--Fe, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487
CARBON
abundance in B-type stars, (E), 25:55701
abundance in solar atmosphere, (E/T), 25:55750
abundance of molecular, in atmospheres of late-type stars, (E/T), 25:55698
deposition of pyrolytic, on silicon oxides, effects of chemical reactivity on, 25:55604
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination in liquid sodium, development of meter for, 25:55379(R) (WARD-4210-T-1-2)
diffusion in solid solutions of cobalt, alpha-iron, nickel, palladium, beta-titanium, and vanadium, 25:55479
diffusion in yttrium at 20 to 300°C, effects of dislocations on, 25:55461
mass transfer in reactor materials exposed to sodium, measurement of, 25:55379(R) (WARD-4210-T-1-2)
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
production of highly isotopically enriched pyrolytic, 25:54542
production of pyrolytic, from methane at 1650 to 2150°C, mechanisms of, 25:55591 (JUL-735-RW)
properties of, derived from indene compounds, 25:57295 (Y-1790)
radiation effects on Dragon pyrolytic, 25:55651
radiation effects on electric conductivity and diamagnetic anisotropy of fibers of, neutron, 25:56282 (CEA-CONF-1822)
radiation effects on electronic properties of, relations of annealing with neutron, 25:56283 (CEA-CONF-1823)
radioinduced dimensional changes in deposited coatings of isotropic, fast neutron, 25:55652
radioinduced dimensional changes in, relations of graphitization with neutron, 25:55645 (CEA-CONF-1821)
reactions between forms of, during heat treatment, 25:57275(T) (SC-T-713060)
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
transfer between stainless steel and uranium carbide, carbon-14 tracer measurements of, 25:55589 (JAERI-Memo-4438)
CARBON BLACK
formation in hydrocarbon thermal decomposition,

XUM

25:57278(T) (SC-T-713066)
sorptive properties of graphitized, for carbon dioxide, 25:55634
CARBON DIOXIDES
corrosive effects on reactor materials, review of, 25:55393
radioinduced reactions with graphite, effects of active species range and water vapor on, 25:55654
radioinduced reactions with graphite, surface oxide formation in, 25:55655
sorption on Graphon, effects of oxygen on, 25:55634
air--$CO_2$, plutonium ignition in, effects of oxygen content on, 25:54946 (CONF-710401-, pp 106-17)
CARBON IONS
effects on diploid yeast cells, OER and RBE for mutagenic and lethal, 25:55165
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
energy levels of $C^{++}$, positions and widths of autoionizing, (T), 25:55820
x-ray scattering by three- and four-electron, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
CARBON ISOTOPES C-11
energy levels of, widths for T = 3/2, (E), 25:56679
production in alpha reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
CARBON ISOTOPES C-12
alpha elastic and inelastic scattering at 8.5 to 10.5 MeV, angular distributions for, (E), 25:56681
alpha reactions (α,Be-7) and (α,Li-6) at 42 MeV, cross sections for, (E), 25:56659
alpha reactions (α,p) at 11.3 to 26.3 MeV, angular distributions and excitation functions for, (E), 25:56675
alpha reactions (α,p) at 8.5 to 10.5 MeV, angular distributions for, (E), 25:56681
alpha reactions at 70 and 90 MeV, cross sections for, (E), 25:56652 (LYCEN-7104, S2.1-2)
deuteron elastic and inelastic scattering at 13.6 MeV, strong-coupling analysis of, (T), 25:56780
deuteron reactions (d,α) at 7.2 to 14 MeV, excitation functions for isospin forbidden, (E), 25:56656
deuteron reactions (d,nγ) at 5 MeV, n-γ coincidence spectra from, (E), 25:56752(R) (SUNI-14)
electron inelastic scattering by, form-factor calculations using isotensor dipole sum rules, (T), 25:56868
form factor of, liquid-drop-model calculation including quadrupole surface oscillations of elastic, (T), 25:56668
helium-3 reactions (He-3,2p) and (He-3,d) at 40 MeV, DWBA analysis of angular distributions and spectra from, (E), 25:56713
helium-3 reactions (He-3,p) and (He-3,2p) at 15 MeV, angular distributions and p-p angular correlations for, (E), 25:56682
lithium-7 elastic scattering at 21 MeV, optical-model analysis of, (E), 25:56663
lithium-7 reactions (Li-7,d) at 21.1 MeV, Hauser--Feshbach analysis of differential cross sections and spectra from, (E), 25:56663
meson ($K^-$) absorption in, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
meson ($\pi^-$) absorption by, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
meson reactions ($\pi^-$,2$\pi^-$) at 4 GeV in propane bubble chamber, upper limit of cross sections for, (E), 25:56439
neutron inelastic scattering at 22 MeV with subsequent α decay, n-α coincidence spectra from, (E), 25:56752(R) (SUNI-14)
photon reactions (γ,n) with, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
photon reactions with, model analysis of, (T), 25:56661
proton elastic scattering by, phase-shift analysis of polarization effects in, (T), 25:56678
proton reactions (p,2p) at 1 GeV, Glauber multiple scattering theory for differential cross sections for quasi-free, (T), 25:56520 (IC-71/106)
proton reactions (p,2p) at 600 MeV, distorted-wave impulse-approximation analysis of cross sections from, (E/T), 25:56711
proton reactions (p,2p) at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
reactions (C-12,f) with bismuth-209 at 62 and 82 MeV, liquid-drop analysis of, (E/T), 25:56786
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
CARBON ISOTOPES C-13
effects on infrared absorption spectra of irradiated carbon-doped silicon, 25:56325
lithium-7 elastic scattering at 21 MeV, optical-model analysis of, (E), 25:56663
lithium-7 reactions (Li-7,t) at 20.5 MeV, DWBA and Hauser--Feshbach analyses of differential cross sections and spectra from, (E), 25:56663
production of dense cylinders of, 25:54542
CARBON ISOTOPES C-14
accumulation by marine phytoplankton, mechanisms of, 25:55154
distribution of recoil, from neutron reactions with nitrogen-14 in potassium azide, 25:54687
effects on infrared absorption spectra of irradiated carbon-doped silicon, 25:56325
energy levels of, shell-model calculation using Fabakin potential, (T), 25:56660
proton reactions (p,γ) and (p,n) at 2.3 to 2.6 MeV, excitation functions and gamma spectra from, (E), 25:56669
reactions of ions of, with solid benzene at 5 to 100 eV, hydrocarbon yields from, 25:54703
reactions of ions of, with solid benzene at 5, 31, and 100 eV, partial degradation of carbon-14-labeled-1,3,5-cycloheptatriene from, 25:54702
CARBON ISOTOPES C-16
production in alpha reactions with aluminum and silicon at 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
CARBON MONOXIDES
abundance in atmospheres of late-type stars, (E/T), 25:55698
desorption from tungsten, time-of-flight study of electron-stimulated, 25:55435 (RLO-2221-T-7-4)
sorption by tantalum, flash--mass spectrometric study of chemi-, 25:55441
spectral lives due to, in IRC + 10216, (E), 25:55686
CO--O, radiolysis of, electron pulse, 25:54587(R) (AECL-3909)
CARBON SULFIDES
spectral lives due to, in IRC + 10216, (E), 25:55686
CARBON SYSTEMS
C--Ca--Ce--Mg--Si, analysis for tellurium by gravimetry, 25:54416
C--Co-base--Ti--W, mechanical properties of heat-treated, 25:55497
C--Co-base--W, mechanical properties of heat-treated, 25:55497
C--Cr--Mo, microstructure of white irons of, 25:55556
C--Hf--Nb, phase diagram of niobium--rich corner of, 25:55563
C--Hf--Re--W, mechanical properties of, 25:55433 (N-71-23982)
C--Hf--Zr, thermodynamic properties of, 25:55614
C--$HfB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--$HfB_2$--SiC, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--Mo, superconductivity of phases of, 25:56087
C--N--O--Pu--U, preparation of carbides, carbonitrides, and hypostoichiometric oxides in, 25:55594 (ORNL-4682, pp 218-28)
C--Nb--U, phase diagram at 1000°C, carbide composition in, 25:55547
C--Nb--Zr, thermodynamic properties of, relations with composition, 25:55615
C--Ru--Th, phase studies of, 25:55640
C--Si, radioinduced dimensional changes in codeposited coatings of isotropic, fast neutron, 25:55652
C--SiC--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--U--Zr, phase diagram at 950°C, carbide composition in, 25:55547
C--U--Zr, thermodynamic properties of, 25:55614
C--W, superconductivity of phases of, 25:56087
C--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
CARBON TETRACHLORIDE
effects on radiolysis of cyclohexane, 25:54670
effects on separation of europium or lanthanum from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
neutron reactions with, replacement reactions of recoil chlorine-38 in, 25:54688
CARBON TETRAFLUORIDE
neutron reactions with, replacement reactions of recoil chlorine-38 in, 25:54688
CARBONITRIDES
preparation by sol-gel process, 25:55594 (ORNL-4682, pp 218-28)
CATHODES
design for injecting hydrogen isotopes into metals, 25:54858
CATTLE
radiation effects on function of testes in male, tonometer measurements on x, 25:55337
CAVITIES
construction of lined underground, method for, 25:54854(P)
excavation of storage, in salt deposits, feasibility study of nuclear methods for, (E), 25:54824(T) (UCRL-Trans-10543, pp 70-80)
CAVITY RESONATORS
design for in-core displacement measurements, 25:55068(T) (AEC-tr-7240)
electron deflection in superconducting $HEM_{11}$, 25:56594 (NP-18998)
CELLS
cycle synchronization in tumor, using 5-fluorouracil,

25:55306
density bands of isolated membranes of rat brain glial, 25:57257 (ORO-3195-45)
density bands of membranes from glial, of mutant and normal mice, 25:57256 (ORO-3195-44)
effects of injections of bone marrow, peritoneal exudate, spleen, or thymus, on recovery of antigen retention system in x-irradiated mice, 25:55147
properties of radioinduced osteosarcoma, in rats, 25:55335
radiation effects on DNA and RNA synthesis in mouse kidney, γ and uv, 25:55129
radiation effects on hamster, sensitizing effects of isoniazid on x, 25:55207 (NYO-2740-8, pp 220-59)
radiation effects on morphology of normal and neoplastic oral cavity, comparison of β, γ, and radium, 25:55345
radiation effects on rat olfactory bulb nerve, electron microscopy of x, 25:55336
radiation effects on renewal patterns of rat liver, tritium-labeled thymidine, 25:55110(R) (TID-25801)
radiation effects on survival of hamster, RBE of californium-252 and radium, 25:55207 (NYO-2740-8, pp 220-59)
radiation effects on water distribution and permeability in frog muscle, x, 25:55323
radiation effects on, theorems for dose--effect relations in, 25:55206 (NYO-2740-8, pp 147-219)
radioactivity distribution in organelles of brain, following administration of tritium-labeled leucine, 25:55119

CELLS, CULTURED
radiation effects on hamster lung, daughter cell repair of lethal x, 25:55311
radiation effects on survival of Chinese hamster and human kidney, parameters for heavy ion, 25:55313
radiation effects on thymidine incorporation into DNA of rat thymus, factors affecting x, 25:55127
radiosensitivity of synchronized Chinese hamster, effects of 5-bromodeoxyuridine on x, 25:55258

CELLS, HeLa
labeling with tritium-labeled thymidine, correlation between radioactivity levels and degree of, 25:55110(R) (TID-25801)
radiation effects on survival of, parameters for heavy ion, 25:55313
radiation effects on survival of, protective effects of tetrahydrofolic acid against x, 25:55268
radiation effects on, following exposure of cytoplasm, nucleus, and whole cells, comparison of uv, 25:55312

CELLS, L
radiation effects on survival of synchronized, effects of age on 14-MeV neutron and x, 25:55309

CELLULOSE
radioinduced polymerization of monomer and polymer impregnants in, mechanical properties of products of, 25:55658

CEMENTS
radioactive waste solidification in, for disposal in seawater, 25:54979

CEREALS
flour, charge removal from, using promethium-147 and strontium-90 beta sources, 25:54897

CERIUM
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in intermediate products of rare earth production by x-ray spectroscopy, 25:54417
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination using N-benzylquinolinium nitrate, gravimetric, 25:54434
diffusion in nickel at 500 to 1100°C, volume and grain-boundary, 25:55488
effects on radiolysis of crystalline potassium nitrate, 25:54638
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
reactions of tetravalent, in γ-irradiated aqueous solutions of sulfuric acid, 25:54647
reduction of, evaluation of various chelating agents for, 25:54422
separation from aqueous Savannah River fuel reprocessing wastes by batch solvent extraction, 25:54739
separation from lanthanum on titanium tungstate papers by electrochromatography, 25:54744
separation from lanthanum, niobium, thorium, and zirconium, by reverse phase partition chromatography on TTA-impregnated paper, 25:54746
separation from rare earth phosphors by precipitation as iodates, 25:54749(P)
separation of yttrium from, by extraction with bis(2-ethylhexyl) phosphate, 25:54750(P)

CERIUM ALLOYS AND SYSTEMS
Au--Ce, crystal structures and melting points of intermetallic, 25:55570
C--Ca--Ce--Mg--Si, analysis for tellurium by gravimetry, 25:54416
Ce--Gd--Ru, critical magnetic field in superconducting, (E), 25:56074
Ce--La, magnetic impurity scattering and superconductivity in, 25:56068
Ce--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Ce--Nd--Ru, critical magnetic field in superconducting, (E), 25:56074
Ce--Ru, critical magnetic field in superconducting intermetallic $CeRu_2$, (E/T), 25:56074
Ce--Ru--Y, critical magnetic field in superconducting, (E), 25:56074
Ce--Zn-base, thermodynamics of molten, at 700 to 1000°K, emf studies of, 25:55442

CERIUM FLUORIDES
$BeF_2$--$CeF_3$--LiF, phase equilibria in, 25:54532 (ORNL-4717, pp 1-27)
$CeF_3$--$ThF_4$, phase studies in, 25:54532 (ORNL-4717, pp 1-27)

CERIUM ISOTOPES Ce-135
energy-level transitions in, branching ratios, internal conversion coefficients, and multipolarities for, (E), 25:56761

CERIUM ISOTOPES Ce-140
proton reactions at high energies, isobar model for analysis of meson (π) production in, 25:56530

CERIUM ISOTOPES Ce-144
content in seawater, role of adsorption processes in, 25:54811
effects on chromosomes in liver of hamsters following injection, RBE for aberrant, 25:55188
toxicity to hamsters following intraperitoneal injection, 25:55188
uptake by Chlamydomonas, statistical analysis of factors affecting, 25:55162

CERIUM OXIDES
decomposition oxygen pressures over test samples of, at high temperatures and low pressures, 25:55428 (BNWL-B-108)

CERIUM SULFATES
radiolysis of sulfuric acid solutions of, reactivity of tetravalent cerium from γ, 25:54647

CERMETS
properties of, effects of stereometric microstructure on, 25:55628

CESIUM
determination as silver hexanitritocerite complex, indirect titrimetric, 25:54415
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
diffusion in BISO-coated fuel particles, 25:55647 (ORNL-4717, pp 83-90)
diffusion in glass, effects of temperature on, 25:55611
release from bonded beds of BISO-coated uranium dioxide particles during post irradiation annealing at 1250°C, 25:55647 (ORNL-4717, pp 83-90)
separation from milk, double-bed ion exchange process for, 25:54722
separation from MSBR fuel solvent by extraction into bismuth by reduction with lithium at 650°C, 25:54534 (ORNL-4717, pp 43-56)
sorption of fission-product, by graphite at high temperatures, 25:55623

CESIUM ALLOYS AND SYSTEMS
Cs--Pr-base, phase diagram of, 25:55567

CESIUM AZIDES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638

CESIUM FLUORIDES
diffusion of xenon-133 in single crystals of, effects of surface properties and structure on, 25:55633

CESIUM IODIDES
diffusion of xenon-133 in single crystals of, effects of surface properties and structure on, 25:55633

CESIUM IONS
reactions with tungsten, sputtering of secondary tungsten ions from, 25:55819

CESIUM ISOTOPES Cs-131
preparation of high-purity carrier-free sources of, for spectroscopic measurements, 25:54889 (INR-P-1325)

CESIUM ISOTOPES Cs-134
content in liquid radioactive waste effluents from Nuclear Fuel Services West Valley reprocessing plant, 25:54753
distribution in conceptus of pregnant rats following injection, 25:55114
distribution in man following ingestion, effects of calcium phosphate, methionine, Prussian blue, and sodium alginate on, 25:55113
energy levels from cesium-133 neutron capture, lifetimes for, (E), 25:56784
energy-level transitions from cesium-133 neutron capture, intensities and multipolarities for, (E), 25:56784

CESIUM ISOTOPES Cs-137
content in liquid radioactive waste effluents from Nuclear Fuel Services West Valley reprocessing plant, 25:54753
content in petroleum, following production stimulation by contained nuclear explosion, (E/T), 25:54826(T) (UCRL-

Trans-10543, pp 99-116)
content of man, comparison of whole-body counter measurements of, 25:55225
distribution in man following ingestion, effects of calcium phosphate, methionine, Prussian blue, and sodium alginate on, 25:55113
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
uptake by rainbow trout in mountain lake ecosystem, role of bottom sediment in pathway for, 25:55159
uses as radiation source, development of market for, 25:54887(R) (BNWL-1308-6)
CESIUM PERCHLORATES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
CESIUM URANIUM FLUORIDES
crystal structure of $CsU_6F_{25}$, 25:54532 (ORNL-4717, pp 1-27)
CHARGED-PARTICLE BEAMS
interactions in Orsay storage ring, space charge effects in, 25:56592 (LAL-RT-43-70)
interactions with nonlinear media, radiations from, (T), 25:56168
radiations from passage through cubic nonlinear media, (T), 25:56168
transport systems for, first- and second-order matrix theory for, 25:56598 (SLAC-75(Rev.2))
CHARGED PARTICLES
Coulomb field corrections for, in strong magnetic fields, 25:56402
dosimetry of relativistic, design of solid-electrolyte dosimeter for, 25:55054(P)
dosimetry using tissue-equivalent wall-less proportional detectors, 25:55002 (NYO-2740-8, pp 7-146)
energy losses in unknown materials, technique for determination of, 25:56752(R) (SUNI-14)
flux of bunches of, at 250 to 500 km in ionosphere, (E/T), 25:56008
intensity at 200 to 300 km of primary cosmic, global distribution of, (E), 25:55980
intensity observations at low altitudes over auroral zones and polar caps, simultaneous electric-field observations and, 25:56030
interactions of system with electromagnetic field, potentials and multipole moments for, (T), 25:56455
motion along spiral path in transparent media, radiations from, (T), 25:56462
motion in electromagnetic fields, radiation corrections for, (T), 25:56393
motion in spatially modulated magnetic fields, invariants in, 25:56401
penetration into Earth and other planetary atmospheres, energy- and space-distribution-related, (T), 25:55983
photon emission in vacuum by, evanescent, (T), 25:56392
reactions with hydrogen atoms and hydrogen-like ions, cross sections for transitions between highly excited levels in, (T), 25:55838
reactions with hydrogen atoms and hydrogen-like ions, cross sections for transitions between highly excited levels in, (T), 25:55839
scattering by electrostatic fields, approximate evaluation of relativistic correction in, 25:55846
trajectories in 1/r electrostatic fields, second-order approximation for calculating, (T), 25:55082
CHEMISTRY
potential--pH diagrams for temperatures above 298.16°K, (T), 25:57212 (AAEC/E-219(Pt.1))
research progress on, April 1, 1970 to March 31, 1971, 25:54711(R) (ORNL-4682)
CHERENKOV RADIATION
discovery of, review of, 25:56389 (JINR-P4-5954)
quantum theory of external, phenomenological, (T), 25:56392
theoretical problems of, 25:56389 (JINR-P4-5954)
CHLORDIAZEPOXIDE
effects on whole-body mixed gamma and neutron irradiated rats, 25:55325
CHLORIDES
thermodynamic potentials and enthalpies of, calculations of standard, 25:54586
CHLORINE
determination as chloride in bismuth, gallium, selenium, and thallium, photometric, 25:54407
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
radiation effects on excretion of, in rat urine, combined effects of open skin lesions and, 25:55332
CHLORINE FLUORIDES
reactions with neptunium dioxide, plutonium dioxide--uranium dioxide, and uranium dioxide, kinetics of, 25:54736
CHLORINE ISOTOPES Cl-34
energy levels from sulfur-32 (He-3,pγ) reactions, spin--parity assignments for, (E), 25:56712
energy-level transitions from sulfur-32 (He-3,pγ) reactions, branching and mixing ratios for, (E), 25:56712
CHLORINE ISOTOPES Cl-35
energy levels from proton inelastic scattering, lifetimes of, (E), 25:56752(R) (SUNI-14)
neutron capture by, γ spectra from, (E), 25:56690 (RT/FI-(70)47)
proton inelastic scattering at 5.47 to 5.61 MeV, excitation function for, (E), 25:56752(R) (SUNI-14)
CHLORINE ISOTOPES Cl-36
energy levels from chlorine-35 neutron capture, (E), 25:56690 (RT/FI-(70)47)
exchange between chloride and chloromolybdate(III), 25:54558
CHLORINE ISOTOPES Cl-37
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
CHLORINE ISOTOPES Cl-38
reactions of recoil, in chlorofluoromethanes, replacement, 25:54688
reactions of recoil, with chloromethane, effects of scavengers on, 25:54681
CHLOROFORM
effects on separation of europium or lanthanum from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
CHLOROPHYTA
Ankistrodesmus braunii, radiation effects on activity of NADP-dependent glyceraldehyde phosphate dehydrogenase in, effects of light on x, 25:55353
Chlamydomonas sp., cerium-144 uptake by, statistical analysis of factors affecting, 25:55162
Chlorella vulgaris, radioinduced mutations in, photoreactivation capacity following uv, 25:55172
CHLORPROMAZINE
effects on whole-body mixed gamma and neutron irradiated rats, 25:55325
CHOLINE
effects on calcium-45 uptake and release by rat brain microsomes, 25:55120
CHROMATIN
radiation effects on activity of sugar beet, effects of dose on γ, 25:55351
CHROMATOGRAPHY
automation of, punched tape and computer processes for, 25:54727
conference on, Russian--Italian, Thilisi, USSR, Oct. 26-29, 1970, 25:54398
development of electro-, using titanium tungstate papers, 25:54744
CHROMIUM
abundance in solar atmosphere, (E/T), 25:55750
alpha reactions with, production of chromium-51 by, 25:54691
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512
determination in process and quality control during ore beneficiation by neutron activation, 25:54507
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in stony meteorites by proton and bremsstrahlung activation, 25:54466
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
deuteron reactions with, production of chromium-51 by, 25:54691
deuteron reactions with, production of vanadium-48 by, 25:54677
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
proton reactions with, production of chromium-51 by, 25:54691
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
surface wetting of molten, on boron nitride, mechanisms of, 25:55469
CHROMIUM ALLOYS AND SYSTEMS
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
thermoelectric properties of, at 0 to 1000°C, 25:56351
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
Al--Cr, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al--Cr, solidification and phase transformations in, nonequilibrium, 25:55535
Al--Cr, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Cr--Mo, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Cr--Mo--Ni-base--W, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416

Al--Cr--Ni-base--Ti, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Al--Cr--Ni-base--Ti, mechanical properties of dispersion-strengthened, at high temperatures, 25:55483
C--Cr--Mo, microstructure of white irons of, 25:55556
Co--Cr--Ni--W, physical properties of, effects of atomization media and consolidation methods on, 25:55480
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Cr--Fe, iron-57 Moessbauer spectra using polarized cobalt oxide source, 25:56366
Cr--Fe-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Fe-base--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Mo--Zr, phase diagram at 1150°C, 25:55538
Cr--Nb--Ni, liquation of, mechanism of intracrystallite, 25:55506
Cr--Ni, radiation effects on electric conductivity of $Ni_3Cr$, neutron, 25:55584
Cr--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Ni-base, strengthening of, effects of substructure domain on dispersion, 25:55492
Cr--Ti-base, superconductivity and constitution of, 25:56108

CHROMIUM BORIDES
wear resistance of deposited, on steels, 25:55619

CHROMIUM HYDROXIDES
preparation of CrOOH, high-pressure hydrothermal method for, 25:55602

CHROMIUM ISOTOPES Cr-49
energy levels from chromium-50 (He-3,$\alpha\gamma$) reactions, spin-parity assignments for, (E), 25:56692
energy-level transitions from chromium-50 (He-3,$\alpha\gamma$) reactions, branching and multipole mixing ratios for, 25:56692

CHROMIUM ISOTOPES Cr-50
deuteron elastic scattering at 13.6 MeV, optical-model analysis of angular distributions from, (T), 25:56725
deuteron reactions (d,p) at 13.6 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56725
helium-3 reactions (He-3,$\alpha\gamma$) at 15 MeV, $\alpha$-$\gamma$ angular correlations from, (E), 25:56692
neutron capture by, gamma spectra from thermal, (E), 25:56683 (FEI-205)
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727

CHROMIUM ISOTOPES Cr-51
deposition and transport in FFTF cooling system, 25:55370 (BNWL-SA-2335)
energy levels from chromium-50 (d,p) reactions, spectroscopic factors for, (T), 25:56725
energy levels from chromium-50 neutron capture, spin--parity assignments for, (E), 25:56683 (FEI-205)
production in cyclotron by $\alpha$, deuteron, and proton reactions with chromium, titanium, and vanadium, 25:54691
use of EDTA-incorporated, for brain and kidney scanning, 25:55272
use of EDTA-incorporated, for measuring glomerular filtration rate of human kidneys, 25:55122

CHROMIUM ISOTOPES Cr-52
deuteron elastic scattering at 13.6 MeV, optical-model analysis of angular distributions from, (T), 25:56725
deuteron reactions (d,p) at 13.6 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56725
neutron capture by, gamma spectra from thermal, (E), 25:56683 (FEI-205)
photon reactions ($\gamma$,n) near threshold energy, cross section for, (E), 25:56702
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727

CHROMIUM ISOTOPES Cr-53
energy levels from chromium-52 (d,p) reactions, spectroscopic factors for, (T), 25:56725
energy levels from chromium-52 neutron capture, spin--parity assignments for, (E), 25:56683 (FEI-205)
neutron capture by, gamma spectra from thermal, (E), 25:56683 (FEI-205)
photon reactions ($\gamma$,n) near threshold energy, cross section for, (E), 25:56702

CHROMIUM ISOTOPES Cr-54
energy levels from chromium-53 neutron capture, spin--parity assignments for, (E), 25:56683 (FEI-205)

CHROMIUM NITRIDES
shock compression effects on powdered, x-ray-diffraction study of, 25:55618

CHROMIUM OXIDES
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
spectra of, after adsorption of water, effects of deuterium on, 25:54565

CHROMOSOMES
radiation effects on chiasma frequency of grasshopper, x, 25:55176
radiation effects on human, bibliography on ionizing, 25:55178
radiation effects on mouse fetus, 25:55207 (NYO-2740-8, pp 220-59)
radiation effects on spontaneous recombination frequency of diploid yeast, uv, 25:55180
radioinduced aberrations in human blood cell, following occupational exposure, $\gamma$, 25:55163
radioinduced aberrations in rat bone marrow, x, 25:55192
radioinduced aberrations of barley seed, method for metaphase analysis of x, 25:55175
radioinduced aberrations of Crepis capillaris seed, effects of time of administration on additive or protective effects of ethylenimine on x, 25:55260
radioinduced aberrations of hamster liver, comparison of RBE for americium-241 $\alpha$ and cerium-144 $\beta$, 25:55188
radioinduced aberrations of male Drosophila, cytological analysis of $\gamma$, 25:55170
radioinduced aberrations of mouse blood, extrapolation to man of protective effects of cystamine against $\gamma$, 25:55256
radioinduced aberrations of peripheral human blood, biological dosimetry using, 25:55228
radioinduced aberrations of wheat seed, effects of prolonged storage on repeated-exposure x, 25:55169
radioinduced premutational oxygen-sensitive changes in Crepis capillaris seed, $\gamma$, 25:55168
radioinduced translocations in Drosophila, effects of dose on neutron and x, 25:55206 (NYO-2740-8, pp 147-219)
radioinduced translocations in mouse spermatogonia, RBE for gamma, 25:55182
translocation induction in Vicia, comparison of effectiveness of ionizing radiation and chemicals for, 25:55191

CHROMOSPHERE
boundary of oscillations of visible, (E), 25:55747
element abundances in, (E/T), 25:55750
fibrils near sunspots, topology of filaments and, (E), 25:55749
limb observations at high-spectral purity, (E), 25:55746
solar-flare emission from, Proton-3 measurement of proton flux from July 7, 1966, (E), 25:55991
spectral fine structure in, morphological relations in H$\alpha$, (E), 25:55748

CHRONOMETERS
design with oscillator time base using radioisotope source, 25:55085(P)

CIRCUITS
calibration of microstrip, using automatic network analyzer, 25:57279(T) (SC-T-713067)

CIVIL ENGINEERING
uses of radiometric gages in, for highway construction and maintenance in US, tabulation of, 25:54907

CLAYS
age of ancient pottery, thermoluminescence method for estimation of, 25:54764

CLOTHING
radioisotope contamination of, derivation of decision levels for control of, 25:55196 (LA-4558)

CLOUDS
gamma radiation dose from radioactive, air attenuation and photon energy in calculation of, 25:54796
gamma radiation doses from radioactive, calculation of, 25:54797

CNIDARIA
corals, age of fossil, accuracy of thorium-230/uranium-234 method for estimating, 25:54776
corals, uranium-238 content in fossil, effects on accuracy of thorium-230/uranium-234 method for age estimation, 25:54776
thorium-232 content in fossil, effects on accuracy of thorium-230/uranium-234 method for age estimation, 25:54776

COAL DEPOSITS
prospecting for, gamma logging method for, (E), 25:54772

COATINGS
growth of binary two-phase, diffusion-controlled, 25:57276(T) (SC-T-713061)
radiation effects on stability of silvered and aluminized FEP teflon-film thermal-control, electron, proton, and uv, 25:55656 (N-71-27736)

COBALT
abundance in solar atmosphere, (E/T), 25:55750
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
casting by levitation melting using magnetic field, 25:55424
complexes, radiation effects on cis-$[Co(en)_2(NO_2)CNS][CoEDTA].2H_2O$, correlated annealing of recoil cobalt-60 in cationic and anionic sites from neutron, 25:54682
deposition on surfaces, basic chemistry in, 25:54587(R) (AECL-3909)
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512

XUM

determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
diffusion of carbon in solid solutions of, 25:55479
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
COBALT ALLOYS AND SYSTEMS
Co--WC, composition and tensile properties of binder phase in, 25:55630
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
C--Co-base--Ti--W, mechanical properties of heat-treated, 25:55497
C--Co-base--W, mechanical properties of heat-treated, 25:55497
Co--Cr--Ni--W, physical properties of, effects of atomization media and consolidation methods on, 25:55480
Co--Fe--Mo, electric conductivity of supersaturated solid solutions of, effects of phase decomposition on, 25:55472
Co--Fe--V, magnetic properties at cryogenic temperatures, 25:56361
Co--Fe--W, hardening of, kinetics of dispersion, 25:55423
Co--Fe-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Co--WC, preparation of fine powdered mixtures of, using ultrasonic vibrations, 25:55598
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
COBALT ISOTOPES Co-57
decay in iron compounds, Moessbauer spectral studies of valence and structural changes from, 25:56381
distribution of recoil, from beta decay and electron capture of nickel-57 in nickel complexes, thermal annealing effects on, 25:54689
energy levels from iron-54 (α,p) reactions, γ branching, spin, mixing ratios, and mean lifetimes of, (E), 25:56700
COBALT ISOTOPES Co-58
content of Pacific seaweeds in environs of reactors in comparison to other locations, 25:55151 (CONF-710817-1)
deposition and transport in FFTF cooling system, 25:55370 (BNWL-SA-2335)
COBALT ISOTOPES Co-59
neutron capture at 14 MeV, γ spectra and cross section for, (E), 25:56729
COBALT ISOTOPES Co-60
annealing of recoil, in cationic and anionic sites of neutron-irradiated crystals of cis-$[Co(en)_2(NO_2)CNS][CoEDTA].2H_2O$, 25:54682
content of Pacific seaweeds in environs of reactors in comparison to other locations, 25:55151 (CONF-710817-1)
deposition and transport in FFTF cooling system, 25:55370 (BNWL-SA-2335)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
use as radiation source to determine charge residence time in rotary kilns, 25:54898
COBALT OXIDES
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
use of CoO as polarized iron-57 Moessbauer source, 25:56366
CoO--MgO, fabrication for in-core neutron flux monitoring, 25:55019(P)
COBALT PERCHLORATES
complexes with ammonia and benzoic acid, radiolysis of, oxidation by hydroxyl radical of benzoatopentaamminecobalt(III) from γ and electron pulse, 25:54669
COINCIDENCE CIRCUITS
design for detection and discrimination of fission neutrons, 25:54995 (EUR-4611)
COINCIDENCE MEASUREMENTS
use of delayed γ--γ, in Moessbauer spectroscopy, 25:56367
COLLISION PROCESSES
classical binary-collision expansion for, limits of applicability of, 25:55865
Coulomb T matrix for nonrelativistic three-body rearrangement, 25:55868
excitation due to rotational motion in atomic, two-state approximation for, 25:55873
Faddeev--Watson multiple-scattering expansion for nonrelativistic three-body, 25:55867
Faddeev--Watson multiple-scattering expansion for nonrelativistic three-body, off-shell approach to, 25:55866
Faddeev--Watson multiple-scattering expansion for nonrelativistic three-body rearrangement, 25:55868
theory of inelastic, quasi-diabatic representation for, 25:55849
COMPOSITE MATERIALS
design aspects of fibre reinforced, survey of, 25:57214 (AWRE-O-77/70)
preparation by granule metallurgy, evaluation of, 25:55404
properties of metal fiber-reinforced ceramic, review on, 25:55608(T) (LB/G-3074)
stress pulse propagation in, frequency-filtering theory for, 25:57269 (SC-DR-710472)
COMPUTER PROGRAMS
ALICE, for automatic selection of kinematical hypotheses for two-prong p + p interactions at 19 GeV/c in hydrogen bubble chamber, 25:56523 (USIP-71-3)
ANDYMG3, modifications for two-dimensional air transport calculations, 25:56261 (LA-4774)
CITATION, for reactor fuel depletion and management calculations, FORTRAN IV for IBM 360, 25:57183 (ORNL-TM-2496(Rev.2))
CODILLI, for neutron resonance analysis, in FORTRAN IV for IBM 360, 25:56814 (COO-2022-7)
COHORT-2, Monte Carlo general purpose shielding, 25:56262 (N-71-22378)
CONCEPT, for conceptual cost estimates for single unit pressurized water power reactors, FORTRAN 4 for IBM 360, 25:57063 (ORNL-TM-3276)
COSTANZA (R,Z), for dynamics analysis of cylindrical reactors during transients, FORTRAN for IBM 360/65, 25:57187 (EUR-4673)
DELIGHT, for high temperature gas cooled reactor coated particle fuel burnup, 25:57021 (JAERI-Memo-4449)
DYNBUF, for dynamic buffer allocation on CDC 6600, 25:57234 (LA-4721)
EDIT, for Playback Executive System, 25:57270 (SC-M-710527)
for calculating half-lives and intensity of total decay curves, 25:56695
for calculating time characteristics of lithium-drifted germanium detectors, in FORTRAN, 25:55001 (NP-19011)
for calculation of pressure over time duration in coupled volumes, 25:54886
for gamma spectra analysis in FORTRAN IV for PDP-9, 25:54523
for heat conduction in reactor fuel rods during coolant loss accidents, ALGOL for Burroughs B6500, 25:57094 (RISO-M-1391)
GELI2 and SPAN2, for calculating nuclide abundances from multichannel gamma spectra, in FORTRAN, 25:55035 (DP-1275)
GRASS, for remote access support systems, 25:57218 (COO-1469-190)
MIMUSA, for unfolding spectra, in FORTRAN IV, 25:55042 (RD/B/N-1963)
modular logic for control point design, 25:57224 (COO-2118-14)
MORSEC, revised cross-section module for MORSE multigroup Monte Carlo code, 25:56263 (ORNL-4716)
NOISE, for determining reactor transfer function from noise measurements, 25:57181 (BNWL-1609)
OMAS, for optical-model analysis of nuclear elastic scattering, 25:56815 (INP-741)
RAGA, for calcuation of γ-ray transport in reactor shields with multiregion slab geometry, ALGOL for Philips X8, 25:57026 (RCN-146)
ROD, for core design and fuel cycle calculations for fluid fueled reactors, FORTRAN 4 for IBM 360, 25:57048 (ORNL-TM-3359)
SDRC, for heterogeneous reactor resonance energy neutron spectra, IBM 360, 25:57182 (JAERI-Memo-4481)
SIMPLOTTER, for plotting graphs, 25:57231 (IS-2305)
SOLRF, for approximation computation of neutron interaction by solid-angle spacing method, 25:56271
SWIFT, for unfolding neutron spectra, in FORTRAN IV for CDC-6600, 25:55036 (HASL-244)
TESTY, for unfolding spectra, in FORTRAN IV, 25:55042 (RD/B/N-1963)
TGO, for design optimization of power transmission grid, 25:57230 (HEDL-TME-71-108)
TRACE, for fast reactor fuel cycle analysis, for IBM 360/65, 25:57020 (EUR-4709)
TRESS, for finite element stress analysis, 25:57285 (TRG-Report-1813)
TRINITY, for three-dimensional magnetohydrodynamics calculations, 25:55944

TWOTRAN SPHERE, modifications for two-dimensional air transport calculations, 25:56261 (LA-4774)
COMPUTERS
basic assembler language manual for Illiac III, 25:57225 (COO-2118-17)
conference on, June 29--July 1, 1970, Juelich, Germany, 25:55074 (JUL-Conf-5)
development at Illinois Univ, 25:57219(R) (COO-1469-193)
development at Illinois Univ., Oct. 1970 to June 1971, 25:57282(R) (TID-25789)
development of, review of trends in, 25:57191 (CONF-710302-(Vol.2), pp 1086-1101)
performance of IBM 1130, for calculation of opposed fixed-field irradiation plans in telecobalt therapy, 25:55218
performance of timesharing, for maintaining and updating radioactive materials inventories at University of Colorado Medical Center, 25:54984
performance of, Argonne benchmark problem collection for evaluation of, 25:57167 (CONF-710302-(Vol.2), pp 901-12)
reference manual for Illiac III, input--output, 25:57227 (COO-2118-21)
reference manual for Illiac III, supervisor organization, 25:57226 (COO-2118-19)
system description for powerful low-cost timeshared, 25:57217 (COO-1469-187)
use in experimental high-energy physics, 25:55050
use of graphic display, for design of advanced nuclear reactors, 25:57007
CONCRETES
cracking and deformation under high sustained loads, mechanics of, 25:55661
creep of prestressed, algorithm for integral-type aging, 25:55664
creep strains in beams of, time-temperature extrapolation analysis of, 25:55663
diffusion of moisture in heated, effects of pore pressure on, 25:55665
gamma penetration of shield of, energy and angular distributions of cobalt-60, (E), 25:56272
gamma transmission through homogeneous slabs, (T), 25:56256 (AD-722012)
neutron attenuation in, effects of iron contents on fast and thermal, (E), 25:57027 (RCN-147)
neutron reactions with, secondary gamma radiation in shielding from, 25:56277
properties of prestressed, for use in pressure vessels, 25:56882
radioinduced polymerization of monomer and polymer impregnants in, mechanical properties of products of, 25:55658
tensile properties of steel wire-reinforced, 25:55662
tensile properties of test cubes of, under triaxial stress, 25:55660
testing of triaxially stressed structures of, for safety margins, 25:55659
vapor pressures in pores of heated, effects on moisture diffusion, 25:55665
CONDENSERS
surge in nuclear power plant cooling system, calculations of, 25:57036
water hammer in nuclear power plant cooling system, calculations of, 25:57036
CONVEYERS
design of hopper-type, for fuel pellets, 25:54841(P)
design of tape-type, for leak-tight transfer of radioactive materials in and out of containers, 25:54988(P)
COOPER POWER REACTOR
effluents from, effects on environment of chemical, radioactive, and thermal, 25:56955 (DOCKET-50298-22)
site for, geological, hydrological, and meteorological data for, 25:56955 (DOCKET-50298-22)
COPPER
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
bremsstrahlung buildup factor for, dependence on position of shielding between source and detector, 25:56280
determination in drill core by neutron activation and γ spectrometry, 25:54469
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512
determination in lead-base alloys by neutron activation and radiochemical separation, 25:54515
determination in meteorites and meteoritic phases by neutron activation and γ spectrometry, 25:54477
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in tellurium by complexing with Bengal Rose and phenanthroline, spectrophotometric, 25:54414
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
effects of residual, on neutron embrittlement of Types A302B and A533B steel, 25:55577 (NRL-7310)
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
erosion of sintered, in oil, design of equipment for measuring arc, 25:55454
mechanical properties of chemical vapor deposited rings of, design of apparatus for testing, 25:55440
microstructure of, potentiostatic studies on, 25:55555
neutron inelastic scattering at 14.4 MeV, differential cross sections, nuclear-level density parameters, and contribution of direct processes for, (E), 25:56684 (FEI-216)
neutron reactions (n,2n) at 14.4 MeV, differential cross sections, second-neutron spectra, and nuclear-level density parameters for, (E), 25:56684 (FEI-216)
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
physical properties of plasma-sprayed spherical powders of, 25:55467
radiation damage in, kinetics of crowdion reactions in annealing stage I/sub E/ of electron, (T), 25:56333
radiation effects on adhesion of epoxy cemented specimen couples of, gamma, 25:55666
reactions with Groups IV and VI transition metal carbides at 1000 to 1200°C, solid-phase, 25:55464
separation from ores by solvent extraction, 25:54816 (ORNL-4682, pp 182-6)
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
solvent properties for Groups IV and VI transition metal carbides at 1000 to 1200°C, 25:55464
wetting of refractory carbides as function of electronic structure, 25:55643
COPPER ACETATES
radiation effects on single crystals of monohydrates of, at 80 and 290°K, ESR studies on x, 25:54610
COPPER ALLOYS AND SYSTEMS
preparation by granule metallurgy, evaluation of, 25:55404
$Al_2O_3$--Cu, production of fine powders of, Microgel process for, 25:55419
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Cu--Y, phase studies of, 25:55561
Be--Cu-base, microstructure of, potentiostatic studies on, 25:55555
Be--Cu-base, radiation effects on aging and precipitation in, neutron, 25:55583
Be--Cu-base--Ni, microstructure of, potentiostatic studies on, 25:55555
Cu--Dy, hyperfine parameters in DyCu, Moessbauer-effect study of, 25:56382
Cu--Ga--Ni, optical constants for β-phase in, 25:56352
Cu--Ge, superconductivity in hcp phases of, (E), 25:56096
Cu--Ni, solvent properties of solid solutions of, for tungsten in copper--nickel--tungsten alloys, 25:55447
Cu--Ni--W, tungsten solubility in copper--nickel solid solutions of, limits of, 25:55447
Cu--Sb, superconductivity in, with $DO_3$ structure, (E), 25:56096
Cu--Si, superconductivity in hcp phases of, (E), 25:56096
Cu--Th, phase diagram and intermetallic compounds, 25:55571
Cu--$ThO_2$, production of plates, rods, sheets, and wires of high-conductivity high-strength, description of process for, 25:55417
Cu--$UO_2$, properties of, effects of stereometric microstructure on, 25:55628
Cu--W, preparation of composites of, by diffusion welding, 25:55405
Cu--W, thermal expansion of infiltrated pseudoalloys of, up to 1500°C, (E/T), 25:55468
Cu--Zn, search for superconductivity in fcc phases of, (E), 25:56096
Cu-base--Zr, microstructure of, potentiostatic studies on, 25:55555
COPPER ISOTOPES Cu-58
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
COPPER ISOTOPES Cu-59
energy levels of, calculation of properties using proton-quadrupole vibration coupling, (T), 25:56731
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
COPPER ISOTOPES Cu-60
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
COPPER ISOTOPES Cu-61
energy levels of, calculation of properties using proton-quadrupole vibration coupling, (T), 25:56731
COPPER ISOTOPES Cu-63
energy levels of, calculation of properties using proton-quadrupole vibration coupling, (T), 25:56731
COPPER ISOTOPES Cu-65
energy levels of, calculation of properties using proton-quadrupole vibration coupling, (T), 25:56731

XUM

neutron capture at 2.9 MeV, cross section for, (E), 25:56696
COPPER ORES
fracturing deposits of, using nuclear explosions, 25:54816 (ORNL-4682, pp 182-6)
CORROSION
book: Corrosion in Nuclear Applications, 25:55388
conference on mechanisms of molten salt, Duesseldorf, April 10, 1969, 25:55371 (CONF-690452)
research progress on, 25:54587(R) (AECL-3909)
CORROSION FILMS
deposition of, effects of heat flux and boiling on, 25:57034
heat transfer effects of, 25:57034
COSMIC PARTICLES
acceleration of, in Milky Way, (T), 25:55907
book; Cosmic Muons and Neutrinos, 25:56469
composition of primary Z = 2 to 5 and Z = 12 to 40, Cosmos-228 observations of, (E), 25:55899
composition of primary, chemical, (E), 25:55911
density in intergalactic space in clusters of galaxies, (E), 25:55789
energy of hadron, at 3250 m above sea level, ionization spectrometer determination of, (E), 25:56413 (INP-756)
flux measurements of muon, discrepancy between underground, 25:55897
flux of 4e/3-charged quarks at 2750 m above sea level, scintillation counter telescope study of upper limit for vertical, (E), 25:56403
flux of hadron, at 3250 m above sea level, ionization spectrometer determination of, (E), 25:56413 (INP-756)
intensity distribution at 200 to 300 km of primary, global, (E), 25:55980
interactions with ambient photons, energy losses in, (T), 25:55908
lifetime of, in Milky Way, (T), 25:55907
modulation of primary Z = 20 to 30, solar, (E), 25:55909
monitoring of neutrons, data from Canadian stations for Jan.--Apr. 1971, (E), 25:55893 (AECL-3971)
proton reactions with iron above 1.5 TeV, ionization spectrometer study of inelasticity coefficients for, (E), 25:56414 (INP-757)
reactions with nuclei above 100 GeV in emulsions, production of low-energy protons in, (E), 25:56429 (INP-754)
research at Lund Univ., 1970, (E), 25:56643(R) (NP-19018)
stopping in nuclear emulsion, mass resolution of tracks from, (E/T), 25:55894 (LUIP-CR-71-4)
COSMIC RADIATION
containment of sudden burst of, in the galactic disk, (T), 25:55895 (N-71-24988)
effects on eyes of astronauts, 25:55341
electron ionization by solar, in Earth and other planetary atmospheres, (T), 25:55983
flux at 250 to 500 km in ionosphere, nature of, (E/T), 25:56008
flux of quarks in, upper limits for, (E), 25:55910
intensity in meridional plane, annual variations and gradient of, (E), 25:55900
intensity of, for last $10^9$ years, (E/T), 25:55781
interaction of galactic, with interplanetary magnetic field, (E), 25:55904
isotropy and origin of 1- to 6-MeV background gamma, (E/T), 25:55896 (N-71-27639)
modulation of primary, step-like changes in long-term, (E), 25:55912
modulation region of galactic, solar-activity-dependent dimensions of, (E/T), 25:55901
propagation through interstellar space and Earth atmosphere, path-length determination for, (E/T), 25:55903
temperature effects on ionizing component of primary, short-period, (E), 25:55898
COSMIC RADIO SOURCES
brightness temperature level of galactic, (E), 25:55730
electron temperatures of galactic, (E), 25:55730
energy sources for, supermassive objects as, (T), 25:55798
identification of 12 small-diameter southern, optical, (E), 25:55725
identification of 70 4C, between -3 and 0°, optical, (E), 25:55723
observations of 3C 153.1, optical, (E), 25:55681
radio positions and flux densities of 235 4C, between -3 and 0°, (E), 25:55723
spectra of 105 small-diameter, absorption, (E), 25:55791
COSMIC RAY TELESCOPES
calibration of satellite-borne NASA--GSFC, 25:55046 (N-71-16750)
COSMIC SHOWERS
density spectra of extensive, ambiguity in, (E), 25:55905
COSMIC X-RAY SOURCES
Cir XR-1, pulsations and spectra from, (E), 25:55721
Cyg X-1, search for pulsed radio emission from, (E), 25:55728
Cyg X-1, upper limits on hard x-ray pulsations from, (E), 25:55727
GX 1 + 4, flux and spectrum from, (E), 25:55720
GX 3 + 1, flux from, (E), 25:55720
GX 5 - 1, flux from, (E), 25:55720
models for, containing black holes, (T), 25:55803
spectra of, OSO-V experiment for, (E), 25:55734 (N-71-23434)
COSMOLOGY
book: Lead Isotopes in Geochemistry and Cosmochemistry, 25:54770
Brans--Dicke field equations in, solutions in flat Friedmann universes, (T), 25:55800
gravitational redshift in theory of generalized gravitational potential, (T), 25:55808
models of, observational effects of local inhomogeneities in, (T), 25:55809
models of, topological properties of, (T), 25:55802
radiation-filled Brans--Dicke, exact solutions to, (T), 25:55801
CREEP
model for in-pile deformation of materials, 25:55579 (WAPD-TM-943)
CROLOY
reactions with sodium at 1000 to 1300°F, carbon and nitrogen mass transfer in, 25:55379(R) (WARD-4210-T-1-2)
CRUSTACEA
Artemia sp., radiation effects on hatchability of eggs of, relation between production of free radicals and protective effects of MEA against γ, 25:55262
CRYOGENICS
conference on cryogenic engineering, Boulder, Colorado, June 17-19, 1970, 25:56113
uses in electric power systems, 25:56114
CRYSTAL RIVER POWER REACTOR, UNIT 3
construction of, revised permit application for, 25:56956 (DOCKET-50302-25)
operation of, revised license application for, 25:56956 (DOCKET-50302-25)
CRYSTAL STRUCTURE
model for order--disorder transformations in alloys and metals, 25:55552
size effects in three-dimensional Ising, 25:57241 (NYO-1480-179)
CRYSTALLOGRAPHY
method for freeze etching corresponding fracture moieties in, 25:57251(T) (ORNL-tr-2509)
CRYSTALS
Debye--Waller factors and Debye--Moessbauer temperatures of, tables of, 25:56376
diffusion in, effects of concentration gradients, pressure, and temperature on, 25:57213 (AECL-3793)
neutron scattering by, use of zero Placzek moment to calculate n-phonon cross section in thermal, (T), 25:56340(T) (AERE-Trans-1137)
CURIUM
energy-level transitions of, following californium-249 decay, (E), 25:55825
separation from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
x-ray yields from, following californium-249 decay, M-subshell, (E), 25:55825
CURIUM ISOTOPES Cm-244
production of aerosols of oxides of, for inhalation studies in dogs, 25:54982
CURIUM OXIDES
preparation for HFIR targets, 25:54671 (ORNL-4682, pp 114-32)
CURRENT ALGEBRA
amplitudes in dual resonance model, 25:56449
elementary particles in, cellular structure in phase space in fibre bundle theory for, 25:56448
SU(3) x SU(3) chiral symmetry breaking parameter in hard-meson tree-graph theory in, 25:56535 (ORO-3992-7)
sum rules in, use of once-subtracted dispersion relation for modification of Adler--Weisberger, 25:56510
CUTTING TOOLS
description of shear-type, for fuel element cutting, 25:54838(P)
CYANIDES
preparation of carbon-11-labeled, by recoil reactions following proton bombardment of lithium amide or nitrogen--hydrogen mixtures, 25:54683
CYANOCOBALTATES
radiolysis of aqueous solutions of, kinetics of reactions of hydrated electrons in electron pulse, 25:54651
CYANOGEN
abundance in atmospheres of late-type stars, (E/T), 25:55698
spectral lives due to, in IRC + 10216, (E), 25:55686
CYCLOHEPTATRIENE
decomposition of carbon-14-labeled, from reactions of solid benzene with carbon-14 ions at 5, 31, and 100 eV, 25:54702
photoinduced decomposition of carbon-14-labeled, 25:54702
CYCLOHEXANE
radiolysis of liquid, kinetics of charge scavenging in γ, 25:54668
radiolysis of, scavenging effects of carbon tetrachloride and nitrous oxide on, 25:54670
reactions with recoil tritium, yields of alkanes from, 25:54685

CYCLOPENTANE
cyclopentane--$N_2O$, radiolysis of, effects of cyclopentene and propene on nitrogen yields from γ, 25:54655
CYCLOPENTENE
effects on reactions of nitrous oxide in γ-irradiated liquid cyclopentane, 25:54655
CYCLOPROPANE
Br--cyclopropane, neutron reactions (n,γ) with, products from reactions of recoil bromine-80m from, 25:54690
CYCLOPROPANE, BROMO-
neutron reactions (n,γ) with, formation of allyl bromide by reaction of recoil bromine-80m from, 25:54690
CYCLOTRON RADIATION
emission by charged particles moving along spiral path in transparent media, 25:56462
CYCLOTRONS
beam injection into sector, ion focusing in drift space for external, 25:56602
design of 300-keV separated-sector, for deuterons, 25:56601
CYSTAMINE
effects on sensitivity of guinea pigs and mice to transverse acceleration, 25:55264
radioprotective effects of, on mice, fast neutron and x, 25:55266
radioprotective effects on mice, extrapolation to man of γ, 25:55256
CYSTEAMINE
radioprotective effects of silicon-substituted thiophene derivatives of, uv, 25:55263
radioprotective effects on Artemia eggs, relation between radioinduced free radicals and γ, 25:55262
radioprotective effects on mice, effects of dose, sex, and strain on x, 25:55257
CZECHOSLOVAKIA
radioisotope content in river waters of, 25:54774

## D

DATA ACQUISITION SYSTEMS
computer systems for, description of graphic display, 25:57008
development of noise analysis, for power reactor dynamics, 25:57023
use of FINK and PANTRY, PSKIT programming package for simplification of, 25:57144 (CONF-710302-(Vol.1), pp 505-7)
use of JOSHUA Terminal System, review of, 25:57145 (CONF-710302-(Vol.1), pp 508-15)
DATA PROCESSING SYSTEMS
computer systems for, description of graphic display, 25:57008
description of interactive graphics data retrieval system, 25:55076 (LA-DC-12576)
use of interactive computer graphics in high energy physics, 25:55093
DATA RECORDING SYSTEMS
description of cytofluorograph, 25:57249 (ORNL-TM-3536)
DATA TABULATIONS
coefficients for partial-wave analysis of vector meson and $1/2^+$ baryon production in pseudoscalar meson interactions with $1/2^+$ baryons, 25:56501 (RHEL/R-224)
DECONTAMINATION
facility for, design of Mound Laboratory medical, 25:54963 (CONF-710401-, pp 311-15)
DEHYDROGENASES
activity in cells of radioinduced osteosarcomas of rats, 25:55335
DENSIMETERS
design and operation of gamma radiometric, for pressed powdered metals, 25:55067
design and operation of in situ gamma radiometric, for ores, 25:55066
development of airborne radiometric, for snow, 25:55065
uses of radiometric, in highway construction and maintenance in US, tabulation of, 25:54907
DESALTING
plant for, digital computer program for simulating dynamics of large multistage flash evaporator, 25:57248 (ORNL-TM-2933)
DEUTERIUM
abundance in solar atmosphere, (E/T), 25:55750
concentration in water by exchange with ammonia, 25:54748
determination of, evaluation of methods for, 25:54587(R) (AECL-3909)
deuterium-ion reactions up to 100 eV with molecular, cross sections for dissociation in, (E), 25:55858
diffusion and internal friction in vanadium, calculation from redistribution in periodic stress gradient, 25:55458
effects of rotational energy of, on cross sections of reactions of argon ions with hydrogen, 25:54550
effects on absorption spectra of water, 25:54578 (ORNL-4682, pp 215-17)
effects on catalytic oxidation of ethylene and propylene over gold, 25:54569
effects on decomposition of dialkyldithiocarbamic acids, 25:54560
effects on ionization of thiol acids, solvent, 25:54566
effects on ir spectra and vapor pressure of crystalline ammonia, 25:54572
effects on ir spectra of α-chromia after adsorption of water, 25:54565
effects on kinetics of reactions of 2-(o-chlorophenyl)-4,5-diphenylimidazolyl radicals with amines and hydroquinone, 25:54561
effects on oxidation of 2-propanol by Fenton's reagent, 25:54576
effects on permanganate oxidation of hydroxycyclohexanecarboxylic acids, 25:54575
effects on photolysis of methane, 25:54573
effects on proton transfer in aqueous sulfuric acid solutions, 25:54564
effects on rate of hydrogen abstraction reactions of hydrogen and methane with moderated recoil fluorine-18 atoms, 25:54686
effects on reaction of thiophenol with trityl radicals, 25:54570
effects on reaction of triphenylphosphine with hydridotriphenylsilyl(π-cyclopentadienyl)dicarbonylmanganese, 25:54567
effects on reactions of radiolytic hydrated electrons in aqueous solutions of cobalt(III) cyanide complexes, 25:54651
effects on reactions of recoil tritium atoms in a gaseous mixture of ethane, methane, and neon, 25:54684
effects on solvolysis of sulfonate esters in solvents of low nucleophilicity, 25:54559
effects on thermal isomerization of 1,2-bis(trimethylsiloxy)cyclobutene, 25:54568
effects on vibrational relaxation times of hydrofluoric acid at 400 to 4000°K, 25:54551
effects on x radiolysis of glycine, ESR studies on, 25:54653
exchange between acetic acid and enol acetates catalyzed by palladium(II) chloride, kinetics of, 25:54557
exchange between ammonia and hydrogen in production of heavy water, 25:54748
exchange between water-d and hydrogen, catalytic effects of platinum on, 25:54587(R) (AECL-3909)
exchange in hydrogen--water system on chromium oxide, iron oxide, and copper chromite catalysts, kinetics of, 25:54554
exchange with hydrogen in cis- and trans-1,1,3,-triphenylcyclopropane and water, 25:54571
exchange with tritium between m-carborane and tert-butanol, ethanol, or liquid ammonia in metal alkoxide-catalyzed reactions, primary kinetic isotope effects in, 25:54555
gold-198 ranges in, from gold-197(n,γ) recoil, 25:56269
injection into metals, design of cathode for, 25:54858
meson (π⁻) absorption in, energy level shift in π-mesic deuterium from, 25:55833
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
properties of molecular, molecular-beam magnetic-resonance measurements of, 25:55826
proton reactions (p,2p) and (p,pn) at 21.5 to 56.4 MeV, absolute cross sections for quasi-free scattering in, (E), 25:56640 (FRNC-CONF-8)
proton reactions (p,2p) at 28.6 MeV, differential cross section for, (E), 25:56644
proton reactions (p,γ) at 0.8 to 3.2 MeV, angular distribution and cross section for, (E), 25:56645
separation from hydrogen, electrochemical, 25:54587(R) (AECL-3909)
DEUTERIUM HYDRIDES
exchange reactions in neon at 1800 to 2800°K, self, 25:54562
properties of, molecular-beam magnetic-resonance measurements of, 25:55826
DEUTERIUM IONS
reactions with deuterium molecules, helium, and neon up to 100 eV, dissociation cross sections for, (E), 25:55858
DEUTERIUM SYSTEMS
D--He-3, energy balance calculations for use in thermonuclear reactors, 25:56215 (N-71-25526)
D--T, burnup in thermonuclear explosions, fractional, 25:54827
D--T, energy balance calculations for fusion reactor conditions, 25:56222
DEUTERONS
interactions e + d → e + p + n, multi-pion exchange contribution to nucleon-nucleon binding in, (T), 25:56527
interactions e + d at high energies, cross sections, Δ(1236) production in e + n interactions, and cross sections for inelastic e + n and e + p interactions from inelastic, (E), 25:56405 (DESY-71/33)
interactions $K^+ + d \rightarrow K^0 + 2p$ at 3.8 GeV/c in deuterium bubble chamber, total and differential cross sections for $K^+ + n \rightarrow K^0 + p$ interactions and total and differential cross sections for, (E), 25:56423 (COO-1195-217)
interactions n + d → n + d, lectures on forward and partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions N + d, dispersion theoretical calculation of vertex function for, (T), 25:56527
interactions p + d → $^3$He + γ, model of intermediate

XUM

nucleon isobar for, 25:56525
interactions p + d → $^3$He + sigma(310), model of intermediate nucleon isobar for, 25:56525
interactions π + d → π + d, lectures on partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions π⁺ + d → p + p + π⁺ + π⁻ at 7 GeV/c, Regge analysis of rho⁰ production in, (E/T), 25:56431
interactions π⁺ + d → p + p, lectures on partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
production in n + n reactions, cross sections for, (T), 25:55777
reactions (d,α) with boron-10 at 0.4 to 1.5 MeV with subsequent alpha decay, reaction mechanisms of, (E), 25:56673
reactions (d,α) with carbon-12 at 7.2 to 14 MeV, excitation functions for isospin forbidden, (E), 25:56656
reactions (d,α) with molybdenum-94 at 10 MeV, α spectra from, (E), 25:56758
reactions (d,α) with neon-22 at 10 MeV, angular distributions for, (E), 25:56716
reactions (d,α) with oxygen-16 at 1.8 to 14 MeV, analysis for reaction mechanism in isospin-forbidden, (E/T), 25:56667
reactions (d,α) with zirconium-90 at 15 MeV, DWBA analysis of, (E), 25:56778
reactions (d,f) with radium-226 at 16 to 19 MeV, mass-yield curve for, (E), 25:56775
reactions (d,He-3) with oxygen-18 at 52 MeV, differential cross sections and spectra from, (E), 25:56662
reactions (d,n) with molybdenum-92 and -94 at 6.25 and 7.0 MeV, time-of-flight spectra and DWBA analysis of differential cross sections for, (E), 25:56766
reactions (d,nγ) with boron-10 at 3 MeV, n-γ coincidence spectra from, (E), 25:56752(R) (SUNI-14)
reactions (d,nγ) with carbon-12 at 5 MeV, n-γ coincidence spectra from, (E), 25:56752(R) (SUNI-14)
reactions (d,p) at 7 to 21.4 MeV with A = 10 to 91 nuclei, diffraction analysis of angular distributions from, (T), 25:56847
reactions (d,p) with aluminum-27 at 12 MeV, l values, spectra, and DWBA analysis of differential cross sections for, (E), 25:56709
reactions (d,p) with chromium-50 and -52 and titanium-48 at 13.6 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56725
reactions (d,p) with fluorine-19 at 10 MeV, angular distributions for, (E), 25:56716
reactions (d,p) with krypton-86 at 5 to 10.5 MeV, analysis of (d,n) threshold cusp using coupled-channel Born approximation, (E/T), 25:56719
reactions (d,p) with magnesium-24 at 10 MeV, cross sections for, (E), 25:56728
reactions (d,p) with nitrogen-14, silicon-28, and sulfur-32 at 13.8 MeV, vector analyzing power from polarized, (E), 25:56724
reactions (d,p) with nuclei, analysis of multi-channel features of, (T), 25:56817 (JINR-E4-5836)
reactions (d,p) with sulfur-33 at 12 MeV, angular distributions and Q-value for, (E), 25:56730
reactions (d,t) with lithium-7 at 10 to 12 MeV, excitation function, spectrum, and DWBA analysis of angular distributions from, (E), 25:56671
reactions with aluminum, Mylar, nickel, and tantalum foils at 80 MeV, cross sections for electron capture in, (E), 25:55862
reactions with chromium and titanium, production of vanadium-48 by, 25:54677
reactions with chromium and vanadium, production of chromium-51 by, 25:54691
reactions with nuclei, method for treatment of Pauli principle in breakup, (T), 25:56833 (ORO-3765-31)
reactions with oxygen-16, Pauli breakup cross section for, (T), 25:56833 (ORO-3765-31)
scattering by cadmium-114, carbon-12, nickel-60, tin-118, and titanium-48 at 13.6 MeV, strong-coupling analysis of elastic and inelastic, (T), 25:56780
scattering by chromium-50 and -52 and titanium-48 at 13.6 MeV, optical-model analysis of angular distributions from elastic, (T), 25:56725
scattering by lithium-6 at 8.0 to 12.0 MeV, optical-model analysis of differential cross sections and excitation functions for elastic, (E), 25:56670
scattering by lithium-7 at 10.0 to 12.0 MeV, optical-model analysis of differential cross sections and excitation function for elastic, (E), 25:56670

DEWAR VESSELS
design of variable-temperature, using superfluid valve, 25:56120

DIAMONDS
use of irradiated, for temperature measurements based on defect annealing using x-ray diffraction readout, 25:55104

DIAZO COMPOUNDS
effects on γ radiolysis of acetic acid solutions of sodium nitrate, 25:54657

DIFFERENTIAL EQUATIONS
solution of, computer subroutines for, 25:57235 (LA-4728)

DIFFERENTIAL THERMAL ANALYSIS
apparatus for use with sealed specimens to 1500°C, 25:54532 (ORNL-4717, pp 1-27)

DIFFUSION
research progress on, in solids, 25:54587(R) (AECL-3909)

DILATOMETERS
design of automatic, for radiation polymerization studies, 25:54616

DIODES
radiation effects on volt--ampere characteristics of silicon, neutron, 25:55100

DISEASES
radiodiagnosis of neurological, role of prescanning cerebral angiography and pneumography in, 25:55281

DISEASES, INFECTIOUS
leukosis, radiation effects on frequency in chickens, x, 25:55329

DISEASES, NEOPLASTIC
adenocarcinomas, radiotherapy of mouse mammary, comparison of effects of air and carbogen atmosphere on cure rate during, 25:55302
cancer, diagnosis of human liver, effectiveness of gold-198 in comparison with alkaline phosphatase evaluation for, 25:55276
carcinomas, radiodiagnosis of human bronchial and thyroid, effectiveness of gallium-67 for, 25:55283
carcinomas, radiodiagnosis of human cervical, effectiveness of renography for, 25:55275
carcinomas, radioinduced thyroid, in man following iodine-131 therapy, 25:55343
carcinomas, radiotherapy of thyroglossal duct, role of surgery and thyroid hormone suppression in iodine-131, 25:55304
carcinomas, scanning of parasternal lymph nodes in patients with mammary, effectiveness of gold-198 for, 25:55288
carcinomas, screening compounds for prevention and therapy of, 25:57229 (EUR-4483)
lymphogranulomatosis, radiotherapy of, effectiveness of γ and x, 25:55301
malignant, radiodiagnosis of skin, use of phosphorus-32 and Si(Li) detectors for, 25:55273
melanomas, endolymphatic therapy for human malignant, effectiveness of iodine-131-labeled lipiodol for, 25:55305
metastases, endolymphatic therapy for human, effectiveness of iodine-131-labeled lipiodol for, 25:55305
metastases, radiodiagnosis of lymph node, in patients with mammary carcinomas, effectiveness of gold-198 for, 25:55288
metastases, radiotherapy of solitary lung and thoracic lymph node, γ, 25:55300
osteosarcomas, radioinduced, in rats following injection of phosphorus-32, cytology and histology of, 25:55335
Rous sarcoma, radiation effects on frequency in chickens, x, 25:55329
sarcomas, cell cycle kinetics for, tritium-labeled thymidine tracer studies on, 25:55110(R) (TID-25801)
sarcomas, radiodiagnosis of human reticulum cell, effectiveness of gallium-67 for, 25:55283
tumors, diagnosis of human brain, comparison of effectiveness of radioisotope scanning and angiography for, 25:55293
tumors, in vitro demonstration of immunity to human brain, 25:57263 (ORO-3195-51)
tumors, radioinduced, in mice following chronic ingestion of strontium-89, 25:55319 (UCD-472-118)
tumors, radiotherapy of deep, preparation of Styrofoam compensators to correct for surface irregularities during x, 25:55244
tumors, radiotherapy of human, effectiveness of iron and steroid treatment for reducing dose and side effects in, 25:55303
tumors, radiotherapy of human, synchronization of cell cycle for improvement of, 25:55306
tumors, tritium-labeled thymidine incorporation in human, method for in vivo, 25:55110(R) (TID-25801)
tumors, virus--cell relations in dog brain, 25:57262 (ORO-3195-50)

DISEASES, PHYSIOLOGICAL
abscesses, diagnosis of human brain, comparison of effectiveness of radioisotope scanning and angiography for, 25:55293
cataracts, radioinduced, in eyes of rabbits, effects of dose and LET on RBE for cobalt-60 γ, 2.5 and 14 MeV neutron, and 3 GeV proton, 25:55317 (CEA-CONF-1744)
effects of human kidney, on lymphocyte changes following radon inhalation, 25:55346
effusions, radiodiagnosis of human pericardial, effectiveness of technetium-99m-labeled sulfide for, 25:55295
embolism, radiodiagnosis of human lung, effectiveness of technetium-99m-labeled human serum albumin and sulfur colloid in combination with gamma camera for, 25:55296
hematoma, diagnosis of human brain, comparison of effectiveness of radioisotope scanning and angiography for, 25:55293
hemorrhages, radioinduced, in muscles of goats, γ, 25:55318(T) (LB/G-2995)
hydrocephalus, radiodiagnosis of infantile, by combined skull and ventricular scanning, 25:55290

XUM

hypertension, radiodiagnosis of human pulmonary, effectiveness of two-phase scintigraphy method with iodine-131-labeled albumen and technetium-99m-labeled albumen for, 25:55284
inflammations, radiodiagnosis of human, effectiveness of silver-105 for, 25:55286
osteoarthropathy, radiodiagnosis of human hypertrophic, effectiveness of strontium-85 and strontium-87m for, 25:55298
osteodystrophia deformans, diagnosis of human, comparison of effectiveness of radioisotope scanning with biochemical methods or radiography for, 25:55294
osteonecrosis, radioinduced in human jaw following malignant tumor therapy, γ, 25:55344
osteonecrosis, treatment of radioinduced human, following therapy of carcinomas, 25:55270
radiodiagnosis of human lung, effectiveness of technetium-99m-labeled sulfur colloid macroaggregates for, 25:55297
spondylitis, scanning of sacroiliac joints in patients with ankylosing, effectiveness of strontium-85 for, 25:55287

DISEASES, TRAUMATIC
radiation injuries, prophylaxis and treatment of human nervous system, following therapy of head tumors, 25:55269
radiation sickness, pathomorphological findings in goats on γ, 25:55318(T) (LB/G-2995)
wounds, effects on electrolyte metabolism in rats, combined effects of radiation and, 25:55332

DISPERSION RELATIONS
sum rule compatible with violation of Pomeranchuk theorem, modified Adler--Weisberger, 25:56510

DISPLACEMENT GAGES
design characteristics of reactor control rod, description of, 25:57204(P)
design of resonance cavity, for in-core use, 25:55068(T) (AEC-tr-7240)

DISTILLATION APPARATUS
design and operation of radioisotope-heated, for recovering potable water from urine, 25:54911(P)
development of continuous-, for separation of helium-3 from helium-4, 25:56121

DODECANE
dodecane--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644

DOGS
blood flow in liver of, xenon-133 clearance method for measurement of, 25:55123
radiation dose distribution in bones of beagle, strontium-90--yttrium-90 β, 25:55319 (UCD-472-118)
radiation dosimetry in lens of beagle, methods for proton, 25:55319 (UCD-472-118)
radiation effects on bones of beagle, estimation of hazards to man from model for long-term low dose radium-226, 25:55319 (UCD-472-118)
radiation effects on erythrocytes of beagle, protective effects of hydrogen peroxide against strontium-90 β, 25:55319 (UCD-472-118)
radiation effects on eyes of beagle, effects of dose on proton, 25:55319 (UCD-472-118)
radioinduced sterility in developing ovaries of beagle, following exposure in utero, effects of dose fractionation on x, 25:55319 (UCD-472-118)
radium-226 content of uveal tissue in eyes of beagle, use of autoradiography to measure, 25:55319 (UCD-472-118)
strontium-90 content of blood plasma in beagle, following prolonged ingestion, 25:55319 (UCD-472-118)
transplantation of γ-irradiated bovine fascia in brain of, for filling dura mater defects, 25:55148

DOLOMITES
analysis for trace elements in sample coexisting with calcite by neutron activation and γ spectrometry, 25:54497

DRESDEN POWER REACTOR, UNIT 1
radioactive liquid release from, safety analysis of unloading heat exchanger tube leak, 25:56896 (DOCKET-50010-95)

DRESDEN POWER REACTOR, UNIT 2
instrumentation for, rod block for average power range and intermediate power range monitoring, 25:56939 (DOCKET-50237-201)
radiation monitoring system for, use of steam jet air ejector offgas monitor to substitute plant chimney, 25:56938 (DOCKET-50237-200)
radiation monitors for, substitution of stacks monitors by steam jet air ejector off-gas, 25:56909 (DOCKET-50249-101)
stack sample line for, plateout test procedures for, 25:56909 (DOCKET-50249-101)
turbine control valve for, fast closure scram for, 25:56939 (DOCKET-50237-201)

DRESDEN POWER REACTOR, UNIT 3
instrumentation for, modification of rod block functions for intermediate range and average power range monitors, 25:56942 (DOCKET-50249-102)
radiation detectors for, temporary substitution of steam jet air ejector off-gas monitor for plant chimney monitoring, 25:56943 (DOCKET-50249-103)
radiation monitors for, substitution of stacks monitors by steam jet air ejector off-gas, 25:56909 (DOCKET-50249-101)
stack sample line for, plateout test procedures for, 25:56909 (DOCKET-50249-101)
turbine control valve for, fast closure scram modification for, 25:56942 (DOCKET-50249-102)

DRILL CORES
analysis of intact, for copper by neutron activation, 25:54469

DYSPROSIUM
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination of trace amounts of, in nuclear grade uranium by x-ray excited optical fluorescence, 25:54428
lattice parameters of, effects of hydrogen on, 25:55549
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
separation from aqueous solutions by solvent extraction using TTA, synergistic effects of 2,4-pentanedione on, 25:54731
x-ray absorption edges of, positions of L/sub III/, (E), 25:55822

DYSPROSIUM ALLOYS AND SYSTEMS
Ag--Dy, hyperfine parameters in DyAg, Moessbauer-effect study of, 25:56382
Au--Dy, crystal structures and melting points of intermetallic, 25:55570
Cu--Dy, hyperfine parameters in DyCu, Moessbauer-effect study of, 25:56382
Dy--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Dy--Rh, hyperfine parameters of DyRh, Moessbauer-effect study of, 25:56382
Dy--Zn, hyperfine parameters of DyZn, Moessbauer-effect study of, 25:56382

DYSPROSIUM CHLORIDES
x-ray absorption edges of, chemical shifts of, (E), 25:55822

DYSPROSIUM ISOTOPES Dy-157
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)

DYSPROSIUM ISOTOPES Dy-159
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)

DYSPROSIUM ISOTOPES Dy-161
energy levels of, model analysis for ΔN = 2 mjxing in, (T), 25:56737 (JINR-E4-5877)
Moessbauer effect in DyCu, DyAg, DyZn, and DyRh, 25:56382
Moessbauer effect in dysprosium intermetallic compounds, 25:56379
Moessbauer spectrum in gadolinium oxide, hyperfine structure in, 25:56375
valence states of dysprosium in intermetallic compounds, Moessbauer-effect study of, 25:56379

DYSPROSIUM ISOTOPES Dy-163
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)

DYSPROSIUM OXIDES
x-ray absorption edges of, chemical shifts of, (E), 25:55822
$Al_2O_3$--$Dy_2O_3$--$UO_2$, temperature distribution in irradiated fuels of, use of eutectic isotherm for monitoring, (E), 25:57194

## E

EARTH
book: Physical and Radiobiological Investigations of Artificial Satellites of the Earth, 25:55342
surface lunar variations of diurnal magnetic fields and pressure, out-of-phase phenomena with ionosphere solar variations, (E/T), 25:56037
surface solar variations of diurnal magnetic fields and pressure, out-of-phase phenomena with ionosphere solar variations, (E/T), 25:56036

EARTHQUAKES
effects on design requirements of power reactor Class 1 equipment and structures, 25:57108
effects on radioisotope content of ground waters in USSR, (E), 25:54775
ground motion from San Fernando, predictions for Glendale area, 25:54812 (NVO-1163-TM-30)
occurrence following underground nuclear explosions, effects of shear wave polarization on, 25:54814

ECOSYSTEMS
plutonium movement in aquatic, 25:55150 (CONF-710401-, pp 407-10)
radioisotope accumulation by organisms in aquatic, effects of stable element content on, 25:55158

EDWIN I. HATCH POWER REACTOR, UNIT 2
design parameters of, revised and additional data on, 25:56969 (DOCKET-50366-15)
operations aspects of, revised and additional data on, 25:56969 (DOCKET-50366-15)

EGGS
radiation processing effects on amino acid content of, 25:55364

ELASTOMERS
radiation processing of, 25:54619(P)

XUM

ELECTRIC ARCS
plasma diagnostics in, spectroscopic, (E/T), 25:56139
plasma instabilities and turbulence in argon, (E/T), 25:56196(R) (N-71-25028)
plasma temperature and electron density in spark, hydrogen, (E), 25:56142
plasma temperature distribution and thermal conductivity in argon, spectral measurements of, (E), 25:56140
pressure measurement near anode of high-current, 25:56155
ELECTRIC CAPACITORS
current shaping techniques for high voltage, 25:57268 (SC-DR-710463)
ELECTRIC CELLS
design of promethium-147-powered, 25:54922(P)
properties of, using alkali metals and charge transfer complexes, 25:57221(R) (COO-1707-12)
ELECTRIC CHARGES
motion in electromagnetic field, Lorentz transformation for invariant electric tension vector, 25:56567
ELECTRIC CONDUCTORS
transmission line constants for coupled microstrip, 25:57277(T) (SC-T-713063)
ELECTRIC DISCHARGE
electron avalanche in helium, simulation by Monte Carlo calculations, 25:56265(T) (ORNL-tr-2518)
electron energy distribution measurement in, (E), 25:56138
electron extraction from Penning, instabilities in, 25:56148
ionization wave excitation in positive columns by acoustic pulses, (E), 25:56154
shock waves in, parameters of ionized air in front of, (E), 25:56160
ELECTRIC FIELDS
electron acceleration of quasi-static, as trigger mechanism for solar flares, (T), 25:55760
intensity observations at low altitudes over auroral zones and polar caps, simultaneous charged-particle observations and, 25:56030
ELECTRIC INSULATORS
development of radiation-resistant, 25:54599 (ORNL-4717, p 117-24)
radiation effects on properties of B-kind, γ, 25:55101
radiation effects on thermionic sheath trilayer, fast-neutron, 25:55096 (N-71-24635)
radiation effects on, fast neutron, 25:54599 (ORNL-4717, p 117-24)
ELECTRIC POWER
superconductivity and cryogenics in, uses of, 25:56114
ELECTRIC PROBES
performance of conical Langmuir, for diagnostics of shock-heated plasmas, (E/T), 25:56144
performance of Langmuir, collisional effects on, 25:56135
properties of electrostatic, in ionospheric plasmas, (E), 25:56012
response of cylindrical Langmuir, in plasma transition regime, (E/T), 25:56136
ELECTROJETS
development of polar, during polar magnetic substorms, (E/T), 25:56029
ion motion in auroral, characterization of auroral electric fields from artificial, (E/T), 25:55959
plasma inhomogeneity formation in equatorial, quasi-linear equations of electron and ion, (T), 25:55986
ELECTROLYSIS
use of countercurrent, in activation analysis, 25:54493
ELECTROLYTES
isopiestic studies of very concentrated aqueous, 25:54535 (ORNL-4717, pp 57-82)
mass transfer in systems of, multicomponent, 25:54719 (ORNL-4682, pp 229-39)
ELECTROLYTIC CELLS
calibration for impurity monitoring in liquid sodium, 25:55069 (ANL-7804)
ELECTROMAGNETIC FIELDS
charged particle motion in, radiation corrections for, (T), 25:56393
charged-particle system interactions with, potentials and multipole moments for, (T), 25:56455
Lagrangian formalism for free Maxwell, in spinor notation, (T), 25:56541
Lorentz transformations for invariant electric tension vector for motion of electric charges in, 25:56567
ELECTROMAGNETIC LENSES
aberrations of asymmetrized quadrupole, 25:56604
ELECTROMAGNETIC SEPARATION
equipment for isotope, collector system for, 25:56584 (JINR-P6-5888)
ion optics system for, design of, 25:54920
ELECTROMAGNETIC WAVES
absorption and transformation in plasma, (T), 25:56250
coupling in inhomogeneous plasma, (E), 25:56225 (CEA-CONF-1802)
emission of auroral vlf, relation to auroral cosmic-noise absorption, (E/T), 25:55999
interactions with inhomogeneous plasma, diagnostic use of, 25:56145
interactions with plasma with exponential density distribution, (T), 25:56230 (INR-1321)
production of high-frequency, by electron beams in solar-wind region upstream from bow shock, (E/T), 25:56019
propagation across magnetic field in parabolic plasma layer, (T), 25:56236
propagation along plasma layers, effect of field pressure on, (T), 25:56235
propagation in slightly relativistic plasma, (T), 25:56228 (CEA-CONF-1806)
propagation of strong cylindrical and spherical, from infinitely weakly ionized plasma, (T), 25:56240
radiation conversion into, in static magnetic fields in vacuum, gravitational, (T), 25:55805
ELECTRON BEAMS
dosimetry of fast, calibrations and controls for, 25:55224
energy determination above 5 GeV, method for, 25:56609(P)
equilibrium and stability of magnetically confined relativistic, (T), 25:56130
focusing and transport of high-current charge-neutralized, in conducting boundaries, 25:56596 (SC-RR-710436)
interactions with collisionless plasma, dispersion relations for linear waves from, 25:56170
interactions with dense plasmas, self fields and currents from relativistic, (T), 25:56166 (NP-19012)
interactions with homogeneous plasma, dispersion relations for linear waves from, (T), 25:56169
interactions with plasma, Bernstein wave excitation in, (E), 25:56241
interactions with plasma, longitudinal wave excitation in, (T), 25:56232 (NP-19020)
interactions with plasma, longitudinal wave reflection in, (T), 25:56247
interactions with plasma, noise levels of Langmuir oscillations from, (E), 25:56249
production of artificial aurorae with, ground-based optical observations of, 25:55962
reactions with solar-wind region upstream from bow shock, high-frequency electromagnetic waves from, (E/T), 25:56019
ELECTRON MICROSCOPES
lens of, spatial frequency of, 25:54587(R) (AECL-3909)
ELECTRON-RING ACCELERATORS
beam dynamics during axial acceleration in, effects of self fields on, 25:56595 (NP-19007)
ring compression in, magnetic field tolerances during, 25:56595 (NP-19007)
ELECTRONIC EQUIPMENT
performance for measuring nuclear yields, tests for determining, 25:54993 (AD-720974)
ELECTRONS
accelertion in solar flares due to quasistatic electric fields, (T), 25:55760
angular distributions of equatorial 30 to 300 keV, in loss cone and at large angles, (E), 25:56027
book: Emissive Properties of Materials (Handbook), 25:56346
distribution of relativistic cosmic, effects of energy-loss mechanisms on, (T), 25:55908
dose distribution in tissue-equivalent phantoms, (T), 25:55214
effects of pulsed, on ammonia at 0.1 to 750 Torr, kinetic study of species formed from, 25:54661
effects of pulsed, on aqueous solutions of cobalt(III) cyanide complexes, kinetics of reactions of hydrated electrons in, 25:54651
effects of pulsed, on benzoatopentaamminecobalt perchlorate, oxidation of benzoatopentaamminecobalt(III) by hydroxyl radical from, 25:54669
effects of pulsed, on carbon monoxide--oxygen mixtures, 25:54587(R) (AECL-3909)
effects of pulsed, on heavy water--water systems, 25:54587(R) (AECL-3909)
effects on antimony-doped germanium at 2.5 MeV, one-valley EPR spectrum of, 25:56298
effects on aqueous solutions of fumarates, ESR studies of radicals from, 25:54656
effects on aqueous solutions of organic compounds, rate constants for hydrogen atom reactions following lytic, 25:55132
effects on carbon-doped silicon at 2 MeV and 130°K, infrared absorption spectral study of, 25:56325
effects on cathodoluminescence spectrum of cadmium telluride, 25:56290
effects on copper, kinetics of crowdion reactions in annealing stage I/sub E/ of, (T), 25:56333
effects on germanium at 700 keV, luminescence spectra from defects induced in, 25:56328
effects on gold-doped platinum at 4.5°K, annealing of Frenkel defects induced in, 25:56284 (JUL-731-FF)
effects on heating of plane bodies, tables for transient temperatures from, 25:56267
effects on lithium-diffused n-type silicon at 30 MeV, defects induced in, 25:56309
effects on lithium-doped n-type germanium at 1 MeV, 25:56301
effects on lithium-doped n-type silicon at 1 to 1.5 MeV, lithium--defect interactions in, 25:56310
effects on luminescence spectra of silicon at 2.5 MeV, effects of uniaxial stress and temperature on,

XUM

25:56295
effects on luminescence spectra of silicon at 3 MeV, effects of annealing and lithium impurity on, 25:56294
effects on magnetoresistance of aluminum single crystals at 3 MeV, (E/T), 25:56334
effects on N-acetylglycine in the presence of ammonia at 7.5 MeV, 25:54650
effects on n-type germanium at 1 MeV, effects of impurities on 65°K annealing stage, 25:56331
effects on n-type germanium, effects of donor impurity on 35 and 65°K stages in annealing of, 25:56330
effects on p-type germanium at 1 MeV and 8°K, defects induced in, 25:56302
effects on p-type germanium at 1.5 MeV and 77°K, annealing of defects induced in, 25:56329
effects on p-type germanium at 1.5 MeV, 220°K defects induced in, 25:56300
effects on p-type silicon at 1.2 MeV, photoconductivity spectral study of, 25:56308
effects on phosphorus-doped n-type germanium at 1.5 MeV, EPR study of, 25:56299
effects on potassium chloride at 2 MeV, thermoluminescence induced by deformation and light after, 25:56321
effects on silicon doped with germanium, oxygen, and carbon at 2.8 MeV and 90°K, infrared absorption spectral study of, 25:56297
effects on silicon- and tellurium-doped n-type gallium arsenide at 1 MeV, 25:56292
effects on stability of silvered and aluminized FEP teflon second-surface mirrors, 25:55656 (N-71-27736)
effects on surfaces and deposit epitaxy of sodium fluoride substrates at 0.2 to 1 keV, 25:56322
effects on tellurium at 0.6 and 1 MeV and 10°K, annealing recovery of, 25:56306
effects on water, effects of temperature on absorption spectrum of hydrated electrons from, 25:54658
emission from materials, manual of tables on, 25:56346
interactions e + d → e + p + n, multi-pion exchange contribution to nucleon-nucleon binding in, (T), 25:56527
interactions e + d at high energies, cross sections, Δ(1236) production in e + n interactions, and cross sections for inelastic e + n and e + p interactions from inelastic, (E), 25:56405 (DESY-71/33)
interactions e + e → e + e + epsilon(750), cross sections for, (T), 25:56463
interactions e + e → e + e + f(1260), cross sections for, (T), 25:56463
interactions e + e → e + e + $\pi^+ + \pi^-$, Feynman diagram model of, 25:56460
interactions e + N at very low energies, review of $\pi^+$ and $\pi^0$ production in, (E/T), 25:56404 (CONF-701121-8)
interactions e + n in e + d interactions at high energies, cross sections for inelastic, (E), 25:56405 (DESY-71/33)
interactions e + n in e + d interactions at high energies, cross sections for Δ(1236) production in, (E), 25:56405 (DESY-71/33)
interactions e + p above second resonance, review of $\pi$ production in, (E), 25:56406 (DESY-71/35)
interactions e + p in composite model, scale invariance of structure function for deep inelastic, 25:56465
interactions e + p in e + d interactions at high energies, cross sections for inelastic, (E), 25:56405 (DESY-71/33)
interactions $e^+ + e^- \rightarrow e^+ + e^- + \pi^+ + \pi^-$, Feynman diagram model of, 25:56460
interactions $e^+ + e^- \rightarrow \pi^+ + \pi^-$ angular and energy distributions for, (T), 25:56459
interactions $e^+ + e^-$, production of pseudoscalar mesons in, 25:56459
interactions γ + e, disturbance of second-order coherence of photon field in quantum electrodynamics for forward, (T), 25:56456
interactions with electromagnetic field at 4 GeV/c in propane bubble chamber, direct electron pair production in, 25:56467
laser beam interactions with, stimulated Compton energy exchange rate in, (T), 25:56266 (UCRL-51065)
mean free path in aluminum and Permalloy foils, (E), 25:56281
motion in strong Coulomb field, Sommerfeld orbits in, (T), 25:56394
photodissociation of complex hydrated, 25:54595 (CONF-700652-(Vol.3))
production and properties of trapped radiolytic, in polar substances, 25:54593 (CONF-700652-(Vol.2), pp 261-93)
production of $e^+e^-$ in electron interactions with electromagnetic field at 4 GeV/c in propane bubble chamber, direct, 25:56467
properties of trapped radiolytic, in alkaline aqueous glasses, 25:54627 (CONF-700652-(Vol.2), pp 295-330)
properties of trapped, in nonpolar solids, 25:54594 (CONF-700652-(Vol.2), pp 331-64)
reactions of hydrated radiolytic, in aqueous solutions of organic compounds, 25:54632 (CONF-700652-(Vol.3), pp 649-92)
reactions of hydrated, chemical reaction kinetic studies using, 25:54631 (CONF-700652-(Vol.3), pp 601-48)
reactions of hydrated, with organic compounds, 25:54631 (CONF-700652-(Vol.3), pp 601-48)
reactions of hydrated, with polynucleotides, effects of secondary structure on, 25:55131
reactions of radiolytic hydrated, in aqueous solutions of cobalt(III) cyanide complexes, kinetics of, 25:54651
reactions of radiolytic, with ion, 25:54591 (CONF-700652-(Vol.1), pp 221-58)
reactions with atoms and diatomic molecules at low energies, review of total and momentum-transfer cross sections for, (E), 25:55856
reactions with atoms and molecules, computer control system for studying, 25:55094
reactions with helium at 100 to 2000 eV, angular and energy distributions of electrons from ionization in, (E), 25:55847
reactions with helium, Born--Oppenheimer approximation for excitation to metastable states in, 25:55843
reactions with helium, eikonal approximation for excitation of $2^1P$ state in, 25:55874
reactions with helium, trapped-electron study of resonances in excitation in, 25:55851
reactions with hydrogen atoms at low energies, use of free-fall atomic model in three-body calculations of ionization cross sections for, 25:55836 (INR-P-1327)
reactions with hydrogen atoms, eikonal approximation for excitation of 2p and 2s states in, 25:55874
reactions with hydrogen atoms, Glauber and Vainshtein approximations for total cross sections for 1s--2p excitation in, 25:55850
reactions with hydrogen atoms, perturbation-theory calculations of 1s--2s excitation in, 25:55877
reactions with hydrogen molecules, effects of vibrational level on kinetic-energy distribution of protons from, (T), 25:55857
reactions with lithium up to 60 eV, Born-approximation calculations of excitation cross sections for, 25:55864
reactions with metal targets at 0.5 to 15 keV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
reactions with molecules at low energies, review of theory of rotational excitation in, 25:55855
reactions with molecules at low energies, review of methods of measurement of cross sections for, 25:55855
reactions with water molecules, dependence of generalized oscillator strengths on momentum transfer in, (E), 25:55880
scattering by atoms, computational procedure for multichannel resonances in, 25:55861
scattering by atoms, polarized-orbital method for, 25:55871
scattering by carbon-12, oxygen-16, and silicon-28, form-factor calculations using isotensor dipole sum rules, (T), 25:56868
scattering by hydrogen atoms at 1.21 to 2.25 rydbergs, complex-energy calculations of s-wave elastic, 25:55860
scattering by hydrogen atoms, algebraic close-coupling approach to, 25:55854
scattering by hydrogen atoms, parameters for multichannel resonances in, (T), 25:55861
scattering by nuclei at medium and high energies, cross sections for summed inelastic and quasi-elastic, (T), 25:56849
scattering by nuclei with multipole moments, effects of nuclear structure on bremsstrahlung produced in polarized and unpolarized, (T), 25:56862
scattering by nuclei, analysis for isotensor components in dipole sum rules for, (T), 25:56868
scattering by nuclei, effect of short-range correlations in, (T), 25:56824 (LYCEN-7104, C4.1-17)
spectra of hydrated, effects of temperature on, 25:54658
transport in solids, Monte Carlo calculations for, 25:56362

ELECTROPHORESIS
review of countercurrent, 25:54742

ELECTROSTATIC ANALYZERS
calculations for a sector field magnetic and, 25:56606
design improvement of planar, for slow electrons, 25:55072 (FRNC-TH-54)
electron energy distributions of, calculations of, 25:55084
performance as time-of-flight spectrometer for plasma diagnostics, (E), 25:56137
performance for electron spectrometry, 25:55083
spectra from charged-particle, method for evaluation of, 25:55082

ELECTROSTATIC FIELDS
charged-particle trajectories in 1/r, second-order approximation for calculating, (T), 25:55082
Coulomb field corrections for, in strong magnetic fields, 25:56402
electron motion in strong Coulomb, Sommerfeld orbits in, (T), 25:56394

ELECTROSTATIC GENERATORS
shielding material for, x-ray, 25:56603(P)

ELECTROSTATIC LENSES
aberrations of asymmetrized quadrupole, 25:56604

ELEMENTARY PARTICLE MODELS
classical stochastic, formulation of Bohr-like, 25:56450
dual quark--parton, for hadron interactions, 25:56481
dual resonance, canonical quantization of proper time formalism in, 25:56480

XUM

dual resonance, current amplitudes in, 25:56449
dual resonance, with second sheet resonances, effects of unitarity-like features in inclusive interactions in, 25:56476
harmonic oscillator quark, for hyperon resonance spectra, 25:56507
Lee, unified treatment of V--theta and V--2theta sectors of, 25:56553
multiperipheral, lectures on interactions at high energies in, 25:56442 (PURC-4159-42)
Regge absorption, $\pi$ and eta production in forward $\gamma$ + N + $\pi$(eta) + N interactions in, 25:56452 (CALT-68-313)
Reggeized one-pion-exchange, diffraction production of N(1470) and N(1688)in n + p + 2p + $\pi^-$ interactions at 2 to 30 GeV in, 25:56521 (JINR-P1-5975)
rising phase shift, mass and width of rho' in anti p + n + $\pi^+$ + 2$\pi^-$ interactions in, 25:56485 (ORO-3992-66)
strong coupling baryon bootstrap, coupling constants between baryons and pseudoscalar mesons in SU(3), 25:56503
vector dominance, hadron weak interaction form factors in, 25:56468 (FRNC-R-1)
ELEMENTARY PARTICLE MODELS (BOOTSTRAP)
theory of SU(3) strong coupling baryon, for coupling constants between baryons and pseudoscalar mesons, 25:56503
ELEMENTARY PARTICLES
current algebra for, cellular structure in phase space in fibre bundle theory in, (T), 25:56448
electromagnetic interactions of, indefinite metric for cross sections of production of heavy photon in, (T), 25:56547 (NYO-1932(2)-200)
inteactions with photons, structure of amplitude and differential cross sections for, (T), 25:56454
interactions at high energies, lectures on multiperipheral models for, (T), 25:56442 (PURC-4159-42)
interactions in dual resonance models with second sheet resonances, effects of unitarity-like features in inclusive, 25:56476
interactions of, formulation of action-at-distance field theory for, (T), 25:56550 (ORO-3992-14)
interactions of, lectures on quantum field theory for relativistic, (T), 25:56571 (CERN-71-14, pp 229-87)
interactions with particles and antiparticles at extremely high energies, asymptotic behavior of amplitudes of elastic, (T), 25:56574
interactions with photons, research at Lund Univ., 1970, (E), 25:56643(R) (NP-19018)
magnetic moment of spin-1/2, in Bohr-like model, 25:56450
mass spectra of spin-1/2, in Bohr-like model, 25:56450
research at Institute of Theoretical Physics, Gothenburg, Sweden, 1970, (T), 25:56441(R) (NP-18997)
research at Purdue Univ., June 1970 to May 1971, (T), 25:56440(R) (COO-1428-276)
spin states of, properties of coherent, (T), 25:56451
strong interactions at high energies, research at Purdue Univ., June 1970 to May 1971, (E), 25:56424(R) (COO-1428-280)
strong interactions of, research at Stockholm Univ., 1970, (E), 25:56416(R) (USIP-71-1)
strong interactions of, review of Regge cuts for, (T), 25:56475 (RPP/C-24)
theory for, anomalous magnetic moment couplings in spin-one, 25:56464
wave equations for massive spin-1/2, two-component, 25:56559
wave equations for massless spin-$^1/_2$, relativistic, 25:56447
widths of, use of resolution functions in experimental measurement of, 25:56430
ELEMENTARY PARTICLES (TRIPLET)
decay of quark-like, weak interaction with nonconservation of baryon number and electric charge for, 25:56471
flux in cosmic rays, upper limits for, (E), 25:55910
flux of 4e/3-charged quarks in cosmic radiation at 2750 m above sea level, scintillation counter telescope study of upper limit for vertical, (E), 25:56403
ELEMENTS
book: Emissive Properties of Materials (Handbook), 25:56346
determination of light, by coincident measurement of complementary particles from nuclear reactions, 25:56752(R) (SUNI-14)
determination of light, in metals, alpha reactions with aluminum and silicon at 70 to 160 MeV for activation analysis methods for, 25:56685 (FRNC-TH-48)
determination of trace amounts of, in particle size fractions of pollution aerosols by neutron activation and gamma spectrometry, 25:54505
energy-level transitions of Z = 57 through 92, probabilities of L x-ray, (E), 25:55823
production of superheavy, by nuclear reactions, chemical problems in, 25:54672
spectra of Z = 20 through 94, relative intensities of K x-ray emission lines of, (E), 25:55827
EMBRYOS
radiation effects on mammalian, 25:55207 (NYO-2740-8, pp 220-59)
radioinduced cardiovascular anomalies in chick, additive effects of hypothermia on x, 25:55333
ENDOTOXINS
radioprotective effects of, use of immune reactions of rats to Trypanosoma in studies of, 25:55267
ENGINEERING TEST REACTOR
experimental capabilities of, liquid metal cooled fast breeder reactor safety programs, 25:57069(R) (ANL-7800)
ENVIRONMENT
conference on remote sensing of, Sixth International, Ann Arbor, Mich., Oct. 13 to 16, 1969, 25:54767
conference on sciences of, 1970 Annual, Boston, April 12 to 16, 1970, 25:54932
contamination by radioactive waste disposal, review on, 25:54784
contamination of, economic aspects of, 25:54599 (ORNL-4717, p 117-24)
fluorine release to, hazards to man following, 25:55246 (CEA-Bib-200)
iodine-129 content of nuclear fuel reprocessing plant, public health hazards from, 25:55199
radiation monitoring of nuclear power plant, design and performance of amphibious detection system for in situ $\gamma$, 25:55239
radioactive contamination of, by nuclear industry in Canada, biological significance of, 25:55194 (70-CNA-641)
radioactivity monitoring in aquatic, role of stable element content measurements in pre-operational, 25:55240
radioactivity monitoring in United Kingdom, derivation and use of reference levels and working limits as standards for, 25:55241
radioactivity monitoring in, consideration of ecological factors in developing program for, 25:55238
radioactivity release to, estimation of effects on background radiation levels of long-term nuclear power plant, 25:55200
sampling for radioactive or toxic materials, evaluation of methods for, 25:54779 (CONF-710401-, pp 347-51)
thermal energy utilization in, 25:54396 (ORNL-4682, pp 242-9)
EPISOMES
radioinduced inactivation of F', role of DNA cross-links in sensitizing effects of psoralen on uv, 25:55361
EPOXY RESINS
radiation effects on adhesive properties in glass--glass and metal--metal joints, gamma, 25:55666
radiation effects on mechanical properties of cured, gamma, 25:55667
EQUIPMENT AND PROCEDURES
development for compacting solid radioactive wastes, 25:54975 (WASH-1167)
ERBIUM
lattice parameters of, effects of hydrogen on, 25:55549
separation from aqueous solutions by solvent extraction using TTA, synergistic effects of 2,4-pentanedione on, 25:54731
ERBIUM ALLOYS AND SYSTEMS
Au--Er, crystal structures and melting points of intermetallic, 25:55570
Er--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
ERBIUM ISOTOPES Er-168
energy levels from holmium-168 beta decay, spin--parity assignments for, (E), 25:56767
energy-level transitions from holmium-168 beta decay, branching ratios and relative intensities for, (E), 25:56767
ERBIUM ISOTOPES Er-169
energy levels from holmium-169 beta decay, spin--parity assignments for, (E), 25:56767
ERBIUM OXALATES
crystal structure of trihydrate of, 25:54532 (ORNL-4717, pp 1-27)
ERYTHROCYTES
radiation effects on beagle dog, protective effects of hydrogen peroxide against strontium-90 $\beta$, 25:55319 (UCD-472-118)
ESTUARIES
radioisotope content and distribution of Hudson River, analysis of fallout, natural, and reactor produced, 25:55160
ETHANE
effects on reactions of recoil tritium with deuterated methane, 25:54684
photoelectron-induced decomposition of, duplication of excitation mechanism in radiation chemistry by, 25:54597
radiation effects on exchange reactions of, with tritium, 25:54727
radioinduced polymerization in dilute solutions in liquid argon, yields from $\gamma$, 25:54615
reactions with moderated recoil fluorine-18 atoms, rate of hydrogen abstraction, 25:54686
ETHANE, 1,1,1-TRICHLORO-2,2-BIS(p-CHLOROPHENYL)-
radioinduced dechlorination in alcoholic solution, mechanism of $\gamma$, 25:54620
radiolysis of, toxicity to rats of products formed following $\gamma$, 25:55135

ETHANE, TRIFLUORO-
reactions with moderated recoil fluorine-18 atoms, rate of hydrogen abstraction, 25:54686
ETHANOL
effects on radiolysis of gaseous ethylene, 25:54643
radiolysis of liquid, yields of hydrogen and free ions in γ, 25:54660
ETHYL ETHER
effects on radiolysis of gaseous ethylene, 25:54643
ETHYLENE
effects on γ radiolysis of propene polymers, 25:54637
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
oxidation over gold, effects of deuterium on, 25:54569
radioinduced polymerization in dilute solutions in liquid argon, yields from γ, 25:54615
radioinduced telomerization by propionic acid, γ, 25:54612
radiolysis of gaseous, effects of ethanol, ethyl ether, and methyl ether on γ, 25:54643
ETHYLENE, CHLORO-, POLYMERS
radioinduced grafting of acrylonitrile on, effects of dose on γ, 25:54613
ETHYLENE, 1,1-DICHLORO-
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
ETHYLENE, FLUORO-
radioinduced polymerization of gaseous and liquid, comparison of properties of products of chemically initiated and γ, 25:54624
ETHYLENE POLYMERS
neutron emission from laser-irradiated deuterated polyethylene, 25:56219
neutron spectra in, time dependence following fast pulses, 25:56629
radiation effects on cuttings and powders of crystals of, effects of dose and sample size on γ, 25:54623
radiation effects on low- and high-pressure films of, comparison of γ and proton, 25:54604
radioactive waste incorporation in, 25:54715 (ORNL-4682, pp 95-113)
ETHYLENE, TETRAFLUORO-, POLYMERS
photoconductivity during ionizing radiation pulses, analysis of dielectric, 25:55079 (SC-DC-713696)
ETHYLENIMINE
effects on mutations in x-irradiated seeds of barley and wheat, 25:55261
effects on x-irradiated seeds of Crepis capillaris, effects of time of administration on additive or radioprotective, 25:55260
EUMYCOTA
Aspergillus sp., radiation effects on germination of, in processed garlic, γ, 25:55354
Saccharomyces carlsbergensis, radiation effects on synthesis of ribosomal precursor RNA in, uv, 25:55138
Saccharomyces cerevisiae, radiation effects on genetics and survival of, effects of dehydration and vapor pressure on, 25:55183
Saccharomyces cerevisiae, radiation effects on survival of, effects of LET on OER and RBE for heavy ion, meson ($\pi^-$), and x, 25:55165
Saccharomyces cerevisiae, radioinduced mutations in, gene control of uv, 25:55187
Saccharomyces cerevisiae, radioinduced mutations in, effects of LET on OER and RBE for γ, heavy ion, and meson ($\pi^-$), 25:55165
Saccharomyces cerevisiae, radiosensitivity of mutants of, correlation between spontaneous reversion frequency and, 25:55352
Saccharomyces sp., rdioinduced chromosome recombination in diploid, uv, 25:55180
Schizophyllum commune (mushroom), radioinduced dome mutants of, morphology of uv, 25:55186
yeasts, radiation effects on survival of haploid, parameters for heavy ion, 25:55313
EUROPE
research programs of EURATOM, 25:55252 (NP-18752)
EUROPIUM
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in nuclear grade uranium by x-ray excited optical fluorescence, 25:54428
reduction at porous carbon cathode with flowing electrolyte, electrochemical, 25:54530 (LA-DC-12469)
separation from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
EUROPIUM ALLOYS AND SYSTEMS
valence states of europium in intermetallic compounds, Moessbauer-effect study of, 25:56379
Eu--La-base, local moment relaxation in superconducting, (E), 25:56071
EUROPIUM ISOTOPES Eu-151
Moessbauer effect in europium intermetallic compounds, 25:56379
EUROPIUM ISOTOPES Eu-152
beta and electron-capture decay of, γ-γ directional correlation from, (E), 25:56777
beta decay of, β-γ angular correlations and matrix elements for nonunique first-forbidden, (E), 25:56776
EUROPIUM ISOTOPES Eu-153
energy-level transitions in, nuclear structure effects on internal conversion of M1, 25:56756
EUROPIUM NITRIDES
evaporation behavior at 1500 to 1800°K, 25:55607 (JUL-739-PC)
formation heat of, 25:55607 (JUL-739-PC)
EXHAUST SYSTEMS
design for Battelle plutonium facility, 25:54959 (CONF-710401-, pp 280-92)
filters for plutonium recovery plant, design of HEPA, 25:54947 (CONF-710401-, pp 118-32)
heat exchangers for radioactive processing building, design of filter plenum, 25:54950 (CONF-710401-, pp 162-80)
operation of plutonium processing building, 25:54948 (CONF-710401-, pp 133-48)
EXOSPHERE
ultraviolet radiation emission in, altitude distribution of neutral helium He 584-A and $He^+$ 304-A extreme-, (E), 25:55967
EXPERIMENTAL BREEDER REACTOR-II
coolant for, corrosive effects on core components and cooling system of liquid sodium, 25:57109 (ANL-7771)
coolant pumps for, summary of operating performance of sodium, 25:57028 (ANL-EBR-27)
cooling system for, corrosive effects of liquid sodium on, 25:57109 (ANL-7771)
core components for, corrosive effects of liquid sodium on, 25:57109 (ANL-7771)
hot cell facility for, equipment for remote measurements on irradiated components in, 25:57054 (ANL-EBR-30)
EXPLOSIONS
effect on radar reflected-produced decameter-wavelength radio waves in ionospheric E region, E-region-detonated, (E/T), 25:55970
EXPONENTIAL PILES
neutron decay constants for uranium, measurements using californium-252 neutron source, 25:56639
EYES
radiation effects on beagle dog, effects of dose on proton, 25:55319 (UCD-472-118)
radioinduced cataracts in rabbit, effects of dose and LET on RBE for cobalt-60 γ, 2.5 and 14 MeV neutron, and 3 GeV proton, 25:55317 (CEA-CONF-1744)
radioinduced light flashes in astronaut, following exposure to cosmic mesons (μ), 25:55341
radium-226 content of uveal tissue of beagle dog, use of autoradiography to measure, 25:55319 (UCD-472-118)

## F

FALLOUT
content in rainwater at Hokkaido, Japan following Sept. 1969 Chinese nuclear explosion, (E), 25:54789
fractionation of, method for determining strontium-89/strontium-90, 25:54803
monitoring in ground-level atmosphere in north Germany and north Norway, 1970 and 1971, 25:54785
monitoring in Swiss atmosphere following Dec. 1968 and Sept. 1969 Chinese nuclear explosions, 25:54791
radiation dose rates from, calculation of, 25:55231
FAST FLUX TEST FACILITY
coolant combustion in, analysis of liquid sodium, (E/T), 25:57112 (HEDL-TME-71-31)
cooling system for, design for safe handling of coolant radioisotopes, 25:55370 (BNWL-SA-2335)
core components for, wear testing in sodium, 25:55379(R) (WARD-4210-T-1-2)
materials for, research progress on development of, 25:55379(R) (WARD-4210-T-1-2)
FAST TEST REACTOR
coolant interaction with molten fuel in, pressure generation by, (T), 25:57073 (CONF-710302-(Vol.1), pp 25-49)
core failure accident in, analysis of radiation hazards from, 25:57113 (HEDL-TME-71-33)
physics calculation for, listing of 26 group cross section set for, 25:57115 (HEDL-TME-71-65)
startup tests of, preliminary outline of, 25:57114 (HEDL-TME-71-58)
FEDERAL REPUBLIC OF GERMANY
fallout monitoring in ground-level atmosphere of north, 1970 and 1971, 25:54785
nuclear power development in, planning for, 25:57003
nuclear power plant requirements in, projections of, 25:57005
nuclear research in, organization and financing of, 25:57014
power reactor development and operation in, review of, 25:56877 (CONF-700438)
FELDSPARS
analysis for barium, potassium, and sodium by neutron activation and γ spectometry, 25:54494
FERMI FAST BREEDER REACTOR
cooling system for, secondary containment requirements

XUM

for external liquid sodium primary piping of, 25:56931 (DOCKET-50016-129)
data acquisition and analysis in, malfunction detection analyzer system for, 25:56878 (CONF-710302-(Vol.1), pp 199-214)
fuel element transfer tank for, operating limits for irradiated, 25:56929 (DOCKET-50016-127)
fuel element transfer tank for, operating limits for irradiated, 25:56930 (DOCKET-50016-128)
FERMIONS
spinor theory of, two-component, 25:56552
theory for two spin-1/2, with Heisenberg coupling, properties of coherent spin states in, (T), 25:56451
wave equations for massive spin-1/2, two-component, 25:56559
wave equations for massless spin-$^1/_2$, relativistic, 25:56447
FERREDOXINS
Moessbauer-spectra studies of, review, 25:55105
FERROCYANIDES
determination by dichrometric titration using triphenylmethane dyes as redox indicators, 25:54410
FETUSES
radiation effects on chromosomes of mouse, 25:55207 (NYO-2740-8, pp 220-59)
FIBERS
radiation effects on electric conductivity and diamagnetic anisotropy of carbon, neutron, 25:56282 (CEA-CONF-1822)
FILMS
book: Emissive Properties of Materials (Handbook), 25:56346
microporous areas in, method of detecting, 25:54859(P)
FILTERS
description of glove box, for plutonium-238 handling, 25:54949 (CONF-710401-, pp 149-61)
description of HEPA, for plutonium processing building, 25:54948 (CONF-710401-, pp 133-48)
installation and performance of HEPA, for radioactive effluents, 25:54947 (CONF-710401-, pp 118-32)
performance of HEPA, in retaining plutonium combustion aerosols, 25:54951 (CONF-710401-, pp 181-202)
FIRES
control and prevention at WADCO, categorization of nuclear facilities for, 25:54953 (CONF-710401-, pp 208-11)
control and prevention in hot cells, design and performance of test facility for, 25:54956 (CONF-710401-, pp 237-47)
control in large volumes using Halon 1301 suppressing agent, 25:54957 (CONF-710401-, pp 248-56)
control of nuclear plant, organization and planning for, 25:54952 (CONF-710401-, pp 204-7)
detection and suppression in glove boxes, design of automatic system for, 25:54954 (CONF-710401-, pp 212-20)
detection and suppression in glove boxes, development of systems for, 25:54939 (CONF-710401-, pp 17-25)
detection in glove boxes, development of reliable system for, 25:54955 (CONF-710401-, pp 221-36)
effects on radioactive processing building exhaust systems, use of filter plenum heat exchangers for minimizing, 25:54950 (CONF-710401-, pp 162-80)
FISSION
energy release in, calculation using renormalized Fermi gas model and collective potential energy surface, (T), 25:56856
mass chain yields in, method for calculation of energy dependence of, (T), 25:56816 (JAERI-Memo-4383)
neutron emission in, analysis of data on retarded, 25:56741 (KFKI-71-35)
neutron yield in, time-of-flight spectrometer for measuring average prompt, 25:55039(T) (LB/G-3040)
FISSION FRAGMENTS
effects on methanol, 25:54645
FISSION PRODUCTS
activity of, formalism for calculation of, 25:54699
deposition of noble metal, on samples from MSRE, 25:54533 (ORNL-4717, pp 29-41)
deposition on samples from MSRE pump bowl, 25:54533 (ORNL-4717, pp 29-41)
detection in failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
distribution in high temperature gas cooled reactor cooling systems, 25:57092(R) (ORNL-TM-3483)
distribution in MSRE moderator graphite, 25:54533 (ORNL-4717, pp 29-41)
monitoring of stack-disposed gaseous, from reactors, production of gases of known specific activity for calibrating detectors for, 25:54986
production and uses of, research progress on, 25:54887(R) (BNWL-1308-6)
production of iodine, power reactor safety problems from, 25:57100
radiation dose rates from uranium-235, at selected times after fission, 25:55231
release during coolant loss accident in water cooled and moderated power reactors, 25:57104
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
release from fast reactors following core failure accident, 25:57113 (HEDL-TME-71-33)
release from gas cooled reactor pressure loss accidents, 25:57106
separation by ion exchange, 25:54449
separation from milk, double-bed ion exchange process for, 25:54722
separation from molten manganese nitrate hexahydrate or calcium chloride hexahydrate by solvent extraction using TBP, 25:54740
separation from MSBR fuel solvent by metal transfer process, distribution of sodium and potassium in, 25:54534 (ORNL-4717, pp 43-56)
separation from plutonium and uranium by fluorination process, 25:54736
separation of short-lived, beta recoil mechanism for, 25:54694
separation of volatile, from LMFBR fuels, 25:54713 (ORNL-4682, pp 39-79)
volatility of oxides of, effects of water vapor on, 25:54758 (ORNL-4717, pp 109-15)
FLOWMETERS
development of radioisotope tracer, for measuring turbine and pump discharge, 25:55065
FLUID FLOW
heat transfer and velocity distribution in turbulent, in triangular channels, calculations of, 25:54884
heat transfer coefficients for turbulent, in ducts with flux transients, derivation of forced-convection, 25:54864 (ANL-7754)
heat transfer in axial turbulent, through tubes and rod bundles, 25:54866 (EIR-198)
heat transfer in incompressible turbulent, through tubes, model for axial, (T), 25:54877 (SGAE-RT-38/1971)
heat transfer in longitudinal turbulent, containing heated rod bundles, equations for calculating stable, 25:54883
heat transfer in two-phase annular, in heated pipes, effects of diffusion and film formation on critical, (E), 25:54869 (FEI-217)
heat transfer in two-phase, in multirod coolant channels, (E), 25:54870(R) (GEAP-10347)
heat transfer in, through vertical annular space, onset of free convection, (E/T), 25:54881
heat transfer to, at supercritical pressures, effects of fuel element dimensions on, 25:54880
magnetohydrodynamic channel, velocity profile in entrance region of, (E/T), 25:55942
magnetohydrodynamic conducting, numerical calculation in traveling magnetic field, 25:55918
magnetohydrodynamic duct, effect of magnetic Reynold's number and Hall effect on current distribution in, (T), 25:55949
magnetohydrodynamic duct, shock-wave propagation in, (E), 25:55951
magnetohydrodynamic extendable channel, electromagnetic fields in induction, 25:55939
magnetohydrodynamic heavy viscous incompressible, infinitely conducting, rotating, equilibrium in vertical magnetic field of, 25:55917
magnetohydrodynamic inviscid perfectly conducting, past thin body in transverse magnetic field, (T), 25:55929
magnetohydrodynamic turbulent, double correlation equations of magnetic field and velocity in isotropic conducting, 25:55916
magnetohydrodynamic turbulent, effect of longitudinal magnetic field on hydraulic resistance in pipes on, (E/T), 25:55937
magnetohydrodynamic, at high Hartmann number, review of, 25:55921
magnetohydrodynamic, coefficient of electromagnetic ejection of solids from, (E/T), 25:55930
magnetohydrodynamic, convective motion in transverse magnetic field in, (T), 25:55948
magnetohydrodynamic, dynamics of liquid-metal drops in conditions of reduced gravitation, 25:55931
magnetohydrodynamic, effect of transverse magnetic field on intensity profiles in turbulent velocity fluctuations in rectangular pipes, (E/T), 25:55926
magnetohydrodynamic, effects of crossed electric and magnetic fields on boundary layer in, (T), 25:55934
magnetohydrodynamic, electric field in rectangular duct with end electrodes, (T), 25:55950
magnetohydrodynamic, equations for magnetostatic equilibria and associated time-dependent resistive flows, 25:55940
magnetohydrodynamic, induced by impulsive rotation of infinite disc, (T), 25:55947
magnetohydrodynamic, mass transfer considering chemical reaction kinetics at boundaries, (T), 25:55932
magnetohydrodynamic, rotation in crossed fields of electrically conducting, (T), 25:55938
magnetohydrodynamic, slow rotation of axisymmetric solids in, (T), 25:55941
magnetohydrodynamic, stabilization of flutter instabilities by distributive control, (T), 25:55925
magnetohydrodynamic, suppression of convection in, (T), 25:55945
magnetohydrodynamic, temperature field in vortex chamber in axially symmetric, (T), 25:55933
magnetohydrodynamic, transition to turbulence with finite

perturbations, (T), 25:55927
magnetohydrodynamic, turbulent jet in longitudinal magnetic field, (T), 25:55928
magnetohydrodynamic, turbulent jets of conducting, (T), 25:55922
pressure distribution in, around roughness element, estimation of rough surface friction factor from measurements of, 25:54873 (RD/B/N-1967)
study of post-burnout two-phase, high-speed photographic method for, 25:54875 (RT/ING-(71)8)
temperature and velocity distribution in turbulent, in annular channel with roughened core rods, calculations of, 25:54874 (RD/B/N-1980)
velocity distribution in cylindrical Couette, method for calculating, 25:54888 (CONF-700557-5)
FLUIDIC DEVICES
design for sealing pressurized tubes in reactor steam generators, 25:54845(P)
FLUIDS
containment between two coaxial walls, design of fluid-tight device for, 25:54860(P)
motion of rotating, produced by temperature gradient perpendicular to gravitational and magnetic fields, (T), 25:55919
temperature distribution in moving, finite element method for calculation of, 25:54882
FLUORESCEIN
sodium salt, diffusion and deposition of, in atmosphere, 25:54795
FLUORESCEIN, TETRAIODO-
radiolysis of aqueous, absorption spectra studies of x, 25:54664
radiolysis of aqueous, reaction mechanisms for x, 25:55139
FLUORIDES
electrode for molten, development of nickel--nickel oxide reference, 25:54532 (ORNL-4717, pp 1-27)
separation from molten lithium chloride by reactions with boron trichloride, 25:54534 (ORNL-4717, pp 43-56)
solvent properties of molten, for boron trifluoride gas, 25:54532 (ORNL-4717, pp 1-27)
solvent properties of molten, for hydrogen, 25:54534 (ORNL-4717, pp 43-56)
sonic velocity of molten, estimation from absolute entropy of, 25:54532 (ORNL-4717, pp 1-27)
FLUORINATION
equipment for continuous, axial dispersion in, 25:54712 (ORNL-4682, pp 1-38)
equipment for continuous, development of frozen-wall, 25:54712 (ORNL-4682, pp 1-38)
FLUORINE
abundance in primary cosmic radiation, (E), 25:55911
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination in aluminum electrolytic bath by 14-MeV neutron activation simultaneously with aluminum and oxygen, 25:54503
hazards to man following release to environment, 25:55246 (CEA-Bib-200)
reactions with neptunium dioxide, plutonium dioxide--uranium dioxide, and uranium dioxide, kinetics of, 25:54736
FLUORINE ISOTOPES F-18
energy levels from resonances in oxygen-16 (d,α) reactions, (E), 25:56667
energy levels of, shell-model calculation with reaction matrices and pairing correlations, (T), 25:56666
production in alpha reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
reactions of moderated recoil, with deuterium, hydrogen, deuterated methane, ethane, and trifluoroethane, rate of hydrogen abstraction, 25:54686
FLUORINE ISOTOPES F-19
deuteron reactions (d,p) at 10 MeV, angular distributions for, (E), 25:56716
photon reactions (γ,n) with, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
FLUORINE ISOTOPES F-20
energy levels from neon-20 (n,p) reactions, (E), 25:56717
energy levels of, spin--parity assignments for, (E), 25:56716
FLUOROBORATES
thermal decomposition of, mass spectrometric studies of, 25:54532 (ORNL-4717, pp 1-27)
tritium exchange in molten, 25:54534 (ORNL-4717, pp 43-56)
FLUOROCARBONS
radiolysis of, for gamma dosimetry, 25:55053
FOOD
radiation processing in United Kingdom, development of facilities for, 25:55363
FOOD CHAINS
radioisotope transport in marine, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
tracer studies of soil and litter arthropod, 25:57281 (SRO-641-2)
FOOD IRRADIATION FACILITIES
design of gamma, for potatoes, 25:54837(P)
FORMALDEHYDE
transitions of normal and isotopic-species, 6-cm rotational, (E), 25:55732
FORMAMIDE
microwave emission from interstellar, detection of, (E), 25:55784
FORMIC ACID
reactions with tetravalent uranium in aqueous benzene solutions, stability constants for complex ions produced by, 25:54581
FRACTURE TESTS
stress analysis for, developments in three-dimensional elastic--plastic, 25:55515
FRANCE
neutron research at CEA in, during October 1969 to December 1970, 25:55203(R) (CEA-N-1449)
nuclear explosions in, program for peaceful uses of, 25:54819(T) (UCRL-Trans-10543, pp 1-3)
radiological accidents in, legal aspects of, 25:55252 (NP-18752)
regulations for overland shipping of sealed gamma sources for radiography, 25:54976
research on heat transfer in, for nuclear programs, 25:54865 (CEA-CONF-1758)
thorium deposits in Vosges Mountains of, effects of thorite and zircon on geochemistry of, 25:54807
uranium deposits in Vosges Mountains of, effects of thorite and zircon on geochemistry of, 25:54807
FREE RADICALS
production of radiolytic, by fast reaction flow systems in aqueous solutions, ESR studies of, 25:54662
radioinduced production in deuterated and normal glycine monocrystals, ESR studies on x, 25:54653
radioinduced production in potassium hydrogen malonate monocrystals at 4.2°K, ESR spectral studies on x, 25:54654
radioinduced production in single crystals of thymine, γ, 25:55130
radioinduced production in vinyl monomers, ESR study of gamma, 25:54634
reactions in photolysis and radiolysis of branched alkane glasses, 25:54648
FREQUENCY STANDARDS
calibration of primary, 25:57296 (Y-IA-92)
FUEL CAPSULES
design and fabrication of SNAP-19B, 25:54893 (MLM-1736)
FUEL CELLS
performance of thin-film, using calcium oxide-stabilized zirconium dioxide, 25:55596
FUMARIC ACID
potassium salt, radiolysis of, radical pair formation in, 25:54665
salts of, radiolysis of aqueous solutions of, ESR studies of radicals from electron, 25:54656
FURNACES
ironmaking in blast, uses of radioisotopes for process studies of, 25:54906
FUSED SALTS
corrosive effects on reactor materials, conference on, 25:55371 (CONF-690452)
production of, for MSR program, 25:54534 (ORNL-4717, pp 43-56)
purification of, equipment and methods for continuous, 25:54712 (ORNL-4682, pp 1-38)

## G

GADOLINIUM
determination of trace amounts of, in nuclear grade uranium by x-ray excited optical fluorescence, 25:54428
lattice parameters of, effects of hydrogen on, 25:55549
separation from aqueous solutions by solvent extraction using TTA, synergistic effects of 2,4-pentanedione on, 25:54731
separation from neodymium and samarium by liquid--liquid chromatography using bis(2-ethylhexyl) phosphate and sulfuric acid, 25:54745
x-ray absorption edges of, positions of L/sub III/, (E), 25:55822
GADOLINIUM ALLOYS AND SYSTEMS
Au--Gd, crystal structures and melting points of intermetallic, 25:55570
Ce--Gd--Ru, critical magnetic field in superconducting, (E), 25:56074
Gd--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
GADOLINIUM CHLORIDES
x-ray absorption edges of, chemical shifts of, (E), 25:55822
GADOLINIUM ISOTOPES Gd-157
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)
GADOLINIUM ISOTOPES Gd-159
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)
GADOLINIUM ISOTOPES Gd-161
energy levels of, model analysis for ΔN = 2 mixing in,

XUM

(T), 25:56737 (JINR-E4-5877)
GADOLINIUM OXIDES
dysprosium-161 Moessbauer spectrum in, hyperfine structure in, 25:56375
x-ray absorption edges of, chemical shifts of, (E), 25:55822
GALAXIES
energy curves and K corrections for giant elliptical, absolute, (E), 25:55794
H II regions in LMC, kinematic properties of 71, (E), 25:55795
hydrogen distribution in M33, (E), 25:55796
infrared emission from, (T), 25:55908
light deflection by gravitational field of cluster of, (T), 25:55809
light from giant elliptical, energy distributions and K-corrections for total, (E), 25:55793
mass of M33, (E), 25:55796
matter in Coma Cluster of, intergalactic, (E), 25:55782
models for nuclei of, containing black holes, (T), 25:55803
particle densities in clusters of, (E), 25:55789
radio emission from nebulae in Magellanic Clouds at 408 MHz, (E), 25:55722
radio observations of Coma and Hercules clusters of, (E), 25:55789
rotational velocity in spiral, radius of maximum, (T), 25:55786
stars in LMC, light variations of supergiant, (E), 25:55705
x-ray emission from Coma Cluster of, cosmological implications of, (E/T), 25:55806
GALLIUM
analysis for chlorides, photometric, 25:54407
determination in meteorites and meteoritic phases by neutron activation and γ spectrometry, 25:54477
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
GALLIUM ALLOYS AND SYSTEMS
Al--Ga--Ni, optical constants for β-phase NiGa/sub 1-y/Al/sub y/ intermetallic compound in, 25:56352
Cu--Ga--Ni, optical constants for β-phase in, 25:56352
Ga--Pu-base, tensile properties of, at 25 to 500°C, effects of strain rate and temperature on, 25:55427 (BNWL-1567)
Ga--transition metals--V, properties of ternary phases of, 25:55500
Ga--V-base, properties of deformed superconducting, 25:56100
GALLIUM ARSENIDES
analysis of epitaxial films of, for impurities by neutron activation and radiochemical separation, 25:54512
ion implantation in, 40-keV sulfur, 25:56288
ion-implantation lattice damage in, reflectivity and scanning electron microscopic studies of 60-keV cadmium, 25:56287
ion-implantation-induced lattice disorder in, proton-channeling study of 140-keV-zinc and 151-keV xenon, 25:56289
radiation effects on carrier properties of heavily doped silicon- and tellurium-doped n-type, 1-MeV-electron, 25:56292
GALLIUM HYDROXIDES
preparation of α-GaOOH, high-pressure hydrothermal method for, 25:55602
GALLIUM ISOTOPES Ga-66
energy levels from zinc-66 (p,nγ) reactions, spin--parity assignments for, (E), 25:56732
energy-level transitions from zinc-66 (p,nγ) multipolarities and branching ratios for reactions, (E), 25:56732
GALLIUM ISOTOPES Ga-67
effectiveness for diagnosis of human bronchial and thyroid carcinomas and reticulum cell sarcomas, 25:55283
GALLIUM ISOTOPES Ga-70
energy levels from gallium-69 (d,p) reactions, (E), 25:56752(R) (SUNI-14)
GALLIUM NITRIDES
shock compression effects on powdered, x-ray-diffraction study of, 25:55618
GALLIUM PHOSPHIDES
ion implantation in, 40-keV sulfur, 25:56288
GAMMA CAMERAS
development using liquefied noble gases in ionization detectors, possibilities for, 25:55028
GAMMA RADIATION
angular distribution from polarized nuclei, system for measuring, 25:55089
detection of, design and construction of self-powered detector for, 25:55011(P)
detection of, design and performance of combined solar battery--scintillation detector for, 25:55005
dose distribution calculations for therapeutic, development of computer program for cobalt-60, 25:55220
dose distribution for teletherapy, development of digital computer method for cobalt-60, 25:55221
dose distributions in rabbit and rat phantoms following exposure to monoenergetic neutron beams, correlation of LET distributions and, 25:55229
dose from radioactive clouds, air attenuation and photon energy in calculation of, 25:54796
dose from radioactive clouds, calculation of, 25:54797
dose rates in uranium radiation loops, calculation of, 25:54991
dose to man following accidental exposure to iridium-192, use of chromosome aberration frequency in biological dosimetry of, 25:55228
dose to man from irradiation facilities, use of aluminum phosphate dosimeter data in calculations of, 25:55235
dose to man in Japan from external occupational exposures, estimation of genetically significant equivalent, 25:55230
dose to organs of mice following inhalation of niobium-95 and zirconium-95, effects of chemical form of inhaled particles on, 25:55125
dosimetry for standardization of pendular pelvic therapy, 25:55222
dosimetry in bulk grain irradiator, performance of encapsulated LiF dosimeter for, 25:55234
dosimetry of, design of solid-electrolyte dosimeter for, 25:55054(P)
dosimetry using tissue-equivalent wall-less proportional detectors, 25:55002 (NYO-2740-8, pp 7-146)
effectiveness for therapy of squamous epithelial cancer of mouth in comparison with ametohepazon, beta particles, 5-fluorouracil, and radium, 25:55345
effects of terrestrial, on vertical distribution of ionization in atmosphere, 25:54790
effects on 1,3-butadiene adsorbed on silica gel, ESR studies of radicals from, 25:54640
effects on 1,3-butadiene single crystals, ESR studies of radicals from, 25:54639
effects on acetic acid solutions of sodium nitrate, effects of diazo reagents on, 25:54657
effects on adhesive properties of epoxy resin in glass--glass and metal--metal joints, 25:55666
effects on alcohols, production of aliphatic aldehydes by, 25:54625(P)
effects on alkaline aqueous glasses, 25:54627 (CONF-700652-(Vol.2), pp 295-330)
effects on aqueous solutions of alkali hydroxides, ESR studies of ozonide ion formation from, 25:54608
effects on aqueous solutions of alkali hydroxides, reply to paper on formation of ozonide ions from, 25:54609
effects on aqueous solutions of sulfuric acid and cerium sulfate, reactivity of tetravalent cerium from, 25:54647
effects on benzoatopentaamminecobalt perchlorate, oxidation of benzoatopentaamminecobalt(III) of hydroxyl radical from, 25:54669
effects on black silicon-carbide varistors, gas desorption in, 25:55102
effects on blood cell chromosomes of industrial personnel following occupational exposure, 25:55163
effects on blood vessels in chickens in relation to mechanisms of acute injury, whole-body exposure, 25:55324
effects on bovine fascia for transplantation in dog brains for filling of defects in dura mater, 25:55148
effects on branched alkane glasses, identification of free radicals from, 25:54648
effects on chromosomes in blood of mice, extrapolation to man of protective effects of cystamine against aberrant, 25:55256
effects on chromosomes of Crepis capillaris seeds, incidence of premutational oxygen-sensitive changes following, 25:55168
effects on chromosomes of Drosophila males, cytological analysis of aberrant, 25:55170
effects on clasmatocyte count in lymph nodes, spleen, and thymus of mice, 25:55321
effects on crystalline alkali metal azides, bromates, and nitrates, 25:54638
effects on crystalline sodium nitrate, 25:54649
effects on cuttings and powders of crystalline polyethylene, effects of dose and sample size on, 25:54623
effects on cyclopentane--nitrous oxide solutions, effects of cyclopentene and propene on yields from, 25:54655
effects on DDT, toxicity to rats of products formed following, 25:55135
effects on dechlorination of 1,1,1-trichloro-2,2-bis(p-chlorophenyl)ethane, 25:54620
effects on dielectric properties of mica insulators, 25:55101
effects on diploid yeast cells, mutagenic, 25:55165
effects on DNA and RNA synthesis in mouse kidney cells synchronized by medium change, 25:55129
effects on donor ability of recA and recA+ strains of Escherichia coli, 25:55358
effects on electronic properties of anodized aluminum electrode, 25:54601
effects on external respiration in man following therapy of malignant chest tumors, 25:55339
effects on eyes of rabbits, effects of dose and LET on RBE for, 25:55317 (CEA-CONF-1744)
effects on gaseous ethylene, effects of ethanol, ethyl ether, and methyl ether on, 25:54643
effects on genetic variation in lizard populations in

Nevada, 25:55320
effects on germanium, luminescence spectra from defects induced in, 25:56328
effects on graft copolymerization of lignin and styrene, 25:54614
effects on grafting of acrylonitrile on poly(vinyl chloride), effects of dose on, 25:54613
effects on hatchability of Artemia eggs, relation between production of free radicals and protective effects of MEA against, 25:55262
effects on human nervous system following therapy of head tumors, prophylaxis and treatment of pathological, 25:55269
effects on in vitro uptake of α-aminoisobutyric acid and cycloleucine by rat liver, 25:55126
effects on incidence of chromosome translocations in mouse spermatogonia, RBE for, 25:55182
effects on incidence of osteonecrosis in human jaw following tumor therapy, 25:55344
effects on incidence of single-strand breaks in double-stranded circular DNA, effects of dose on, 25:55133
effects on linseed, dose dependence of mutagenic, 25:55177
effects on liquid butane and deuterated butane--butane mixtures, effects of scavengers on yields from, 25:54659
effects on liquid cyclohexane, kinetics of charge scavenging in, 25:54668
effects on liquid ethanol, yields of hydrogen and free ions from, 25:54660
effects on lithium-compensated boron-doped silicon, annealing of defects induced in, 25:56293
effects on longevity and reproduction of grain moths, effects of dose on, 25:55315
effects on low- and high-pressure polyethylene films, 25:54604
effects on low-resistivity n-type germanium, recombination of defects induced in, 25:56327
effects on mechanical properties of cured epoxy resins, 25:55667
effects on N-acetylglycine in the presence of ammonia, 25:54650
effects on nutritive properties of beef, 25:55367
effects on phosphorus oxychloride, ESR spectra of radical anion from, 25:54667
effects on polymerization of 2-methylpropene compounds, comparison of molecular weight distribution of products produced by, with that of chemically initiated products, 25:54621
effects on polymerization of acrylonitrile, comparison of structure of products produced by, and chemically initiated products, 25:54622
effects on polymerization of gaseous and liquid fluoroethylene, comparison of properties of products produced by, and those of chemically initiated products, 25:54624
effects on polymerization of methane, ethane, and ethylene, 25:54615
effects on population dynamics of freshwater snails following chronic low dose rate exposure, 25:55314
effects on potassium fluoride--silver nitrate and silver nitrate ices, EPR studies of neutral silver trapping sites from, 25:54666
effects on propene polymers, effects of ethylene and nitrous oxide on, 25:54637
effects on pupae of cotton spotted bollworm, 25:55368
effects on reproduction and survival of progeny of adult male grain moths, effects of dose on, 25:55316
effects on response of rats to tranquilizers following whole-body exposure in mixed neutron fields, 25:55325
effects on RNA polymerase activity in sugar beets, effects of dose and washing on, 25:55351
effects on salts, impurity paramagnetic center appearance in, 25:56339
effects on seed yield of lima beans, effects of developmental stage on, 25:55349
effects on seeds of Crepis capillaris, effects of water content on mutagenic, 25:55167
effects on shelf life of Pacific Coast fish following shipboard exposure, 25:55366
effects on silicon p--n junctions, (E/T), 25:55095(R) (COO-1624-41)
effects on silver nitrate on porous glass or silica gel surfaces, ESR studies of, 25:54606
effects on silver nitrate on porous glass or silica gel surfaces, ESR studies of, 25:54607
effects on single crystals of thymine, 25:55130
effects on sodium acetate crystals, ESR studies on trapped $CH_2CO^-$ radicals produced by, 25:54652
effects on sprouting, spoilage molds, and sugar content of garlic bulbs, 25:55354
effects on supercooled water, yields from, 25:54663
effects on survival of hamster cells, effects of dose on RBE for, 25:55207 (NYO-2740-8, pp 220-59)
effects on survival of Salmonella species in smoked lake whitefish, effects of dose on, 25:55365
effects on swine following bilateral and unilateral exposures, LD-50 for lethal, 25:55334
effects on telomerization of ethylene by propionic acid, 25:54612
effects on thallium sulfate, yields of hydrogen peroxide from, 25:54646
effects on tissues of goats, pathology of, 25:55318(T)
(LB/G-2995)
effects on vinyl monomers at 77°K, ESR study of radicals induced in, 25:54634
energy scale for, comparison with α-particle energy scale, 25:56773
flux in statistically inhomogeneous medium, Monte Carlo method of calculating, 25:56268
flux of, from solar flares, (T), 25:55762
isotropy of cosmic background, between 1 and 6 MeV, (E/T), 25:55896 (N-71-27639)
monitoring for heavy water moderated research reactor fuel element failure detection system, 25:57118 (JAERI-Memo-4157, pp 44-50)
monitoring in environment of nuclear power plant, design and performance of amphibious detection system for in situ, 25:55239
penetration of concrete shield, energy and angular distributions of cobalt-60, (E), 25:56272
properties of secondary, produced by neutron reactions with shielding, 25:56277
reactions (γ,n) with helium-4 at threshold to 31 MeV, cross section for, (E), 25:56649
reactions with intermediate nuclei, cross sections for, (E), 25:56782
scattering by americium-243, production of spontaneously fissioning isomers in inelastic, (E), 25:56738 (JINR-P15-5959)
scattering by plutonium-239, production of spontaneously fissioning isomers in inelastic, (E), 25:56738 (JINR-P15-5959)
transmission through homogeneous concrete slabs, (T), 25:56256 (AD-722012)
transport code for, revised cross-section module for Monte Carlo multigroup, 25:56263 (ORNL-4716)
transport method for shielding calculations, three-dimensional stochastic, (T), 25:56273
transport studies, (E/T), 25:56255(R) (AD-721388)
use for therapy of lung and thoracic lymph node metastases, 25:55300
use for therapy of lymphogranulomatosis of bones, 25:55301

**GAMMA SOURCES**
activity measurements of low-level, crystal scintillation detector design optimization for, 25:55024
development of economical high-intensity, for industrial irradiation plant, 25:54914
dose distribution around sealed linear radium, electronic calculations for, 25:54923
gamma energies and intensities for radium-226, for efficiency calibration of lithium-drifted germanium detectors, 25:55041 (ORNL-TM-3509)
Monte Carlo transport analysis for finite ground-distributed, 25:56260 (EGG-1183-2284)
shipping of sealed, for radiography, French regulations for overland, 25:54976
use of cobalt-60, for commercial processing in United Kingdom, 25:55363

**GAMMA SPECTROMETERS**
data acquisition and processing system for, on-line computer, 25:54474
data processing system for, combined computer peaksearch and peakfit in, 25:54472
design of electron--positron pair, for neutron capture spectroscopy, 25:55040 (NP-18994)
performance of airborne, for measuring radioisotope content of soils, 25:54768

**GAMMA SPECTROSCOPY**
isomer shifts in Moessbauer, calibration of, (T), 25:56370
pulse-height spectra unfolding techniques for, 25:54436 (ORNL-TM-3463)
spectra analysis for calculating nuclide abundances, computer program for, 25:55035 (DP-1275)
use for well logging in presence of radon, (E), 25:54759

**GARIGLIANO POWER REACTOR**
fuel assemblies for, burnup and heavy isotope content of irradiated, (E/T), 25:56879 (EUR-4638)

**GAS CENTRIFUGES**
economic aspects of uranium enrichment using, Swedish studies on, 25:54921
efficiency of partially ionized plasma, method for improvement of, 25:54912
flow and temperature in, calculations of, 25:54891(T) (K-Trans-61-5)
flow in, method for calculating velocity distribution in, 25:54888 (CONF-700557-5)
flow through one-dimensional, calculation of radial, 25:54890(T) (K-Trans-61-3)

**GAS CHROMATOGRAPHY**
method for fuel element failure detection system, development of, 25:57193 (JAERI-Memo-4157, pp 66-83)

**GAS FLOW**
magnetohydrodynamic channel, calculations of, 25:55935
magnetohydrodynamic duct, boundary layer in absence of ionization equilibrium in, 25:55946
magnetohydrodynamic two-dimensional unsteady, classification of invariant solutions of equations of, 25:55924
magnetohydrodynamic wave generation in nonhomogeneous plasma in strong magnetic field, (T), 25:55923

XUM

magnetohydrodynamic, discontinuity in solution of optimum problems in, (T), 25:55936
magnetohydrodynamic, in inductive shock wave tubes, (E), 25:55920
GASEOUS DIFFUSION PROCESS
economic aspects of uranium enrichment using, Swedish studies on, 25:54921
GASES
alpha-particle energy loss and straggling in tissue-equivalent, (E/T), 25:56279
collision integral for particles of disparate mass, 25:56179
neutrino emission from, due to propagation of relativistic shock waves, (T), 25:55668
GENES
effects on uv radioinduced site reversion in yeast mutants, 25:55187
radiation effects on order of, in chromosomes of Schizophyllum mutants, uv, 25:55186
GENETICS
abstracts of papers presented at 1971 meeting of Genetics Society of America, 25:55166
book: Genetics Lectures, Volume 2, 25:55179
GEOCHEMISTRY
activation analysis in, development of epithermal neutron, 25:54468
activation analysis in, review of routine, 25:54463
book: Essays on the Geology and Geochemistry of Ore Deposits, 25:54763
book: Lead Isotopes in Geochemistry and Cosmochemistry, 25:54770
conference on activation analysis in cosmochemistry and, Kjeller, Norway, September, 1970, 25:54457
GEOLOGY
book: Essays on the Geology and Geochemistry of Ore Deposits, 25:54763
GEOMAGNETIC FIELDS
activity index for 1932--70, frequency tables for Kp, 25:56017
activity of, correlation patterns with radiation-belt electron intensity, (E/T), 25:55979
activity of, correlation with intensity of interplanetary magnetic field, (E), 25:56007
depression in Earth core and Earth surface and in magnetotail, during magnetic storms, (E/T), 25:56002
disturbances in, produced by nonstationary source of γ quanta, rapidly varying, (T), 25:55989
effects on midlatitude sporadic E, (E/T), 25:56015
intensity at 100 to 500 km in ionosphere, computation of total vector of real, 25:55990
magnetic-shell parameter L for point in, new approximation of, (T), 25:56041
pulsations in, relationship of Pc-type steady Earth-current, with magnetosphere and solar-wind parameters, (E/T), 25:56004
relation with magnetospheric field deformation, (E), 25:55952 (N-71-27604)
solar-wind interaction with dipole model of, 25:56009
variations at Earth surface and in ionosphere, out-of-phase phenomena of solar diurnal, (E/T), 25:56036
variations at Earth surface and in ionosphere, out-of-phase phenomena of lunar diurnal, (E/T), 25:56037
variations of, effect of sector structure of interplanetary magnetic fields on, (E/T), 25:55988
GERMANIUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
analysis for oxygen by helium-3 activation and radiochemical separations, 25:54502
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
determination in meteorites and meteoritic phases by neutron activation and γ spectrometry, 25:54477
ion implantation in, 40-keV sulfur, 25:56288
radiation damage in lithium-doped n-type, 1-MeV-electron, 25:56301
radiation damage in n-type, effects of donor impurity on 35 and 65°K stages in annealing of electron, 25:56330
radiation damage in n-type, effects of impurities on annealing of 65°K in 1-MeV-electron, 25:56331
radiation effects on p-type, annealing of 77°K 14-MeV-neutron, 25:56305
radioinduced defects in low-resistivity n-type, study of recombination of γ-, 25:56327
radioinduced defects in p-type, 220°K stage in annealing of 1.5-MeV-electron, 25:56300
radioinduced defects in p-type, annealing at 77°K of 1.5-MeV-electron, 25:56329
radioinduced defects in p-type, electric properties and annealing of 8°K 1-MeV-electron, 25:56302
radioinduced defects in, Moessbauer-type structure in luminescence spectra of electron- and γ-, 25:56328
radioinduced defects in, review of studies of low-temperature, 25:56303
radioinduced interstitial phosphorus in phosphorus-doped n-type, EPR study of 1.5-MeV-electron, 25:56299
radioinduced one-valley EPR spectrum in antimony-doped, 2.5-MeV-electron, 25:56298
radioinduced photocurrent oscillations in n-type, fast-neutron and proton, 25:56316
GERMANIUM ALLOYS AND SYSTEMS
Al--Ge--V, phase formation in $V_3Al/sub\ x/Ge/sub\ 1-x/$ with A15 structure, 25:55539
Cu--Ge, superconductivity in hcp phases of, (E), 25:56096
Ge--Si, fabrication of thermoelements of, hot pressing method for, 25:57267 (SC-DR-710438)
GERMANIUM ISOTOPES Ge-64
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
GERMANIUM ISOTOPES Ge-66
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
GERMANIUM ISOTOPES Ge-68
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
GERMANIUM ISOTOPES Ge-70
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
GERMANIUM ISOTOPES Ge-72
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
GLASS
age of ancient, fission track method for estimation of, 25:54761
age of man-made and volcanic, fission track method for estimation of, 25:54771
analysis for aluminum, boron, and sodium in, by simultaneous measurement of scattered α particles and prompt protons, 25:56752(R) (SUNI-14)
analysis for boron in, by measurement of prompt proton spectra from (d,p) reactions, 25:56752(R) (SUNI-14)
analysis of borate, for boron by neutron absorption method, 25:54437(T) (RFP-Trans-82)
analysis of natural, for tin by neutron activation using 40-min tin-123, 25:54480
diffusion in, data tabulations on, 25:55509
diffusion of radioactive cesium, rubidium, sodium, and strontium in, effects of temperature on, 25:55611
radiation effects on adhesion of epoxy cemented specimen couples of, gamma, 25:55666
radioactive waste storage in, safety of high-level, 25:54969 (JUL-766-CT)
GLAZES
composition, deposition, and properties of aluminosilicate, for vitroceramic fuel elements, 25:55613
GLOVE BOXES
air leakage into, effects on plutonium inert gas atmosphere processing, 25:54944 (CONF-710401-, pp 83-97)
atmosphere control in Battelle plutonium facility, 25:54959 (CONF-710401-, pp 280-92)
atmosphere system for, surveillance of inert argon--nitrogen, 25:54945 (CONF-710401-, pp 98-105)
design for use at HAPO, personnel considerations in, 25:54938 (CONF-710401-, pp 4-16)
filter changes in, description of contamination control valve for minimizing, 25:54958 (CONF-710401-, pp 258-66)
filters for plutonium-238 handling, description of, 25:54949 (CONF-710401-, pp 149-61)
fire detection system for, development of, 25:54955 (CONF-710401-, pp 221-36)
fire extinguishing system for nonmetals in, design of automatic, 25:54954 (CONF-710401-, pp 212-20)
fire protection in plutonium, description of system for, 25:54948 (CONF-710401-, pp 133-48)
gloves for, evaluation of properties of, 25:54941 (CONF-710401-, pp 44-55)
materials for construction of, evaluation of, 25:54940 (CONF-710401-, pp 26-43)
materials for fire-resistant, equipment and methods for testing, 25:54939 (CONF-710401-, pp 17-25)
operation of, design and construction material selection for safe, 25:54940 (CONF-710401-, pp 26-43)
protection from overpressure, description of manometer for, 25:54958 (CONF-710401-, pp 258-66)
GLUCOSE, 2-AMINO-2-DEOXY-
incorporation of carbon-14-labeled, into synaptosomes in vitro, 25:57260 (ORO-3195-48)
GLUTEN
radiation effects on amino acid content of processed wheat, 25:55364
GLYCERALDEHYDEPHOSPHATE DEHYDROGENASE
radiation effects on activity of algae, x, 25:55353
GLYCINE
radiolysis of single crystals of deuterated and normal, at low temperature, ESR studies on free radicals produced by x, 25:54653
GLYCINE, N-ACETYL-
radiolysis of aqueous solutions of, in presence of ammonia, electron, γ, and uv, 25:54650
GLYCOGEN
metabolism in radioinduced osteosarcomas in rats, 25:55335

GOATS
radiation injuries to tissues of, pathology of gamma, 25:55318(T) (LB/G-2995)
GOLD
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
determination in Australian tektites by thermal neutron activation and radiochemical separations, 25:54478
determination in geochemical samples by neutron activation, 25:54484
determination in geological materials by neutron activation, 25:54488
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in meteorites and meteoritic phases by neutron activation and γ spectrometry, 25:54477
determination in ores and rocks by neutron activation of lead alloy obtained in cupel assay, 25:54521
effects on annealing of Frenkel defects in irradiated platinum, 25:56284 (JUL-731-FF)
separation from aqueous solutions by solvent extraction using tribenzylamine, 25:54515
GOLD ALLOYS AND SYSTEMS
Au--Al, search for superconductivity in fcc phases of, (E), 25:56096
Au--Cd, search for superconductivity in fcc phases of, (E), 25:56096

Au--Tm, crystal structures and melting points of intermetallic, 25:55570
Au--V, magnetic properties of, 25:56358
Au--Yb, crystal structures and melting points of intermetallic, 25:55570
Au--Zn, search for superconductivity in fcc phases of, (E), 25:56096
GOLD ISOTOPES Au-190
beta and electron-capture decay of, conversion electron spectra from, (E), 25:56760
GOLD ISOTOPES Au-197
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
neutron capture by, range of recoil atoms from, 25:56269
neutron reactions using iron-filtered beams, analysis of resonance cross sections for, 25:56795
GOLD ISOTOPES Au-198
effectiveness for human liver scanning in comparison to alkaline phosphatase evaluation and histological studies, 25:55276
effectiveness for scanning parasternal lymph nodes in patients with mammary carcinomas, 25:55288
recoil from gold-197(n,γ) reaction, ranges of, 25:56269
use for estimating late x radiation effects on circulation in brain, liver, lungs, and skin of rats, 25:55328
GRANITES
damage to surrounding Sahara, from Monique nuclear explosion, evaluation of mechanical, 25:54820(T) (UCRL-Trans-10543, pp 4-35)
seismic shock propagation in, comparison of experimental and calculated data on, 25:57287 (UCRL-51075)
GRAPHITE
corrosion by high temperature steam, 25:57092(R) (ORNL-TM-3483)
development for molten salt reactor, use of high-temperature centrifugation in, 25:54534 (ORNL-4717, pp 43-56)
diffusion of methane in moderator, mathematical model of, 25:57044
electron band structure of, electron-emission study of, (E), 25:56348
fission product distribution in MSRE moderator, 25:54533 (ORNL-4717, pp 29-41)
gas diffusion in MSRE moderator, 25:54533 (ORNL-4717, pp 29-41)
magnetoresistance in boronated and neutron-irradiated, 25:56319
permeability of extruded, gas flow method for measurement of, 25:55612
radiation effects on Dragon high-temperature, 25:55651
radiation effects on mechanical properties of, viscoelastic analysis of neutron, 25:55646 (EUR-4674)
radiation effects on properties of needle-coke, relation of pitch-binder content with fast neutron, 25:55653
radioinduced surface oxidation in carbon dioxide, 25:55655
radiolytic gasification in carbon dioxide, effects of active species range and water vapor on, 25:55654
sorption reaction with fission-product cesium-rubidium mixtures at high temperatures, 25:55623
stresses in high temperature gas cooled reactor fuel tubes, (E/T), 25:57051
thermal conductivity of polycrystalline, effects of boron and bromine doping on, 25:55635
GRAVITATION
forces between disks and cylinders, Lense--Thirring, (T), 25:55807
formalism of tetrad theory of, reference systems in, 25:56568
redshift in theory of generalized gravitational potential, (T), 25:55808
theories of, principle of equivalence in scalar--tensor, 25:56569
GRAVITATIONAL FIELDS
energy tensor of Einstein linear, resting liquid sphere in phenomenological, (T), 25:56565
fluid motion produced by perpendicular temperature gradient of, in magnetic field, rotating, (T), 25:55919
light deflection by, associated with clusters of galaxies, (T), 25:55809
Schwinger equations for, 25:56561
GRAVITATIONAL RADIATION
conversion to electromagnetic waves in static magnetic fields in vacuum, (T), 25:55805
density waves associated with first-order, second-order, (T), 25:55799
detection of, experiments for estimation of upper limit for muon shower signal in background in Weber detector for, (E), 25:56566
waves in closed universe, (T), 25:56570
GRAVITY WAVES
generation of atmospheric, by solar eclipse, (E/T), 25:56016
GROUND
motion at Tosco mine and tower stations from Rulison Event, (E), 25:54813 (PNE-R-51)
motion from San Fernando earthquake, predictions for Glendale area, 25:54812 (NVO-1163-TM-30)
GROUND WATERS
radioisotope content of USSR, effects of earthquakes on, 25:54775
GROUP THEORY
conformal, nonlinear realizations for breaking of, 25:56549 (ORO-3992-9)
Lie groups in, survey of use in atomic spectroscopy, 25:55882 (NYO-1447-64)
Lorentz covariance in, general, 25:56558
nuclear structure in, lectures on, 25:56838 (UR-875-350)
Poincare group in, representations as functions of eigenvalues of Casimir operators in, 25:56534 (KFKI-71-38)
GUANIDINE, NITROSO-
effects on spontaneous recombination frequency of chromosomes of diploid yeast, 25:55180
GUINEA PIGS
sensitivity to transverse acceleration, effects of radioprotective compounds on, 25:55264
GUNDREMMINGEN POWER REACTOR
fuel element failure in, effects of $10^1/_2$ month operation on, 25:56924 (TID-25812)
inspection after $10^1/_2$ months of operation, findings of, 25:56924 (TID-25812)
maintenance during June 1971, 25:56924 (TID-25812)
maintenance during May 1971, 25:56916 (TID-25791)
operations during June 1971, 25:56924 (TID-25812)
operations during May 1971, 25:56916 (TID-25791)

## H

H.B. ROBINSON POWER REACTOR, UNIT 2
emergency core cooling system for, performance evaluation for, 25:56945 (DOCKET-50261-73)
HI REGIONS
distance to low-latitude high-velocity, method for determining, (E), 25:55717
distribution in M33, (E), 25:55796
distribution in Milky Way, 21-cm absorption study of, (E), 25:55791

XUM

HII REGIONS
distribution in M33, (E), 25:55796
infrared emission from dust grains in, (T), 25:55718
observations in NGC 2175, of bright condensation 3C 153.1, (E), 25:55681
properties of 71, in LMC, (E), 25:55795
HADRONS
energy of cosmic, at 3250 m above sea level, ionization spectrometer determination of, (E), 25:56413 (INP-756)
flux of cosmic, at 3250 m above sea level, ionization spectrometer determination of, (E), 25:56413 (INP-756)
form factors of, vector dominance model for weak interaction, (T), 25:56468 (FRNC-R-1)
interactions of, dual quark--parton model for, 25:56481
interactions with hadrons at high energies, research at Purdue Univ., June 1970 to May 1971, (E), 25:56424(R) (COO-1428-280)
interactions with hadrons, research at Stockholm Univ., 1970, (E), 25:56416(R) (USIP-71-1)
interactions with hadrons, review of Regge cuts for, (T), 25:56475 (RPP/C-24)
interactions with leptons, generalized Weinberg sum rules in deep inelastic, 25:56461
model for, pseudovector isospinor heavy-boson, 25:56477
production in photon reactions in Coulomb field of nuclei at high energies, 25:56457
reactions with stable and unstable hadrons, kinematic study of, (T), 25:56474 (FRNC-TH-63)
HAFNIUM
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in volcanic ash by neutron activation and $\gamma$ spectrometry, 25:54513
determination in zircons by neutron activation and $\gamma$ spectrometry of hafnium-179m, 25:54491
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
electric conductivity of, temperature dependence of, 25:55445
enthalpy to 1400°K, 25:55445
preparation and uses of, newsletter on, 25:55406
HAFNIUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
thermoelectric properties of, at 0 to 1000°C, 25:56351
C--Hf--Nb, phase diagram of niobium--rich corner of, 25:55563
C--Hf--Re--W, mechanical properties of, 25:55433 (N-71-23982)
C--Hf--Zr, thermodynamic properties of, 25:55614
Hf--Mo, nitriding of, mechanism of growth and loss of coherency of hafnium nitride precipitates during internal, 25:55460
Hf--Nb--Ti--Zr, superconducting properties of, with, 25:56104
Hf--Nb--Zr, superconducting properties of, 25:56105
Hf--Nb-base, oxygen solubility limits in, lattice parameter measurements of, 25:55568
Hf--Pr-base, phase diagram of, 25:55567
Hf--Si, properties of, thermochemical and thermophysical, 25:55644
Hf--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Hf--Ta-base, oxidation behavior of polycrystals and single crystals of, at 750 to 1050°C, 25:55397
Hf--V, thermal capacity of superconducting intermetallic $HfV_2$, (E), 25:56072
HAFNIUM BORIDES
hafnium-isotope Moessbauer effect following Coulomb excitation by alpha particles, 25:56369
stability in acids, 25:54543
C--$HfB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--$HfB_2$--SiC, electric and thermal conductivity at 300 to 1300°K, 25:55627
SiC--$HfB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
HAFNIUM CARBIDES
hafnium-isotope Moessbauer effect following Coulomb excitation by alpha particles, 25:56369
physical properties and stability to nitrogen, 25:55629
HAFNIUM ISOTOPES Hf-173
energy levels from lutetium-175 (p,3n) reactions, high-spin rotational, (E), 25:56796
HAFNIUM ISOTOPES Hf-177
neutron capture up to 300 eV, $\gamma$ spectra and resonance spin assignments for, (E), 25:56751 (RT/FI-(70)55)
neutron reactions (n,$\alpha$) at 1.09 to 8.87 eV, $\alpha$ widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
HAFNIUM ISOTOPES Hf-178
Moessbauer effect in hafnium compounds following Coulomb excitation by alpha particles, 25:56369
HAFNIUM ISOTOPES Hf-179
neutron capture up to 200 eV, $\gamma$ spectra and resonance spin assignments for, (E), 25:56751 (RT/FI-(70)55)
HAFNIUM ISOTOPES Hf-180
Moessbauer effect in hafnium compounds following Coulomb excitation by alpha particles, 25:56369
HAFNIUM NITRIDES
growth and loss of coherency of precipitates of, in hafnium--molybdenum alloy during internal nitriding, 25:55460
hafnium-isotope Moessbauer effect following Coulomb excitation by alpha particles, 25:56369
physical properties of, 25:55629
HAFNIUM OXIDES
thermal conductivity at high temperatures, 25:55637
$HfO_2$--$Y_2O_3$, thermal conductivity of solid solutions of, at high temperatures, 25:55637
$HfO_2$-base--$Y_2O_3$, properties as electrolyte, 25:56355
HAIR
plutonium-239 incorporation in rabbit, effects of dose on rate of, 25:55116
HALIDES
diffusion in, data tabulations on, 25:55509
uranium precipitation from molten, using molten zinc cathode, 25:54580
HAMSTERS
radioinduced chromosome aberrations in liver of Chinese, comparison of RBE for americium-241 $\alpha$ and cerium-144 $\beta$, 25:55188
radioisotope toxicity to Chinese, following intraperitoneal injection, comparison of americium-241 and cerium-144, 25:55188
HANDLING AND STORAGE
facility for plutonium, design of safe shielded, 25:54942 (CONF-710401-, pp 56-67)
HANFORD PRODUCTION REACTORS
fuel elements for, development of method for extrusion of internally and externally cooled, 25:55402 (RMI-L-48)
HARDNESS
determination of micro-, evaluation of quantitative image analyzer for, 25:57240 (MLM-OP-71007)
HARMONIC ANALYSIS
coefficients from unequally spaced data, 25:57250 (ORNL-TM-3547)
HARTLEPOOL POWER REACTORS
pressure vessels for, design of podded boiler type, (E/T), 25:56885
HEALTH PHYSICS
personnel qualifications for, in plutonium facility, 25:55204 (CONF-710401-, pp 267-79)
programs at Oarai Research Establishment in Japan during October through December 1970, 25:55247(R) (JAERI-Memo-4353)
reactor siting problems in, conference on, Vol. I, Idaho Falls, Idaho, Nov. 3 to 6, 1970, 25:57103
reactor siting problems in, conference on, Vol. III, Idaho Falls, Idaho, Nov. 3 to 6, 1970, 25:55193
reactor siting problems in, conference on, Vol. II, Idaho Falls, Idaho, Nov. 3 to 6, 1970, 25:55157
HEART
radiation effects on monkey fetus, 25:55207 (NYO-2740-8, pp 220-59)
radioinduced anomalies in chick embryo, additive effects of hypothermia on x, 25:55333
HEART, MECHANICAL
power system for, design of plutonium-238-fueled Stirling cycle, 25:54910(P)
HEAT
effects on respiration rate in wheat seedlings, 25:55348
HEAT EXCHANGERS
design of filter plenum, for radioactive processing buildings, 25:54950 (CONF-710401-, pp 162-80)
sodium boiling on surfaces of, effects of heating surface material and roughness on incipient, 25:54868(T) (EURFNR-897)
standard for design and performance of air-cooled, for nuclear steam-supplied systems, 25:54833 (RDT-E-4-18-T)
HEAT EXCHANGERS (LIQUID-LIQUID)
standard for fabrication and acceptance of shell and tube, 25:54832 (RDT-E-4-17-T)
HEAT-RESISTING ALLOYS AND METALS
book: Physical Metallurgy of Refractory and Rare Metals, 25:55438
corrosion by molten salts, conference on, 25:55371 (CONF-690452)
stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
testing for friction and wear in high-temperature sodium, plans for, 25:55379(R) (WARD-4210-T-1-2)
HEAT SOURCES
use of radioisotope, in distillation system for recovering potable water from urine in spacecraft, 25:54911(P)
HEAT TRANSFER
burnout during subcooled boiling, measurement of, 25:54871 (IFA-TR-58)
calculation and measurement of critical, on surfaces immersed in boiling high-boiling-point organic compounds, 25:54879
calculation of stable, from rod bundles in longitudinal turbulent flow, equations for, 25:54883
calculations for heating surfaces with porous magnetite deposits, model for, 25:54862 (AEEW-R-711)
calculations for slender bodies, equations for, 25:54885
calculations for turbulent flow in annular channel with

XUM

roughened core rods, eddy viscosity model for, 25:54874 (RD/B/N-1980)
calculations for turbulent liquid flow in triangular channels, 25:54884
coefficients for forced-convection, in ducts with flux transients, derivation of, 25:54864 (ANL-7754)
effects of crud deposits, 25:57034
effects of transient, on space--time temperature distribution in semi-finite medium, 25:54876 (RT/ING-(71)11)
measurement of critical, for two-phase annular flow in heated pipes, effects of diffusion and film formation on, 25:54869 (FEI-217)
mechanisms of boiling, in two-phase flow in multirod coolant channels, (E), 25:54870(R) (GEAP-10347)
mechanisms of free convection, in fluid contained in vertical annular space, (E/T), 25:54881
model for axial, with incompressible turbulent flow through tubes, (T), 25:54877 (SGAE-RT-38/1971)
research for French nuclear programs, review of, 25:54865 (CEA-CONF-1758)
HEAT TRANSFER SYSTEMS
design and operation of, for measuring heat transfer to high-pressure boiling water, 25:54867 (EUR-4683)
HEATED EFFLUENTS
effects on environment of liquid metal cooled fast breeder reactor, 25:57069(R) (ANL-7800)
physical properties of round, turbulent, buoyant jet, 25:57245 (ORNL-4685)
HELIUM
abundance in atmospheres of beta Cephei stars, (E/T), 25:55711
abundance in B-type stars, (E), 25:55701
abundance in horizontal-branch stars, (E/T), 25:55708
abundance in interstellar gas, alpha reactions with aluminum and silicon at 70 to 160 MeV for determining, 25:56685 (FRNC-TH-48)
abundance in Sun, (E/T), 25:55751
burning in 15- and 30-solar-mass stars, (T), 25:55691
corrosive effects on reactor materials, review of, 25:55393
deuterium-ion reactions up to 100 eV with, cross sections for dissociation in, (E), 25:55858
distribution of solar neutral 584-A euv, observations of glow from exospheric, (E), 25:55967
electric discharges in, simulation of electron avalanche by Monte Carlo calculations, 25:56265(T) (ORNL-tr-2518)
electron reactions at 100 to 2000 eV with, angular and energy distributions of electrons from ionization in, (E), 25:55847
electron reactions at low energies with, review of total and momentum-transfer cross sections for, (E), 25:55856
electron reactions with, Born--Oppenheimer approximation for excitation to metastable states in, 25:55843
electron reactions with, eikonal approximation for excitation of $2^1P$ state in, 25:55874
electron reactions with, trapped-electron study of resonances in excitation in, 25:55851
electron scattering by, polarized-orbital calculations of, 25:55871
energy levels of, positions and widths of autoionizing, (T), 25:55820
energy of ground state of, calculation using configuration-interaction wave functions and correlation factor, 25:55892
energy of ground-state atom of, calculation using Faddeev formalism, 25:55824
gold-198 ranges in, from gold-197(n,γ) recoil, 25:56269
helium-hydride-ion reactions at 0.5 to 1 MeV with, cross sections for dissociation in, (E), 25:55872
helium-ion elastic and inelastic scattering at 300 eV to 1.5 keV, by rotational coupling effects on differential cross sections for, (T), 25:55848
hydrogen-ion ($H_2^+$) reactions up to 100 eV with, cross sections for dissociation in, (E), 25:55858
lithium-ion reactions at 600 to 2800 eV with, interference effects in charge-exchange cross sections for, 25:55844
oxygen-ion reactions at 10 to 40 MeV with, cross sections for electron capture in, 25:55869
oxygen-ion reactions at 7 to 40 MeV with, cross sections for electron capture and loss in, (E), 25:55870
phonon--phonon interaction in liquid, below 1°K, (T), 25:56052
plasma of, destruction of metastable states in, (E), 25:56151(T) (SC-T-713064)
plasma of, electron--ion recombination at low temperatures in, (E), 25:56161
plasma of, electron--ion recombination in cryogenic, (E), 25:56152(T) (SC-T-713065)
plasma of, relaxation theory of Stark broadening of spectral lines in, 25:56184
properties as high temperature gas cooled reactor coolant, 25:57040
properties of, calculation using one-dimensional integral equation obtained by reduction of multidimensional Schroedinger equation, 25:56398
proton reactions above 25 keV with, excitation in, (T), 25:55842
proton reactions at 20 to 120 keV with, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
proton reactions up to 5 MeV with, cross sections for electron capture in, (T), 25:55837
reactions with hydrogen molecules at 14 to 50 keV, cross sections for one-electron stripping from ground-state and metastable helium atoms in, (E), 25:55845
release from irradiated boron carbide, research progress on, 25:54599 (ORNL-4717, p 117-24)
solubility in liquid sodium at 330 to 550°C, 25:54583
spectral lines of, in planetary nebulae, (E), 25:55700
HELIUM HYDRIDES
reactions with gases at 0.5 to 1 MeV of ions of, cross sections for dissociation in, (E), 25:55872
HELIUM IONS
distribution of $He^+$ 304-A euv, observations of glow from exospheric, (E), 25:55967
effects on diploid yeast cells, OER and RBE for mutagenic and lethal, 25:55165
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
range in air, argon, nitrogen, and oxygen at 0.2 to 2.0 MeV as function of energy, (E), 25:56276
reactions with hydrogen molecules, cross sections for one-electron capture in, 25:55845
scattering by helium at 300 eV to 1.5 keV, rotational coupling effects on differential cross sections for elastic and inelastic, (T), 25:55848
scattering by neon, quasi-diabatic calculation of differential cross sections for inelastic, 25:55849
scattering by sodium chloride crystals, channeling in, 25:54587(R) (AECL-3909)
HELIUM ISOTOPES
content in USSR ground waters, effects of earthquakes on, 25:54775
HELIUM ISOTOPES He-3
abundance in Sikhote--Alin meteorite, (E), 25:55671
abundance in targets aboard Soyuz space probes, (E), 25:55902
reactions (He-3,2p) and (He-3,d) with carbon-12 and silicon-28 at 40 MeV, DWBA analysis of angular distributions and spectra from, (E), 25:56713
reactions (He-3,α) with lithium-7 at 16 to 18 MeV, excitation functions, spectrum, and zero- and finite-range DWBA analyses of angular distributions from, (E), 25:56671
reactions (He-3,α) with yttrium-89 at 15 MeV, DWBA analysis of, (E), 25:56778
reactions (He-3,α) with yttrium-89 at 25 MeV, angular distributions for, (E), 25:56779
reactions (He-3,αγ) with chromium-50 at 15 MeV, α-γ angular correlations from, (E), 25:56692
reactions (He-3,d) with strontium-87 at 18 MeV, angular distributions for, (E), 25:56779
reactions (He-3,f) with bismuth-209, thorium-232, and uranium-238 at 20 to 34 MeV, cross sections at delayed neutron yields for, (E), 25:56803
reactions (He-3,γ) with tritium at 0.5 to 20 MeV, angular distributions for, (E), 25:56646
reactions (He-3,γ) with tritium at 9 to 26 MeV, differential cross section for, (E), 25:56664
reactions (He-3,n) with beryllium-9 at 8 MeV, neutron spectra from, (E), 25:56679
reactions (He-3,p) and (He-3,2p) with carbon-12 at 15 MeV, angular distribution and p-p angular correlations for, (E), 25:56682
reactions (He-3,p) with oxygen-18 at 18 MeV, angular distributions for, (E), 25:56716
reactions (He-3,p) with phosphorus-31 and potassium-39 at 12 and 13 MeV, p-γ coincidence spectra from, (E), 25:56715
reactions (He-3,p) with zirconium-90 at 16.5 and 18 MeV, proton spectra and angular distributions for, (E), 25:56758
reactions (He-3,pγ) with sulfur-32 at 8.00 to 9.00 MeV, proton spectrum and p--γ angular correlations in, (E), 25:56712
reactions (He-3,t) with boron-11 at 26 MeV, triton spectra from, (E), 25:56679
reactions (He-3,t) with strontium-88 at 23 MeV, analysis for reaction mechanism in, (E), 25:56779
scattering by boron-11 at 26 MeV, helium-3 spectra from inelastic, (E), 25:56679
scattering by yttrium-89 at 15 and 20 MeV, angular distributions for elastic, (E), 25:56778
separation from helium-4, continuous-distillation apparatus for, 25:56121
D--He-3, energy balance calculations for use in thermonuclear reactors, 25:56215 (N-71-25526)
HELIUM ISOTOPES He-4
alpha elastic scattering below 100 MeV, analysis using nonlocal separable potential, (T), 25:56852
charge form factor of, effects of cms motion on calculation of, (T), 25:56647
containment of liquid, by superfluid plug in space, 25:56119
critical-heat flux in saturated liquid II, discrepancies using thin-wire-heaters for, 25:56060
energy levels of, microscopic description using cluster model, 25:56654 (LYCEN-7104, S13.1-11)
equilibrium properties of submonolayer films of, (E/T),

XUM

25:56659
excitations in superfluid, ion and roton, 25:56057
film boiling in liquid II, high-speed motion-picture studies of, 25:56061
flow of liquid II at supercritical velocities, near-isothermal dissipative, 25:56062
hyperons (Λ) elastic scattering at 1 to 20 MeV, calculation of polarization and cross sections using OBE model, (T), 25:56648
meson reactions ($\mu^-$,nν) with, short-range nucleon--nucleon correlation effects on energy spectrum and angular distribution asymmetry of neutrons from, (T), 25:56641 (JINR-P4-5986)
neutron elastic scattering below 50 MeV, analysis using nonlocal separable potential, (T), 25:56852
neutron elastic scattering by, analysis using separable nonlocal potential, (T), 25:56642 (LYCEN-7104, C5.1-15)
neutron elastic scattering by, lectures on forward dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
order parameter on free surface of liquid II, boundary condition of, (T), 25:56056
phonon--phonon interaction in liquid, below 1°K, (T), 25:56052
photon reactions (γ,n) at threshold to 31 MeV, cross section for, (E), 25:56649
proton elastic scattering below 50 MeV, analysis using nonlocal separable potential, (T), 25:56852
proton elastic scattering by, analysis using separable nonlocal potential, (T), 25:56642 (LYCEN-7104, C5.1-15)
quantum lattice-gas model of equilibrium properties of liquid, 25:56058
second sound velocity in rotating liquid II, (E), 25:56054
sound velocity in liquid, (T), 25:56055
superflow interaction with vortex lattice in, theoretical models of behavior of shear waves in, 25:56053
surface tension of liquid II, near lambda point, (T), 25:56056
vortex-free Landau state in rotating superfluid, 25:56048

HELIUM ISOTOPES He-5
energy levels of, microscopic description using cluster model, 25:56654 (LYCEN-7104, S13.1-11)

HELIUM ISOTOPES He-10
production in neutron fission of uranium-235, yields for, (E), 25:56788

HELIUM SYSTEMS
He--methane--$SiH_4$, radiation effects on, reactions of recoil tritium from neutron, 25:54678

HEMATOPOIESIS
radiation effects on, in active bone marrow, effects of dose fractionation on, 25:55326
radiation effects on, in mice in comparison to effects on clasmatosis, γ, 25:55321

HEMOPROTEINS
Moessbauer-spectra studies of, review, 25:55105

HEXANE
hexane--naphthalene, radiation effects on, products from, 25:54599 (ORNL-4717, p 117-24)

HEXOKINASE
radiation effects on activity of, in brain, erythrocytes, and liver of tumor-bearing rats, x, 25:55140

HIGH-ENERGY PHYSICS
High Energy Physics Index. Vol. 9, No. 15, 25:56446
High Energy Physics Index, Vol. 9, No. 16, 25:56443
High Energy Physics Index. Vol. 9, No. 17, 25:56445
High Energy Physics Index. Vol. 9, No. 18, 25:56444
research at Institute of Theoretical Physics, Gothenburg, Sweden, 1970, (T), 25:56441(R) (NP-18997)
research at Purdue Univ., June 1970 to May 1971, (T), 25:56440(R) (COO-1428-276)

HIGH-TEMPERATURE GAS-COOLED REACTOR EXPERIMENT
core components for, radiation effects on carbonaceous, 25:55651
fuel reprocessing for, development of head-end methods in, 25:54714 (ORNL-4682, pp 80-94)
fuel tubes for, calculation of stresses in graphite, (E/T), 25:57051

HIROSHIMA
atomic bombing of, radiation effects on mortality of man exposed in utero to, 25:55307

HOLMIUM
lattice parameters of, effects of hydrogen on, 25:55549

HOLMIUM ALLOYS AND SYSTEMS
Au--Ho, crystal structures and melting points of intermetallic, 25:55570

HOLMIUM ISOTOPES Ho-165
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
energy-level transitions in, nuclear structure effects on internal conversion of M1, 25:56756
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)

HOLMIUM ISOTOPES Ho-168
beta decay of, branching ratios, gamma spectra, and log-ft values for, (E), 25:56767

HOLMIUM ISOTOPES Ho-169
beta decay of, gamma spectra and log-ft values for, (E), 25:56767

HORMONES, ADRENAL
hydrocortisone, effects on renewal patterns of normal and tumor cells, 25:55110(R) (TID-25801)

HORMONES, PARATHYROID
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)

HORMONES, PITUITARY
growth hormone, radioimmunoassay in anterior pituitary medium, application of statistical procedures to double antibody technique for, 25:55143
growth hormone, radioimmunoassay in man, mathematical analysis of, 25:55145
luteinizing, radioimmunoassay in man, mathematical analysis of, 25:55145
prolactin, radioimmunoassay in anterior pituitary medium, application of statistical procedures to double antibody technique for, 25:55143
thyrotropin, radioimmunoassay in anterior pituitary medium, application of statistical procedures to double antibody technique for, 25:55143
vasopressin, radioimmunoassay in human blood plasma, use of double antibody technique for, 25:55142

HORMONES, SEX
chlorotrianisine, radioprotective effects of, on mice, fast neutron and x, 25:55266
estradiol, estimation in man using radioligand assay, (T), 25:55145
prostaglandins, radioimmunoassay in blood plasma of rabbits, 25:55144

HORMONES, THYROID
thyroxine, determination in blood serum by activation and ion exchange, 25:54453
triiodothyronine, determination in blood serum by activation and ion exchange, 25:54453
triiodothyronine, radioimmunoassay in human serum, effects of hyperthyroidism and hypothyroidism on, 25:55146

HOT CELLS
atmosphere system for, surveillance of inert argon--nitrogen, 25:54945 (CONF-710401-, pp 98-105)
design for α radiation measurements, 25:55590(R) (EIR-192)
design of box-type, for poisonous or radioactive materials, 25:54978(P)
equipment for remote measurements in irradiated components in, description of, 25:57054 (ANL-EBR-30)
fire protection test facility for, design and performance of, 25:54956 (CONF-710401-, pp 237-47)

HUMBOLDT BAY POWER REACTOR
cooling system for leak rate limit for primary, 25:56932 (DOCKET-50133-68)

HYDROAROMATIC COMPOUNDS
radioinduced hydrogenation and alkylation of, 25:54599 (ORNL-4717, p 117-24)

HYDROCARBONS
radiolysis of, excited states and intermediates in, 25:54626 (CONF-700652-(Vol.1), pp 139-219)
radiolysis of, review on ionic processes in, 25:54630 (CONF-700652-(Vol.3), pp 523-98)
mepasine--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644

HYDROCHLORIC ACID
dissociation at high temperatures using flowing cell, potentiometric determination of, 25:54535 (ORNL-4717, pp 57-82)

HYDROFLUORIC ACID
solubility in sodium fluoroborate--sodium fluoride eutectic, 25:54532 (ORNL-4717, pp 1-27)

HYDROGEN
abundance in M33, (E), 25:55796
abundance in solar atmosphere, (E/T), 25:55750
charged-particle reactions with atomic, cross sections for transitions between highly excited levels in, (T), 25:55838
charged-particle reactions with atomic, cross sections for transitions between highly excited levels in, (T), 25:55839
condensation of solid, in contracting interstellar clouds and protostars, (T), 25:55785
content in thermosphere from June 1966 to Jan. 1967, temporal variations from in situ, (E), 25:55973
corrosive effects on reactor materials, review of, 25:55393
detection of interstellar molecular, (E), 25:55700
determination in metals, design of instrument for, 25:54424
diffusion and internal friction in niobium and vanadium, calculation from redistribution in periodic stress gradient, 25:55458
diffusion in titanium and titanium alloy at 450 to 600°F, effects of stress on, 25:55476
diffusion through metals, effects of hydrogen pressure on rate of, 25:54534 (ORNL-4717, pp 43-56)
diffusion through oxide-coated metals, effects of water vapor on rate of, 25:54534 (ORNL-4717, pp 43-56)
effects on lattice parameters of rare earth metals, scandium, and yttrium, 25:55549
electron elastic scattering at 1.21 to 2.25 rydbergs by atomic, complex-energy calculations of s-wave, 25:55860

electron reactions at low energies with atomic, use of free-fall atomic model in three-body calculations of ionization cross sections for, 25:55836 (INR-P-1327)
electron reactions with atomic, eikonal approximation for excitation of 2p and 2s states in, 25:55874
electron reactions with atomic, Glauber and Vainshtein approximations for total cross sections for 1s--2p excitation in, 25:55850
electron reactions with atomic, perturbation-theory calculations of 1s--2s excitation in, 25:55877
electron reactions with molecular, effects of vibrational level on kinetic-energy distribution of protons from, (T), 25:55857
electron scattering by atomic, algebraic close-coupling approach to, 25:55854
electron scattering by, parameters for multichannel resonances in, (T), 25:55861
helium-atom reactions at 14 to 50 keV with molecular, cross sections for one-electron stripping in, (E), 25:55845
helium-hydride-ion reactions at 0.5 to 1 MeV with molecular, cross sections for dissociation in, (E), 25:55872
helium-ion reactions with molecular, cross sections for one-electron capture into ground-state and metastable atoms in, 25:55845
injection into metals, design of cathode for, 25:54858
photon reactions with atomic, perturbation-theory calculations of bound--bound and bound--free transitions in multi-, 25:55875
plasma of, ion energy distribution during turbulent heating of, (E), 25:56131
plasma of, precision measurements of spectra of, (E), 25:56156
plasma of, temperature and electron density determination in spark, (E), 25:56142
positron reactions with atomic, eikonal approximation for excitation of 2s state in, 25:55874
positron scattering by atomic, algebraic close-coupling approach to, 25:55854
proton reactions at 10 to 2500 keV with atomic, excitation in, (T), 25:55841
proton reactions at 20 to 120 keV with molecular, cross sections for electron capture into 2s state of hydrogen in, (E), 25:55853
proton reactions at 30 and 50 eV with atomic, forced common turning-point treatment of excitation in, 25:55881
proton reactions at 5 eV with atomic, cross sections for momentum transfer in, (E), 25:55840
proton reactions up to 5 MeV with molecular, cross sections for electron capture in, (T), 25:55837
proton reactions with atomic, eikonal approximation for excitation of 2s state in, 25:55874
radiation effects on catalytic properties of electrodes of, neutron, 25:54602
reactions between atoms and molecules of, quantum mechanical treatment of, 25:55863
reactions of radiolytic, ESR studies on, 25:54628 (CONF-700652-(Vol.2), pp 367-420)
reactions with biochemicals, rate constants for, 25:55132
reactions with moderated recoil fluorine-18 atoms, effects of deuterium on rate of hydrogen abstraction, 25:54686
solubility in molten fluorides, 25:54534 (ORNL-4717, pp 43-56)
sorption by niobium, bulk and surface, 25:55434 (RLO-2221-T-7-3)
spectral 6300-A emission in nighttime auroral ionosphere on Mar. 23-24, 1969, simultaneous triangulation with SAR arc, (E), 25:55971
spectral lines of, in planetary nebulae, (E), 25:55700
spectral Lyman-α dayglow analysis of Martian exosphere, (E), 25:55812
yields from γ radiolysis of supercooled water, 25:54663
yields from radiolysis of liquid ethanol, 25:54660

HYDROGEN IONS
scattering by sodium chloride crystals, channeling in, 25:54587(R) (AECL-3909)

HYDROGEN IONS ($H_2^+$)
energy of ground-state, calculation from James wave functions, 25:55829
reactions with helium and neon up to 100 eV, dissociation in, (E), 25:55858

HYDROGEN ISOTOPES
determination in heavy water by specific gravity measurements, standard for, 25:54430
exchange at 300 to 500°C, catalytic effects of cadmium, thallium, or zinc vapors on homomolecular, 25:54552
fractionation in synthesis of benzene from calcium carbide--water reaction, 25:54735
separation of, effects of overpotential on electrochemical, 25:54721

HYDROGEN PEROXIDES
radioprotective effects on erythrocytes of beagle dogs, strontium-90 β, 25:55319 (UCD-472-118)
yields from γ radiolysis of supercooled water, 25:54663
yields from γ radiolysis of thallium sulfate, 25:54646

HYDROGEN SULFIDES
separation from heavy water plant effluents for recycle in incoming water, 25:54918(P)

HYDROGEN SYSTEMS
Ar--H, meson(μ⁻) reactions with, meson transfer from hydrogen to argon and x-ray emission in, (E), 25:55830
H--N, radiation effects on, production of carbon-11-labeled cyanides by recoils from proton, 25:54683
H--Ti--Zr, inflammability correlation of powdered, 25:55473

HYDROMAGNETIC WAVES
effects on high-energy proton relaxation in magnetosphere, (T), 25:56011

HYDROQUINONE
determination by dichrometric titration using triphenylmethane dyes as redox indicators, 25:54410

HYDROXIDES
radiolysis of aqueous glasses of, electron trapping in γ, 25:54627 (CONF-700652-(Vol.2), pp 295-330)

HYDROXYL (HO)
radio-wave absorption due to, in direction of W44, (E), 25:55716
reactions of radiolytic, in aqueous solutions of organic compounds, 25:54632 (CONF-700652-(Vol.3), pp 649-92)
reactions with benzoatopentaamminecobalt(III) from radiolysis of benzoatopentaamminecobalt perchlorate, 25:54669
yields from γ radiolysis of supercooled water, 25:54663

HYPERFRAGMENTS
energy levels of, optical potential model for excited, 25:56524
hyperon (Λ) binding energy of excited, 25:56524

HYPERONS
classification of heavy octet, SU(3) mass formulas for, (T), 25:56540
decays of, urbaryon rearrangement diagram for nonleptonic, 25:56470
spectra of, harmonic oscillator quark model for, 25:56507

HYPERONS (Λ)
production in $\pi^+ + p$ interactions at 8 GeV/c in hydrogen bubble chamber, momentum and angular distributions for, (E), 25:56427 (IFA-HE-73)
scattering by helium-4 at 1 to 20 MeV, calculation of polarization and cross sections using OBE model, (T), 25:56648

HYPERONS (Ξ)
properties of, SU(3) mass formulas for prediction of, (T), 25:56540

HYPERONS ($\Xi^-$)
decay $\Xi^- \rightarrow e + \nu + \Lambda^0$ relative to $\Xi^- \rightarrow \pi + \Lambda$, counter--spark chamber measurement of branching ratio for, 25:56411
decays of, counter--spark chamber measurement of beta, 25:56411

HYPOIODOUS ACID
production by reactions of fission product iodine in steam--air mixtures, 25:54547

HYPOXIA
effects of cyanide-induced, on hexokinase activity in brain, erythrocytes, and liver of rats, 25:55140

## I

ICE
diffusion in, data tabulations on, 25:55509

IGNEOUS ROCKS
age of, effects of geophysical variables on fission track method for estimation, 25:54760
analysis for trace elements by nuclear techniques, 25:54462
analysis of Mesozoic dolerite, for rare earths, 25:54476
uranium distribution in Skaergaard, Rhum, and Bushveld cumulates, use as indicator of mesostasis, 25:54809

IMIDE POLYMERS
photoconductivity during ionizing radiation pulses of H-film, analysis of dielectric, 25:55079 (SC-DC-713696)

IMMUNE REACTIONS
radiation effects on mouse, effects of injections of bone marrow, peritoneal exudate, spleen, or thymus cells on recovery from x, 25:55147

IN-PILE LOOPS
description of Osiris and Pegase high-temperature, for irradiation testing, 25:54840
design of high-power gamma rdiation, for IRT Tbilisi, 25:57129
design parameters of high flux research reactor pressurized water, 25:57121 (RCN-145)
operations of high flux research reactor pressurized water, 25:57121 (RCN-145)

INCOLOY 800
reactions with sodium at 1000 to 1300°F, carbon and nitrogen mass transfer in, 25:55379(R) (WARD-4210-T-1-2)

INDIAN POINT POWER REACTOR, UNIT 1
coolant leakage rates for, limits for allowable, 25:56928 (DOCKET-50003-91)
emergency core cooling system for, performance evaluation for, 25:56926 (DOCKET-50003-89)
inspection program for, proposed augmented in-service, 25:56927 (DOCKET-50003-90)

XUM

INDIUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
determination by neutron activation, use of ion exchange in, 25:54397
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
magnetic flux states of superconducting cylinders of, quantized, (E), 25:56064
neutron reactions using iron-filtered beams, analysis of resonance cross sections for, 25:56795
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
superconducting transition temperature of, effects of compression deformation on, 25:54587(R) (AECL-3909)
INDIUM ALLOYS AND SYSTEMS
Ag--In, search for superconductivity in fcc phases of, (E), 25:56096
Au--In, search for superconductivity in fcc phases of, (E), 25:56096
Au--In, superconductivity in hcp phases of, (E), 25:56096
Bi--In, superplastic properties of eutectic, 25:55456
Hg--In, phase diagram of, 25:55536
In--Ni, optical constants for β-phase NiIn intermetallic compound in, 25:56352
In--Pb, phonon spectra of dilute, superconducting tunneling study of, 25:56075
In--Pb, stress relaxation in mixed-state superconductivity, effect of magnetic fields on, 25:56063
In--Pb, strong-coupling parameters in superconducting, (E), 25:56076
In--Pb-base, thermal conductivity of one-dimensional superconducting, fluctuation effects on, (E/T), 25:56095
In--Sb, radioinduced defects and electron mobility changes in InSb single crystals, annealing of fast-neutron, 25:56317
In--Sn, phase diagrams of, relations with property--composition diagrams, 25:55546
INDIUM CHLORIDES
complexes with phthalocyanine, radiation effects on, Szilard--Chalmers process from neutron, 25:54680
INDIUM HYDROXIDES
preparation of InOOH, high-pressure hydrothermal method for, 25:55602
INDIUM IODIDES
indium-114m electron capture decay in, Coulomb fragmentation from, 25:54696
INDIUM ISOTOPES
energy levels of, quasiparticle description of low-lying, (T), 25:56794
INDIUM ISOTOPES In-107
beta and electron-capture decay of, γ spectra from, (E), 25:56759
INDIUM ISOTOPES In-114
electron capture decay of metastable, in indium iodides, Coulomb fragmentation from, 25:54696
INDIUM ISOTOPES In-115
energy levels of, Davydov-model calculations of spins for, (T), 25:56785
energy-level scheme from neutron inelastic scattering, (E), 25:56752(R) (SUNI-14)
energy-level transitions in, Davydov-model calculations of probabilities for E2, (T), 25:56785
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
INDOLE, 3-(2-AMINOETHYL)-5-METHOXY-
effects on sensitivity of guinea pigs and mice to transverse acceleration, 25:55264
INFORMATION CENTERS
operation of Nuclear Safety, during May and June 1971, 25:57092(R) (ORNL-TM-3483)
INFORMATION RETRIEVAL SYSTEMS
computer systems for, use of graphic display, 25:57007
computer systems for, use of graphic display, 25:57008
INFRARED RADIATION
detection of discrete celestial sources of far-, (E), 25:55692
emission from central region of Milky Way, 4-color photometry of, (E), 25:55783
solar spectrum between 12 and 24 μ, (E), 25:55739
INORGANIC COMPOUNDS
entropies of, use of molar volumes in method for estimating, 25:54532 (ORNL-4717, pp 1-27)
INSECTA
Chorthippus brunneus, radiation effects on chiasma frequency in, x, 25:55176
Drosophila melanogaster, radioinduced chromosome aberrations in male, cytological analysis of γ, 25:55170
Drosophila melanogaster, radioinduced translocations in chromosomes of, effects of dose on neutron and x, 25:55206 (NYO-2740-8, pp 147-219)
Earias vittella, radioinduced sterilization of, γ, 25:55368
Ephestia cautella, radiation effects on longevity and reproduction of, effects of dose on γ, 25:55315
Ephestia cautella, radiation effects on reproduction and survival of progeny of, effects of dose to male parents on γ, 25:55316
Habrobracon sp., radioinduced mutations for life-shortening in, x, 25:55185
Phorma regina, biochemistry of development of, 25:57265(R) (ORO-3883-3)
INTERSTELLAR MATERIAL
alignment of grains of, with respect to the magnetic field, (T), 25:55792
condensation of solid hydrogen in contracting clouds of, (T), 25:55785
detection of molecular hydrogen in, (E), 25:55700
helium abundance in, alpha reactions with aluminum and silicon at 70 to 160 MeV for determining, 25:56685 (FRNC-TH-48)
infrared emission from dust grains in H II regions, (T), 25:55718
microwave emission from formamide in, detection of, (E), 25:55784
INTESTINES
strontium-85 sorption by human, effects of aluminum phosphate gel on, 25:55109 (COO-1231-67)
INVARIANCE PRINCIPLES
parity-conserving relativistic quantum field theory, geometric structure of, (T), 25:56557
INVERTEBRATES
plutonium-239 content of Atlantic Ocean, 25:55161
IODINE
determination as iodate, iodine monochloride, or periodate by potentiometric titration, 25:54433
determination by gas chromatography and photometry, in-flame detector for, 25:54406
determination by radioactive, in rainwater and seawater by isotope exchange and scintillation counting, 25:54442
determination in biological fluids by neutron activation, ion exchange, and γ spectrometry, semi-automated, 25:54516
determination in biological fluids by neutron activation and radiochemical separation, 25:54509
diffusion and deposition of gaseous, in atmosphere, 25:54795
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
production in power reactors, safety problems from, 25:57100
reactions of fission product, in steam--air mixtures, 25:54547
separation of fission product, from off-gases from reprocessing of LMFBR fuels, 25:54713 (ORNL-4682, pp 39-79)
IODINE ISOTOPES I-124
beta and electron-capture decay of, gamma energies and intensities from, (E), 25:56781
IODINE ISOTOPES I-125
decay in iodine compounds, Moessbauer spectral study of effects of, 25:56381
transport across placenta in pregnant sheep, 25:55319 (UCD-472-118)
IODINE ISOTOPES I-126
beta and electron-capture decay of, gamma energies and intensities from, (E), 25:56781
IODINE ISOTOPES I-127
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
IODINE ISOTOPES I-128
yields from neutron reactions (n,γ) with iodine-127 in pentane or pentenes, 25:54705
IODINE ISOTOPES I-129
abundance in Galaxy, (T), 25:55781
content of environment of nuclear fuel reprocessing plant, public health hazards from, 25:55199
IODINE ISOTOPES I-131
determination of, use of ion exchange in methods for, 25:54397
effectiveness for lung scanning for evaluating perfusion changes following bronchography, 25:55285
effectiveness for scanning cerebral blood vessels in comparison with angiography, 25:55289
effectiveness in combination with surgery and thyroid hormone suppression for therapy of thyroglossal duct carcinomas, 25:55304
effectiveness of albumen-incorporated, for scanning pulmonary arteries in patients with pulmonary hypertension, 25:55284
effectiveness of lipiodol-incorporated, for endolymphatic therapy in patients with malignant melanomas or metastases, 25:55305
effects on potassium and sodium metabolism in man following therapy of diffuse toxic goiter, 25:55340
release during coolant loss accident in water cooled and moderated power reactors, 25:57104
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
release of liquid and gaseous effluents from power reactors, 25:56978
transport across placenta in pregnant sheep, 25:55319 (UCD-472-118)
use for estimating late x radiation effects on circulation in brain, liver, lungs, and skin of rats,

25:55328
use for therapy, development of thyroid carcinoma following, 25:55343
IODINE ISOTOPES I-132
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
IODINE ISOTOPES I-133
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
IODINE ISOTOPES I-134
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
IODINE ISOTOPES I-135
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
IODINE SYSTEMS
I--1-pentene, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--1-pentene, radiolysis of, distribution of iodine-131-labeled products from, 25:54705
I--2-pentene, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--2-pentene, radiolysis of, distribution of iodine-131-labeled products from, 25:54705
I--pentane, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--pentane, radiolysis of, distribution of iodine-131-labeled products from, 25:54705
ION-ACOUSTIC WAVES
damping and growth in plasma, nonlinear Landau, (T), 25:56234
excitation in polar regions by streaming instability in polar wind, v1f, (E/T), 25:55966
propagation in fully ionized collisional plasma, instabilities from, (T), 25:56251
ION BEAMS
charge neutralization in, cross-beam technique for, 25:55816
focusing in magnetic field isotope separators, design of optical system for, 25:54920
focusing of drifting, in non-uniform magnetic field, 25:56602
ION EXCHANGE
book: Ion Exchange in Analytical Chemistry, 25:54397
ION EXCHANGE MATERIALS
isotope separation factors for electromigration through, single-stage, 25:54729
ION SOURCES
aperture extractor design for high-current, 25:56213 (LBL-327)
control circuit for deuterium--tritium, for neutron generators, 25:56605(P)
description of high-temperature molecular-stream, for MI-1305 mass spectrometer, 25:55081
design and operation of polarized, review on, 25:56610
design of duoPIGatron, for plasma injection experiments, 25:56208 (CONF-711012-9)
design of high-frequency heavy-, 25:55817
design of large-area high-current, for plasma injection experiments, 25:56212 (LBL-35)
design of multi-aperture 1-keV hydrogen, for injection into magnetic mirror machines, 25:56217 (UCRL-73387)
design of multiply charged heavy, using electron resonance plasmas, 25:56210 (EUR-CEA-FC-603)
development for plasma injection studies, review of, 25:56218 (UCRL-73412)
development of, review of, 25:55814 (UCRL-73353)
emittance of, device for measuring, 25:56611
IONOSPHERE
charged-particle density and precipitation in polar-cap auroral, sounding-rocket observations of, (E), 25:56031
charged-particle flux at 250 to 500 km in, acceleration mechanism of bunches of, (E/T), 25:56008
charged-particle intensity at low altitudes over auroral zones and polar caps, relation of simultaneous electric-field observations to, (E), 25:56030
charged-particle intensity distribution at 200 to 300 km in, global primary cosmic rays and residual, (E), 25:55980
cosmic-ray propagation from source to, path-length determination for, (E/T), 25:55903
creation of electron-beam-produced artificial aurorae, magnetospheric magnetic-field configuration from, (E), 25:55961
D region, effect on parameters of Dec. 27, 1968 chromospheric flare, (E/T), 25:55982
D region, ion kinetics in nighttime, nuclear-explosion-associated, (E), 25:56010
diagnostics using electrostatic probes, probe properties in, (E), 25:56012
E region, critical-frequency variations at large solar zenith angles, universal-time-dependent, (E), 25:55994
E region, current systems in polar, ground-level perturbation-field model of, (T), 25:55977
E region, detonation-wave effects on decameter-wavelength radio waves in, (E/T), 25:55970
E region, effect on parameters of Dec. 27, 1968 chromospheric flare, (E/T), 25:55982
E region, electron density enhancements during 2B solar flares, (E/T), 25:56035
E region, plasma transport processes in, theoretical formulation for, 25:55969
electric field in nighttime and daytime auroral, Langmuir-probe measurement of vector, 25:55960
electric fields in polar, correlation with magnetic disturbances in polar regions, (E/T), 25:55959
electric-field intensity at low altitudes over auroral zones and polar caps, relation of simultaneous charged-particle observations to, (E), 25:56030
electron content during Mar. 8, 1970 magnetic storm, spatial and temporal variations of, (E), 25:55974
electron density in topside, ground-based and topside-sounding diurnal and seasonal variations of midlatitude, (E), 25:55993
electron density irregularities in, nonperiodic, (E), 25:56042
electron precipitation in polar, during Aug. 13-18, 1968 magnetic storm, soft-, (E), 25:55964
F region, effect on parameters of Dec. 27, 1968 chromospheric flare, (E/T), 25:55982
F region, plasma ring and polar cavity in, comparison of north- and south-polar, (E), 25:56034
F region, striation formation in barium clouds released at 157 and 194 km, (E), 25:56033
F1 layer, electron and ion temperatures and densities in, (E), 25:56047
F1 layer, electron density enhancements during 2B solar flares, (E/T), 25:56035
F2 layer, characteristics of critical frequency distribution curves, statistical analysis of, (E/T), 25:55985
F2 layer, electron density enhancements during 2B solar flares, (E/T), 25:56035
F2 layer, electron-density distribution in, numerical models of, (T), 25:55984
F2 layer, ground-based and topside-sounding diurnal and seasonal variations of electron density in, (E), 25:55993
geomagnetic-field intensity at 100 to 500 km, computation of total vector of real, 25:55990
ion-density enhancements in polar, during Aug. 13-18, 1968 magnetic storm, positive-, (E), 25:55964
ionization irregularities in geomagnetic-field-oriented topside, whistler-associated, (E), 25:55997
ionization profile in upper, computation from ground-based vertical soundings, (E/T), 25:55995
lightning discharge pulses in, correlation and spectral characteristics from leader stage of, (E/T), 25:55998
magnetic field of 1f oscillations under, computer calculations of, (T), 25:56001
magnetic-field and pressure variations in, compared to Earth surface, solar diurnal, (E/T), 25:56036
magnetic-field and pressure variations in, compared to Earth surface, lunar diurnal, (E/T), 25:56037
parameters of, ground-based and satellite observations of solar-activity effects on geophysical, (E), 25:55981
plasma disturbances by satellite in, boundary-value problem for Vlasov--Poisson equation, 25:56014
plasma inhomogeneity formation in equatorial electrojets, quasi-linear equations of electron and ion, (T), 25:55986
proton precipitation in and radar echoes from auroral, simultaneous observations of, (E), 25:55963
radio-wave absorption in, latitudinal dependence of lunar-phase effect on, (E), 25:55975
radio-wave propagation at midlatitude across polar cap during PCA, proton anomaly of very long, (E), 25:55996
solar particles in polar, energy dissipation of PCA-associated, (T), 25:56005
solar-eclipse effect on, observations from two stations of Sept. 22, 1968, (E), 25:56000
sporadic E, daily variation in height of, (E/T), 25:56006
sporadic E, detonation-wave effects on decameter-wavelength radio waves in, (E/T), 25:55970
sporadic E, effects of geomagnetic activity on, (E/T), 25:56015
spread F, relation to whistler characteristics, (E), 25:55997
variations of temperature and molecular nitrogen and atomic and molecular oxygen concentrations at 100 to 200 km, diurnal, (E), 25:55987
IONS
atomic oscillator strengths for sodium-like, (T), 25:55776
charged-particle reactions with hydrogen-like, cross sections for transitions between highly excited levels in, (T), 25:55839
charged-particle reactions with hydrogen-like, cross sections for transitions between highly excited levels in, (T), 25:55838
detection of heavy, efficiency of scintillation counters for, 25:55016
effects of beams of heavy, on survival of bacterial spores and cultured cells, 25:55313
energy level lifetimes for fluorescent states, compilation of, 25:57215 (CEA-Bib-198)
implantation in semiconductors, review of analysis of

XUM

lattice disorder in, 25:56304
mass and mobility of atmospheric, methods for measuring, 25:54800
mobility of alpha particle-induced, in air, spectra of, 25:54801
reactions of radiolytic, with electrons, 25:54591 (CONF-700652-(Vol.1), pp 221-58)
reactions with monocrystalline metal surfaces at 0.5 to 10 keV, equipment for study of reflection and secondary emission from, 25:55815
reactions with thorium-232, light-element yields from heavy, (E), 25:56788

IRIDIUM
conductivity at 80 to 1900°K, electric and thermal, 25:55523
determination in geochemical samples by neutron activation, 25:54484
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in silicate rocks and rock-forming minerals by neutron activation and radiochemical separations, 25:54486
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453

IRIDIUM ALLOYS AND SYSTEMS
Ir--Nb, niobium-93 NMR in $Nb_3Ir$, 25:56373
Ir--Pr-base, phase diagram of, 25:55567
Ir--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566

IRIDIUM ISOTOPES Ir-192
uses as gamma source for jet engine inspection, 25:54927

IRON
abundance in solar atmosphere, (E/T), 25:55750
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
casting by levitation melting using magnetic field, 25:55424
complexes with TTA, spectrophotometric study of, 25:54692(R) (NYO-3417-15)
compounds, effectiveness for treatment of human tumors combined with radiation for normalization of blood picture, 25:55303
deformation and fracture at low temperatures, effects of vanadium on, 25:55478
determination by dichrometric titration using triphenylmethane dyes as redox indicators, 25:54410
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in stony meteorites by proton and bremsstrahlung activation, 25:54466
determination in tourmaline, by deuteron activation analysis and $\gamma$ counting, 25:56752(R) (SUNI-14)
determination in volcanic ash by neutron activation and $\gamma$ spectrometry, 25:54513
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in air by neutron activation and $\gamma$ spectrometry, 25:54456
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and $\gamma$ spectrometry, 25:54496
diffusion of carbon in solid solutions of alpha, 25:55479
distribution coefficient of impurity of, in zirconium, measurement of, 25:55502
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
effects on sorption of strontium on cation exchanger from strong acid, 25:54720 (UJV-2550-Ch)
iron-57 Moessbauer spectra using polarized cobalt oxide source, 25:56366
magnetic properties of, at cryogenic temperatures, 25:56361
neutron cross sections for, transmission of fission spectra through thick samples for evaluation of minima in total, (E), 25:56650 (COO-2049-5)
neutron inelastic scattering at 14.4 MeV, differential cross sections, nuclear-level density parameters, and contribution of direct processes for, (E), 25:56684 (FEI-216)
neutron reactions (n,2n) at 14.4 MeV, differential cross sections, second-neutron spectra, and nuclear-level density parameters for, (E), 25:56684 (FEI-216)
neutron reactions with, secondary gamma radiation in shielding from, 25:56277
neutron transport in, fast, (E/T), 25:56618 (RPI-328-230)
production in blast furnaces, uses of radioisotopes for studying operations in, 25:54906
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
proton reactions above 1.5 TeV, ionization spectrometer study of inelasticity coefficients for, (E), 25:56414 (INP-757)
reactions with sodium at 1000 to 1300°F, carbon and nitrogen mass transfer in, 25:55379(R) (WARD-4210-T-1-2)
separation of ferric, by solvent extraction using TTA, effects of TOPO on, 25:54692(R) (NYO-3417-15)
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)

IRON ALLOYS AND SYSTEMS
preparation by granule metallurgy, evaluation of, 25:55404
stability of aluminum oxide dispersions in, at high temperatures, 25:55485
thermoelectric properties of, at 0 to 1000°C, 25:56351
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Fe, magnetic properties of, 25:56358
Al--Fe--Ti, mechanical properties at 550 to 1100°C, 25:55501
Al--Fe--Ti, phase studies of, 25:55501
Be--Fe-base, phase transitions in 400°C annealing of, Moessbauer-effect study of, 25:56378
carbides--Fe, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487
Co--Fe--Mo, electric conductivity of supersaturated solid solutions of, effects of phase decomposition on, 25:55472
Co--Fe--V, magnetic properties at cryogenic temperatures, 25:56361
Co--Fe--W, hardening of, kinetics of dispersion, 25:55423
Co--Fe-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Fe, iron-57 Moessbauer spectra using polarized cobalt oxide source, 25:56366
Cr--Fe-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Fe-base--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe--Mo--Ni, properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
Fe--Mo--Ni-base, magnetic properties at cryogenic temperatures, 25:56361
Fe--Ni, electron mean free path in Permalloy foils, fast, (E), 25:56281
Fe--Ni, magnetic properties at cryogenic temperatures, 25:56361
Fe--Ni, precipitation in beryllium-containing, metallography of 700°C, 25:55544
Fe--Ni, properties and structure of, produced by sintering using systematic thermal fluctuations, 25:554..
Fe--Ni--WC, phase relations and tensile properties of sintered, 25:55631
Fe--Ni-base, microstructure of Type 706, 25:55553
Fe--Ni-base, microstructure of Type 706, effects of heat treatment on, 25:55554
Fe--Sm, phase diagram and intermetallic compounds, 25:55569
Fe--Ta, thermodynamic properties of intermetallic $TaFe_2$, 25:55508
Fe--WC, phase relations and tensile properties of sintered, 25:55631
Fe-base--Mn--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Mo, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Mo--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Ni--Rh, use as filter in polarized iron-57 Moessbauer source, 25:56366
Fe-base--Si, magnetic properties at cryogenic temperatures, 25:56361
Fe-base--Ti, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--V, deformation and fracture at low temperatures, effects of vanadium content on, 25:55478

IRON BROMIDES
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381

IRON CHLORIDES $FeCl_2$
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381

IRON IODIDES
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381

IRON IONS
Moessbauer-effect studies of structure of inorganic complexes and organometallic compounds of, review, 25:56380
spectra of Fe XV in solar corona, extreme-ultraviolet, (E), 25:55767
spectral lines due to, in solar euV spectrum, (E), 25:55774

IRON ISOTOPES
determination of, gas-phase mass spectrometric, 25:54404

IRON ISOTOPES Fe-52
nuclear properties of, for medical use, 25:54676
production by proton reactions with manganese and ion

exchange, 25:54676
IRON ISOTOPES Fe-54
alpha reactions (α,p) at 9.86, 10.02, and 10.40 MeV, p--γ angular correlations from, (E), 25:56700
neutron capture by, gamma spectra from thermal, (E), 25:56683 (FEI-205)
proton elastic scattering at 9.6 MeV, optical-model analysis of, (E/T), 25:56699
IRON ISOTOPES Fe-55
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
IRON ISOTOPES Fe-56
energy level 0.85 MeV from neutron inelastic scattering, deformation parameter for, (E), 25:56707
energy levels from resonances in (γ,n) reactions, isobaric analog, (E), 25:56702
neutron capture by, cross section for nonresonant, (E), 25:56702
neutron capture by, gamma spectra from thermal, (E), 25:56683 (FEI-205)
neutron elastic and inelastic scattering at 14 MeV, vibrating-model analysis of differential cross sections for, (E), 25:56707
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
proton elastic scattering at 9.6 MeV, optical-model analysis of, (E/T), 25:56699
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727
IRON ISOTOPES Fe-57
Moessbauer effect in fast-neutron-irradiated cobalt-doped silicon, 25:56326
Moessbauer effect in iron inorganic complexes and organometallic compounds, review, 25:56380
Moessbauer source, preparation of polarized, 25:56366
Moessbauer technique, delayed-coincidence, 25:56367
Moessbauer--NMR study of rf-perturbed hyperfine levels of, 25:56368
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
IRON ISOTOPES Fe-58
energy levels from manganese-58 beta decay, spin--parity assignments for, (E), 25:56710
IRON ISOTOPES Fe-59
distribution in man, whole-body radiometric method for studies of, 25:55111
IRON OXIDES
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
IRON OXIDES FeO
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381
IRON OXIDES $Fe_2O_3$
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381
$Al_2O_3$--$Fe_2O_3$, production of fine powders of, Microgel process for, 25:55419
IRRADIATION FACILITIES
accidents at, methods of estimating gamma radiation dose to man following, 25:55235
description of alpha, for irradiating mammalian cells, 25:55002 (NYO-2740-8, pp 7-146)
description of SHERLOCK III neutron, 25:54506
description of STIRCA, at Cadarache, France, 25:54851
description of USSR UGU-200 gamma, 25:54844
design and operation of safe, for medical use in Japan, 25:54852
design of, 25:54855(P)
design of dual compartment portable, with panel-type radiation source, 25:54849(P)
design of electron, for industrial materials, 25:54835(P)
design proposal for biomedical, at Los Alamos Meson Physics Facility, 25:55299 (LA-4490)
development of gamma, in United Kingdom for commercial processing, 25:55363
dosimetry in 380-Ci cobalt-60 dual, 25:55319 (UCD-472-118)
gamma sources for, development of economical high-intensity, 25:54914
radiation dose in uranium loop-type, calculation of gamma, 25:54991
radiation dosimetry in bulk grain, performance of encapsulated LiF dosimeter for γ, 25:55234
ISONIAZID
radiosensitizing effects on hamster cells, x, 25:55207 (NYO-2740-8, pp 220-59)
ISOTOPE EFFECTS
use of, after rate-determining step to study behavior of bonds during hydrogen transfer, 25:54577
ISOTOPE EXCHANGE
processes in gaseous phase for measurement of diffusion coefficients of liquid metals, 25:54556
radiation effects on, chromatographic studies on, 25:54727
ISOTOPE GENERATORS
design of mother--daughter-type, with quick coupling mechanism, 25:54909(P)
development of, using countercurrent electrophoresis, 25:54742
ISOTOPE SEPARATION METHODS
cascades for large arbitrary enrichment, design of asymmetric, 25:54917
development of countercurrent electrophoresis, 25:54742
review of new, for uranium isotopes, 25:54919
ISOTOPES
separation factors for, in electromigration through ion exchange membranes, single stage, 25:54729
ITALY
reform of C.N.E. in, 25:55252 (NP-18752)

## J

JAMES A. FITZPATRICK POWER REACTOR
containment system for, design parameters of, 25:56961 (DOCKET-50333-30)
design parameters for, revised and additional data on, 25:56961 (DOCKET-50333-30)
operations aspects for, revised and additional data on, 25:56961 (DOCKET-50333-30)
technical specifications for, 25:56961 (DOCKET-50333-30)
JAPAN
health and safety at Oarai Research Establishment in, during October through December 1970, 25:55247(R) (JAERI-Memo-4353)
radiation dose to man in, from external occupational exposures, estimation of genetically significant equivalent γ, neutron, and x, 25:55230
JAPANESE POWER DEMONSTRATION REACTOR
fuel rods of, fission product release and detection of failed Zircaloy 2 clad uranium oxide ($UO_2$), 25:57047 (JAERI-Memo-4157, pp 2-22)
neutron monitor for, development of in-core boron coated ionization chamber, 25:57025
JET ENGINES
inspection of, use of iridium-192 gamma sources for radiographic, 25:54927
JOINTS
scanning of sacroiliac, in ankylosing spondylitis patients, effectiveness of strontium-85 for, 25:55287
JOSEPH M. FARLEY POWER REACTOR, UNIT 1
construction of, revised and additional data for permit application for, 25:56964 (DOCKET-50348-24)
control system for, wiring requirements for, 25:56966 (DOCKET-50348-26)
design parameters of, revised and additional data on, 25:56965 (DOCKET-50348-25)
operation of, revised and additional data for license application for, 25:56964 (DOCKET-50348-24)
operations aspects of, revised and additional data on, 25:56965 (DOCKET-50348-25)
JOSEPH M. FARLEY POWER REACTOR, UNIT 2
construction of, revised and additional data for permit application for, 25:56964 (DOCKET-50348-24)
control system for, wiring requirements for, 25:56966 (DOCKET-50348-26)
design parameters of, revised and additional data on, 25:56965 (DOCKET-50348-25)
operation of, revised and additional data for license application for, 25:56964 (DOCKET-50348-24)
operations aspects of, revised and additional data on, 25:56965 (DOCKET-50348-25)
JUPITER (PLANET)
luminosity of, relation to solar activity, (T), 25:55766

## K

KEROSENE
kerosene--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644
KEWAUNEE POWER REACTOR
design parameters of, revised and additional data on, 25:56957 (DOCKET-50305-25)
operations aspects of, revised and additional data on, 25:56957 (DOCKET-50305-25)
KIDNEYS
glomerular filtration rate of human, use of chromium-51-labeled EDTA for measurement of, 25:55122
scanning in patients with cervical carcinomas for course control and prognosis, 25:55275
scanning of human, using chromium-51 or ytterbium-169-labeled EDTA, 25:55272
KILNS
charge residence time in rotary, use of cobalt-60 source for determination of, 25:54898
KIMBERLITES
thorium content in African, 25:54495
uranium content in African, 25:54495
KRYPTON
reactions with thallium bromides, crossed-beam measurements of cross sections for dissociative ionization in, 25:55879
release from liquid metal fast breeder reactor fuel recycle complex, 25:54754
scattering by nitrogen molecules, rainbow oscillations in differential cross sections for, (E), 25:55852
x-ray fluorescence yield of, K, (E), 25:56697
KRYPTON IONS
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)

XUM

KRYPTON ISOTOPES
uses of radioactive, as indicator of oxygen mass transfer in aqueous solutions and slurries, 25:54903
KRYPTON ISOTOPES Kr-80
neutron capture by, cross sections for thermal and resonance, (E), 25:56691
KRYPTON ISOTOPES Kr-83
energy-level transitions in isomeric, energies and internal conversion coefficients for, (E), 25:56708
isomeric transition in, gamma and x-ray spectra and half-life for, (E), 25:56708
KRYPTON ISOTOPES Kr-85
content in global atmosphere, forecasts to year 2000 of, 25:54781(T) (JPRS-53174)
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
uses as tracer for studying atmospheric diffusion of plumes and puffs, 25:54908
KRYPTON ISOTOPES Kr-86
deuteron reactions (d,p) at 5 to 10.5 MeV, analysis of (d,n) threshold cusp using coupled-channel Born approximation, (E/T), 25:56719
KRYPTON ISOTOPES Kr-87
beta decay scheme, (E), 25:56703
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
KRYPTON ISOTOPES Kr-88
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
uses in detection of leaks in reactor fuel cans, 25:54904

# L

LA CROSSE BOILING-WATER REACTOR
cooling system for, stainless steel intergranular sensitization and failure probability in, 25:55378 (SWRI-1228-P-7-40)
quality assurance program for, 25:56925 (DOCKET-1155-134)
site of, environmental radiation survey during January 1969 to June 1971, 25:56895 (DOCKET-1155-135)
LABORATORIES
design and operational safety of Battelle plutonium, at West Jefferson, Ohio, 25:54959 (CONF-710401-, pp 280-92)
safety organization and procedures for plutonium development, 25:54958 (CONF-710401-, pp 258-66)
LABORATORY EQUIPMENT
design for measuring arc erosion of sintered copper and tungsten in oil, 25:55454
LACTOSE
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)
LANTHANUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in intermediate products of rare earth production by x-ray spectroscopy, 25:54417
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
effects on radiolysis of crystalline potassium nitrate, 25:54638
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
separation from cerium and niobium by reverse-phase partition chromatography on TTA-impregnated paper, 25:54746
separation from cerium on titanium tungstate papers by electrochromatography, 25:54744
LANTHANUM ALLOYS AND SYSTEMS
Al--La--rare earths, crystal field levels, superconducting transition temperature, and exchange parameters of, (T), 25:56359
Al--La--Tm, crystal field levels of La/sub 1-x/Tm/sub x/$Al_2$, (E), 25:56359
Au--La, crystal structures and melting points of intermetallic, 25:55570
Ce--La, magnetic impurity scattering and superconductivity in, 25:56068
Eu--La-base, local moment relaxation in superconducting, (E), 25:56071
La--Pb, magnetic impurities effect on superconducting intermetallic $LaPb_3$, 25:56109
La--Sn, magnetic impurities effect on superconducting intermetallic $LaSn_3$, 25:56109
La--Sn, magnetic properties of $LaSn_3$, NMR and susceptibility, 25:56353
La--Tl, magnetic impurities effect on superconducting intermetallic $LaTl_3$, 25:56109
LANTHANUM BORIDES
production of complex $LaB_6$ shapes by hot casting under pressure, 25:55599
LANTHANUM ISOTOPES La-139
energy levels from barium-138 proton elastic scattering, spectroscopic factors for isobaric analog, (E), 25:56769
meson reactions ($\mu^-,\nu$) with, probability for, (E), 25:56739 (JINR-P1-6006)
nuclear magnetic resonance in $LaSn_3$, 25:56353
LASER RADIATION
effects on vanadium and nickel of pulsed, vacancy formation of, 25:56313
interactions with electrons, stimulated Compton energy exchange rate in, (T), 25:56266 (UCRL-51065)
scattering on plasma, electron distribution functions from Thomson, (E/T), 25:56143
LASERS
design of neodymium, for plasma production, 25:56193 (IPP-4/82)
performance of dye, effects of chemical quenching of triplet state on, 25:57288 (UCRL-51088)
quantum theory of spontaneous emission in presence of external radiation, 25:55883
use for plasma heating, prospects for, 25:56128
LAVA
analysis of peralkaline, by nuclear methods, 25:54462
LEAD
analysis of beads of, for noble metals by neutron activation and γ spectrometry, 25:54487
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
bremsstrahlung buildup factor for, dependence on position of shielding between source and detector, 25:56280
determination by controlled potential coulometry using rotated mercury cell, 25:54427
determination by x-ray counting after neutron activation, 25:54692(R) (NYO-3417-15)
determination in biological materials by irradiation with 30-MeV α particles and track registration of α particles from decay of resulting polonium, 25:54452
determination in isoquinoline formate by polarography, 25:54421
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination in yttrium oxide by emission spectrometry, 25:54419
effects on radiolysis of crystalline potassium nitrate, 25:54638
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
metallography of, sample preparation for, 25:57239 (MLM-OP-71004)
microwave oscillations in parallel superconducting Josephson junctions, 25:56077
neutron cross sections for, transmission of fission spectra through thick samples for evaluation of minima in total, (E), 25:56650 (COO-2049-5)
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
neutron reactions with, secondary gamma radiation in shielding from, 25:56277
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
superconducting junctions of, finite-voltage behavior of Pb/Cu/Pb, (E), 25:56107
thermal capacity at 25 to 317°C, 25:55626
LEAD ALLOYS AND SYSTEMS
analysis for antimony, arsenic, and copper by neutron activation and radiochemical separation, 25:54515
preparation by granule metallurgy, evaluation of, 25:55404
Cd--Pb, diffusion in molten, kinetics of mutual, 25:55449
In--Pb, phonon spectra of dilute, superconducting tunneling study of, 25:56075
In--Pb, stress relaxation in mixed-state superconductivity, effect of magnetic fields on, 25:56063
In--Pb, strong-coupling parameters in superconducting, (E), 25:56076
In--Pb-base, thermal conductivity of one-dimensional superconducting, fluctuation effects on, (E/T), 25:56095
La--Pb, magnetic impurities effect on superconducting intermetallic $LaPb_3$, 25:56109
Pb--Pr-base, phase diagram of, 25:55567
Pb--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
LEAD AZIDES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
radiolysis of, topography of evolution of products from x, 25:54642
LEAD ISOTOPES
book: Lead Isotopes in Geochemistry and Cosmochemistry, 25:54770
energy levels of neutron-deficient, survey of data on

low-lying, 25:56798
LEAD ISOTOPES Pb-206
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
LEAD ISOTOPES Pb-207
energy levels from resonances in (γ,n) reactions, doorway-state, (E), 25:56702
energy levels of, shell-model analysis of nonnormal, (T), 25:56763
neutron capture by, cross section for nonresonant, (E), 25:56702
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
LEAD ISOTOPES Pb-208
energy levels of, continuum shell-model calculation for giant dipole resonance, (T), 25:56800
meson reactions ($\mu^-,\nu$) with, probability for, (E), 25:56739 (JINR-P1-6006)
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
photon reactions (γ,n) with, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
photonuclear reactions of, analysis using eigenchannel reaction theory and continuum shell model, (T), 25:56800
proton elastic scattering with isobaric analog excitation, shell-model analysis of, (E/T), 25:56769
proton reactions at high energies, isobar model for analysis of meson (π) production in, 25:56530
LEAD ISOTOPES Pb-210
content in river waters in Czechoslovakia, (E), 25:54774
determination in lunar rocks and soils by β scintillation counting of bismuth-210, 25:54440
distribution in tissues of uranium mining personnel, 25:55117
LEAD ISOTOPES Pb-212
beta decay of, effects of chemical binding on recoil yields from, 25:54694
LEAD ISOTOPES Pb-214
beta decay of, effects of chemical binding on recoil yields from, 25:54694
LEAK DETECTORS
design for detecting gas leaks using radioisotope tracers, 25:55063(P)
LEPTONS
interactions with hadrons, generalized Weinberg sum rules in deep inelastic, 25:56461
LEUCINE
radiation effects on in vitro rat liver uptake of, γ, 25:55126
LEVEL INDICATORS
design of linearized radiometric, for measuring quantities of fluidic materials in containers, 25:55059(P)
LIGHT
amplification of spontaneously emitted, photon statistics of linear coherent, 25:57242 (NYO-3406-20)
deflection by gravitational field of cluster of galaxies, (T), 25:55809
effects on respiration rate in wheat seedlings, 25:55348
scattering by random surface ripples, optical mixing spectroscopic study of, 25:57232 (IS-T-494)
scattering by weakly ionized plasma, theory of Thomson, 25:56165 (N-71-27890)
LIGHT SOURCES
design of encapsulated radioactivated, 25:54915(P)
LIGHTNING
discharge pulses in ionosphere, correlation and spectral characteristics of leader stage of, (E/T), 25:55998
LIGNIN
radioinduced graft polymerization with polystyrene, γ, 25:54614
LIGROINE
effects on separation of europium or lanthanum from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
LIMERICK POWER REACTOR, UNIT 1
cooling system equipment for, classification requirements for, 25:56968 (DOCKET-50352-20)
design parameters of, revised and additional data on, 25:56967 (DOCKET-50352-19)
emergency core cooling system for, revised and additional data on, 25:56968 (DOCKET-50352-20)
operations aspects of, revised and additional data on, 25:56967 (DOCKET-50352-19)
piping systems for, classification requirements for, 25:56968 (DOCKET-50352-20)
quality assurance program for, organization chart for, 25:56968 (DOCKET-50352-20)
LIMERICK POWER REACTOR, UNIT 2
cooling system equipment for, classification requirements for, 25:56968 (DOCKET-50352-20)
design parameters of, revised and additional data on, 25:56967 (DOCKET-50352-19)
emergency core cooling system for, revised and additional data on, 25:56968 (DOCKET-50352-20)
operations aspects of, revised and additional data on, 25:56967 (DOCKET-50352-19)
piping systems for, classification requirements for, 25:56968 (DOCKET-50352-20)
quality assurance program for, organization chart for, 25:56968 (DOCKET-50352-20)
LINEAR ACCELERATORS
beam focusing in high-current electron induction, 25:56608
target failure at electron, contamination and radioprotection problems resulting from natural uranium, 25:56582 (CEA-R-4188)
LINEAR ENERGY TRANSFER
analysis of, algorithm for, 25:55002 (NYO-2740-8, pp 7-146)
distributions in rabbit and rat phantoms following exposure to monoenergetic neutron beams, correlation of γ, neutron, and recoil ion dose distributions with, 25:55229
effects on RBE for effects of protons on impulse transmission in frog sciatic nerve, 25:55215
LIPIODOL
effectiveness of iodine-131-labeled, for human endolymphatic therapy, 25:55305
LIPOPOLYSACCHARIDES
radioprotective effects of, on mice, fast neutron and x, 25:55266
LIQUID METAL FAST BREEDER REACTOR
accidents in, analysis of aerosol production and distribution characteristics following, (E/T), 25:57105
accidents in, analysis of molten uranium oxide ($UO_2$) reaction with liquid sodium during, 25:57069(R) (ANL-7800)
containment structures for, effects of accidents on dynamic response of, 25:57069(R) (ANL-7800)
control system for 1000 MW(e), design requirements and simulation studies for, 25:57069(R) (ANL-7800)
coolant boiling in, detection and stability analysis of, 25:57069(R) (ANL-7800)
coolant boiling in, initiation and thermal hydraulics aspects of sodium, (E/T), 25:57068(R) (AI-AEC-13006)
coolant combustion accidents in, release and transport of aerosols and energy from sodium, (E/T), 25:57068(R) (AI-AEC-13006)
coolant interaction with molten fuel in, fuel rod failure propagation from, (T), 25:57083 (CONF-710302-(Vol.1), pp 241-58)
coolant interaction with molten fuel in, pressure generation by, (T), 25:57073 (CONF-710302-(Vol.1), pp 25-49)
coolant interaction with molten fuel in, reactivity feedback from, (T), 25:57074 (CONF-710302-(Vol.1), pp 50-78)
coolant voiding accidents in, PASET code for analysis of, 25:57082 (CONF-710302-(Vol.1), pp 215-40)
coolant voiding analysis in, comparison of momentum integral and compressible models for, 25:57081 (CONF-710302-(Vol.1), pp 180-98)
core disassembly accidents in, axial kinetics model for analysis of, 25:57080 (CONF-710302-(Vol.1), pp 167-79)
core disassembly accidents in, numerical instabilities in VENUS code for analysis of, 25:57079 (CONF-710302-(Vol.1), pp 152-66)
core disassembly accidents in, use of SAS2A code for analysis of, 25:57077 (CONF-710302-(Vol.1), pp 120-7)
core disassembly accidents in, two-dimensional space-time kinetics method for analysis of, 25:57078 (CONF-710302-(Vol.1), pp 128-51)
core for, effects of fuel failure propagation on safety and economic performance of, (E/T), 25:57089 (GEAP-13639-2)
core for, effects of fuel failure propagation on safety and economic performance of, (E/T), 25:57088 (GEAP-13639-1)
core melt-through accident in, safety aspects and containment methods for, 25:57093 (ORNL-TM-3504)
core structures for, effects of accident initiated stresses on plastic deformation of, 25:57069(R) (ANL-7800)
fuel cycle for, research progress on, 25:54717 (ORNL-4682, pp 160-2)
fuel element failure in, effects of fission gas and molten fuel ejection from, (T), 25:57075 (CONF-710302-(Vol.1), pp 79-96)
fuel elements for, Failed Fuel Mockup facility for testing, 25:57092(R) (ORNL-TM-3483)
fuel elements for, failure propagation characteristics of bundle arranged pin type, 25:57069(R) (ANL-7800)
fuel elements for, safety evaluation of equipment and methods for shipping spent, 25:54972 (ORNL-TM-2723)
fuel pin bundles for, effects of coolant flow blockage on, (T), 25:57076 (CONF-710302-(Vol.1), pp 102-19)
fuel pins for, effects of high temperature and burnup on performance of Type 347 stainless steel clad plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$), 25:57045 (GEAP-10385)
fuel pins for, effects of overpower transients on performance of stainless steel clad uranium oxide ($UO_2$), 25:57046 (GEAP-13722)
fuel reprocessing for, development of aqueous methods for, 25:54713 (ORNL-4682, pp 39-79)
fuels for, radiation properties and shielding requirements of, 25:54713 (ORNL-4682, pp 39-79)
safety aspects of, research and development program during July 1969 to June 1970, 25:57069(R) (ANL-7800)

XUM

safety research on, summary of fiscal year 1971, 25:57068(R) (AI-AEC-13006)
safety studies for 1000 MW(e), review of, 25:57069(R) (ANL-7800)
stability of, analytical methods and transfer function techniques for, 25:57069(R) (ANL-7800)
standards for, development of engineering, 25:57092(R) (ORNL-TM-3483)
temperature measurement in, program for testing ultrasonic/thermocouple probe for, 25:55078(R) (NYO-3906-5)
thermal effluents from, effects on environment of, 25:57069(R) (ANL-7800)
LIQUIDS
containers for hazardous, design of pressure-relief plugged sealed, 25:54989(P)
diffusive motion in, time-of-flight neutron scattering method for studying, 25:56634
LITHIUM
abundance in solar atmosphere, (E/T), 25:55750
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
electron reactions up to 60 eV with, Born-approximation calculations of excitation cross sections for, 25:55864
reaction with defects in electron-irradiated n-type silicon, 25:56310
separation from salt solutions by solvent extraction using fluorinated β-diketones, 25:54718 (ORNL-4682, pp 168-81)
x-ray scattering by, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
LITHIUM ALLOYS AND SYSTEMS
Bi--Li, solvent properties for rare earths and thorium, 25:54712 (ORNL-4682, pp 1-38)
LITHIUM ALUMINUM FLUORIDES
spectra of, effects of lithium-6 on ir, 25:54563
LITHIUM AMIDES
radiation effects on, production of carbon-11-labeled cyanides by recoils from proton, 25:54683
LITHIUM CHLORIDES
separation of fluoride from molten, by reactions with boron trichloride, 25:54534 (ORNL-4717, pp 43-56)
LITHIUM FLUORIDES
lattice sites of vanadium and manganese ions in crystals of, calculation and x-irradiation effects on, 25:56384
radioinduced thermoluminescence peaks and absorption bands of, error in analysis of, 25:56338
$BeF_2$--$CeF_3$--LiF, phase equilibria in, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF, thermodynamics of mixing in molten, electrochemical measurements of, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF--$ThF_4$, liquidus temperature of, 25:54534 (ORNL-4717, pp 43-56)
$BeF_2$--LiF--$ThF_4$, plutonium trifluoride solubility and absorption spectra in molten, effects of oxide on, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of protactinium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of uranium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
LiF--NaF--$ThF_4$, phase equilibria in, high-temperature, 25:54532 (ORNL-4717, pp 1-27)
LITHIUM HALIDES
solvent properties of molten, for actinides and lanthanides, 25:54712 (ORNL-4682, pp 1-38)
LITHIUM HYDRIDES
LiH--W, shielding properties of, calculation of, 25:57133 (ORNL-TM-3366)
LITHIUM HYDROXIDES
radiation effects on aqueous solutions of, ESR studies of ozonide ion formation from γ, 25:54608
LITHIUM IONS
energy levels of $Li^+$, positions and widths of autoionizing, (T), 25:55820
energy of ground-state $Li^+$, calculation using Faddeev formalism, 25:55824
reactions with helium at 600 to 2800 eV, interference effects in charge-exchange cross sections for, 25:55844
LITHIUM ISOTOPES
separation in ion exchange resin--lithium salt solution system, 25:54730
LITHIUM ISOTOPES Li-6
abundance in Galaxy, (T), 25:55781
abundance in solar atmosphere, (E/T), 25:55750
deuteron elastic scattering at 8.0 to 12.0 MeV, optical-model analysis of differential cross sections and excitation functions for, (E), 25:56670
effects on ir spectra of lithium aluminum fluoride, 25:54563
energy levels from tritium (He-3,γ) reactions, resonance, (E), 25:56664
proton elastic scattering at 6.868 MeV, absolute cross section for, (E), 25:56670
reactions (Li-6,d) with argon-40 at 22 MeV, angular distributions for, (E), 25:56714
LITHIUM ISOTOPES Li-7
abundance in Galaxy, (T), 25:55781
deuteron elastic scattering at 10.0 to 12.0 MeV, optical-model analysis of differential cross sections and excitation function for, (E), 25:56670
deuteron reactions (d,t) at 10 to 12 MeV, excitation function, spectrum, and DWBA analysis of angular distributions from, (E), 25:56671
helium-3 reactions (He-3,α) at 16 to 18 MeV, excitation functions, spectrum, and zero- and finite-range DWBA analyses of angular distributions from, (E), 25:56671
proton elastic scattering at 6.868 MeV, absolute cross section for, (E), 25:56670
proton reactions (p,n) at 2 to 5.5 MeV, excitation function for, (E), 25:56752(R) (SUNI-14)
reactions (Li-7,d) with carbon-12 at 21.1 MeV, Hauser--Feshbach analysis of differential cross sections and spectra from, (E), 25:56663
reactions (Li-7,t) with carbon-13 at 20.5 MeV, DWBA and Hauser--Feshbach analyses of differential cross sections and spectra from, (E), 25:56663
scattering by carbon-12 and -13 at 21 MeV, optical-model analysis of, (E), 25:56663
LITHIUM ISOTOPES Li-9
production in alpha reactions with aluminum and silicon at 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
LITHIUM PERCHLORATES
reactions of molten, with rhenium or technetium, Raman spectral studies on compounds produced by, 25:54538
LITHIUM TANTALATES
congruent melting composition of $LiTaO_3$, from Curie temperatures, 25:55639
LITHIUM YTTERBIUM FLUORIDES
crystal structure of $LiYbF_4$, 25:54532 (ORNL-4717, pp 1-27)
LIVER
radiation effects on in vitro uptake of α-aminoisobutyric acid and cycloleucine by, γ, 25:55126
radiation effects on succinate dehydrogenase activity in rat in vitro, x, 25:55128
scanning of human, comparison of alkaline phosphatase evaluation and histological studies with gold-198, 25:55276
LOOPS
description of Luxembourg sodium test, 25:54839
design of sodium, for reactor material self-welding tests, 25:55379(R) (WARD-4210-T-1-2)
operation of sodium, for measurement of carbon and nitrogen mass transfer, 25:55379(R) (WARD-4210-T-1-2)
LOS ALAMOS MESON PHYSICS FACILITY
experimental facilities at, description of low-energy meson (π), 25:56589 (LA-DC-12730)
experimental facilities of, proposal for biomedical, 25:55299 (LA-4490)
meson (π) beam facility for, proposal for, 25:56588 (LA-4535)
LUNAR MATERIALS
aluminum-26 abundance in, (E), 25:55772
analysis by instrumental neutron activation and neutron activation with radiochemical separations, 25:54461
analysis for lead-210 by β scintillation counting of bismuth-210, 25:54440
analysis of fines No. 10084 from Apollo 11 for rare earths by ion exchange chromatography on high-voltage electrophoresis and neutron activation, 25:54475
analysis of rock, by activation and γ spectrometry, 25:54460
argon-40 diffusion from, (E), 25:55672
diffusion of radon in, 25:54440
isotope studies of Apollo 11 samples, (T), 25:55811
particle tracks in, characteristics of proton and alpha, (E), 25:55669 (N-71-26344)
sodium-22 abundance in, (E), 25:55772
LUNGS
radiation effects on blood circulation in rabbit, acute x, 25:55327
radiotherapy of metastases into, γ, 25:55300
scanning of human, effectiveness of technetium-99m-labeled sulfur colloid macroaggregates for, 25:55297
scanning of human, for diagnosis of embolism, effectiveness of technetium-99m-labeled human serum albumin and sulfur colloids in combination with gamma camera for, 25:55296
scanning of human, for evaluating perfusion changes following bronchography, use of iodine-131 for, 25:55285
scanning of human, health physics aspects of xenon-133, 25:55248
LUTETIUM
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
lattice parameters of, effects of hydrogen on, 25:55549
LUTETIUM ALLOYS AND SYSTEMS
Au--Lu, crystal structures and melting points of intermetallic, 25:55570
Lu--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
LUTETIUM ISOTOPES Lu-175
energy-level transition in, calculation of γ circular

polarization using parity-nonconserving potential, (T), 25:56768
energy-level transitions in, nuclear structure effects on internal conversion of M1, 25:56756
proton reactions (p,3nγ) at 20 to 40 MeV, γ spectra and excitation functions for, (E), 25:56796
LUTETIUM ISOTOPES Lu-176
neutron capture by, gamma and conversion-electron spectra from thermal, (E), 25:56762
LUTETIUM ISOTOPES Lu-177
energy levels from thermal neutron capture by lutetium-176, (E), 25:56762
LYMPH NODES
radiotherapy of metastases into thoracic, γ, 25:55300
scanning of parasternal, in patients with mammary carcinomas, effectiveness of gold-198 for, 25:55288
LYMPHOCYTES
growth following phytohemagglutinin stimulation, control of, 25:57284 (TID-25802)
radiation effects on clasmatosis periodicity in mouse, in relation hematopoietic recovery, γ, 25:55321
radiation effects on electrophoretic mobility of, effects of phytohemagglutinin on x, 25:56310
radiation effects on reactivity of human, following radon inhalation, effects of kidney disease type on, 25:55346
radiation effects on renewal patterns of rat spleen, tritium-labeled-thymidine, 25:55110(R) (TID-25801)
radiation effects on response of rat spleen, to sheep erythrocytes, tritium-labeled thymidine, 25:55110(R) (TID-25801)
LYSINE
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)

# M

MACHINING
methods for electrical discharge and electrochemical, bibliography on, 25:54834 (WAPD-331)
MAGNESIUM
abundance in B-type stars, (E), 25:55701
abundance in primary cosmic radiation, (E), 25:55911
analysis for calcium by nondestructive alpha activation, 25:54522
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
determination in yttrium oxide by emission spectrometry, 25:54419
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
radioinduced void production in high-purity, fast neutron, 25:55580
separation from other alkaline earths by ionophoresis on filter paper and poly(vinyl alcohol), 25:54725
separation from other metal ions on titanium tungstate papers by electrochromatography, 25:54744
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
thermal stability of powdered, in air, 25:55504
MAGNESIUM ALLOYS AND SYSTEMS
porosity of, effects of annealing and crystallization on micro-, 25:55462
preparation by granule metallurgy, evaluation of, 25:55404
Al--Mg--Zr, cracking and mechanical properties of welded joints of, effects of long-term heating at 70°C on, 25:55470
C--Ca--Ce--Mg--Si, analysis for tellurium by gravimetry, 25:54416
Ce--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Dy--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Er--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Gd--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Lu--Mg, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Mg--Nd, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
Mg-base--Zr, oxidation above 400°C in presence of carbon dioxide, mechanisms of internal, 25:55382
Mg-base--Zr, structure of sintered, following high-temperature annealing, optical and electron microscopy studies of changes in, 25:55548
MAGNESIUM FLUORIDES
positron lifetimes in, empirical model for calculation of, 25:55834
MAGNESIUM ISOTOPES Mg-24
alpha elastic and inelastic scattering at 104 MeV, nuclear deformation study from differential cross sections for, (E), 25:56687 (KFK-1397)
alpha reactions (α,C-12) and (α,Li-6) at 42 MeV, cross sections for, (E), 25:56659
deuteron reactions (d,p) at 10 MeV, cross sections for, (E), 25:56728
nuclear deformation of, differential cross sections for alpha elastic and inelastic scattering by magnesium-24 for determining, (E), 25:56687 (KFK-1397)
photodisintegration rate of, relation to silicon burning in stars, 25:55703
MAGNESIUM ISOTOPES Mg-25
energy levels from resonances in (γ,n) reactions, isobaric analog, (E), 25:56702
photon reactions (γ,n) near threshold energy, cross section for, (E), 25:56702
MAGNESIUM ISOTOPES Mg-26
alpha elastic and inelastic scattering at 104 MeV, nuclear deformation study from differential cross sections for, (E), 25:56687 (KFK-1397)
alpha reactions (α, He-6) at 42 MeV, angular distributions for, (E), 25:56665
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
nuclear deformation of, differential cross sections for alpha elastic and inelastic scattering by magnesium-26 for determining, (E), 25:56687 (KFK-1397)
MAGNESIUM OXIDES
CoO--MgO, fabrication for in-core neutron flux monitoring, 25:55019(P)
MgO--Mo, deformation mechanisms in, effects of temperature on, 25:55455
MgO--NiO, fabrication for in-core neutron flux monitoring, 25:55019(P)
MgO--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
MAGNESIUM SULFATES
radiation effects from incorporated sulfur-35 on sorptive properties for hydrocarbons, gas chromatographic studies of, 25:54603
MAGNET COILS
developments in pulsed multifilament superconducting, 25:56580 (BNL-16026)
MAGNETIC ANALYZERS
calculations for a sector field electrostatic and, 25:56606
MAGNETIC FIELDS
cosmic-ray interactions with interplanetary, galactic, (E), 25:55904
currents under ionosphere, computer calculations of If, (T), 25:56001
effect on fluid motion produced by temperature gradient perpendicular to gravitational field, (T), 25:55919
energy conversion processes in solar, (T), 25:55773
magnetic drift waves near proton cyclotron frequency, (E/T), 25:56043
measurements of interplanetary, north--south component, (E), 25:55779
rotation of loop systems in solar atmosphere, (E/T), 25:55743
structure of interplanetary, effects on geomagnetic fields of sector, (E/T), 25:55988
structure of interplanetry, sector, (E/T), 25:55765
tidal effects of galactic, on small star clusters, (T), 25:55683
MAGNETIC MATERIALS
structures of compounds and alloys in monoclinic system, tables of neutron-diffraction, 25:56341 (NP-19010)
MAGNETIC MIRROR MACHINES
ion extraction from Pleiade-type, multiply charged heavy, 25:56210 (EUR-CEA-FC-603)
plasma injection into 2X II, large-area high-current ion source for, 25:56212 (LBL-35)
plasma injection into Baseball II, source for, 25:56217 (UCRL-73387)
plasma stability criteria for DECA II B, MHD, (T), 25:56194 (EUR-CEA-FC-598)
plasma stabilization in Phoenix II, using integrity feedback system, (E), 25:56197
x-ray spectra from INTEREM plasma, regularization technique for electron energy, distribution function for, 25:56134 (ORNL-TM-3582)
MAGNETIC RESONANCE
hyperfine structure of electron, effects of nuclear Zeeman term on, 25:54641
MAGNETIC STORMS
effect of Mar. 8, 1970, on ionospheric spatial and temporal electron content variations, (E), 25:55974
effect of polar, on localized characteristics of magnetotail magnetic fluctuations, (E), 25:56040
effect on geomagnetic fields in Earth core and on Earth surface and in magnetotail, (E/T), 25:56002
effect on interaction of galactic cosmic rays with interplanetary magnetic fields, (E), 25:55904
effect on magnetopause structure, Explorer-12 observations of Sept. 24, 1961, (E), 25:56022
effect on relation of positive ion-density enhancements to soft electron precipitation in polar ionosphere, Aug. 13-18, 1968, (E), 25:55964
observations of magnetospheric substorms on Sept. 14, 1968, balloon and satellite, (E), 25:56025

XUM

occurrence of substorm onset in magnetosphere, association with impulsive energetic electron flux in distant magnetotail, (E/T), 25:56044
production of magnetospheric sudden commencements, relation to polar magnetic substorms, (E/T), 25:56026
structure of polar, effect of intensification of westward electrojet current on, (E/T), 25:56029
sudden commencements of, diurnal and seasonal pattern in occurrence frequency from 1955--1969 of, (E/T), 25:56003
MAGNETITES
analysis for vanadium by activation method, 25:54483
effects of surface deposits of, on wick-boiling on heating surfaces, 25:54862 (AEEW-R-711)
MAGNETOHYDRODYNAMIC GENERATORS
electric energy transmission by, acting as direct voltage generators, 25:55913(P)
electrodynamic force profile control in conducting bodies in traveling magnetic field, (T), 25:55915
external characteristics of, with sections connected in series, (T), 25:55914
shock wave interactions in Faraday-type, (E), 25:55951
MAGNETOHYDRODYNAMICS
calculational method for n--z plane,, 25:56188
calculational programs for three-dimensional, 25:55944
electric circuit calculations in problems of, 25:55943
MAGNETOPAUSE
current-layer attitudes in, during Ogo-5 crossings, (E), 25:56023
position of, Imp spacecraft tabulations of averge and unusual, (E), 25:56021
structure during Sept. 24, 1961 magnetic storm, Explorer-12 data of, (E), 25:56022
MAGNETOSHEATH
plasma penetration from, into dayside magnetosphere forming polar cusp, (E), 25:56024
MAGNETOSPHERE
boundary parameters of, relation with Pc-type steady Earth-current pulsations, (E/T), 25:56004
bow-shock crossings at geocentric distances between 120 and 200 R/sub E/, Pioneer 8, (E/T), 25:55953
bow-shock position in, Imp spacecraft tabulations of average and unusual, (E), 25:56021
characteristics of polar cusp during magnetic storm, Nov. 1, 1968, (E), 25:56024
convection pattern from magnetic disturbance and auroral motion during Feb. 14-15, 1958, aurorae over Alaska, (E), 25:55954
current source and conductivity in equatorial, field-aligned, (E/T), 25:55959
deformation of, OGO 3 and 5 observations of magnetic-activity-related and time-dependent, (E), 25:55952 (N-71-27604)
electric field in, estimate of solar-wind-velocity-dependent, (T), 25:56039
electric fields in, satellite-borne double-probe dc measurements of convection, 25:55958
electron-flux profiles of pre-midnight asymmetry in outer radiation zones, 40-keV, (E), 25:56045
electrostatic-wave emissions in polar, satellite observations of vlf, (E), 25:55965
electrostatic-wave excitation in polar regions by streaming instability in polar wind, vlf, (E/T), 25:55966
magnetic drift waves near proton cyclotron frequency, (E/T), 25:56043
magnetic storm sudden commencements in, relation to polar magnetic substorms, (E/T), 25:56026
magnetic storms on Sept. 14, 1968 in, balloon and satellite observations of, (E), 25:56025
magnetic-field configuration from controlled injection of electron beams on magnetic-field lines, (E), 25:55961
magnetic-shell parameter L for point in magnetic field, new approximation of, (T), 25:56041
particle angular distribution near loss cone, equatorial 30 to 300 keV electrons and protons, (E), 25:56027
plasma-sheet behavior in, associated with visible auroral substorms over Alaska, (E), 25:55955
proton interactions with Alfven waves in, (T), 25:56011
solar wind interactions with, simulation of, 25:55976
whistler emission in, effect of whistler-wave interaction with related resonating particles on triggered, (E/T), 25:56038
MAGNETOTAIL
electron flux in distant, association with magnetic substorm onset in magnetosphere, (E/T), 25:56044
geomagnetic-field depression in, during magnetic storm, (T), 25:56002
magnetic-field fluctuations during polar magnetic substorms, localized characteristics of, (E), 25:56040
plasma-sheet behavior in, associated with visible auroral substorms over Alaska, (E), 25:55955
MAGNETS
shunt protection for superconducting, internal, (T), 25:56112
MAINE YANKEE POWER REACTOR
cooling system for, inspection of Type 316 stainless steel welds in pipe-to-valve joints of, 25:56958 (DOCKET-50309-41)
MALONIC ACID
potassium salt, radiation effects on monocrystals of, at 4.2°K, ESR spectral studies on production of radicals by x, 25:54654
MAMMALIA
calcium homeostasis in, cellular basis for, 25:57244 (NYO-3489-22)
MAN
americium-241 excretion in urine of, following inhalation as oxide, effects of DTPA on, 25:55118
cesium-137 content of, comparison of whole-body counter measurements of, 25:55225
congenital malformations in, genetic and nongenetic factors in, 25:57222(R) (COO-2013-19)
fluorine hazards to, following release to environment, 25:55246 (CEA-Bib-200)
glomerular filtration rate of kidneys of, use of chromium-51-labeled EDTA for measurement of, 25:55122
iron-59 distribution in, whole-body radiometric method for studies of, 25:55111
promethium-147 metabolism in, use of data from swine experiments in development of model for studies on, 25:55108 (BNWL-SA-3747)
radiation dose distribution in, during radiography using single- and three-phase equipment, comparison of x, 25:55227
radiation dose field in, standardization of isodose charts for expressing therapeutic, 25:55211
radiation dose to organs of, terminology for expressing, 25:55251
radiation dose to, during therapy, use of IBM 1130 computer for calculation of treatment fields in planning γ, 25:55218
radiation dose to, following accidental exposure to iridium-192, use of chromosome aberration frequency in biological dosimetry of γ, 25:55228
radiation dose to, following accidents at gamma irradiation facilities, use of aluminum phosphate dosimeters and phantom for estimating, 25:55235
radiation dose to, from external occupational exposures, estimation of genetically significant equivalent γ, neutron, and x, 25:55230
radiation dose to, from iodine-129 in environment of nuclear fuel reprocessing plant, 25:55199
radiation dose to, in vicinity of nuclear fuel reprocessing plant, estimation of, 25:55237
radiation dose to, interpretation of emergency, used in nuclear power plant site evaluations, 25:55242
radiation dose to, plutonium surface contamination levels for, 25:55195 (CONF-710401-, pp 352-64)
radiation effects on external respiration in, following therapy of malignant chest tumors, γ, 25:55339
radiation effects on mortality of, exposed in utero to atomic bombing in Hiroshima and Nagasaki, effects of dose on, 25:55307
radiation effects on potassium and sodium metabolism in, following iodine-131 therapy of diffuse toxic goiter, 25:55340
radiation effects on skin of, following therapy of bone sarcomas, high energy bremsstrahlung, 25:55338
radiation hazards to, from inhalation of reactor radioisotopes following accidental release, estimation of relative, 25:55202
radiation hazards to, from nuclear power plant effluent, evaluation of, 25:55347
radiation hazards to, use of model for effects on dogs to estimate long-term low dose radium-226, 25:55319 (UCD-472-118)
radiation protection of, dioctyl phthalate tests on respirators for, 25:55243 (CONF-710401-, pp 392-406)
radioimmunoassay of angiotensins in blood plasma of, effects of hypertension and renal transplants on, 25:55141
radioinduced injuries to nervous system of, following therapy of head tumors, prophylaxis and treatment of γ, 25:55269
radioinduced osteonecrosis in jaw of, following therapy of malignant tumor, γ, 25:55344
radioinduced osteonecrosis treatment in, following therapy of carcinomas, 25:55270
radioinduced thyroid carcinoma in, following iodine-131 therapy, 25:55343
radioisotope contamination of clothing and skin of, derivation of decision levels for control of, 25:55196 (LA-4558)
radioisotope content of, comparison of ICRP and MIRD methods for calculating maximum permissible, 25:55201
radioisotope distribution in, effects of calcium phosphate, methionine, Prussian blue, and sodium alginate on mixed cesium and strontium, 25:55113
radioprotection using cystamine, extrapolation of data on mice to γ, 25:55256
radiotherapy in, digital computer method for dose distribution calculations during cobalt-60 γ, 25:55221
radiotherapy of lung and thoracic lymph node metastases in, γ, 25:55300
radiotherapy of lymphogranulomatosis of bones in, effectiveness of γ and x, 25:55301
radiotherapy of malignant melanomas or metastases in, effectiveness of iodine-131-labeled lipiodol for endolymphatic, 25:55305
radiotherapy of small pelvis in, dosimetry for standardization of pendular cobalt-60 γ, 25:55222

radiotherapy of thyroglossal duct carcinomas in, role of surgery and thyroid hormone suppression in iodine-131, 25:55304
scanning of kidneys in, for course control and prognosis of cervical carcinomas, 25:55275
scanning of lungs in, for evaluating perfusion changes following bronchography, 25:55285
scanning of thyroid of children, immunofluorescent tests on antibody production following, 25:55292
strontium-85 metabolism following intravenous and oral administration, effects of calcium intake on, 25:55109 (COO-1231-67)
strontium-90 toxicity to, extrapolation of data on animals to determine long-term, 25:55319 (UCD-472-118)

MANGANESE
abundance in solar atmosphere, (E/T), 25:55750
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
determination in yttrium oxide by emission spectrometry, 25:54419
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728

MANGANESE ALLOYS AND SYSTEMS
Al--Mn, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al-base--Mn, binding energy and entropy of vacancies in, 25:54587(R) (AECL-3909)
Bi--Mn, properties as extractant for rare earths from MSBR fuel solvent, 25:54534 (ORNL-4717, pp 43-56)
Fe-base--Mn--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Mn--Mo--Ni--steel, radiation effects on brittleness and strength of heavy-section plates and welds of, fast neutron, 25:55585
Mn--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Mn--Ti, inflammability correlation of powdered, 25:55473

MANGANESE IONS
lattice sites in lithium fluoride and sodium fluoride crystals, calculation and x-irradiation effects, 25:56384

MANGANESE ISOTOPES Mn-54
deposition and transport in FFTF cooling system, 25:55370 (BNWL-SA-2335)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)

MANGANESE ISOTOPES Mn-55
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
proton reactions (p,4n) at 65 MeV, production of iron-52 by, 25:54676

MANGANESE ISOTOPES Mn-58
beta decay of, gamma spectra, half-life, Kurie plots, and log-ft and Q values for, (E), 25:56710

MANOMETERS
design for prevention of glove box overpressure, 25:54958 (CONF-710401-, pp 258-66)
design of capacitance, for measuring oxygen pressures over dissociating oxides, 25:55428 (BNWL-B-108)
performance of molecular, for calibrating instruments for ultrahigh vacuum, 25:54992

MANY BODY PROBLEM
analysis using hyperspherical formalism, 25:56390 (LYCEN-7104, S5.1-53)
calculational system for two-dimensional, 25:56187
theory for nonrelativistic three-body, Faddeev approach for, 25:56575
treatment of nuclear three-body, using potential concept, 25:56872

MARITIME PRESSURIZED-WATER REACTOR
fuel element dropping incident for, recovery and repair procedures for, 25:57137 (DOCKET-50238-84)
operating limits for, safety analysis for Core 2 fuel shuffle, 25:57136 (DOCKET-50238-83)

MARS (PLANET)
exosphere structure of, from hydrogen Lyman-α dayglow analysis, (E), 25:55812
surface analysis by alpha scattering, 25:54459

MASS SPECTROGRAPHY
research progress on, 25:54587(R) (AECL-3909)

MASS SPECTROMETERS
beam positioner for, solid-state automatic, 25:55075 (K-1817)
ion source for MI-1305, high-temperature molecular-stream, 25:55081
performance for isotopic analysis of rocks, 25:54757(R) (MIT-1381-18)

MATHEMATICS
conference on reactor, 25:57071 (CONF-710302-(Vol.1))
conference on reactor, 25:57147 (CONF-710302-(Vol.2))
integrals having both exponential and gaussian functions in, evaluation of, 25:56399
synthesis of interval covers, geometrical model for, 25:57223 (COO-2118-13)

MATTER
detection of intergalactic, in Coma Cluster, (E), 25:55782
equation of state of, in neutron stars, (T), 25:55715
mass formula and properties of, at subnuclear densities, (T), 25:55678
model of superdense, properties of short-range field, (T), 25:55689
superfluid state in neutron-star, (T), 25:55714

MEATS
beef, effects of gamma irradiated, on lipid and protein metabolism of rats, 25:55367
fish, preservation by freezing, conference on, 25:55362 (LFEN-NI.-56a)
fish, radiation processing effects on survival of Salmonella species in smoked lake whitefish, γ, 25:55365
fish, radiation processing of Pacific Coast, effectiveness of shipboard γ, 25:55366
fish, radiation processing of, conference on, 25:55362 (LFEN-NI.-56a)
fish, strontium-90 content of, calculation of, 25:55156

MECHANICAL ENGINEERING
book: Experimental Stress Analysis and its Influence on Design, 25:54846

MEDICAL PERSONNEL
radiation dose to, during cardiac catheterization procedure, x, 25:55226
requirements of Los Alamos Meson Physics Facility, 25:55299 (LA-4490)

MEDICAL SUPPLIES
radiosterilization in United Kingdom, development of facilities for, 25:55363

MEDICINE
radioisotope uses in clinical, conference on, pharmacodynamic and pharmacokinetics of, 25:55255

MEMBRANE FILTERS
efficiency of molecular sieve-type, for sampling tritiated water vapor in air, 25:54798

MENDOCINO POWER REACTOR, UNIT 1
effluents from, effects on environment of chemical, radioactive, and thermal, 25:56973 (DOCKET-50398-8)

MENDOCINO POWER REACTOR, UNIT 2
effluents from, effects on environment of chemical, radioactive, and thermal, 25:56973 (DOCKET-50398-8)

MERCHANT VESSELS
economics of nuclear versus diesel powered, (T), 25:57138

MERCURY
corrosive effects on niobium--zirconium and T-111 alloys at 1200°F, 25:55377 (N-71-26947)
determination by neutron activation or photometry following solvent extraction, 25:54499
determination in Australian tektites by thermal neutron activation and radiochemical separations, 25:54478
determination in biological and environmental samples by neutron activation and radiochemical separation, 25:54508
determination in standard rocks and quartzes by neutron activation and radiochemical separation, 25:54454
determination in terrestrial and nonterrestrial rocks by atomic absorption spectroscopy, comparison of neutron activation analysis results with those from, 25:54511
determination of trace amounts of, in silicate rocks by neutron activation and radiochemical separations, 25:54489
potential for, method for modeling 1 + 2 component of, 25:56387
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728

MERCURY ALLOYS AND SYSTEMS
Hg--In, phase diagram of, 25:55536
Hg--Pr-base, phase diagram of, 25:55567
Hg--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566

MESIC ATOMS
energy level shift in deuterium π-, contribution of absorption--re-emission process to, 25:55833
energy levels of μ- and π-, effects of meson finite size on, (T), 25:55831
meson (π) polarizability in, possibility of detection of, 25:55831
spectra of μ-, relation of nuclear charge distribution to isotope shifts in, 25:55821
x-ray emission from argon and neon μ-, (E), 25:55830

MESONS
coupling constants between baryons and pseudoscalar, in SU(3) strong coupling baryon bootstrap model, 25:56503
interactions of, symmetry breaking of chiral SU(3) x SU(3) in phenomenological Lagrangians for, (T), 25:56533 (IFA-FT-85)
interactions with 1/2+ baryons, tables of coefficients for partial-wave analysis of vector meson and 1/2+

XUM

baryon production in, (T), 25:56501 (RHEL/R-224)
masses of scalar, in broken chiral SU(3) x SU(3), (T), 25:56539 (ORO-3992-11)
model for, pseudovector isospinor heavy-boson, 25:56477
production from intermediate nucleon isobar decay in nucleon reactions with light nuclei, 25:56525
production of two, in anti p + p s- and p-wave interactions at rest, gauge-invariant chiral SU(3) x SU(3) symmetric Lagrangian model for, (T), 25:56538 (ORO-3992-2)
wave equation for dual free, Duffin--Kemmer, 25:56489

MESONS (eta)
interactions eta + eta, Lorentz pole structure of Virasoro model for, 25:56494
interactions eta + eta, Regge poles and residues in Virasoro model for elastic, 25:56493
production in forward γ + N → eta + N interactions, Regge absorption model for, (T), 25:56452 (CALT-68-313)

MESONS (f)
production in e + e → e + e + f(1260) interactions, cross sections for, (T), 25:56463

MESONS (K)
decay K → π + l + ν, effective Lagrangian model with SU(3) x SU(3) chiral symmetry-breaking terms for form factors of, (E), 25:56537 (JINR-E2-5996)
interactions K + N at 2 to 20 GeV/c, behavior of diffraction maximum in inelastic, (T), 25:56504
interactions K + N, particle exchange and Regge-pole exchange in Veneziano model for, 25:56518
interactions K + p and p + p, triple-Regge hypothesis for relations between cross sections for inclusive, 25:56515
interactions K + π from Chew--Low extrapolation of K+ + p interactions, phase shifts for, 25:56486
interactions K + π in K- + p and K- + n interactions at 3 GeV in bubble chamber, s-wave, (E), 25:56426 (FRNC-TH-53)
production in four-prong π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, angular and momentum distributions for, (E), 25:56428 (IFA-HE-75)
production in π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, momentum and angular distributions for, (E), 25:56427 (IFA-HE-73)
production of anti K - K pairs in four-prong π+ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56428 (IFA-HE-75)

MESONS (K-)
absorption by carbon-12, nitrogen-14, and oxygen-16, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
interactions K- + n at 3 GeV in deuterium bubble chamber, production of K(890), K(1400), and Kππ systems, upper limits for production cross sections of isospin-3/2 K*, and K + π s-wave interactions in, (E), 25:56426 (FRNC-TH-53)
interactions K- + p → anti K0 + n at 1.7 to 18.2 GeV/c, Regge analysis of, (E/T), 25:56506
interactions K- + p → anti K0 + n at high energies, Regge pole--cut model for analysis of, 25:56505
interactions K- + p → anti K0 + n, secondary Regge contributions in, 25:56508
interactions K- + p → K- + p at high energies, Regge pole--cut model for analysis of, 25:56505
interactions K- + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions K- + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
interactions K- + p at 3 GeV in hydrogen bubble chamber, production of K(890), K(1400) and Kππ systems, upper limits for production cross sections of isospin-3/2 K*, and K + π s-wave interactions in, (E), 25:56426 (FRNC-TH-53)

MESONS (K0)
decay K0 → π0 + π0, K1^0 and K2^0 interference in, (E), 25:56407
decay K2^0 → π + e + ν, q²-dependence of vector form factor for, (E), 25:56408

MESONS (K+)
decay K+ → π0 + e+ + ν + γ, branching ratio for, (E), 25:56410
decay K+ → π0 + e+ + ν in heavy-liquid bubble chamber, form factor in, (E), 25:56409
interactions K+ + d → K0 + 2p at 3.8 GeV/c in deuterium bubble chamber, total and differential cross sections for K+ + n → K0 + p interactions and total and differential cross sections for, (E), 25:56423 (COO-1195-217)
interactions K+ + n → K0 + p at 5.5 GeV/c, Regge analysis of, (E/T), 25:56506
interactions K+ + n → K0 + p in K+ + d → K0 + 2p interactions at 3.8 GeV/c in deuterium bubble chamber, total and differential cross sections and forward amplitude for, (E), 25:56423 (COO-1195-217)
interactions K+ + n → K0 + p, secondary Regge contributions in, 25:56508
interactions K+ + n → K+ + π- + p at 12 GeV/c, structure in Kπ mass spectra near 1.85 GeV from, (E), 25:56434
interactions K+ + p → K*+(890) + p at 3.0 to 8.25 GeV/c, Veneziano model for, 25:56511
interactions K+ + p → K0 + π0 + Δ++, Kπ phase shifts from Chew--Low extrapolation of, 25:56486
interactions K+ + p → K0 + X (anything), triple-Regge hypothesis for p-Reggeon total cross section from inclusive, 25:56515
interactions K+ + p → K+ + p at high energies, Regge pole--cut model for analysis of, 25:56505
interactions K+ + p → K+ + π- + Δ++, Kπ phase shifts from Chew--Low extrapolation of, 25:56486
interactions K+ + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions K+ + p at 10 GeV/c in hydrogen bubble chamber, review of K* and N* production in, (E), 25:56435

MESONS (μ)
book; Cosmic Muons and Neutrinos, 25:56469
capture by nuclei, second-class G-parity properties in, (T), 25:56854
effects of cosmic, on eyes of astronauts, 25:55341
flux measurements underground using thin detectors and thick Utah detector, discrepancy between cosmic, 25:55897
intensity variations of cosmic, use of energy-dependent hadron--nucleus cross sections for calculation of ground level, 25:55906

MESONS (μ-)
capture by calcium-40, photon asymmetry for radiative, (E), 25:56705
capture by nuclei, effect of short-range correlations in, (T), 25:56824 (LYCEN-7104, C4.1-17)
capture by nuclei, lectures on models for, (T), 25:56809 (CERN-71-14, pp 67-99)
interactions μ+ + μ- at high energies, cross sections for Bhabha, 25:56466
interactions with electromagnetic field at 4 GeV/c in propane bubble chamber, direct electron pair production in, 25:56467
reactions (μ-,nν) with helium-4, short-range nucleon--nucleon correlation effects on energy spectrum and angular distribution asymmetry of neutrons from, (T), 25:56641 (JINR-P4-5986)
reactions (μ-,nν) with oxygen-16, neutron spectrum and angular distribution asymmetry in, (T), 25:56820 (JINR-P4-5997)
reactions (μ-,ν) with lanthanum-139 and lead-208, probability for, (E), 25:56739 (JINR-P1-6006)
reactions (μ-,ν) with oxygen-16, lectures on elementary particle method for partial capture rate for, (T), 25:56809 (CERN-71-14, pp 67-99)
reactions with argon and neon at high pressures, x-ray emission from, (E), 25:55830
reactions with argon--hydrogen mixtures, meson transfer from hydrogen to argon and x-ray emission in, (E), 25:55830

MESONS (μ+)
interactions μ+ + μ- at high energies, cross sections for Bhabha, 25:56466

MESONS (ω)
mass and width from π+ + p → π+ + p + ω0 interactions at 3.7 GeV/c, (E), 25:56430
vertex function in nonrenormalizable theory of ωrhoπ interactions, ladder approximation for, (T), 25:56483 (JINR-E2-6017)

MESONS (π)
absorption by carbon-12, nitrogen-14, and oxygen-16, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
absorption by light nuclei, lectures on, (T), 25:56810 (CERN-71-14, pp 155-228)
exchange contribution to nucleon-nucleon binding in e + d → e + p + n interactions, (T), 25:56527
exchange in n + p → 2p + π- interactions at 2 to 30 GeV, Reggeized one-pion-exchange model for, (T), 25:56521 (JINR-P1-5975)
interactions γ + π → π + γ, epsilonγγ and fγγ coupling constants from finite-energy sum rules for, (T), 25:56463
interactions K + π from Chew--Low extrapolation of K+ + p interactions, phase shifts for, 25:56486
interactions K + π in K- + p and K- + n interactions at 3 GeV in bubble chamber, s-wave, (E), 25:56426 (FRNC-TH-53)
interactions π + d → π + d, lectures on partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions π + N → sigma + N, helicity conservation in, 25:56517
interactions π + N → vector meson + N, helicity conservation in, 25:56517
interactions π + N at 2 to 20 GeV/c, behavior of diffraction maximum in inelastic, (T), 25:56504
interactions π + N at 5.9 to 18.2 GeV/c, phenomenology of complex-spin negative-mass-squared resonance tachyons in angular distributions of charge-exchange, (T), 25:56500 (ORO-3992-18)
interactions π + N at high energies, total effective cross sections for acausal, (T), 25:56502
interactions π + N at low and intermediate energies, Regge poles for, (T), 25:56497 (FRNC-TH-33)
interactions π + N at low and medium energies, lectures on, (T), 25:56807 (CERN-71-14)
interactions π + N at low energies, lectures on, (T), 25:56496 (CERN-71-14, pp 101-54)
interactions π + N, coupling constant from current-

algebra sum rules and Veneziano amplitude for, 25:56516
interactions π + N, dual quark--parton model for, 25:56481
interactions π + N, three-channel model for $P_{11}$, 25:56519
interactions π + p → π + p at 0 to 300 MeV, review lectures on, (E/T), 25:56422 (CERN-71-14, pp 379-93)
interactions π + p at 4 to 36 GeV, quark model for multiple π production in, 25:56514
interactions π + π → rho + rho, helicity conservation in, 25:56517
interactions π + π at low energies, dispersion-relation calculations of amplitudes, phase shifts, and scattering lengths for, (T), 25:56495
interactions π + π in $\pi^+ + p \to \pi^+ + \pi^0(\pi^+) + p(n)$ and $\pi^+ + n \to \pi^+ + \pi^- + p$ interactions at 13.1 GeV/c in bubble chamber, diffractive, (E), 25:56425 (COO-1428-294)
interactions π + π, low-energy-parameter sum rules from two-variable crossing-symmetric expansion of amplitude of, (T), 25:56484 (ORO-3992-10)
interactions π + π, model for analytic, crossing-symmetric amplitudes of, 25:56490
interactions π + π, resonant structure in S-wave amplitudes of, 25:56492
interactions with nuclei, survey of research on, 25:56873
mass in renormalization theory, quadratic divergence of, 25:56564
production in e + p interactions above second resonance, review of, (E), 25:56406 (DESY-71/35)
production in forward γ + N → π + N interactions, Regge absorption model for, (T), 25:56452 (CALT-68-313)
production in four-prong $\pi^+$ + p interactions at 8 GeV/c in hydrogen bubble chamber, angular and momentum distributions for, (E), 25:56428 (IFA-HE-75)
production in γ + p, π + p, and p + p interactions at 4 to 36 GeV, quark model for multiple, 25:56514
production in $\pi^+$ + p interactions at 8 GeV/c in hydrogen bubble chamber, momentum and angular distributions for, (E), 25:56427 (IFA-HE-73)
radiobiological properties of, 25:55299 (LA-4490)
reactions with nuclei at 60 GeV in emulsions, production of low-energy protons in, (E), 25:56429 (INP-754)
reactions with nuclei at low and medium energies, lectures on, (T), 25:56807 (CERN-71-14)
reactions with nuclei, lectures on soft pion theorems for, (T), 25:56808 (CERN-71-14, pp 1-65)
scattering by nuclei, lectures on forward dispersion relations for elastic, (T), 25:56810 (CERN-71-14, pp 155-228)
scattering by nuclei, review lectures on nonvanishing pions in, (T), 25:56811 (CERN-71-14, pp 289-378)
vertex function in nonrenormalizable theory of πrhoπ interactions, ladder approximation for, (T), 25:56483 (JINR-E2-6017)

MESONS ($\pi^-$)
absorption in deuterium, energy level shift in π-mesic atom from, 25:55833
effects on diploid yeast cells, OER and RBE for mutagenic, 25:55165
interactions $\pi^- + p \to A_2^- + p$, $A_2^- \to \pi^- +$ neutrals near threshold energy, mass spectra of $A_2$ in, (E), 25:56436
interactions $\pi^- + p \to eta + n$ at 1.7 to 18.2 GeV/c, Regge analysis of (E/T), 25:56506
interactions $\pi^- + p \to eta + n$ in nuclei at 7.82 GeV/c, differential cross sections for, (E), 25:56432
interactions $\pi^- + p \to eta + n$ with $A_2$ exchange, K-matrix absorption model in U(6,6) x O(3,1) for, 25:56513
interactions $\pi^- + p \to eta + n$, secondary Regge contributions in, 25:56508
interactions $\pi^- + p \to K^+ + \Sigma^-$, spark chamber study of $\pi^-$, $K^+$, and $\Sigma^-$ decay products in, (E), 25:55048
interactions $\pi^- + p \to K^+ + \Sigma^-$, $\Sigma^- \to n + \pi^-$, spark chamber study of, (E), 25:55049
interactions $\pi^- + p \to n + \pi^+ + \pi^-$ at 7 GeV/c, Regge analysis of $rho^0$ production in, (E/T), 25:56431
interactions $\pi^- + p \to p + 2\pi^- + \pi^+$ at 5 to 25 GeV/c, partial-wave analysis for 3π system in mass region 1.0 to 2.0 GeV, (T), 25:56482 (COO-1195-224)
interactions $\pi^- + p \to \pi^0 + n$ at 5.9 to 18.2 GeV/c, negative-mass-squared resonance interpretation of angular distribution for, (T), 25:56499 (ORO-3992-8)
interactions $\pi^- + p \to \pi^0 + n$ at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^- + p \to \pi^0 + n$ at very high energies, polarization in, 25:56509
interactions $\pi^- + p \to \pi^0 + n$ in nuclei at 7.82 GeV/c, differential cross sections for, (E), 25:56432
interactions $\pi^- + p \to \pi^0 + n$, secondary Regge contributions in, 25:56508
interactions $\pi^- + p \to \pi^- + p$ at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^- + p \to \pi^- + p(\Delta^{++}) + rho^0(\pi^-)$, Cherenkov mechanism for cross section behavior of, (T), 25:56498 (IFA-HE-76)
interactions $\pi^-$ + p at 10 to 17.5 GeV/c, polarization parameter in forward elastic, (E), 25:56437
interactions $\pi^-$ + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
interactions with electromagnetic field at 4 GeV/c in propane bubble chamber, direct electron pair production in, 25:56467
production in e + e → $\pi^+ + \pi^-$ interactions, Feynman diagram model for, 25:56460
production in proton reactions with nuclei at high energies, isobar model for analysis of nuclear surface effects on, 25:56530
reactions ($\pi^-$,2$\pi^-$) with carbon-12 at 4 GeV in propane bubble chamber, upper limit of cross sections for, (E), 25:56439
reactions ($\pi^-$,eta) with nuclei at 7.82 Gev/c, differential cross sections for, (E), 25:56432
reactions ($\pi^-$,$\pi^0$) with nuclei at 7.82 GeV/c, differential cross sections for, (E), 25:56432

MESONS ($\pi^0$)
interactions $\pi^0 + p \to \omega + p$, Reggeized absorption model fits to, 25:56458
interactions $\pi^0 + p \to rho^0 + p$, Reggeized absoption model fits to, 25:56458
production in e + N interactions at very low energies, review of, (E/T), 25:56404 (CONF-701121-8)

MESONS ($\pi^+$)
interactions $\pi^+ + d \to p + p + \pi^+ + \pi^-$ at 7 GeV/c, Regge analysis of $rho^0$ production in, (E/T), 25:56431
interactions $\pi^+ + d \to p + p$, lectures on partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions $\pi^+ + n \to \pi^+ + \pi^- + p$ at 13.1 GeV/c in deuterium bubble chamber, diffractive π + π interactions in, (E), 25:56425 (COO-1428-294)
interactions $\pi^+ + p \to p + 2\pi^+ + \pi^-$ at 5 to 25 GeV/c, partial-wave analysis for 3π system in mass region 1.0 to 2.0 GeV, (T), 25:56482 (COO-1195-224)
interactions $\pi^+ + p \to \pi^+ + p + \omega^0$ at 3.7 GeV/c, mass and width of ω from, (E), 25:56430
interactions $\pi^+ + p \to \pi^+ + p$ at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^+ + p \to \pi^+ + \pi^0(\pi^+) + p(n)$ at 13.1 GeV/c in hydrogen bubble chamber, diffractive π + π interactions in, (E), 25:56425 (COO-1428-294)
interactions $\pi^+ + p$ at 10 to 17.5 GeV/c, polarization parameter in forward elastic, (E), 25:56437
interactions $\pi^+ + p$ at 8 GeV/c in hydrogen bubble chamber, cross sections, kinematical behavior of secondaries, and K--anti K pairs and resonance production in four-prong, (E), 25:56428 (IFA-HE-75)
interactions $\pi^+ + p$ at 8 GeV/c in hydrogen bubble chamber, mass distributions and cross sections for resonance production and momentum and angular distributions for, (E), 25:56427 (IFA-HE-73)
production in e + e → $\pi^+ + \pi^-$ interactions, Feynman diagram model for, 25:56460
production in e + N interactions at very low energies, review of, (E/T), 25:56404 (CONF-701121-8)
production in proton reactions with nuclei at high energies, isobar model for analysis of nuclear surface effects on, 25:56530

MESONS (rho)
mass and width of rho' in anti p + n → $\pi^+ + 2\pi^-$ interactions in rising phase shift model, (T), 25:56485 (ORO-3992-66)
production in $\pi^+ + d \to p + p + \pi^+ + \pi^-$ interactions at 7 GeV/c, Regge analysis of (E/T), 25:56431
production in $\pi^- + p \to \pi^+ + \pi^- + n$ interactions at 7 GeV/c, Regge analysis of, 25:56431
production in $\pi^+ + p$ interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56427 (IFA-HE-73)
production of $rho^0$ in $\pi^- + p \to \pi^- + p + rho^0$ interactions, Cherenkov mechanism for cross section behavior for, (T), 25:56498 (IFA-HE-76)
vertex function in nonrenormalizable theory of πrhoπ interactions, ladder approximation for, (T), 25:56483 (JINR-E2-6017)

MESONS, RESONANCE
coupling constants for epsilonγγ and fγγ from finite-energy sum rles for γ + π → π + γ interactions, (T), 25:56463
coupling strength from duality and unitarity, absolute, 25:56478
decay 3π → π + epsilon, partial-wave analysis for, (T), 25:56482 (COO-1195-224)
decay 3π → π + rho(f), partial-wave analysis for, (T), 25:56482 (COO-1195-224)
decay $A_1 \to \pi$ + rho, partial-wave analysis for s-wave, (T), 25:56482 (COO-1195-224)
decay $A_1 \to rho + \pi$, zero S-wave coupling from t-channel helicity conservation in $A_1 + A_1 \to \pi + \pi$ interactions, 25:56488
decay $A_2 \to \pi + f^0$, partial-wave analysis for s-wave, (T), 25:56482 (COO-1195-224)
decay of high-mass, dual resonance model for multiplicity in, 25:56491
decay of K(890) and K(1400) in bubble chamber, branching ratios for, (E), 25:56426 (FRNC-TH-53)
exchange of exotic, urbaryon rearrangement diagrams for two-body reactions with, 25:56479
interactions $A_1 + A_1 \to \pi + \pi$, zero S-wave coupling in $A_1$ rho π from t-channel helicity conservation in, 25:56488
production in $A_1$, $A_2$, and $A_3$ in 3π system in mass region 1.0 to 2.0 GeV in $\pi^+ + p \to p + 2\pi^+ + \pi^-$ and $\pi^- + p \to p + 2\pi^- + \pi^+$ interactions at 5 to 25 GeV, partial-wave

XUM

analysis for, (T), 25:56482 (COO-1195-224)
production of 3π system in mass region 1.0 to 2.0 GeV in $\pi^- + p \rightarrow 2\pi^- + \pi^+ + p$ and $\pi^+ + p \rightarrow p + 2\pi^+ + \pi^-$ interactions at 5 to 25 GeV/c, partial-wave analysis for, (T), 25:56482 (COO-1195-224)
production of $A_2$ in $\pi^- + p \rightarrow A_2^- + p$, $A_2^- \rightarrow \pi^- +$ neutrals near threshold energy, (E), 25:56436
production of anti K(890), K(890), and KantiK(1150), and KantiK(1325) enhancements in four-prong $\pi^+ + p$ interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:56428 (IFA-HE-75)
production of epsilon(750) in $e + e \rightarrow e + e +$ epsilon interactions, cross sections for, (T), 25:56463
production of isospin-3/2 $K^*$ in $K^- + p$ and $K^- + n$ interactions at 3 GeV in bubble chamber, upper limits for cross sections for, (E), 25:56426 (FRNC-TH-53)
production of $K^*$ in $K^+ + p$ interactions at 10 GeV/c in hydrogen bubble chamber, review of, (E), 25:56435
production of K(890) in $\pi^+ + p$ interactions at 8 GeV/c in hydrogen bubble chamber, cross sections for, (E), 25:56427 (IFA-HE-73)
production of K(890), K(1400), and K$\pi\pi$ systems in $K^- + p$ and $K^- + n$ interactions at 3 GeV in bubble chamber, (E), 25:56426 (FRNC-TH-53)
production of K$\pi$(1850) in $K^+ + n \rightarrow K^+ + \pi^- + p$ interactions at 12 GeV/c, (E), 25:56434
properties of $A_1$, $A_2$, and $A_3$ in 3π system in mass region 1.0 to 2.0 GeV in $\pi^+ + p \rightarrow p + 2\pi^+ + \pi^-$ and $\pi^- + p \rightarrow p + 2\pi^- + \pi^+$ interactions at 5 to 25 GeV, partial-wave analysis for, (T), 25:56482 (COO-1195-224)
properties of K(890) and K(1400) in $K^- + p$ and $K^- + n$ interactions at 3 GeV in bubble chamber, (E), 25:56426 (FRNC-TH-53)
reactions with stable and unstable hadrons, kinematic study of, (T), 25:56474 (FRNC-TH-63)
widths from duality and unitarity, elastic and total, 25:56478
widths of high-mass, in dual resonance model, 25:56491
METALLURGICAL EQUIPMENT
design for high-temperature stress measurement in chemical vapor deposited tungsten rings, 25:55440
METALLURGY
book: Physical Metallurgy of Refractory and Rare Metals, 25:55438
METALS
abundance in atmospheres of beta Cephei stars, (E/T), 25:55711
abundance in R Cyg and HD 35155, (E), 25:55699
abundance in stars, effects on structure of convection zone, (T), 25:55679
analysis for hydrogen, design of instrument for, 25:54424
analysis for light elements, alpha reactions with aluminum and silicon at 70 to 160 MeV for activation, 25:56685 (FRNC-TH-48)
book: Corrosion in Nuclear Applications, 25:55388
book: Emissive Properties of Materials (Handbook), 25:56346
book: Physical Metallurgy of Refractory and Rare Metals, 25:55438
corrosion by vanadium pentoxide melts, effects of polarization on, 25:55373 (CONF-690452-, Paper 6)
corrosive effects of liquid, on reactor components, review of, 25:55392
crystal disorder--order transformation in, kinetics of, 25:55552
defects in, high temperature annealing of quenched, 25:57216(R) (COO-1456-16)
density of pressed powdered, gamma radiometric measurement of, 25:55067
diffusion coefficients for liquid, use of isotope exchange in gaseous phase for measurement of, 25:54556
diffusion in, data tabulations on, 25:55509
ion reactions at 0.5 to 10 keV with monocrystalline surfaces of, equipment for study of reflection and secondary emission from, 25:55815
oxidation of, use of oxygen-18 (p,α) reaction for studying depth of, 25:55384
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
radiation effects on, tritium decay to helium for studies of, 25:55575 (LA-DC-12996)
radioinduced defects in, small angle x-ray scattering method for studies of, 25:55578 (RD/B/N-1990)
radioinduced swelling of pure, relations of dose and temperature with fast neutron, 25:55572 (BLG-457)
radioinduced swelling of, theoretical model for fast neutron, 25:55582
surface relaxations in cubic, 25:54587(R) (AECL-3909)
thermodynamic potentials and enthalpies during chlorination and oxidation, calculations of standard, 25:54586
METEORITES
analysis by 14-MeV neutron activation and γ spectrometry, review of, 25:54465
analysis by activation, comparison of other methods with, 25:54458
analysis by instrumental activation, gamma--gamma coincidence spectrometry in, 25:54479
analysis by instrumental neutron activation and neutron activation with radiochemical separations, 25:54461
analysis for tin by neutron activation using 40-min tin-123, 25:54480
analysis for trace amounts of elements by neutron activation, 25:54517
analysis for trace elements by neutron activation, 25:54477
analysis of stony, for calcium, chromium, iron, nickel, and titanium by proton and bremsstrahlung activation, 25:54466
analysis of terrestrial, for noble metals by neutron activation, 25:54484
argon-40 diffusion from, (E), 25:55672
element abundances in, (E/T), 25:55750
isotope abundance in Sikhote--Alin, helium-3, neon-21, and argon-38, (E), 25:55671
particle tracks in, characteristics of proton and alpha, (E), 25:55669 (N-71-26344)
xenon-isotope abundances in, (E/T), 25:55670
METHACRYLIC ACID, METHYL ESTER
radiolysis of single crystals of, at 77°K, ESR study of radicals and radical pairs from γ, 25:54634
METHANE
diffusion in graphite moderator, mathematical model of, 25:57044
neutron inelastic scattering by gaseous and liquid, calculation of second-order corrections for, 25:56628
neutron spectra in solid, time dependence following fast pulses, 25:56629
photolysis of, effects of deuterium on, 25:54573
pyrolysis at 1650 to 2150°C to produce carbon, mechanisms of, 25:55591 (JUL-735-RW)
pyrolysis of carbon-13-labeled, production of dense cylinders of carbon-13 by, 25:54542
radioinduced polymerization in dilute solutions in liquid argon, yields from γ, 25:54615
reactions with moderated recoil fluorine-18 atoms, effects of deuterium on rate of hydrogen abstraction, 25:54686
reactions with recoil tritium, kinetics of, 25:54684
He--methane--$SiH_4$, radiation effects on, reactions of recoil tritium from neutron, 25:54678
METHANE, BROMOTRIFLUORO-
properties for use in control of fires in large volumes, 25:54957 (CONF-710401-, pp 248-56)
properties for use in suppression of fires in glove boxes, 25:54954 (CONF-710401-, pp 212-20)
METHANE, CHLORO-
radiation effects on, effects of scavengers on reactions of recoil chlorine-38 from neutron, 25:54681
METHANE, CHLOROTRIFLUORO-
neutron reactions with, replacement reactions of recoil chlorine-38 in, 25:54688
METHANE, DICHLORODIFLUORO-
flow of highly dispersed, photographic study of post-burnout two-phase, 25:54875 (RT/ING-(71)8)
neutron reactions with, replacement reactions of recoil chlorine-38 in, 25:54688
METHANE, IODO-
diffusion and deposition of gaseous, in atmosphere, 25:54795
production in sodium hydroxide sprays, effects of organic materials on, 25:57092(R) (ORNL-TM-3483)
removal from reactor containment systems, effectiveness of sprays for, 25:57092(R) (ORNL-TM-3483)
METHANE, TRICHLOROFLUORO-
neutron reactions with, replacement reactions of recoil chlorine-38 in, 25:54688
METHANOL
radiolysis by fission fragments, thermal decomposition processes in, 25:54645
METHIONINE
effects on distribution of mixed cesium and strontium radioisotopes in man following ingestion, 25:55113
METHOTREXATE
effects on renewal patterns of normal and tumor cells, 25:55110(R) (TID-25801)
METHYL ETHER
effects on radiolysis of gaseous ethylene, 25:54643
METHYLIDYNE
detection of ionized, in photospheric spectrum, (E), 25:55768
METROLOGY
book: Accurate Characterization of the High-Pressure Environment, 25:54878
standards for nuclear, use of potassium-40 and rubidium-87 as, 25:54901
MICA
age of, effects of partial pressure on fission track estimation of, 25:54760
particle tracks in, characteristics of proton and alpha, (E), 25:55669 (N-71-26344)
radiation effects on dielectric properties of, γ, 25:55101
MICE
radiation dose to organs of, effects of chemical form of inhaled particles on niobium-95 and zirconium-95, β and γ, 25:55125
radiation effects on antigen retention system of, effects of cell inspection on recovery from x, 25:55147
radiation effects on clasmatocyte count in lymph nodes, spleen, and thymus of, γ, 25:55321
radiation effects on gastrointestinal tract of,

protective effects of S-2-[3-aminopropylamino]ethylphosphorothioic acid against x, 25:55259
radiation effects on growth and survival of, protective effects of tetrahydrofolic acid against x, 25:55268
radioinduced chromosome aberrations in blood of, extrapolation to man of protective effects of cystamine against γ, 25:55256
radioinduced chromosome translocations in spermatogonia of, RBE for gamma, 25:55182
radioinduced life shortening in, effects of dose, sex, and strain on protective effects of AET, cysteamine, PAPP, and serotonin against x, 25:55257
radioinduced recessive sex-linked lethal mutations in, three-generation test for frequency of x, 25:55184
radioinduced tumors in, following chronic ingestion of strontium-89, 25:55319 (UCD-472-118)
radioisotope distribution in, following inhalation, effects of chemical form on niobium-95 and zirconium-95, 25:55125
radiosensitivity of male, effects of radioprotective compounds on neutron and x, 25:55266
radiotherapy of mammary adenocarcinomas in, comparison of effects of air and carbogen atmosphere on cure rate during, 25:55302
radium-224 distribution in tissues of, following intraperitoneal injection, dose relation for radium-226 and, 25:55115
sensitivity to transverse acceleration, effects of radioprotective compounds on, 25:55264

MICROORGANISMS
radiation effects on DNA in, mechanism for mutagenic uv, 25:55136
radioisotope accumulation by marine, mechanisms of, 25:55154

MICROSOMES
calcium-45 uptake and release by rat brain, effects of ATP, choline, KCl, NaCl, and sucrose on, 25:55120

MICROWAVES
cosmic background, effects of elastic scattering and pair production in photon--photon collisions, 25:55908
use for heating of magnetized plasmas, resonances in anomalous, (E), 25:56124

MILK
separation of fission products from, double-bed ion exchange process for, 25:54722

MILKY WAY
cosmic-particle lifetimes in, (T), 25:55907
cosmic-ray containment in disk of, (T), 25:55895 (N-71-24988)
cosmic-ray history of, (T), 25:55781
hydrogen in, distribution of neutral, (E), 25:55791
infrared emission from central region of, 4-color photometry of, (E), 25:55783
interstellar grain alignment in, (T), 25:55792
nucleosynthesis in, (T), 25:55781
radio recombination-line emission from interstellar medium, (T), 25:55797
radio-wave polarization in loops and spurs between -7 and +85°, (E), 25:55787
rotational velocity of, radius of maximum, (T), 25:55786
stellar distribution in Cygnus, (E), 25:55790
structure of, from study of OB stars, (E), 25:55788
synchrotron radiation in, spatial distribution of, (E), 25:55730

MILLSTONE POINT POWER REACTOR, UNIT 1
emergency core cooling system for, effects of control circuit set conditions on failure of motor activated valves for, 25:56904 (DOCKET-50245-89)
emergency core cooling system for, failure of low pressure injection outboard containment spray valve for, 25:56906 (DOCKET-50245-91)
emergency core cooling system for, replacement of burned out actuating motors for low pressure injection valve and torus spray valve for, 25:56906 (DOCKET-50245-91)
emergency service water pumps for, failure to reach specified pumping pressure during surveillance test of, 25:56907 (DOCKET-50245-92)
radioactive effluents from, revised curie number for 1970, 25:56905 (DOCKET-50245-90)
turbine steam bypass valves for, failure of, 25:56908 (DOCKET-50245-93)

MINERALS
analysis of rock-forming, for iridium, osmium, and ruthenium by neutron activation and radiochemical separation, 25:54486
prospecting for seabed, using californium-252 neutron source, 25:54913

MIRRORS
radiation effects on stability of silvered and aluminized FEP teflon second-surface, electron, proton, and uv, 25:55656 (N-71-27736)

MITOCHONDRIA
immunological distinction of rat brain and liver, by sequential absorption analysis, 25:57253 (ORO-3195-41)
radiation effects on permeability and structure of membranes of rat liver, x, 25:55128

MITOSIS
radioinduced aberrations in rat bone marrow, x, 25:55192

MIXER-SETTLERS
design for radioactive waste fixation in bitumen, 25:54981

MOESSBAUER EFFECT
coincidence technique, delayed, 25:56367
conference on application of, Tihany, Hungary, June 17 to 21, 1969, 25:56374
conference on methodology of, sixth, Chicago, Jan. 25, 1970, 25:56364
gamma source for, preparation of polarized iron-57, 25:56366
Goldanskii--Karyagin effect of atomic vibration anisotropy in polycrystals, review, 25:56377
spectral shifts in, scale multipliers and calibration of isomer, (T), 25:56370
standards for, review of, 25:56365
use in studies of biological materials, review, 25:55105

MOESSBAUER SPECTROMETERS
velocity calibration of, review of, 25:56365

MOISTURE GAGES
design of passive radiometric, using cosmic ray neutrons, for soils, 25:55061(P)
design of radiometric, for sand, 25:55064(P)

MOLECULES
electron reactions at low energies with diatomic, review of total and momentum-transfer cross sections for, (E), 25:55856
electron reactions at low energies with, review of methods of measurement of cross sections for, 25:55855
electron reactions at low energies with, review of theory of rotational excitation in, 25:55855
electron reactions with, computer control system for studying, 25:55094
energy level lifetimes for fluorescent states, compilation of, 25:57215 (CEA-Bib-198)
energy transfer in systems of, research progress on, 25:54600(R) (UCLA-34-P-88-32)
photon emission in presence of external radiation, spontaneous, (T), 25:55883

MOLLUSCA
Aplysia californica, radioisotope content of Pacific Ocean, in environs of reactors, 25:55151 (CONF-710817-1)
Crassostrea angulata, zinc-65 uptake by shell and soft tissues of, effects of cobalt and iron on, 25:55153
Ostrea edulis, zinc-65 uptake by shell and soft tissues of, effects of cobalt and iron on, 25:55153
Physa heterostropha, radiation effects on population dynamics of, chronic low dose rate γ, 25:55314

MOLTEN SALT BREEDER REACTOR
fuel reprocessing for, by reductive extraction, 25:54534 (ORNL-4717, pp 43-56)
fuel reprocessing for, flow sheet analysis for, 25:54712 (ORNL-4682, pp 1-38)

MOLTEN SALT REACTOR EXPERIMENT
chemistry of coolant, fuel, and moderator in, 25:54533 (ORNL-4717, pp 29-41)
metal transfer studies in, 25:54533 (ORNL-4717, pp 29-41)

MOLYBDENUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
analysis for oxygen using exhalograph EAO-201, 25:54426
analysis for trace impurities, review on methods for, 25:54399
crystallization and polygonization of single crystals of, effects of rolling direction on, 25:55559
crystallization in strongly deformed monocrystal of, 25:55518
deformation mechanisms in, effects of temperature on, 25:55455
determination by dichrometric titration using triphenylmethane dyes as redox indicators, 25:54410
determination in fission product mixtures by ion exchange and polarography or β counting, 25:54449
determination in rocks, chemical methods for, 25:54403
determination of trace amounts of, in high-purity acids by emission spectrography, 25:54431
determination of, solvent extraction methods in, 25:54401
diffusion of nickel in monocrystalline, effects of vacuum on, 25:55505
effects on oxidation of niobium at 1500 to 2000°C and low pressures, 25:55380
microstructure of, effects of prior mechanical and thermal treatments on shock-induced, 25:55543
physical properties of plasma-sprayed spherical powders of, 25:55467
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
properties of fibers of, for use in preparation of ceramic composites, 25:55608(T) (LB/G-3074)
radioinduced void production in, 5-MeV nickel ion, 25:55573 (BNWL-SA-3962)
separation from chromium, tungsten, and uranium by reverse-phase partition chromatography on TTA-impregnated paper, 25:54746
separation from other metal ions on titanium tungstate papers by electrochromatography, 25:54744
separation from rhenium by solvent extraction, 25:54401
separation from seawater by rapid adsorbing colloid flotation method, 25:54743
separation of uranium from, in methyl sulfoxide by cation

XUM

exchange chromatography, 25:54728
supercooling and thermal conductivity in superconducting, (E/T), 25:56066
thermal capacity at 25 to 2600°C, 25:55626
thermal expansion to 2000°C, 25:55493
thermodynamic properties of liquid, levitation calorimetry method for studies of, 25:55496
MOLYBDENUM ALLOYS AND SYSTEMS
$Al_2O_3$--Mo, deformation mechanisms in, effects of temperature on, 25:55455
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
Al--Cr--Mo, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Cr--Mo--Ni-base--W, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Mo, solidification and phase transformations in, nonequilibrium, 25:55535
Al--Mo, thermal decomposition of solid solutions of, kinetics of, 25:55448
Al--Mo--Sn--Ti-base--Zr, welding of, properties of joints produced by friction, 25:55409
Al--Mo--Sn--U-base, tensile properties of dilute, at 23 to 600°C, 25:55429 (CEA-R-4177)
Al--Mo--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Mo--Ti--V, diffusion of hydrogen in, at 450 to 600°F, effects of stress on, 25:55476
Al--Mo--Ti-base, embrittlement of two-phase, mechanisms of, 25:55450
Al-base--Mo, thermal expansion of quenched, 25:55499
C--Cr--Mo, microstructure of white irons of, 25:55556
C--Mo, superconductivity of phases of, 25:56087
Co--Fe--Mo, electric conductivity of supersaturated solid solutions of, effects of phase decomposition on, 25:55472
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Cr--Mo--Zr, phase diagram at 1150°C, 25:55538
Fe--Mo--Ni, properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
Fe--Mo--Ni-base, magnetic properties at cryogenic temperatures, 25:56361
Fe-base--Mo, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Mo--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Hf--Mo, nitriding of, mechanism of growth and loss of coherency of hafnium nitride precipitates during internal, 25:55460
MgO--Mo, deformation mechanisms in, effects of temperature on, 25:55455
Mn--Mo--Ni--steel, radiation effects on brittleness and strength of heavy-section plates and welds of, fast neutron, 25:55585
Mo--Ni, mechanical properties at high temperatures, effects of molybdenum content on, 25:55474
Mo--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Mo--Ni-base--$ThO_2$, tensile strength at 1093°C, effects of thermomechanical processing on, 25:55486
Mo--Re--W, creep properties of, at 1800 to 4000°F, effects of grain size on, 25:55431 (N-71-23110)
Mo--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Mo--Ta--Ti, phase studies of, 25:55565
Mo--Ti, deformation mechanisms in, effects of temperature on, 25:55455
Mo--Ti-base, deformation of, effects of strain rate and temperature on, 25:55459
Mo--TZM, deformation mechanisms in, effects of temperature on, 25:55455
Mo--U, thermoelastic response of, Grueneisen coefficient for, 25:55436 (SC-RR-710314)
MOLYBDENUM CARBIDES
wetting by copper, effects of electronic structure on, 25:55643
MOLYBDENUM FLUORIDES
stability in molten lithium beryllium fluoride solution, 25:54532 (ORNL-4717, pp 1-27)
MOLYBDENUM ISOTOPES Mo-92
deuteron reactions (d,n) at 6.25 and 7.0 MeV, time-of-flight spectra and DWBA analysis of differential cross sections for, (E), 25:56766
energy levels from proton inelastic scattering, transition probabilities for, (E), 25:56774
energy levels of, properties of multiparticle, (T), 25:56783
energy-level transitions in, analysis of E2, (T), 25:56783
proton elastic and inelastic scattering at 15 MeV, coupled-channel analysis of, (E/T), 25:56774
MOLYBDENUM ISOTOPES Mo-94
deuteron reactions (d,α) at 10 MeV, α spectra from, (E), 25:56758
deuteron reactions (d,n) at 6.25 and 7.0 MeV, time-of-flight spectra and DWBA analysis of differential cross sections for, (E), 25:56766
energy levels from proton inelastic scattering, transition probabilities for, (E), 25:56774
proton elastic and inelastic scattering at 15 MeV, coupled-channel analysis of, (E/T), 25:56774
MOLYBDENUM ISOTOPES Mo-95
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
MOLYBDENUM ISOTOPES Mo-96
energy levels from proton inelastic scattering, transition probabilities for, (E), 25:56774
proton elastic and inelastic scattering at 15 MeV, coupled-channel analysis of, (E/T), 25:56774
MOLYBDENUM ISOTOPES Mo-98
energy levels from proton inelastic scattering, transition probabilities for, (E), 25:56774
proton elastic and inelastic scattering at 15 MeV, coupled-channel analysis of, (E/T), 25:56774
MOLYBDENUM ISOTOPES Mo-99
beta decay of, routine separation by solvent extraction of technetium-99m from, 25:54675
MOLYBDENUM ISOTOPES Mo-100
energy levels from proton inelastic scattering, transition probabilities for, (E), 25:56774
proton elastic and inelastic scattering at 15 MeV, coupled-channel analysis of, (E/T), 25:56774
MONKEYS
radioinduced sterility in developing ovaries of, following exposure in utero, effects of dose fractionation on x, 25:55319 (UCD-472-118)
MONTICELLO POWER REACTOR, UNIT 1
compressed air system for, scram initiation from failed loading controls for, 25:56914 (DOCKET-50263-85)
emergency core cooling system for, inoperability of high pressure coolant injection, 25:56912 (DOCKET-50263-82)
emergency core cooling system for, inoperability of high pressure coolant injection, 25:56913 (DOCKET-50263-84)
emergency core cooling system for, performance evaluation of, 25:56946 (DOCKET-50263-83)
instrumentation for, failure of mercury wetted magnetic switch in low-low water level, 25:56914 (DOCKET-50263-85)
MOON
electric conductivity and temperature of interior of, magnetic transient-response measurements of, 25:55810
magnetic field on surface of, magnetic transient-response measurements of, 25:55810
phase of, latitudinal dependence of ionospheric absorption on, (E), 25:55975
solar-wind interactions with, (E), 25:55810
surface analysis by alpha scattering, 25:54459
MOTORS
description and use of reluctance, for driving reactor control rods, 25:54848
MULLITES
properties of metal fiber-reinforced composites of, review on, 25:55608(T) (LB/G-3074)
properties of refractories of, mechanical and thermal, 25:55621
MUSCOVITES
age of, use of neutron activation in argon--potassium method of estimation of, 25:54765
MUTAGENS
effectiveness for inducing chromosome translocations in Vicia, 25:55191
MUTATIONS
induction in Mycobacterium phlei by 1-methyl-1-nitrosourea, 25:55171
radiation effects on survival of Escherichia coli, temperature dependence of recovery from uv, 25:55360
radioinduced adenine auxotrophic, in Bacillus subtilis, effects of aminopterin on uv, 25:55189
radioinduced adenine auxotrophic, in Escherichia coli, effects of streptomycin on uv, 25:55189
radioinduced dome, in Schizophyllum, linkage with B incompatibility factor of uv, 25:55186
radioinduced recessive sex-linked lethal, in germ cells of mice, three-generation test for frequency of x, 25:55184
radioinduced, in apples and pears for grafting on rootstocks, selection of, 25:55174
radioinduced, in bacteriophage T4, recombination in mutant crosses following uv, 25:55173
radioinduced, in barley and maize, effects of developmental stage and dose on, 25:55190
radioinduced, in barley and wheat seeds, effects of ethylenimine on x, 25:55261
radioinduced, in Chlorella vulgaris, photoreactivation capacity following uv, 25:55172
radioinduced, in diploid yeast cells, effects of LET on OER and RBE for γ, heavy ion, and meson ($\pi^-$), 25:55165
radioinduced, in Habrobracon for life-shortening, 25:55185
radioinduced, in lens of mice, effects of dose fractionation on x, 25:55206 (NYO-2740-8, pp 147-219)
radioinduced, in linseed for chlorophyll, dose dependence of γ, 25:55177

radioinduced, in linseed for chlorophyll, mechanisms of inheritance of γ, 25:55177
radioinduced, in Mycobacterium phlei for pigment formation, uv, 25:55171
radioinduced, in plants for improved agricultural qualities, review of, 25:55181
radioinduced, in plants for improved agricultural qualities, review of, 25:55179
radioinduced, in seeds of Crepis capillaris, effects of water content on γ and x, 25:55167
radioinduced, in yeast, gene control of uv, 25:55187
MYELIN
heterogeneity of central nervous system, 25:57261 (ORO-3195-49)
subfractions of rat central nervous tissue, isolation and biochemical characterization of, 25:57258 (ORO-3195-46)
MYLAR
deuteron reactions at 80 MeV with foils of, cross sections for electron capture in, (E), 25:55862
proton reactions at 155 and 600 MeV with foils of, cross sections for electron capture in, (E), 25:55862

# N

NAGASAKI
atomic bombing of, radiation effects on mortality of man exposed in utero to, 25:55307
NAPHTHALENE
hexane--naphthalene, radiation effects on, products from, 25:54599 (ORNL-4717, p 117-24)
NATURAL BACKGROUND RADIATION
effects on ion balance in atmosphere, 25:54786
NATURAL GAS
analysis of Rulison Event-stimulated, results of chemical and radiochemical, 25:54817 (PNE-R-52)
flow and pressure in wells following Rulison Event, data tabulation on, 25:54817 (PNE-R-52)
flow from runaway gas field wells, use of contained nuclear explosions for stopping, 25:54825(T) (UCRL-Trans-10543, pp 81-98)
production by underground nuclear explosions, consequences of using products from, 25:54599 (ORNL-4717, p 117-24)
production stimulation using underground nuclear explosions, radiation hazards from, 25:54823(T) (UCRL-Trans-10543, pp 56-69)
radioisotope content of, use of threshold limit values in establishing standards for, 25:55198
storage of, use of nuclear explosions to prepare reservoirs for, 25:54816 (ORNL-4682, pp 182-6)
NATURAL WATERS
radon content of Bad Brambach, Germany, dual ionization chamber measurements of, 25:54766
NEBULAE
infrared emission from dust grains in Orion, (T), 25:55718
radio emission from, in Magellanic Clouds at 408 MHz, (E), 25:55722
NEODYMIUM
desorption from tungsten, heat of, 25:55533
determination in intermediate products of rare earth production by x-ray spectroscopy, 25:54417
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
diffusion in nickel at 500 to 1100°C, volume and grain-boundary, 25:55488
effects on radiolysis of crystalline potassium nitrate, 25:54638
separation from aqueous solutions by solvent extraction using TTA, synergistic effects of 2,4-pentanedione on, 25:54731
separation from gadolinium and samarium by liquid--liquid chromatography using bis(2-ethylhexyl) phosphate and sulfuric acid, 25:54745
separation from promethium by displacement chromatography using [(carboxymethylimino)bis(ethylenenitrilo)]tetraacetic acid, EDTA, and nitrilotriacetic acid, 25:54723
solubility in liquid bismuth--lithium systems, 25:54712 (ORNL-4682, pp 1-38)
NEODYMIUM ALLOYS AND SYSTEMS
Au--Nd, crystal structures and melting points of intermetallic, 25:55570
Ce--Nd--Ru, critical magnetic field in superconducting, (E), 25:56074
Mg--Nd, compound formation in, vapor pressure measurements for studies of thermodynamics of, 25:55525 (IS-T-462)
NEODYMIUM ISOTOPES
nuclear electric quadrupole moments of, (E), 25:55828
spectra of electronic and muonic, relation of nuclear charge distribution to isotope shifts in, 25:55821
spectra of, isotopic shift in, (E), 25:55828
NEODYMIUM ISOTOPES Nd-137
energy-level transitions in, branching ratios, internal conversion coefficients, and multipolarities for, (E), 25:56761
NEODYMIUM ISOTOPES Nd-141
energy levels from neodymium-142 (p,d) reactions, neutron-hole structure of, (E), 25:56770
NEODYMIUM ISOTOPES Nd-142
alpha reactions (α,xnypzα) at 104 MeV, gamma spectra from, (E), 25:56761
proton reactions (p,α) at 35 MeV, DWBA analysis of, (E), 25:56770
NEODYMIUM ISOTOPES Nd-143
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
NEODYMIUM ISOTOPES Nd-145
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
NEODYMIUM ISOTOPES Nd-152
beta decay of, β and γ singles and coincidence spectra from, (E), 25:56772
NEODYMIUM OXIDES
argon-ion reactions at 30 keV with, charge states and kinetic energies of scattered and recoil ions of, (E), 25:55818
NEON
abundance in primary cosmic radiation, (E), 25:55911
deuterium-ion reactions up to 100 eV with, cross sections for dissociation in, (E), 25:55858
effects on yields from reactions of recoil tritium with ethane and methane, 25:54684
gold-198 ranges in, from gold-197(n,γ) recoil, 25:56269
helium-hydride-ion reactions at 0.5 to 1 MeV with, cross sections for dissociation in, (E), 25:55872
helium-ion inelastic scattering by, quasi-diabatic calculation of differential cross sections for, 25:55849
hydrogen-ion ($H_2^+$) reactions up to 100 eV with, cross sections for dissociation in, (E), 25:55858
meson ($\mu^-$) reactions with, x-ray emission from, (E), 25:55830
nuclear charge radius of, determination from x-ray emission in neon--meson ($\mu^-$) reactions, 25:55830
proton reactions at 20 to 120 keV with, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
NEON IONS
effects on diploid yeast cells, OER and RBE for mutagenic and lethal, 25:55165
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
NEON ISOTOPES Ne-19
energy levels from neon-20 (p,d) reactions, spectroscopic factors for, (E), 25:56704
NEON ISOTOPES Ne-20
alpha elastic and inelastic scattering at 104 MeV, nuclear deformation study from differential cross sections for, (E), 25:56687 (KFK-1397)
alpha reactions (α,γ), magnesium-24 photodisintegration rates from, 25:55703
energy levels from neon-21 (p,d) reactions, spectroscopic factors for, (E), 25:56704
energy levels from proton inelastic scattering, deformation parameters for, (E), 25:56704
neutron reactions (n,2α) at 14.3 MeV, Q-value and cross section for, (E), 25:56717
neutron reactions (n,α) and (n,p) at 14.3 MeV, spectra and cross sections for, (E), 25:56717
nuclear deformation of, differential cross sections for alpha elastic and inelastic scattering by neon-20 for determining, (E), 25:56687 (KFK-1397)
proton elastic scattering at 40 MeV, differential cross sections for, (E), 25:56704
proton inelastic scattering at 40 MeV, differential cross sections for, (E), 25:56704
proton reactions (p,d) at 40 MeV, differential cross sections for, (E), 25:56704
reactions (Ne-20,O-16) with calcium-40 at 63 and 73.7 MeV, cross sections for, (E), 25:56721
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
NEON ISOTOPES Ne-21
abundance in Sikhote--Alin meteorite, (E), 25:55671
energy levels from neon-22 (p,d) reactions, spectroscopic factors for, (E), 25:56704
proton inelastic scattering at 40 MeV, differential cross sections for, (E), 25:56704
proton reactions (p,d) at 40 MeV, differential cross sections for, (E), 25:56704
NEON ISOTOPES Ne-22
alpha elastic and inelastic scattering at 104 MeV, nuclear deformation study from differential cross sections for, (E), 25:56687 (KFK-1397)
alpha reactions (α, He-6) at 42 MeV, angular distributions for, (E), 25:56665
deuteron reactions (d,α) at 10 MeV, angular distributions for, (E), 25:56716
energy levels from proton inelastic scattering, deformation parameters for, (E), 25:56704
nuclear deformation of, differential cross sections for alpha elastic and inelastic scattering by neon-22 for determining, (E), 25:56687 (KFK-1397)

XUM

proton elastic scattering at 40 MeV, differential cross sections for, (E), 25:56704
proton inelastic scattering at 40 MeV, differential cross sections for, (E), 25:56704
proton reactions (p,d) at 40 MeV, differential cross sections for, (E), 25:56704
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
NEPHELINE
age of, use of neutron activation in argon--potassium method of estimation of, 25:54765
NEPTUNE (PLANET)
luminosity of, relation to solar activity, (T), 25:55766
NEPTUNIUM
deposition on stainless steel from ammonium sulfate solutions, 25:54673
energy-level transitions of, following americium-241 decay, (E), 25:55825
preparation of sources of, for alpha spectrometry, 25:54673
separation from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
separation from nitric acid solutions by solvent extraction using benzene--EDTA--TTA, kinetics of reactions in, 25:54733
x-ray yields from, following americium-241 decay, M-subshell, (E), 25:55825
NEPTUNIUM IONS
electron paramagnetic resonance spectrum in thoria single crystals, 25:56383
NEPTUNIUM ISOTOPES Np-228
electron capture decay of, uranium-238 delayed fission from, (E), 25:56744(T) (NP-tr-1936)
NEPTUNIUM ISOTOPES Np-237
alpha decay of aligned, analysis of α angular distributions for, (E/T), 25:56749 (RCN-142)
energy levels from americium-241 alpha decay, (E), 25:56753 (UCRL-51087)
energy-level transition in, nuclear current parameter for internal conversion of 26.38-keV, 25:56797
neutron fission of aligned, analysis of angular distributions for slow, (E/T), 25:56749 (RCN-142)
NEPTUNIUM OXIDES
reactions with fluorine and fluorine chlorides, kinetics of, 25:54736
NERVES
radiation effects on impulse transmission in frog sciatic, effects of LET on RBE for proton, 25:55215
NERVOUS SYSTEM
radioinduced injuries to human, following therapy of head tumors, prophylaxis and treatment of γ, 25:55269
NEUTRINOS
book; Cosmic Muons and Neutrinos, 25:56469
detection of solar, (E/T), 25:55741
emission from relativistic shock-wave propagation in gases, (T), 25:55668
emission from Sun, discrepancy between experimental and theoretical values, (E/T), 25:55741
interactions ν + N, second-class G-parity properties in elastic scattering, (T), 25:56854
interactions ν + p in proton electromagnetic field at 30 to 400 GeV, total cross sections for W production from, (T), 25:56473
NEUTRINOS (ν/sub μ/)
interactions ν + n → p + μ⁻, evidence for second-class currents from proton polarization in, (T), 25:56472
NEUTRON CAPTURE THERAPY
dose irregularities during, local, 25:55212
NEUTRON CROSS SECTIONS
computation system for, homogenization and modification capabilities of ARC, 25:56614 (ANL-7714)
evaluation of ENDF/B data on, PSYCHE code for, 25:57174 (CONF-710302-(Vol.2), pp 1004-15)
evaluation of ENDF/B-I and ENDF/B-II data, water moderated reactor benchmark problems for, 25:57019 (CONF-710302-(Vol.2), pp 1065-85)
evaluation of ENDF/B-II data files, status of benchmark testing for, 25:57178 (CONF-710302-(Vol.2), pp 1053-64)
evaluation of ENDF/B-II, JOSHUA system for, 25:57176 (CONF-710302-(Vol.2), pp 1024-30)
evaluation of, status of ENDF/B processing codes for, 25:57173 (CONF-710302-(Vol.2), pp 991-1003)
evaluation of, status of ENDF/B processing codes for, 25:57165 (CONF-710302-(Vol.2), pp 877-86)
listing of 26 group set for fast test reactor physics calculations, 25:57115 (HEDL-TME-71-65)
preparation of moment of ENDF/B photon production matrices and sources, LAPHAN code for, 25:57175 (CONF-710302-(Vol.2), pp 1016-23)
preparation of multigroup, MC²--2 code for, 25:57171 (CONF-710302-(Vol.2), pp 968-82)
production of multigroup libraries from ENDF/B data, ETOG-2 and ETOT codes for, 25:57177 (CONF-710302-(Vol.2), pp 1031-46)
NEUTRON SOURCES
description of paraffin-moderated radioisotope thermal, for detector calibration, 25:54892 (LA-4745)
design of intense thermal, based on proton reactions with liquid metals, 25:56624(P)
fabrication of californium-252, 25:54671 (ORNL-4682, pp 114-32)
ion source for deuterium--tritium, control circuit for, 25:56605(P)
isodose curves for californium-252, 25:55002 (NYO-2740-8, pp 7-146)
properties of radioisotope, review on, 25:54507
targets for, design of absorbed deuterium--tritium, 25:56626(P)
use of californium-252, as randomly pulsed source for prompt neutron decay measurements, 25:56639
NEUTRON SPECTROMETERS
data processing for, computer program for, 25:55036 (HASL-244)
data unfolding technique for, 25:55038 (LA-DC-12314)
description of time-focused crystal, for measuring time-dependent spectra in pulsed moderators, 25:56629
design of cadmium-loaded liquid scintillation time-of-flight, for measuring average number of neutrons per fission, 25:55039(T) (LB/G-3040)
development of NE-213 scintillation, 25:55002 (NYO-2740-8, pp 7-146)
development of NE-213 scintillation, for operation in aqueous media, 25:55034 (COO-2049-7)
development of NE-213 scintillation, using off-line gamma-ray discrimination, 25:55033 (COO-2049-6)
performance of lithium fluoride, 25:55043 (RD/B/N-2034)
NEUTRON SPECTROSCOPY
pulse-height spectra unfolding techniques for, 25:54436 (ORNL-TM-3463)
NEUTRON STARS
equation of state of matter in, (T), 25:55715
gravitational redshifts in, (T), 25:55808
matter in, mass formula and properties of, (T), 25:55678
models for, (T), 25:55715
period--age distribution of, (E/T), 25:55687
superfluid state in, (T), 25:55714
superfluidity in, (T), 25:55715
NEUTRONS
capture by chlorine-35, γ spectra from, (E), 25:56690 (RT/FI-(70)47)
capture by gold-197, range of recoil atoms from, 25:56269
capture by hafnium-177 up to 200 eV, γ spectra and resonance spin assignments for, (E), 25:56751 (RT/FI-(70)55)
capture by hafnium-177 up to 300 eV, γ spectra and resonance spin assignments for, (E), 25:56751 (RT/FI-(70)55)
capture by iron-56 and lead-207, cross sections for nonresonant, (E), 25:56702
capture by krypton-80, cross section for resonance, (E), 25:56691
capture by nuclei at 10 to 100 keV, compilation of gamma spectra and intensities for, (E), 25:56655 (ORNL-TM-3379)
capture by nuclei, correlation between reduced neutron and radiative widths for resonance, 25:56818 (JINR-E4-5880)
capture by plutonium-239 at 0.02 to 30 keV, cross sections for, (E), 25:56746 (ORNL-4707)
capture by plutonium-239 at 0.1 to 30 keV, ratio of cross sections for fission and radiative, (E), 25:56734(T) (BNL-tr-446)
capture by uranium-233, uranium-235, uranium-238, plutonium-239, plutonium-240, and plutonium-242, EBR-II integral measurements of, 25:56982 (ANL-7791)
capture by uranium-238 below 600 eV, γ spectra and distribution of partial radiation widths in, (E), 25:56790
capture by ytterbium-170 at 8.1 to 73 eV, γ spectra from resonance, (E), 25:56802
capture by ytterbium-172 at 140 to 202 eV, γ spectra from resonance, (E), 25:56802
capture-to-fission ratios for uranium-233, uranium-235, uranium-238, plutonium-239, plutonium-240, and plutonium-242, EBR-II integral measurements of, 25:56982 (ANL-7791)
collisions along flight paths with continuously varying cross sections, Monte Carlo sampling method for, 25:57164 (CONF-710302-(Vol.2), pp 871-6)
density in multiplying media, spectral function representation of time- and energy-dependent, 25:56625
detection of, design of boron trifluoride ionization chamber for, 25:55014(P)
detection of, design of scintillation detector for, 25:55012(P)
detection of, radiator foil converter with diamond crystal detector for, 25:55009(P)
diffusion in benzene, heavy water, and light water, diffusion constant and cooling coefficients for, (T), 25:56631
diffusion in heterogeneous medium with slugs of small dimensions, Green function in, (T), 25:56636
dose distributions in rabbit and rat phantoms following exposure to monoenergetic beams, correlation of LET distributions and, 25:55229
dose to man in Japan from external occupational exposures, estimation of genetically significant equivalent, 25:55230
dose to tissue equivalent phantoms, Monte Carlo

calculations of absorbed and equivalent 580-MeV, 25:55216
dosimetry for irradiation of biological materials, 25:55002 (NYO-2740-8, pp 7-146)
dosimetry using tissue-equivalent wall-less proportional detectors, 25:55002 (NYO-2740-8, pp 7-146)
effects on aging and precipitation in beryllium--copper alloys, 25:55583
effects on black silicon-carbide varistors, 25:55103
effects on catalytic properties of hydrogen electrodes, 25:54602
effects on cells, effects of absorbed dose on RBE for, 25:55206 (NYO-2740-8, pp 147-219)
effects on Charpy-V performance and dynamic tear of ASTM A533B steel plates and weld deposits, 25:55586
effects on chloroindium chlorophthalocyanine, Szilard--Chalmers process from, 25:54680
effects on chloromethane, reactions of recoil chlorine-38 from, 25:54681
effects on cobalt complexes, annealing of recoil cobalt-60 from, 25:54682
effects on defect production in polycrystalline boron carbide, 25:55650
effects on dimensional changes in carbon, relations with graphitization, 25:55645 (CEA-CONF-1821)
effects on ductile-to-brittle transition temperature of thick-wall pressure vessel steels, 25:55588
effects on electric conductivity and diamagnetic anisotropy of carbon fibers, 25:56282 (CEA-CONF-1822)
effects on electronic properties of graphite, relations with annealing, 25:56283 (CEA-CONF-1823)
effects on embrittlement of Types A302B and A533B steel, relations with impurity copper and phosphorus content, 25:55577 (NRL-7310)
effects on heating of plane bodies, tables for transient temperatures from, 25:56267
effects on helium--methane--silane system, reactions of recoil tritium from, 25:54678
effects on incidence of dominant lethal mutations in Drosophila, 25:55206 (NYO-2740-8, pp 147-219)
effects on magnetoresistance in graphite, 25:56319
effects on mechanical properties of graphite, viscoelastic analysis of, 25:55646 (EUR-4674)
effects on opacity of lens of mice, effects of dose fractionation on, 25:55206 (NYO-2740-8, pp 147-219)
effects on pollen and stamen hairs of Tradescantia, RBE for, 25:55206 (NYO-2740-8, pp 147-219)
effects on potassium chromates, role of recoil reactions in "Crossover reaction" on thermal annealing of, 25:54679
effects on response of rats to tranquilizers following whole-body exposure in mixed γ fields, 25:55325
effects on silicon at 76°K, growth and annealing of divacancies induced in, 25:56311
effects on silicon p--n junctions, (E/T), 25:55095(R) (COO-1624-41)
effects on survival of hamster cells, effects of dose on RBE for, 25:55207 (NYO-2740-8, pp 220-59)
effects on volt--ampere characteristics of silicon diodes, 25:55100
energy distribution in beryllium, transition region function for, (T), 25:56622
flux distribution in non-uniform lattices, nodal integral transport method for calculation of, 25:57156 (CONF-710302-(Vol.2), pp 655-78)
flux distribution in non-uniform reactor lattices, modified collision probability method for calculation of, 25:57155 (CONF-710302-(Vol.2), pp 644-54)
flux distribution in reactors, determination of function moments of, (T), 25:57179
flux distribution in reactors, finite element solution of diffusion and transport equations for calculation of, 25:57159 (CONF-710302-(Vol.2), pp 723-38)
flux distribution in reactors, Monte Carlo calculation of adjoint, 25:57162 (CONF-710302-(Vol.2), pp 803-32)
flux distribution in reactors, non-iterative method for calculation of time dependent, 25:57157 (CONF-710302-(Vol.2), pp 679-700)
flux distribution in reactors, S/sub n/ programming techniques for calculation of, 25:57148 (CONF-710302-(Vol.2), pp 557-60)
flux distribution in reactors, solution of non-stationary and quasi-critical transport equations for, 25:57186
flux distribution in reactors, spherical harmonic equations for elimination of ray effects in, 25:57151 (CONF-710302-(Vol.2), pp 577-607)
flux distribution in reactors, synthetic transport theory method for calculation of, 25:57154 (CONF-710302-(Vol.2), pp 625-43)
flux distribution in reactors, time discretization of transport equation for calculation of, 25:57158 (CONF-710302-(Vol.2), pp 701-22)
flux distribution in reactors, variational treatment of DP-0 method for calculation of, 25:57152 (CONF-710302-(Vol.2), pp 608-16)
flux distribution in reactors, weighted diamond difference approximations for calculation of, 25:57150 (CONF-710302-(Vol.2), pp 565-76)
flux distributions in reactors, $P_3$ approximation for calculation of, 25:57149 (CONF-710302-(Vol.2), pp 561-4)
flux from solar flares, (T), 25:55761
flux measurements, handling and readout system for activation detectors for in-core, 25:55008(P)
flux monitoring, fabrication of MgO--NiO and MgO--CoO activation detectors for in-core, 25:55019(P)
interactions anti p + n → $\pi^+ + 2\pi^-$, mass and width of rho' in rising phase shift model for, (T), 25:56485 (ORO-3992-66)
interactions e + n in e + d interactions at high energies, cross sections for Δ(1236) production in, (E), 25:56405 (DESY-71/33)
interactions e + n in e + d interactions at high energies, cross sections for inelastic, (E), 25:56405 (DESY-71/33)
interactions γ + n in e + d interactions at high energies, cross sections for particle production in, (E), 25:56405 (DESY-71/33)
interactions $K^+ + n \rightarrow K^0 + p$ at 5.5 GeV/c, Regge analysis of, (E/T), 25:56506
interactions $K^+ + n \rightarrow K^0 + p$, secondary Regge contributions in, 25:56508
interactions $K^+ + n \rightarrow K^+ + \pi^- + p$ at 12 GeV/c, structure in $K\pi$ mass spectra near 1.85 GeV from, (E), 25:56434
interactions $K^-$ + n at 3 GeV in deuterium bubble chamber, production of K(890), K(1400), and $K\pi\pi$ systems, upper limits for production cross sections of isospin-3/2 K*, and K + π s-wave interactions in, (E), 25:56426 (FRNC-TH-53)
interactions n + d → n + d, lectures on forward and partial-wave dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions n + n, cross sections for, and comparison with p + p interactions, (T), 25:55777
interactions n + p → 2p + $\pi^-$ at 2 to 30 GeV, Reggeized one-pion-exchange model for π exchange and diffraction production of N(1470) and N(1688) in, (T), 25:56521 (JINR-P1-5975)
interactions n + p → d + γ, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + π, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + rho, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + sigma(310), model of intermediate nucleon isobar for, 25:56525
interactions n + p → p + n at 8 and 19 GeV/c; spark chamber study of differential cross sections and Δ(1236) and N(1518) production in, (E), 25:56415 (NP-18888)
interactions n + p at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
interactions n + p at 14.1 MeV, relativistically covariant models for bremsstrahlung cross sections for, (T), 25:56526
interactions $\nu + n \rightarrow p + \mu^-$, evidence for second-class currents from proton polarization in, (T), 25:56472
interactions $\pi^+ + n \rightarrow \pi^+ + \pi^- + p$ at 13.1 GeV/c in deuterium bubble chamber, diffractive π + π interactions in, (E), 25:56425 (COO-1428-294)
interactions, SOLRF program for computation of, according to solid-angle method of spacing, 25:56271
leakage from graphite systems with cylindrical voids, pulsed source measurements on, (E/T), 25:57190
leakage from small multiplying assemblies, Monte Carlo method for calculation of, 25:57163 (CONF-710302-(Vol.2), pp 857-70)
mass difference (n - p), indefinite metric for electromagnetic, (T), 25:56547 (NYO-1932(2)-200)
monitoring of cosmic, data from Canadian stations for Jan.--Apr. 1971, (E), 25:55893 (AECL-3971)
production in meson reactions ($\mu^-$,nν) with helium-4, short-range nucleon--nucleon correlation effects on energy spectrum and angular distribution asymmetry in, (T), 25:56641 (JINR-P4-5986)
production in meson reactions ($\mu^-$,nν) with oxygen-16, spectrum and angular distribution asymmetry in, (T), 25:56820 (JINR-P4-5997)
reactions (n,2n) with copper, iron, and niobium at 14.4 MeV, differential cross sections, second-neutron spectra, and nuclear-level density parameters for, (E), 25:56684 (FEI-216)
reactions (n,α) with hafnium-177 at 1.09 to 8.87 eV, α widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
reactions (n,α) with molybdenum-99, neodymium-143, neodymium-145, samarium-147, samarium-149, and tellurium-123 at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
reactions (n,α) with zinc-64 at 281 and 2637 eV, α widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
reactions (n,α) with zinc-67 at 1548 eV, α widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
reactions (n,f) with neptunium-237, uranium-233, and uranium-235 using oriented targets, analysis of angular distributions for slow, 25:56749 (RCN-142)
reactions (n,f) with plutonium-239 at 0.02 to 30 keV, cross sections for, (E), 25:56746 (ORNL-4707)
reactions (N,f) with plutonium-239 at 0.05 to 7.20 MeV, angular anisotropy and nucleon-pairing effects in, (E), 25:56736 (FEI-233)
reactions (n,f) with plutonium-239 at 0.1 to 30 keV,

XUM

ratio of cross sections for radiative capture and, (E), 25:56734(T) (BNL-tr-446)
reactions (n,f) with plutonium-239, plutonium-241, uranium-233, and uranium-235, prompt neutron yield from, (E), 25:56743 (NP-18966)
reactions (n,f) with uranium-233, uranium-235, uranium-238, plutonium-239, plutonium-240, and plutonium-242, EBR-II integral measurements of, 25:56982 (ANL-7791)
reactions (n,γ) with actinide isotopes in molecular sieves, isotope enrichment by, 25:54718 (ORNL-4682, pp 168-81)
reactions with aluminum at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with beryllium at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with bromocyclopropane and bromine--cyclopropane, reactions of recoil bromine-80m from, 25:54690
reactions with cadmium at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with carbon at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with chlorofluoromethanes, replacement reactions of recoil chlorine-38 from, 25:54688
reactions with copper at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with deuterium at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with gold-197 and indium using iron-filtered beams, analysis of resonance cross sections for, 25:56795
reactions with iodine-127 in pentane and pentenes, yields and product distribution from, 25:54705
reactions with iron, lead, oxygen, and sodium, transmission of fission spectra through thick samples for evaluation of minima in total cross sections for, (E), 25:56650 (COO-2049-5)
reactions with lead at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with nitrogen-14 in potassium azide, distribution of recoil carbon-14 from, 25:54687
reactions with nuclei at low energies, computer program for cross sections of resonance, (T), 25:56814 (COO-2022-7)
reactions with nuclei in unresolved resonance region, method for calculation of cross sections for, (T), 25:56870
reactions with shielding, secondary gamma radiation from, 25:56277
reactions with tellurium-128 in tellurium--oxygen compounds, iodine-129 Moessbauer studies of recoil tellurium-129 reactions from, 25:54704
reactions with tungsten at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
reactions with uranium-235 and -238, total γ spectrum above 1 MeV from, (E), 25:56745 (ORNL-4691)
research at CEA in France during October 1969 to December 1970, 25:55203(R) (CEA-N-1449)
scattering by atoms, analysis of many-particle distribution functions in Sunakawa model for elastic multiple, (T), 25:56637
scattering by cadmium sulfide crystals, anomalous transmission from suppression of (n,γ) reaction in resonant, 25:56627
scattering by copper, iron, and niobium at 14.4 MeV, differential cross sections, nuclear-level density parameters, and contribution of direct processes for inelastic, (E), 25:56684 (FEI-216)
scattering by gaseous and liquid methane, calculation of second-order corrections for inelastic, 25:56628
scattering by helium-4 below 50 MeV, analysis using nonlocal separable potential, (T), 25:56852
scattering by helium-4, analysis using separable nonlocal potential, (T), 25:56642 (LYCEN-7104, C5.1-15)
scattering by helium-4, lectures on forward dispersion relations for elastic, (T), 25:56810 (CERN-71-14, pp 155-228)
scattering by liquids, time-of-flight method for studying diffusive motion by, 25:56634
scattering by paramagnetic nickel, orbital contribution to magnetic cross section for, (T), 25:56354
scattering by zirconium hydride, effects of stoichiometry on structure in down-, 25:56343
shielding of, properties of Chemtree products for, 25:54962 (CONF-710401-, pp 307-10)
spectra from proton reactions (p,xn) with uranium-238 at 750 MeV, unfolding capability for, (E), 25:55038 (LA-DC-12314)
spectra in polyethylene, solid anhydrous ammonia, and solid methane following fast pulses, time-dependent, 25:56629
spectra of, method for analysis of, 25:56620 (RT/FI-(70)53)
thermalization in polycrystalline beryllium, Monte Carlo method for calculating, (T), 25:56619 (RT/FI-(70)49)
thermalization of, degenerate kernel technique for calculation of, 25:56630
transport code for, revised cross-section module for Monte Carlo multigroup, 25:56263 (ORNL-4716)
transport equation for, numerical method for solution of time-independent, (T), 25:56616 (JUL-764-RG)
transport equation for, solution of Boltzmann, with respect to position, angle, and energy, 25:56617 (JUL-765-RG)
transport equations for slab geometry, nonhomogeneous boundary-value problem for linear, (T), 25:56621
transport in graphite systems with voids, pulsed-source measurements on, (E/T), 25:57189
transport in homogeneous slabs, comparison of diffusion and transport theory for, 25:56613 (AD-715563)
transport in nonuniform medium with anisotropic scattering, constant relaxation of average flux, (T), 25:56635
transport in shielding, S/sub n/ discrete ordinate sets for deep-penetration, 25:57153 (CONF-710302-(Vol.2), pp 617-24)
transport in thick and thin slabs, calculation of energy-dependent, (T), 25:56632
transport in three-dimensional geometries, computer generation of Monte Carlo sampling functions for, 25:57160 (CONF-710302-(Vol.2), pp 771-81)
transport of, spin polarization effects in, (T), 25:56633
transport studies, (E/T), 25:56255(R) (AD-721388)
uses in radiography, design of equipment for, 25:54931(P)

NEUTRONS, COLD
scattering by zirconium hydride, total cross section for, (E), 25:56623

NEUTRONS, DELAYED
monitoring for liquid metal cooled fast breeder reactor fuel element failure detection system, 25:57055 (JAERI-Memo-4157, pp 84-8)
monitoring for water cooled research reactor fuel element failure detection system, 25:57119 (JAERI-Memo-4157, pp 51-65)

NEUTRONS, FAST
attenuation in concrete shielding, effects of iron contents on, (E), 25:57027 (RCN-147)
capture by A = 26 through 136 nuclei at 2.9 MeV, cross sections for, (E), 25:56696
capture by cobalt-59, niobium-93, and rhodium-103 at 14 MeV, γ spectra and cross sections for, (E), 25:56729
capture by uranium-235 at 0.25 to 4 MeV with fission isomer excitation, excitation function for, (E), 25:56793
detection of, effect of stopping power on threshold sensitivity of nuclear emulsions for, 25:55022
dosimetry in lucite phantoms using thermoluminescent dosimeters, 25:55319 (UCD-472-118)
dosimetry in tissue-equivalent phantoms, effects of energy spectra and location of dosimeters on, 25:55232
dosimetry of, performance of polymer gelatin nuclear emulsions for, 25:55057
effects on brittleness and strength of manganese--molybdenum--nickel steel plates and welds, 25:55585
effects on dimensions of codeposited isotropic carbon--silicon coatings, 25:55652
effects on electric conductivity of $CrNi_3$, 25:55584
effects on eyes of rabbits, effects of dose and LET on RBE for, 25:55317 (CEA-CONF-1744)
effects on fracture and tensile properties of A533B pressure vessel steel, 25:55587
effects on graphite properties, relations with pitch-binder content, 25:55653
effects on graphites, pyrocarbons, and fuel bodies in Dragon reactor at 600 to 1200°C, 25:55651
effects on indium antimonide at 50°C, annealing of, 25:56317
effects on junction capacitance of silicon $n^+ - p - p^+$ power diode, 25:55097 (N-71-25389)
effects on mice, effects of radioprotective compounds on, 25:55266
effects on p-type germanium at 14 MeV and 77°K, annealing of, 25:56305
effects on photocurrent of n-type germanium, 25:56316
effects on silicon at 78°K, infrared absorption bands induced in, 25:56296
effects on silicon doped with cobalt, $^{57}Fe$ Moessbauer-effect study of, 25:56326
effects on silicon, EPR study of defects induced in, 25:56324
effects on stress relaxation in alloys, model for, 25:55579 (WAPD-TM-943)
effects on survival of synchronized L cells, effects of age on, 25:55309
effects on swelling of metals, theoretical model for, 25:55582
effects on swelling of pure metals and Types 304 and 316 stainless steel, relations with dose and temperature, 25:55572 (BLG-457)
effects on swelling of stainless steel for use in fast breeder reactors, 25:55581
effects on thermionic sheath trilayer insulators, 25:55096 (N-71-24635)
effects on void production in high-purity magnesium, 25:55580
flux measurements on, by uranium-238 fission and determination of barium-140, standard for, 25:54444
reactions (n,2α) with neon-20 at 14.3 MeV, cross section and Q-value for, (E), 25:56717
reactions (n,2α) with nitrogen-14 at 14.1 MeV, intermediate structure in cross section for, (E),

25:56680
reactions (n,α) and (n,p) with neon-20 at 14.3 MeV, spectra and cross sections for, (E), 25:56717
reactions (n,α) with argon-40 at 14.4 MeV, α spectra, cross sections, and Q-value for, (E), 25:56718
reactions (n,f) with thorium-232 and uranium-238 at 14 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
reactions (n,f) with thorium-232 and uranium-238 at 14.1 MeV, angular distributions for, (E), 25:56804
reactions (n,f) with uranium-235 at 2 and 15 MeV, mass chain yield for, (T), 25:56816 (JAERI-Memo-4383)
reactions with nuclei near 14 MeV, statistical analysis of shell effects in, (T), 25:56869
reflection by steel slab, orders-of-scattering calculation for collimated polyenergetic, 25:56257 (COO-2049-8)
scattering by carbon-12 at 22 MeV with subsequent α decay, n-α coincidence spectra from inelastic, (E), 25:56752(R) (SUNI-14)
scattering by iron-56 at 14 MeV, vibrating-model analysis of differential cross sections for elastic and inelastic, (E), 25:56707
scattering by samarium-154 at 1.5 MeV, γ spectra from inelastic, 25:56752(R) (SUNI-14)
scattering by tantalum-181, tin-120, and zirconium-90 at 7 MeV, S-matrix analysis of differential cross sections for elastic, (T), 25:56789
transport in iron, (E/T), 25:56618 (RPI-328-230)
transport in shielding slabs, orders-of-scattering method for, 25:56258 (COO-2049-9)
NEUTRONS, FISSION
detection and discrimination of, coincidence system for, 25:54995 (EUR-4611)
effects on bubble nucleation and re-solution in uranium dioxide at high temperatures, 25:55649
effects on lithium-diffused n-type silicon, defects induced in, 25:56309
effects on swine following bilateral and unilateral exposures, LD-50 for lethal, 25:55334
NEUTRONS, FUSION
emission from laser irradiated deuterated polyethylene, 25:56219
NEUTRONS, INTERMEDIATE
reactions (n,f) with uranium-235 at 30 keV, time analysis of compound-nucleus decays in, (E), 25:56752(R) (SUNI-14)
spectra for heterogeneous reactors, computer program calculation of, 25:57182 (JAERI-Memo-4481)
spectrum in pool type reactors, quadruple foil method for measurement of, 25:57126
NEUTRONS, THERMAL
attenuation in concrete shielding, effects of iron contents on, (E), 25:57027 (RCN-147)
capture by chromium-50, -52, and -53 and iron-54 and -56, gamma spectra from, (E), 25:56683 (FEI-205)
capture by krypton-80, cross section for, (E), 25:56691
capture by lutetium-176, gamma and conversion-electron spectra from, (E), 25:56762
diffraction of, quantum mechanical calculation for, (T), 25:56615 (FMRB-37/71)
effects on bubble nucleation and re-solution in uranium dioxide at high temperatures, 25:55649
effects on cadmium sulfide and telluride, luminescence and electric resistivity study of, 25:56307
reactions (n,f) with plutonium-239 and uranium-233 and -235, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
reactions (n,f) with uranium-235, yields of light elements in, (E), 25:56788
scattering by crystals, use of zero Placzek moment to calculate n-phonon cross section in, (T), 25:56340(T) (AERE-Trans-1137)
scattering in light and heavy water, computer program for analysis of, 25:56638
NEVADA TEST SITE
soils around, plutonium content of, 25:54755 (CONF-710401-, pp 320-7)
NICKEL
abundance in solar atmosphere, (E/T), 25:55750
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
casting by levitation melting using magnetic field, 25:55424
corrosion by vanadium oxide melts, mechanisms of, 25:55374 (CONF-690452-, Paper 7)
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512
determination in isoquinoline formate by polarography, 25:54421
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in stony meteorites by proton and bremsstrahlung activation, 25:54466
deuteron reactions at 80 MeV with foils of, cross sections for electron capture in, (E), 25:55862
diffusion in molybdenum single crystals, effects of vacuum on, 25:55505
diffusion of carbon in solid solutions of, 25:55479
diffusion of cerium and neodymium in, at 500 to 1100°C, volume and grain-boundary, 25:55488
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
electron reactions at 0.5 to 15 keV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
mechanical properties of sintered, at room temperature, 25:55437(R) (TID-25784)
microstructure of sintered, 25:55437(R) (TID-25784)
neutron cross section in tight-binding model of paramagnetic, calculation of orbital contribution to magnetic, (T), 25:56354
proton reactions at 1.5 to 4.5 MeV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
proton reactions at 155 and 600 MeV with foils of, cross sections for electron capture in, (E), 25:55862
radioinduced vacancies in, aggregate formation from laser-beam, 25:56313
reactions with Groups IV and VI transition metal carbides at 1000 to 1200°C, solid-phase, 25:55464
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
solvent properties for Groups IV and VI transition metal carbides at 1000 to 1200°C, 25:55464
sorptive properties for tellurium, 25:54587(R) (AECL-3909)
strengthening of, effects of substructure domain on dispersion, 25:55492
NICKEL ALLOYS AND SYSTEMS
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
stability of aluminum oxide dispersions in, at high temperatures, 25:55485
$Al_2O_3$--Ni, production of fine powders of, Microgel process for, 25:55419
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Cr--Mo--Ni-base--W, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Cr--Ni-base--Ti, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Al--Cr--Ni-base--Ti, mechanical properties of dispersion-strengthened, at high temperatures, 25:55483
Al--Ga--Ni, optical constants for β-phase NiGa/sub 1-y/Al/sub y/ intermetallic compound in, 25:56352
Al--Ni--V, phase equilibria in intermetallic compounds of, 25:55562
Be--Cu-base--Ni, microstructure of, potentiostatic studies on, 25:55555
Co--Cr--Ni--W, physical properties of, effects of atomization media and consolidation methods on, 25:55480
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Cr--Fe-base--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Nb--Ni, liquation of, mechanism of intracrystallite, 25:55506
Cr--Ni, radiation effects on electric conductivity of $Ni_3Cr$, neutron, 25:55584
Cr--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Cr--Ni-base, strengthening of, effects of substructure domain on dispersion, 25:55492
Cu--Ga--Ni, optical constants for β-phase in, 25:56352
Cu--Ni, solvent properties of solid solutions of, for tungsten in copper--nickel--tungsten alloys, 25:55447
Cu--Ni--W, tungsten solubility in copper--nickel solid solutions of, limits of, 25:55447
Fe--Mo--Ni, properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
Fe--Mo--Ni-base, magnetic properties at cryogenic temperatures, 25:56361
Fe--Ni, electron mean free path in Permalloy foils, fast, (E), 25:56281
Fe--Ni, magnetic properties at cryogenic temperatures, 25:56361
Fe--Ni, precipitation in beryllium-containing, metallography of 700°C, 25:55544
Fe--Ni, properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
Fe--Ni--WC, phase relations and tensile properties of sintered, 25:55631
Fe--Ni-base, microstructure of Type 706, 25:55553
Fe--Ni-base, microstructure of Type 706, effects of heat treatment on, 25:55554
Fe-base--Mn--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Mo--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Ni, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Fe-base--Ni--Rh, use as filter in polarized iron-57 Moessbauer source, 25:56366
In--Ni, optical constants for β-phase NiIn intermetallic compound in, 25:56352

XUM

Mn--Mo--Ni--steel, radiation effects on brittleness and strength of heavy-section plates and welds of, fast neutron, 25:55585
Mn--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Mo--Ni, mechanical properties at high temperatures, effects of molybdenum content on, 25:55474
Mo--Ni-base, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
Mo--Ni-base--$ThO_2$, tensile strength at 1093°C, effects of thermomechanical processing on, 25:55486
Ni--NiO, development of reference electrode of, for molten fluorides, 25:54532 (ORNL-4717, pp 1-27)
Ni--$ThO_2$, production of fine powders of, Microgel process for, 25:55419
Ni--TiC, grain growth in liquid-phase sintering of, 25:55642
Ni--$UO_2$, surface energy of, at 1500°C, 25:55616
Ni--W-base, sintering of powdered dilute, effects of nickel content on, 25:55426
NICKEL IONS
effects on void production in refractory metals at 5 MeV, 25:55573 (BNWL-SA-3962)
spectral lines due to, in solar euV spectrum, (E), 25:55774
NICKEL ISOTOPES Ni-57
beta decay and electron capture of, in hexaamminenickel(II) complexes, behavior of cobalt-57 from, thermal annealing effects on, 25:54689
NICKEL ISOTOPES Ni-58
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727
NICKEL ISOTOPES Ni-59
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
NICKEL ISOTOPES Ni-60
deuteron elastic and inelastic scattering at 13.6 MeV, strong-coupling analysis of, (T), 25:56780
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
proton elastic scattering at 11 MeV, differential cross sections for, (T), 25:56789
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727
NICKEL ISOTOPES Ni-63
uses as tracer in measuring diffusion of nickel in molybdenum, 25:55505
NICKEL OXIDES
preparation of uniform particles of, for fission product deposition studies, 25:54587(R) (AECL-3909)
reactions with alkali metal sulfates at 550 to 950°C, 25:55372 (CONF-690452-, Paper 5)
MgO--NiO, fabrication for in-core neutron flux monitoring, 25:55019(P)
Ni--NiO, development of reference electrode of, for molten fluorides, 25:54532 (ORNL-4717, pp 1-27)
NINE MILE POINT POWER REACTOR
radioactive effluents from, corrections for January to December 1970, 25:56901 (DOCKET-50220-73)
turbine for, inspection and repair of broken attachment pins for last stage bucket shanks of, 25:56902 (DOCKET-50220-74)
NIOBIUM
abundance in R Cyg and HD 35155, (E), 25:55699
analysis for nitrogen by fast neutron activation, 25:54501
casting by levitation melting using magnetic field, 25:55424
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
corrosion by sodium at 600°C, effects of oxygen on, 25:55386
determination of trace amounts of, in high-purity acids by emission spectrography, 25:54431
determination of, study of complexes with 4-(2-pyridylazo)resorcinol in oxalic and tartaric acid systems in spectrophotometric, 25:54425
diffusion and internal friction of hydrogen in, calculation from redistribution in periodic stress gradient, 25:55458
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
electron transport in superconducting Nb/Nb oxide/Bi tunnel junctions, (E/T), 25:56078
melting of, behavior of impurities during vacuum, 25:55403
oxidation at 1500 to 2000°C and low pressures, effects of zirconium, molybdenum, and tungsten on, 25:55380
performance in superconducting lumped-parameter oscillator circuit, 25:55086
physical properties of plasma-sprayed spherical powders of, 25:55467
properties of fibers of, for use in preparation of ceramic composites, 25:55608(T) (LB/G-3074)
properties of vacuum electrodeposited thin films of, electric and physical, 25:55507
radiation effects on beryllia- and alumina-bonded trilayer sheath insulators, fast-neutron, 25:55096 (N-71-24635)
radioinduced void production in, 5-MeV nickel ion, 25:55573 (BNWL-SA-3962)
separation from cerium and lanthanum by reverse-phase partition chromatography on TTA-impregnated paper, 25:54746
separation from pegmatitic ores, leaching studies for, 25:54752
separation from pyrochlore concentrates as oxide, 25:54741
sorptive properties for hydrogen, bulk and surface, 25:55434 (RLO-2221-T-7-3)
structure of single crystals of, effects of low-temperature rolling and annealing on, 25:55560
structure of thin films of, deposited on sapphire, epitaxy in, 25:55531
NIOBIUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
hardening mechanisms of, electron microscope and x-ray studies of dispersion, 25:55443
Al--Nb, niobium-93 NMR in $Nb_3Al$, 25:56373
Au--Nb, niobium-93 NMR in $Nb_3Au$, 25:56373
C--Hf--Nb, phase diagram of niobium--rich corner of, 25:55563
C--Nb--U, phase diagram at 1000°C, carbide composition in, 25:55547
C--Nb--Zr, thermodynamic properties of, relations with composition, 25:55615
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Cr--Nb--Ni, liquation of, mechanism of intracrystallite, 25:55506
Hf--Nb--Ti--Zr, superconducting properties of, with, 25:56104
Hf--Nb--Zr, superconducting properties of, 25:56105
Hf--Nb-base, oxygen solubility limits in, lattice parameter measurements of, 25:55568
Ir--Nb, niobium-93 NMR in $Nb_3Ir$, 25:56373
Nb--Pt, niobium-93 NMR in $Nb_3Pt$, 25:56373
Nb--Ru, diffusion in, effects of composition on mutual, 25:55452
Nb--Sn, fabrication of laminated superconducting $Nb_3Sn$, 25:56079(P)
Nb--Sn, niobium-93 in $Nb_3Sn$, 25:56373
Nb--Sn, phase transition in $Nb_3Sn$, neutron-scattering study of lattice-dynamical, 25:55545
Nb--Sn, phonon frequencies and susceptibility of $Nb_3Sn$, (T), 25:56344
Nb--Sn, superconducting critical current of intermetallic $Nb_3Sn$, effect of carbon on, 25:56084
Nb--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Nb--Ti, strengthening by step-aging, relations with microstructure, 25:55490
Nb--Ti--W--Zr, solidus volume of, simplex-lattice method for prediction of, 25:55529
Nb--Ti--Zr, phase studies of, 25:55564
Nb--Ti-base, superconductivity and constitution of, 25:56108
Nb--Ti-base, superconductivity of, relations with crystal structure, 25:55541
Nb--Zn, phase and intermetallic compound formation in, 25:55534
Nb--Zr, microstructure of, isothermal omega transformation in, 25:55557
Nb--Zr-base, superconductivity of, relations with crystal structure, 25:55541
Nb-base--O--Ti, structure and tensile properties of, 25:55521
Nb-base--O--Zr, structure and tensile properties of, 25:55522
Nb-base--Ti, magnetization properties of superconducting, transporting sinusoidal alternating current in longitudinal magnetic field, (E/T), 25:56085
Nb-base--Zr, corrosion by mercury at 1200°F, 25:55377 (N-71-26947)
Nb-base--Zr, magnetization properties of superconducting, transporting sinusoidal alternating current in longitudinal magnetic field, (E/T), 25:56085
Nb-base--Zr, oxygen solubility limits in, lattice parameter measurements of, 25:55568
Nb-base--Zr, superconducting transition temperature of, effect of deformation on, (E/T), 25:56099
NIOBIUM BORIDES
stability in acids, 25:54543
NIOBIUM CARBIDES
physical properties and stability to nitrogen, 25:55629
physical properties and structure of, review on effects of composition on, 25:55632
wetting by copper, effects of electronic structure on, 25:55643
NbC--ZrC, physical properties and structure of, review on effects of composition on, 25:55632
NbC--ZrC, wetting by copper at 1100°C, effects of electronic structure on, 25:55643
NIOBIUM FLUORIDES
disproportionation of $NbF_4$, at 350°C, 25:54532 (ORNL-4717, pp 1-27)
mass spectrometric studies of, 25:54532 (ORNL-4717, pp

XUM

1-27)
preparation of $NbF_4$, by reduction of excess niobium pentafluoride with niobium metal, 25:54532 (ORNL-4717, pp 1-27)
stability in molten lithium beryllium fluoride solution, 25:54532 (ORNL-4717, pp 1-27)
NIOBIUM ISOTOPES Nb-90
beta and electron-capture decay of, branching ratios, gamma energies and intensities and log-ft values from, (E), 25:56791
NIOBIUM ISOTOPES Nb-92
energy levels from molybdenum-94 (d,α) and zirconium-90 (He-3,p) reactions, spin-parity assignments for, (E), 25:56758
NIOBIUM ISOTOPES Nb-93
energy-level scheme from neutron inelastic scattering, (E), 25:56752(R) (SUNI-14)
neutron capture at 14 MeV, γ spectra and cross section for, (E), 25:56729
neutron inelastic scattering at 14.4 MeV, differential cross sections, nuclear-level density parameters, and contribution of direct processes for, (E), 25:56684 (FEI-216)
neutron reactions (n,2n) at 14.4 MeV, differential cross sections, second-neutron spectra, and nuclear-level density parameters for, (E), 25:56684 (FEI-216)
nuclear magnetic resonance in $Nb_3Al$, $Nb_3Sn$, $Nb_3Ir$, $Nb_3Pt$, and $Nb_3Au$ at 4.2 to 300°K, 25:56373
NIOBIUM ISOTOPES Nb-95
content in atmosphere during 1969, (E), 25:54803
distribution in mice following inhalation, effects of chemical form on, 25:55125
NIOBIUM NITRIDES
physical properties of, 25:55629
shock compression effects on powdered, x-ray-diffraction study of, 25:55618
NIOBIUM OXYFLUORIDES
mass spectrometric studies of, 25:54532 (ORNL-4717, pp 1-27)
NITRIC ACID
density of aqueous solutions of, 25:54578 (ORNL-4682, pp 215-17)
effects on radiolysis of hydrocarbon TBP mixtures, 25:54644
sorption on uranium dioxide, 25:55594 (ORNL-4682, pp 218-28)
NITRIDES
diffusion in, data tabulations on, 25:55509
NITRITES
diffusion in, data tabulations on, 25:55509
yields from radiolysis of sodium nitrate, comparison of Ceric and Shinn methods for determining, 25:54633(R) (ORO-3660-4)
NITROGEN
abundance in solar atmosphere, (E/T), 25:55750
content at 100 to 200 km of molecular, diurnal variations of, (E), 25:55987
corrosive effects on reactor materials, review of, 25:55393
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination in niobium, tantalum, and titanium by fast neutron activation, 25:54501
diffusion in yttrium at 20 to 300°C, effects of dislocations on, 25:55461
helium-hydride-ion reactions at 0.5 to 1 MeV with molecular, cross sections for dissociation in, (E), 25:55872
helium-ion range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
mass transfer in reactor materials exposed to sodium, measurement of, 25:55379(R) (WARD-4210-T-1-2)
oxygen-ion reactions at 10 to 40 MeV with molecular, cross sections for electron capture in, 25:55869
oxygen-ion reactions at 7 to 40 MeV with molecular, cross sections for electron capture and loss in, (E), 25:55870
proton range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
proton reactions at 20 to 120 keV with molecular, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
scattering by argon, krypton, and nitrogen molecules of molecular, rainbow oscillations in differential cross sections for, (E), 25:55852
solubility in alpha-vanadium at 300 to 1000°C, 25:55475
sorption by zirconium at low pressures and high temperatures, 25:55463
spectral emission of Lyman--Birge--Hopfield system of molecular, in day airglow from Aug. 1967 to July 1968, (E), 25:55968
NITROGEN IONS
x-ray scattering by three- and four-electron, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
NITROGEN ISOTOPES N-13
production in alpha reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
NITROGEN ISOTOPES N-14
alpha reactions at 70 and 90 MeV, cross sections for, (E), 25:56652 (LYCEN-7104, S2.1-2)
deuteron reactions (d,p) at 13.8 MeV, vector analyzing power for polarized, (E), 25:56724
energy levels from carbon-12 (He-3,p) and (He-3,2p) reactions, spin-parity assignments for, (E), 25:56682
energy levels of, shell-model calculation using Fabakin potential, (T), 25:56660
exchange between thiocyanate and thiocyanatomolybdate(III), 25:54558
meson (K-) absorption in, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
meson (π) absorption by, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
neutron reactions (n,2α) at 14.1 MeV, intermediate structure in cross section for, (E), 25:56680
neutron reactions (n,p) in potassium azide, distribution of recoil carbon-14 from, 25:54687
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
NITROGEN ISOTOPES N-15
energy levels at 12.50 and 12.52 MeV from carbon-14 (p,γ) and (p,n) reactions, spin--parity assignments and widths for, (E), 25:56669
energy-level transitions from carbon-14 (p,γ) and (p,n) reactions, branching and mixing ratios and multipolarities for, (E), 25:56669
NITROGEN ISOTOPES N-16
beta decay of, half-life for, (E), 25:56658
NITROGEN ISOTOPES N-17
energy levels from oxygen-18 (d,He-3) reactions, l-transfer values and spin--parity assignments for, (E), 25:56662
production in alpha reactions with aluminum and silicon at 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
NITROGEN MUSTARDS
effects on Escherichia coli, effects of 2,4-dinitrophenol on recovery from lethal, 25:55355
effects on renewal patterns of normal and tumor cells, 25:55110(R) (TID-25801)
NITROGEN OXIDES $N_2O$
effects on γ radiolysis of propane polymers, 25:54637
effects on radiolysis of cyclohexane, 25:54670
butane--$N_2O$, radiolysis of, effects of oxygen on yields of nitrogen from γ, 25:54659
cyclopentane--$N_2O$, radiolysis of, effects of cyclopentene and propene on nitrogen yields from γ, 25:54655
NITROGEN SYSTEMS
air--N, plutonium ignition in, effects of oxygen content on, 25:54946 (CONF-710401--, pp 106-17)
C--N--O--Pu--U, preparation of carbides, carbonitrides, and hypostoichiometric oxides in, 25:55594 (ORNL-4682, pp 218-28)
H--N, radiation effects on, production of carbon-11-labeled cyanides by recoils from proton, 25:54683
N--Ta, electric conductivity of films of, effects of glow discharge on, 25:55519
NONANE
radiation effects on sorption on magnesium sulfate incorporating sulfur-35, gas chromatographic studies of, 25:54603
NORWAY
fallout monitoring in ground-level atmosphere of north, 1970 and 1971, 25:54785
NOVAE
spectra of, principal absorption, (E/T), 25:55677
NOVO VORONEZH POWER REACTOR, UNIT 1
neutron flux in, threshold detector measurement of fast, 25:56891
NOVO VORONEZH POWER REACTOR, UNIT 2
neutron flux in, threshold detector measurement of fast, 25:56891
NOZZLES
stresses in reactor pressure vessel, effects of attachment configuration on, 25:57092(R) (ORNL-TM-3483)
testing of pressure vessel, ultrasonic method for, 25:54925
NUCLEAR AUXILIARY POWER SYSTEMS
design of plutonium-238-fueled, for implantable circulatory support system, 25:54910(P)
design parameters of heat pipe cooled thermionic fast reactor, calculations for optimum economic, 25:57134
mass of space, effects of radiator mass on, 25:54916
NUCLEAR CHEMISTRY
research progress in, 25:54587(R) (AECL-3909)
NUCLEAR EMULSIONS
cosmic particle reactions with nuclei above 100 GeV in, production of low-energy protons in, (E), 25:56429 (INP-754)
cosmic-ray tracks in, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
development of doped silver chloride, for detection of ionizing particles, 25:54996 (IKF-28)
meson (π) reactions with nuclei at 60 GeV in, production of low-energy protons in, (E), 25:56429 (INP-754)
particle tracks in, logic unit of PFIL 70 photometer for measuring, 25:55045 (LUIP-CR-71-2)
particle tracks in, television system for scanning, 25:55021

XUM

performance of polymer gelatin, for fast neutron dosimetry, 25:55057
sensitivity for fast neutrons, effect of stopping power on threshold, 25:55022
use for detection of alpha particles in bone marrow and blood of miners, 25:55236
NUCLEAR EXPLOSIONS
effects of, tests for determining performance of equipment for measuring, 25:54993 (AD-720974)
peaceful uses of, review of research on, 25:54830
uses of, review on industrial, 25:54816 (ORNL-4682, pp 182-6)
NUCLEAR EXPLOSIONS, ATMOSPHERIC
effect on kinetics of ions in nighttime ionospheric D region, (E), 25:56010
effects on mortality of man exposed in utero in Hiroshima and Nagasaki, long-term, 25:55307
fireballs from, effects of atmospheric particles on, (T), 25:54815 (AD-722031)
NUCLEAR EXPLOSIONS, UNDERGROUND
conference on peaceful uses of, Vienna, Austria, Jan. 18 to 22, 1971, 25:54818(T) (UCRL-Trans-10543)
effects of Nonique, on surrounding granite, studies of mechanical, 25:54820(T) (UCRL-Trans-10543, pp 4-35)
engineering and scientific uses of, review of, 25:54828
medical planning for experimental, off-site, 25:55249
peaceful uses of contained, USSR program on, 25:54821(T) (UCRL-Trans-10543, pp 36-41)
peaceful uses of, French program on, 25:54819(T) (UCRL-Trans-10543, pp 1-3)
radiation hazards from contained, evaluation of, 25:54823(T) (UCRL-Trans-10543, pp 56-69)
radioactivity from, comparison of US and USSR methods for calculating deposition, diffusion, and transport of, 25:54782 (UCRL-51054)
radiological safety for, off-site planning of, 25:55249
seismic wave propagation from Nonique, in Sahara granite, measurement of, 25:54820(T) (UCRL-Trans-10543, pp 4-35)
seismic waves from, determination of earthquake focal mechanisms from polarization angles of S, 25:54814
uses for petroleum production stimulation, USSR studies on, 25:54822(T) (UCRL-Trans-10543, pp 42-55)
uses of contained, for creating storage cavities in salt deposits, feasibility study of, (E), 25:54824(T) (UCRL-Trans-10543, pp 70-80)
uses of contained, for production stimulation of petroleum, 25:54826(T) (UCRL-Trans-10543, pp 99-116)
uses of contained, for stopping runaway gas and oil wells, 25:54825(T) (UCRL-Trans-10543, pp 81-98)
NUCLEAR MAGNETIC RESONANCE
modulation effects on, study of frequency- and field-, (E/T), 25:56371
theory of radiation detection and double-resonance techniques, 25:56372
NUCLEAR MATERIALS MANAGEMENT
equipment and methods for fuel rods and fabrication waste, nondestructive, 25:55004(R) (WCAP-7562-4)
safeguards system for, at nuclear power plants, role of reactor in, 25:54934 (BNWL-1598)
safeguards systems for, role of burnup calculation technology in, 25:54935 (BNWL-1599)
NUCLEAR MATTER
binding energy of neutron, calculations using Brueckner and variational theories, (T), 25:56867
NUCLEAR MODELS
collective, formulation for odd--odd deformed nuclei, 25:56812 (COO-1120-124)
Fermi gas, lectures on μ capture by nuclei in, (T), 25:56809 (CERN-71-14, pp 67-99)
Nilsson, effect of hexadecapole deformation on ΔN = 2 crossing in, (T), 25:56858
shell, Lanczos method for calculations in, (T), 25:56865
shell, lectures on μ capture by nuclei in, (T), 25:56809 (CERN-71-14, pp 67-99)
shell, systems approach to, 25:56866
NUCLEAR PARTICLES
detection of, development of doped silver chloride detectors for, 25:54996 (IKF-28)
NUCLEAR PHYSICS
book: Advances in Nuclear Physics. Volume 3, 25:56871
book: Nuclear Physics. Volume II. Interactions of Radiation and Matter Book 2, 25:56845
research at Oregon State University, 25:56689 (RLO-1062-711)
research at University of North Carolina April 1 to June 30, 1971, 25:56748(R) (ORO-2408-45)
NUCLEAR POWER PLANTS
development in France, review of, 25:57002
development in U. S., analysis of optimum economic, 25:57062 (ORNL-4682, pp 240-1)
development of, international cooperation in, 25:57006
development of, international cooperation in, 25:56983 (NP-18992)
effects on krypton-85 content in global atmosphere, 25:54781(T) (JPRS-53174)
environmental effects of, 25:56983 (NP-18992)
environmental effects of, estimate of potential, 25:57098
piping systems for, analysis of earthquake- and thermal-induced stresses in, (E/T), 25:54850
radiation monitoring in environment of, design and performance of amphibious detection system for in situ γ, 25:55239
radioactive effluent from, evaluation of hazards to human population from, 25:55347
radioactivity monitoring in environment of, consideration of ecological factors in developing program for, 25:55239
radioactivity release to environment from, estimation of effects on background radiation levels of long-term, 25:55200
requirements in Germany, projections of, 25:57005
siting of, geologic and seismic factors in, 25:54777
siting of, interpretation of emergency radiation doses to man used as guidelines for, 25:55242
systems analysis of, 25:54396 (ORNL-4682, pp 242-9)
NUCLEAR REACTIONS
conference on, 25:56821 (LYCEN-7104)
description of quasielastic scattering, on light nuclei, 25:56830 (LYCEN-7104, S14.1-18)
isovector excitations in photon-induced, (T), 25:56827 (LYCEN-7104, S8.1-10)
particle production in, methods for calculation of high-energy, (T), 25:56844
properties of single-nucleon transfer, on deformed nuclei, 25:56875
properties of transfer, methods for analysis of, 25:56823 (LYCEN-7104, C3.1-40)
research at Lyon Institute of Nuclear Physics in 1970, 25:56742(R) (LYCEN-7101)
research on polarized proton-induced, at Saclay, 25:56688 (LYCEN-7104, S6.1-2)
theory of nucleus--nucleus, Pauli principle in, 25:56829 (LYCEN-7104, S12.1-4)
NUCLEAR REACTIONS (DIRECT)
cross sections for summed inelastic and quasi-elastic scattering of medium- and high-energy electrons and protons, (T), 25:56849
Feynman diagrams for, unified treatment of nonrelativistic, (T), 25:56831 (LYCEN-7104, S18.1-18)
heavy-particle stripping in, PWBA calculations of differential cross sections for, (T), 25:56863
mechanisms in, use of triangle diagrams for internal bremsstrahlung for identification of, (T), 25:56864
stripping, diffraction analysis of angular distributions from (d,p), (T), 25:56847
NUCLEAR STRUCTURE
calculation for ground state properties of spherically symmetric nuclei using modified delta interaction, 25:56840
calculation of shell-model reaction matrix elements in Z = 28 region, using Reid and Yale potentials, (T), 25:56857
calculations for single-particle states in A =177 region using Woods--Saxon potential, (T), 25:56837(T) (UCRL-Trans-10544)
calculations for spherical even--even nuclei including anharmonic effects, 25:56842
configurations in, symmetry for highly restricted partitions and angular-momentum states of equivalent-particle, 25:56848
group symmetries for, lectures on, (T), 25:56838 (UR-875-350)
vibrational states of spherical nuclei, description of static quadrupole moments using self-consistent cranking approximation, 25:56860
NUCLEAR THEORY
boson expansion method in, treatment including Pauli principle, 25:56843
cluster expansion method for correlated wave functions, 25:56850
electromagnetic operator in, test for isotensor component of, 25:56839
generator coordinate formalism in, application to nuclear collisions, (T), 25:56825 (LYCEN-7104, C6.1-12)
Hamiltonian function for heavy nuclei in, structure of weak-interaction, 25:56768
mass formula in, energy-density functional form for, 25:56853
nuclear compressibility in, phenomenological description for, 25:56846
nucleon--nucleon correlations in, analysis of short-range, 25:56824 (LYCEN-7104, C4.1-17)
spectroscopic calculations in, formalism for, 25:56874
statistical description of nuclear surface, 25:56841
three-body problem in, analysis of singular-core interactions in boundary-condition model, 25:56851
three-body problem in, treatment using potential concept, 25:56872
NUCLEAR WEAPONS
control of, history and principles of treaties for, 25:54829
NUCLEI
alpha inelastic scattering by, role of isoscalar transition operator in, (T), 25:56876
alpha reactions (α,d) and (α,p) at 25 MeV with light, distorted-wave analysis of differential cross sections for, (T), 25:56677
cosmic particle reactions above 100 GeV in emulsions, production of low-energy protons in, (E), 25:56429 (INP-754)
deuteron reactions (d,p) at 7 to 21.4 MeV with A = 10 to

XUM

91, diffraction analysis of angular distributions from, (T), 25:56847
deuteron reactions (d,p) with, analysis of multi-channel features of, (T), 25:56817 (JINR-E4-5836)
deuteron reactions with, method for treatment of Pauli principle in breakup, (T), 25:56833 (ORO-3765-31)
electron density near, evaluation of, (T), 25:56370
electron scattering by, analysis for isotensor components in dipole sum rules for, (T), 25:56868
electron scattering by, effect of short-range correlations in, (T), 25:56824 (LYCEN-7104, C4.1-17)
electron scattering by, effects of nuclear structure on bremsstrahlung produced in polarized and unpolarized, (T), 25:56862
energy level radiation widths at excitation energies of the order of neutron binding energy, mean, (T), 25:56836(T) (UCRL-Trans-10542)
energy level transitions in, pair spectrometer for measuring multipolarities for, 25:55040 (NP-18994)
energy levels from gamma resonance scattering, resonance parameters for, (E), 25:56782
energy levels of even--even deformed, collective $1^+$, (T), 25:56819 (JINR-P4-5889)
energy levels of even--even, Mariscotti description of ground-state, (T), 25:56813 (COO-1746-57)
energy levels of even--even, table of quasi-ground, quasi-$\beta$, and quasi-$\gamma$ bands for, (E), 25:56651 (INSJ-127)
energy levels of nonaxial, Davydov-model calculations of 9/2, (T), 25:56785
energy levels of, method for calculating energy and spin dependence of density of excited, (T), 25:56835(T) (UCRL-Trans-10540)
energy levels of, reseach on electromagnetic properties of excited, (E/T), 25:56832(R) (NYO-3525-67)
energy-level transitions in deformed, probabilities for E2, (T), 25:56735 (FEI-202)
energy-level transitions in nonaxial, Davydov-model calculations of probabilities for E2, (T), 25:56785
fission of $Z < 84$, research at Western Washington State College, 1970 to 1971, (E), 25:56750(R) (RLO-1759-25)
masses of neutron-rich, (T), 25:55678
meson ($\mu^-$) capture by, effect of short-range correlation in, (T), 25:56824 (LYCEN-7104, C4.1-17)
meson ($\mu^-$) capture by, lectures on models for, (T), 25:56809 (CERN-71-14, pp 67-99)
meson ($\pi$) absorption by light, lectures on, (T), 25:56810 (CERN-71-14, pp 155-228)
meson ($\pi$) elastic scattering by, lectures on forward dispersion relations for, (T), 25:56810 (CERN-71-14, pp 155-228)
meson ($\pi$) reactions at 60 GeV in emulsions, production of low-energy protons in, (E), 25:56429 (INP-754)
meson ($\pi$) reactions at low and medium energies, lectures on, (T), 25:56807 (CERN-71-14)
meson ($\pi$) reactions with, lectures on soft pion theorems for, (T), 25:56808 (CERN-71-14, pp 1-65)
meson ($\pi$) scattering by, review lectures on nonvanishing pions in, (T), 25:56811 (CERN-71-14, pp 289-378)
meson ($\pi^-$) reactions ($\pi^-$,eta) at 7.82 GeV/c, differential cross sections for, (E), 25:56432
meson ($\pi^-$) reactions ($\pi^-$,$\pi^0$) at 7.82 GeV/c, differential cross sections for, (E), 25:56432
meson($\pi$) interactions with, survey of research on, 25:56873
mesons ($\mu$) capture by, second-class G-parity properties in, (T), 25:56854
neutron capture at 10 to 100 keV, compilation of gamma spectra and intensities for, (E), 25:56655 (ORNL-TM-3379)
neutron capture by, correlation between reduced neutron and radiative widths for resonance, 25:56818 (JINR-E4-5880)
neutron reactions (n,$\alpha$) and (n,p) near 14 MeV, statistical analysis of shell effects in, (T), 25:56869
neutron reactions in unresolved resonance region, method for calculation of cross sections for, (T), 25:56870
neutron resonance cross sections at low energies, computer program for, (T), 25:56814 (COO-2022-7)
nucleon elastic scattering by, computer program for optical-model analysis of, 25:56815 (INP-741)
nucleon inelastic scattering by, analysis using spin-orbit interaction, (T), 25:56826 (LYCEN-7104, C7.1-36)
nucleon scattering by, microscopic description using optical model, (T), 25:56822 (LYCEN-7104, C1.1-13)
observations of solar low-energy, during 1967 at widely separated locations, (E), 25:55956
photon reactions in Coulomb field at high energies, hadron production in, 25:56457
photon reactions with intermediate, cross sections for, (E), 25:56782
production and properties of low-energy, from proton inelastic reactions with $12 < Z < 83$ nuclei at 0.010 to 5 GeV, (T), 25:56522(T) (ORNL-tr-2520)
proton inelastic scattering by s-d shell, analysis of deformation in polarized, (T), 25:56828 (LYCEN-7104, S9.1-7)
proton reactions with $12 < Z < 83$, at 0.010 to 5 GeV, properties of low-energy nuclei from, (T), 25:56522(T) (ORNL-tr-2520)
research at Lund Univ., 1970, (E), 25:56643(R) (NP-19018)
scattering by light nuclei, analysis using generator coordinate formalism, (T), 25:56825 (LYCEN-7104, C6.1-12)

NUCLEIC ACID
radiolysis of solid, effects of electron dislocation and molecular weight on resistance to, 25:54636

NUCLEIC ACID, DEOXYRIBO-
isolation of high molecular weight, from cultured neural tumor cells, 25:57286 (UCLA-12-832)
labeling rat liver cell and spleen lymphocyte, with tritium-labeled thymidine, 25:55110(R) (TID-25801)
radiation effects on chemical, molecular biology, and physical processes in, mechanism of uv, 25:55136
radiation effects on single- and double-strand breaks in, mechanism of uv, 25:55308
radiation effects on structure of yeast, in relation to genetic damage, uv, 25:55183
radiation effects on synthesis of mouse kidney cell, $\gamma$ and uv, 25:55129
radiation effects on thymidine incorporation in cultured rat thymus cell, factors affecting x, 25:55127
radioinduced single-strand breaks in double-stranded circular, effects of dose on, 25:55133
radiolysis of solid, effects of electron dislocation and molecular weight on resistance to, 25:54636
role of cross links of, in inactivation of bacteriophage lambda, F' episomes, and Escherichia coli by combined psoralen and uv radiation, 25:55361

NUCLEIC ACID, RIBO-
radiation effects on synthesis of mouse kidney cell, $\gamma$ and uv, 25:55129
radiation effects on synthesis of ribosomal precursor of, in yeast, uv, 25:55138

NUCLEOGENESIS
history of galactic, (T), 25:55781
xenon isotope production in solar system, (E/T), 25:55670

NUCLEONS
binding to nucleons in e + d + e + p + n interactions, multi-pion exchange contribution to, (T), 25:56527
interactions e + N at very low energies, review of $\pi^+$ and $\pi^0$ production in, (E/T), 25:56404 (CONF-701121-8)
interactions $\gamma$ + N + $\pi$(eta) + N, Regge absorption model for forward, (T), 25:56452 (CALT-68-313)
interactions K + N at 2 to 20 GeV/c, behavior of diffraction maximum in inelastic, (T), 25:56504
interactions K + N, particle exchange and Regge-pole exchange in Veneziano model for, 25:56518
interactions N + d, dispersion theoretical calculation of vertex function for, (T), 25:56527
interactions N + N + d + boson, model of intermediate nucleon-isobar decay for, 25:56525
interactions N + N + N + N + $\pi$, lectures on kinematics and phenomenological and dynamical models for, (T), 25:56810 (CERN-71-14, pp 155-228)
interactions N + N at low energy, analysis of $^1S_0$ scattering lengths and effective ranges for, 25:56529
interactions N + N below 3 GeV, one-boson-exchange models for, 25:56532
interactions N + N, dual quark--parton model for, 25:56481
interactions N + N, singlet effective-range parameters of Mongan separable potential for, (T), 25:56859
interactions $\nu$ + N, second-class G-parity properties in elastic scattering, (T), 25:56854
interactions $\pi$ + N + sigma + N, helicity conservation in, 25:56517
interactions $\pi$ + N + vector meson + N, helicity conservation in, 25:56517
interactions $\pi$ + N at 2 to 20 GeV/c, behavior of diffraction maximum in inelastic, (T), 25:56504
interactions $\pi$ + N at 5.9 to 18.2 GeV/c, phenomenology of complex-spin negative-mass-squared resonance tachyons in angular distributions of charge-exchange, (T), 25:56500 (ORO-3992-18)
interactions $\pi$ + N at high energies, total effective cross sections for acausal, (T), 25:56502
interactions $\pi$ + N at low and intermediate energies, Regge poles for, (T), 25:56497 (FRNC-TH-33)
interactions $\pi$ + N at low and medium energies, lectures on, (T), 25:56807 (CERN-71-14)
interactions $\pi$ + N at low energies, lectures on, (T), 25:56496 (CERN-71-14, pp 101-54)
interactions $\pi$ + N, coupling constant from current-algebra sum rules and Veneziano amplitude for, 25:56516
interactions $\pi$ + N, dual quark--parton model for, 25:56481
interactions $\pi$ + N, three-channel model for $P_{11}$, 25:56519
production in four-prong $\pi^+$ + p interactions at 8 GeV/c in hydrogen bubble chamber, angular and momentum distributions for, (E), 25:56428 (IFA-HE-75)
scattering by nuclei, analysis using spin-orbit interaction, (T), 25:56826 (LYCEN-7104, C7.1-36)
scattering by nuclei, computer program for optical-model analysis of elastic, 25:56815 (INP-741)
scattering by nuclei, microscopic description using optical model, (T), 25:56822 (LYCEN-7104, C1.1-13)
structure of, meson momentum distribution in, 25:56512

XUM

NUCLEOTIDES
electron reactions with poly-, effects of secondary structure on hydrated, 25:55131

O

OBRIGHEIM POWER REACTOR (GERMANY)
pressure vessel for, ultrasonic testing for defects in, 25:56892
OBSIDIAN
age of Japanese, fission track method for estimation of, 25:54773
uranium content of Japanese, measurement of, 25:54773
OCEANOGRAPHY
activation analysis in, review of, 25:54481
OCONEE POWER REACTOR, UNIT 1
control rod drive for, preoperational testing damage repair for, 25:56915 (DOCKET-50269-37)
OCTANE
radiation effects on sorption on magnesium sulfate incorporating sulfur-35, gas chromatographic studies of, 25:54603
OIL SHALES
fracture by nuclear explosions, 25:54816 (ORNL-4682, pp 182-6)
ORES
analysis for chromium for process and quality control during beneficiation by neutron activation, 25:54507
analysis for gold by neutron activation of lead alloy obtained in cupel assay, 25:54521
analysis of platinum-bearing, for noble metals by neutron activation and γ spectrometry, 25:54487
analysis of slurries of, by neutron activation, irradiator for on-stream, 25:54506
analysis of terrestrial, for noble metals by neutron activation, 25:54484
analysis of, gamma radiometric equipment for field, 25:55066
density measurement of, gamma radiometric equipment for field, 25:55066
ORGANIC ACIDS
radiolysis of, rate constants for hydrogen atom reactions following electron, 25:55132
ORGANIC COMPOUNDS
radiation effects on luminescence of, 25:54598 (CONF-700652-(Vol.2), pp 423-75)
radioinduced preparation of, in liquid nonaqueous systems, review of, 25:54617
radiolysis of aqueous solutions of, reactions of hydrated electrons and hydroxyl radicals in pulse, 25:54632 (CONF-700652-(Vol.3), pp 649-92)
radiolysis of single crystals of, effects of Zeeman terms on hyperfine structure of ESR spectra following, 25:54641
radiolysis of solid, effects of electron dislocation and molecular dimensions on, 25:54635
radiolysis of solid, role of tunnel effects in reactions after, 25:54596
radiolysis of sulfur-containing, rate constants for hydrogen atom reactions following electron, 25:55132
radiolysis of, excited states and intermediates in, 25:54626 (CONF-700652-(Vol.1), pp 139-219)
reactions with hydrated electrons, 25:54631 (CONF-700652-(Vol.3), pp 601-48)
ORGANISMS
radioisotope accumulation by aquatic, effects of stable element content on, 25:55158
radioisotope uptake by marine, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
ORGANS
radiation dose to human, terminology for expressing, 25:55251
ORNL HIGH-FLUX ISOTOPE REACTOR
maintenance during April through June 1971, 25:57120(R) (ORNL-TM-3569)
operation during April through June 1971, 25:57120(R) (ORNL-TM-3569)
OSMIUM
casting by levitation melting using magnetic field, 25:55424
conductivity at 80 to 1900°K, electric and thermal, 25:55523
determination in geochemical samples by neutron activation, 25:54484
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in presence of ruthenium, spectrophotometric, 25:54412
determination in silicate rocks and rock-forming minerals by neutron activation and radiochemical separations, 25:54486
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
separation from rhenium by solvent extraction, 25:54401
OSMIUM ALLOYS AND SYSTEMS
Os--Pr-base, phase diagram of, 25:55567
Os--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Os--Re-base, sound velocity at room temperature in, 25:55078(R) (NYO-3906-5)
OSMIUM ISOTOPES Os-191
beta decay of, gamma--x-ray angular correlation from, (E), 25:56755
OSTEICHTHYES
plutonium-239 content of Atlantic Ocean, 25:55161
Salmo gairdneri, cesium-137 uptake by mountain lake, role of bottom sediment in pathway for, 25:55159
OTTO HAHN REACTOR
operation during 1970, 25:57139
OVARIES
radioinduced sterility of developing beagle dog and monkey, following exposure in utero, effects of dose fractionation on x, 25:55319 (UCD-472-118)
OXIDES
diffusion in, data tabulations on, 25:55509
diffusion on sodium chloride surface, 25:54758 (ORNL-4717, pp 109-15)
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
thermodynamic potentials and enthalpies of, calculations of standard, 25:54586
OXYCHLORODURANATES
properties of pyridinium, 25:54541
OXYGEN
abundance in primary cosmic radiation, (E), 25:55911
abundance in solar atmosphere, (E/T), 25:55750
content at 100 to 200 km of atomic and molecular, diurnal variations of, (E), 25:55987
determination by charged particle activation methods, optimum irradiation conditions and nuclear interferences for, 25:54520
determination in aluminum electrolytic bath by 14-MeV neutron activation simultaneously with aluminum and fluorine, 25:54503
determination in germanium and silicon by helium-3 activation, 25:54502
determination in liquid potassium or sodium by zirconium gettering-vacuum-fusion method, 25:54418
determination in liquid sodium, development of meter for, 25:55379(R) (WARD-4210-T-1-2)
determination in molybdenum using exhalograph EAO-201, 25:54426
determination in semiconductor silicon by alpha or proton activation, 25:54528
diffusion in alpha-phase zirconium following deformation, mechanisms of, 25:55551
diffusion in yttrium at 20 to 300°C, effects of dislocations on, 25:55461
effects of additions of, on tensile properties of titanium--vanadium and aluminum--titanium--vanadium alloys, 25:55471
effects on carbon dioxide sorption on graphite, 25:55634
effects on corrosion of niobium by sodium at 600°C, 25:55386
effects on ignition of plutonium in inert atmospheres, 25:54946 (CONF-710401-, pp 106-17)
effects on lithium--defect interactions in electron-irradiated silicon, 25:56310
effects on reactions of recoil chlorine-38 in neutron-irradiated chloromethane, 25:54681
effects on yields from radiolysis of butane, 25:54659
helium-ion range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
infrared spectra in aurora, enhancement and excitation mechanisms of 1.27-μ, (E/T), 25:56018
mass transfer in aqueous solutions and slurries, use of radiokrypton as indicator for, 25:54903
neutron cross sections for, transmission of fission spectra through thick samples for evaluation of minima in total, (E), 25:56650 (COO-2049-5)
proton range at 0.2 to 2.0 MeV in, as function of energy, (E), 25:56276
proton reactions at 20 to 120 keV with molecular, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
reactions with single and polycrystals of tantalum--tungsten alloys at 850 to 1100°C, 25:55385
reactions with tungsten surfaces at low pressures and high temperatures, (T), 25:55396
solubility limits in niobium--zirconium and niobium--hafnium alloys, lattice parameter measurements of, 25:55568
sorption by zirconium at low pressures and high temperatures, 25:55463
spectral excitation of 1304-A resonance radiation in dayglow, photoelectron-impact, (E), 25:56032
spectral intensity in night airglow, covariation of nonauroral O II Herzberg I band and O I 5577-A, (E), 25:56046
stopping of nuclei of, in nuclear emulsion, mass resolution of, (E/T), 25:55894 (LUIP-CR-71-4)
OXYGEN IONS
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
reactions with argon, helium, and nitrogen at 10 to 40 MeV, cross sections for electron capture in, 25:55869
reactions with argon, helium, and nitrogen at 7 to 40 MeV, cross sections for electron capture and loss in, (E), 25:55870
x-ray scattering by three- and four-electron, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)

XUM

OXYGEN IONS (O⁻)
reactions with sodium ions ($Na^+$) at 0.1 to 7 eV, merged-beam measurement of total cross sections for charge exchange in, 25:55859
OXYGEN ISOTOPES O-15
production in alpha reactions with aluminum and silicon at 70 to 160 MeV, cross sections and fission mechanism for, (E/T), 25:56685 (FRNC-TH-48)
OXYGEN ISOTOPES O-16
alpha reactions (α,2α) at 46 and 52.5 MeV, analysis using impulse approximation, (E/T), 25:56674
alpha reactions (α,Be-7) and (α,Li-6) at 42 MeV, cross sections for, (E), 25:56659
alpha reactions (α,γ) at 850 to 2490 keV, astrophysical implications of, (E/T), 25:55704
deuteron reactions (d,α) at 1.8 to 14 MeV, analysis for reaction mechanism in isospin-forbidden, (E/T), 25:56667
deuteron reactions with, Pauli breakup cross section for, (T), 25:56833 (ORO-3765-31)
electron inelastic scattering by, form-factor calculations using isotensor dipole sum rules, (T), 25:56868
energy levels from alpha resonances in carbon-12, partial and total widths for, (E), 25:56675
energy levels from carbon-12 alpha resonances, spin--parity assignments and widths for, (E), 25:56681
energy levels of, Brueckner--Hartree--Fock calculations using density-dependent effective interactions in, (T), 25:56834 (ORO-3765-32)
exchange between carbon dioxide and water, effects of amines and inorganic salts on kinetics of, 25:54549
form factor of, liquid-drop-model calculation including quadrupole surface oscillations of elastic, (T), 25:56668
meson ($K^-$) absorption in, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
meson (π) absorption by, analysis of mechanism in, 25:56653 (LYCEN-7104, S4.1-10)
meson reactions ($\mu^-,n\nu$) with, neutron spectrum and angular distribution asymmetry in, (T), 25:56820 (JINR-P4-5997)
meson reactions ($\mu^-,\nu$) with, lectures on elementary particle method for partial capture rate for, (T), 25:56809 (CERN-71-14, pp 67-99)
oxygen-16 elastic scattering at 13.6 to 23.7 MeV, cross section for, (E), 25:56657
oxygen-16 reactions at 13.6 to 23.7 MeV, cross sections, γ spectra, and particle angular distributions for, (E), 25:56657
photon reactions (γ,n) with, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
photon reactions with, model analysis of, (T), 25:56661
proton elastic scattering by, phase-shift analysis of polarization effects in, (T), 25:56678
reactions (O-16, pnγ) with phosphorus-31 at 34 and 36 MeV, p-γ and γ-γ coincidence spectra from, (E), 25:56693
scattering by nuclei in wide energy range, phase shift analysis of angular distributions for elastic, (E), 25:56740 (JINR-P7-5884)
OXYGEN ISOTOPES O-17
energy levels from carbon-12 (Li-7,d) reactions, spin assignments for, (E), 25:56663
energy levels from neon-20 (n,α) reactions, (E), 25:56717
OXYGEN ISOTOPES O-18
alpha inelastic scattering at 13.5 to 17.0 MeV, alpha and gamma spectra and α--γ angular correlations in, (E), 25:56672
alpha reactions (α, He-6) at 42 MeV, angular distributions for, (E), 25:56665
deuteron reactions (d,He-3) at 52 MeV, differential cross sections and spectra from, (E), 25:56662
energy levels from alpha inelastic scattering, spin--parity assignments for, (E), 25:56672
energy levels of, shell-model calculation with reaction matrices and pairing correlations, (T), 25:56666
energy-level transitions from alpha inelastic scattering, branching and multipole mixing ratios for, (E), 25:56672
exchange between carbon dioxide and water, effects of amines and inorganic salts on kinetics of, 25:54549
exchange between perrhenate and water in methanol, kinetics of, 25:54574
exchange between water and lithium bromates, nickel nitrates, or sodium selenates at 100 to 170°C, 25:54553
helium-3 reactions (He-3,p) at 18 MeV, angular distributions for, (E), 25:56716
proton reactions (p,α) at 500 to 750 keV, excitation function for, (E), 25:55384
radiation effects on potassium salts in presence of, production of oxygen-18-labeled products from, 25:54633(R) (ORO-3660-4)
OXYGEN SYSTEMS
C--N--O--Pu--U, preparation of carbides, carbonitrides, and hypostoichiometric oxides in, 25:55594 (ORNL-4682, pp 218-28)
CO--O, radiolysis of, electron pulse, 25:54587(R) (AECL-3909)
Nb-base--O--Ti, structure and tensile properties of, 25:55521
Nb-base--O--Zr, structure and tensile properties of, 25:55522
OYSTER CREEK POWER REACTOR, UNIT 1
emergency core cooling system for, effects of fuel element loading errors on performance calculations for, 25:56937 (DOCKET-50219-145)
instrumentation for, replacement procedures for local power range monitor, 25:56900 (DOCKET-50219-147)
operations during January to June 1971, 25:56899 (DOCKET-50219-146)

## P

PACIFIC OCEAN
protactinium-231 distribution in, 25:54810
thorium-230 distribution in, 25:54810
PACKED COLUMNS
dispersion in, for contacting liquids with high density difference, axial, 25:54719 (ORNL-4682, pp 229-39)
PAINTS
radiation resistance of selected, evaluation of, 25:54396 (ORNL-4682, pp 242-9)
PAIR PRODUCTION
cross sections for incident photons of 1.073 to 2.615 MeV, effects of atomic-electron screening on, (T), 25:56275
PALISADES POWER REACTOR
control rod drives for, effects of epoxy deposits on test failure of, 25:56911 (DOCKET-50255-54)
cooling system for, description of unintentional pressure reduction in, 25:56910 (DOCKET-50255-53)
PALLADIUM
determination in fission product mixtures by ion exchange and polarography or β counting, 25:54449
determination in geochemical samples by neutron activation, 25:54484
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in lead beads, matte, and platinum-bearing ores by neutron activation and γ spectrometry, 25:54487
diffusion of carbon in solid solutions of, 25:55479
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
separation from other metal ions on titanium tungstate papers by electrochromatography, 25:54744
separation from rhenium by solvent extraction, 25:54401
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
PALLADIUM ALLOYS AND SYSTEMS
Al--Pd, optical constants for β-phase PdAl intermetallic compound in, 25:56352
PALLADIUM ISOTOPES Pd-103
distribution in rats following introduction into thigh muscle, effects of carrier on, 25:55112
PALLADIUM ISOTOPES Pd-107
hazards from, evaluation of radiological, 25:54887(R) (BNWL-1308-6)
PANCREAS
scanning of human, diagnostic value of, 25:55280
scintiscanning of human, effectiveness of selenium-75-labeled selenomethionine for, 25:55271(T) (LB/G-3059)
PARTICLE TRACKS
analysis of spark chamber, stringing method for, 25:55048
measurement of bubble and spark chamber, automatic, 25:55047
structure in liquids and solids, models for, 25:54589 (CONF-700652-(Vol.1), pp 19-49)
PARTICLES
counting of radioisotope-labeled 10 μ diameter, Coulter type instrument for, 25:55090
effects of atmospheric meteoritic and sulfate, on nuclear fireball emissions, (T), 25:54815 (AD-722031)
PEGMATITES
processing of, leaching studies for, 25:54752
PENICILLAMINE
hydrochloride, radiation effects on single crystals of, ESR studies of x, 25:54605
PENTANE
I--pentane, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--pentane, radiolysis of, distribution of iodine-131-labeled products from, 25:54705
PENTANE, 3-METHYL-
radiation effects on glasses of, reactions and identification of free radicals produced by γ and uv, 25:54648
2,4-PENTANEDIONE
effects on separation of rare earths from aqueous solutions by solvent extraction using TTA, synergistic, 25:54731
1-PENTENE
I--1-pentene, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--1-pentene, radiolysis of, distribution of iodine-131-labeled products from, 25:54705

XUM

2-PENTENE
I--2-pentene, neutron reactions (n,γ) with iodine-127 in, yields and product distribution from, 25:54705
I--2-pentene, radiolysis of, distribution of iodine-131-labeled products from, 25:54705
PEPTIDES
preparation of tritium-labeled, development of catalytic method for, 25:54693(P)
PERCHLORIC ACID
reactions with uranyl ions, disproportionation and ECE kinetics in reduction, 25:54585
PERSONNEL
alpha detection in blood and bone marrow of mining, using nuclear emulsions, 25:55236
decontamination of, design of Mound Laboratory facility for medical, 25:54963 (CONF-710401-, pp 311-15)
qualifications for health and safety support in plutonium facility, 25:55204 (CONF-710401-, pp 267-79)
radiation dose to, from radioactive objects, method for estimation of, 25:54987
radioinduced chromosome aberrations in blood cells of industrial, γ, 25:55163
radioisotope distribution in tissues of uranium mining, lead-210 and polonium-210, 25:55117
PERTURBATION THEORY
error bounds for nth-order energies and wave functions in Rayleigh--Schroedinger, 25:55891
five-point function and singularity manifolds in, Feynman graph of, 25:56551
PETROLEUM
cesium-137 content of, following production stimulation by contained nuclear explosion, (E/T), 25:54826(T) (UCRL-Trans-10543, pp 99-116)
flow from runaway oil field wells, use of contained nuclear explosions for stopping, 25:54825(T) (UCRL-Trans-10543, pp 81-98)
production stimulation by contained nuclear explosion, calculation of contamination from, 25:54826(T) (UCRL-Trans-10543, pp 99-116)
production stimulation using underground nuclear explosions, radiation hazards from, 25:54823(T) (UCRL-Trans-10543, pp 56-69)
production stimulation using underground nuclear explosions, USSR studies on, 25:54822(T) (UCRL-Trans-10543, pp 42-55)
recovery by fracturing oil shales by nuclear explosions, 25:54816 (ORNL-4682, pp 182-6)
strontium-89 content of, following production stimulation by contained nuclear explosion, (E/T), 25:54826(T) (UCRL-Trans-10543, pp 99-116)
PHAEOPHYTA
radioisotope content of Pacific, in environs of reactors, 25:55151 (CONF-710817-1)
PHANTOMS
radiation dose distribution in tissue-equivalent, calculation of high energy electron, 25:55214
radiation dose distribution in water, isodose curves for 5 to 15 MeV positron, 25:55210
radiation dose distributions in rabbit and rat, following exposure to monoenergetic neutron beams, correlation of LET distributions with γ, neutron, and recoil ion, 25:55229
radiation dose to bone and muscle, use of tissue-equivalent organic scintillators in measurement of x, 25:55213
radiation dose to tissue equivalent, Monte Carlo calculations of absorbed and equivalent 592-MeV proton, 25:55216
radiation dose to tissue equivalent, Monte Carlo calculations of absorbed and equivalent 580-MeV neutron, 25:55216
radiation dosimetry in lucite, performance of thermoluminescent dosimeters for fast neutron, 25:55319 (UCD-472-118)
radiation dosimetry in tissue-equivalent, effects of energy spectra and dosimeter location on fast neutron, 25:55232
use with aluminum phosphate dosimeters for evaluation of gamma dose to man accidentally exposed at irradiation facilities, 25:55235
PHARMACEUTICALS
production of radioisotope-labeled, conference on, 25:55255
PHENOL, 2,4-DINITRO-
effects on recovery of Escherichia coli following uv or x irradiation or nitrogen mustard treatment, 25:55355
PHONONS
cross section in thermal neutron scattering by crystal of n-, use of zero Placzek moment to calculate, (T), 25:56340(T) (AERE-Trans-1137)
PHOSPHATES
diffusion in, data tabulations on, 25:55509
PHOSPHONIC ACID, BUTYL-, DIBUTYL ESTER
solvent properties for actinides and lanthanides in reprocessing of LMFBR fuel, 25:54706 (BNWL-SA-3345)
PHOSPHORIC ACID, DIETHYL ESTER
silver salt, crystal structure of, x-ray diffraction studies of, 25:57291 (UR-49-1515)
PHOSPHORIC ACID, TRIBUTYL ESTER
solvent properties for plutonium, 25:54713 (ORNL-4682, pp 39-79)
dodecane--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644
kerosene--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644
mepasine--TBP, radiolysis of, effects of nitric acid on reactor, 25:54644
PHOSPHORODITHIOIC ACID, DIBENZYL ESTER
potassium salt, crystal structure of, x-ray diffraction studies of, 25:57291 (UR-49-1515)
PHOSPHOROTHIOIC ACID, S-(2-AMINOETHYL) ESTER
effects on sensitivity of guinea pigs and mice to transverse acceleration, 25:55264
PHOSPHOROTHIOIC ACID, S-2-(3-AMINOPROPYLAMINO)ETHYL ESTER
radioprotective effects on gastrointestinal tract of mice, effects of strain on x, 25:55259
PHOSPHORS
purification of rare earth, by precipitation of cerium and thorium impurities as iodates, 25:54749(P)
use of tissue-equivalent organic, in measurement of x radiation absorbed dose to bones and muscles, 25:55213
PHOSPHORUS
content of diseased and normal human bones, neutron activation determination of, 25:55106
determination in calcite and dolomite by neutron activation and γ spectrometry, 25:54497
effects of residual, on neutron embrittlement of Types A302B and A533B steel, 25:55577 (NRL-7310)
PHOSPHORUS ISOTOPES P-31
helium-3 reactions (He-3,pγ) at 12 and 13 MeV, p-γ coincidence spectra from, (E), 25:56715
oxygen-16 reactions (O-16,pnγ) at 34 and 36 MeV, p-γ and γ-γ coincidence spectra from, (E), 25:56693
PHOSPHORUS ISOTOPES P-32
accumulation by marine phytoplankton, mechanisms of, 25:55154
determination in water by Cherenkov radiation counting using liquid scintillation spectrometer, 25:54438
effects on incidence of osteosarcomas in rats following intraperitoneal injection, 25:55335
effects on thymineless death and liquid holding recovery in Escherichia coli, synergistic effects of uv radiation on, 25:55359
use as tracer for measuring velocity of moving thread, 25:54900
use with Si(Li) detectors for diagnosis of skin neoplasms, 25:55273
PHOSPHORUS OXIDES
$P_2O_5$--$ThO_2$--$ZrO_2$, phase studies on subsolidus equilibrium in, 25:55638
PHOSPHORYL CHLORIDES
radiolysis of, ESR spectra of $POCl_3^-$ radical anion from γ, 25:54667
PHOTOCONDUCTIVITY
measurement during and after ionizing radiation pulses, technique for routine, 25:55079 (SC-DC-713696)
PHOTOGRAPHY
method for high-speed, for studying post-burnout two-phase flow, 25:54875 (RT/ING-(71)8)
PHOTOMETERS
circuits for PFIL 70, for nuclear emulsion particle track analysis, logic, 25:55045 (LUIP-CR-71-2)
PHOTOMULTIPLIER TUBES
temperature effects on scintillation detector, at 20 to 70°C, 25:55025
PHOTON BEAMS
energy determination above 5 GeV, method for, 25:56609(P)
PHOTONS
effects on heating of plane bodies, tables for transient temperatures from, 25:56267
emission of evanescent, by charged particles in vacuum, (T), 25:56392
emission of high-energy, from quasars, (T), 25:55908
interactions γ + e, disturbance of second-order coherence of photon field in quantum electrodynamics for forward, (T), 25:56456
interactions γ + N → π(eta) + N, Regge absorption model for forward, (T), 25:56452 (CALT-68-313)
interactions γ + n → $\pi^0$ + n, Reggeized absorption model fits to, 25:56458
interactions γ + n in e + d interactions at high energies, cross sections for particle production in, (E), 25:56405 (DESY-71/33)
interactions γ + p → eta + p, Reggeized absorption model fits to, 25:56458
interactions γ + p → $\pi^0$ + p, Reggeized absorption model fits to, 25:56458
interactions γ + p at 4 to 36 GeV, quark model for multiple π production in, 25:56514
interactions γ + p in e + d interactions at high energies, cross sections for particle production in, (E), 25:56405 (DESY-71/33)
interactions γ + π → π + γ, epsilonγγ and fγγ coupling constants from finite-energy sum rules for, (T), 25:56463
interactions of, potentials and multipole moments for amplitudes of, (T), 25:56455
interactions of, research at Lund Univ., 1970, (E), 25:56643(R) (NP-19018)
interactions with high-energy cosmic rays, energy-loss mechanisms in, (T), 25:55908
interactions with polarized particles, structure of

amplitude and differential cross sections for, (T), 25:56454
production in n + p interactions at 14.1 MeV, relativistically covariant models for cross sections for, (T), 25:56526
production of heavy, in electromagnetic interactions, indefinite metric for cross sections of, (T), 25:56547 (NYO-1932(2)-200)
reactions (γ,f) with thorium-232 at 90 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
reactions (γ,f) with uranium-238 at 35 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
reactions (γ,r) with A = 25 to 208 nuclei near threshold energies, cross sections for, (E), 25:56702
reactions (γ,n) with calcium-40, carbon-12, fluorine-19, lead-208, and oxygen-16, analysis by Feynman triangle diagrams of fine-structure peaks in cross sections for, (T), 25:56676
reactions with atoms at 1.073 to 2.615 MeV, effects of atomic-electron screening on cross sections for pair production in, (T), 25:56275
reactions with carbon-12 and oxygen-16, model analysis of, (T), 25:56661
reactions with hydrogen atoms, perturbation-theory calculations of bound--bound and bound--free transitions in multi-, 25:55875
reactions with lead-208, analysis using eigenchannel reaction theory and continuum shell model, (T), 25:56800
reactions with nuclei in Coulomb field at high energies, hadron production in coherent, 25:56457
reactions with UN at 0 to 74 eV, optical constants from, (E/T), 25:56345
scattering by plutonium-239, production of spontaneously fissioning isomers in inelastic, (E), 25:56738 (JINR-P15-5959)
transport equation for, non-linear Monte Carlo solution of, 25:57161 (CONF-710302-(Vol.2), pp 794-7)

PHOTOSPHERE
element abundances in, (E/T), 25:55750
spectra of, search for CH+ in, (E), 25:55768

PHTHALOCYANINE
complexes with indium chloride, radiation effects on, Szilard--Chalmers process from neutron, 25:54680

PHYSICS
conference on computational, Culham, England, 7/69, 25:56400
research at Chalk River January 1 to March 31, 1971, 25:56733(R) (AECL-3912)

PHYTOHEMAGGLUTININ
effects on electrophoretic mobility of x-irradiated human lymphocytes, 25:55310

PIGMENTS
extraction from Cyanophycene algae, decolaration by, 25:57236(T) (LA-tr-71-73)

PINCH DEVICES
radiation from fast z-, time--space resolved spectroscopic measurements of, (E), 25:56150 (LGI-70/14/E)
radiation losses from theta, at 100 to 200 A, (E), 25:56149 (IPP-1/108)

PINCH EFFECT
plasma stabilization by force-free magnetic fields in linear, magnetohydrodynamic, (T), 25:56200

PIPES
design criteria for nuclear service, development program for, 25:57092(R) (ORNL-TM-3483)
heat transfer from heated, to two-phase annular flow, effects of diffusion and film formation on critical, (E), 25:54869 (FEI-217)
stresses in nuclear power plant, analysis of earthquake- and thermal-induced, 25:54850
tees for nuclear service, elastic response and fatigue testing of, 25:57092(R) (ORNL-TM-3483)

PLACENTA
iodine-125 and -131 transport across, in pregnant sheep, 25:55319 (UCD-472-118)

PLANETARY NEBULAE
condensations in, life spans of neutral, (T), 25:55702
model for IRC + 10216, (E), 25:55686
spectra of, helium and hydrogen lines in, (E), 25:55700

PLANETS
atmospheres of, ionization by penetration of energetic charged particles, (T), 25:55983

PLANKTON
plutonium-239 content of Atlantic Ocean, 25:55161
radioisotope accumulation by marine, mechanisms of, 25:55154
radium-226 content of marine phyto-, off coast of South Africa, 25:55155

PLANTS
analysis for aluminum by separation and neutron activation, 25:54514
radiation monitoring in environs of Ames Research Reactor during 1971, 25:55152 (IS-2658)

PLASMA
charged particle beam interactions with nonlinear, radiations from, (T), 25:56168
charged-particle motion in, formation of Debye potential well in, (T), 25:56174
collision integral for particles of disparate mass, 25:56179
collisions in low-temperature helium, destruction of metastables in, (E), 25:56151(T) (SC-T-713064)
collisions in, system for two-dimensional many body calculations, 25:56187
conductivity in T-3 and ST Tokamak, mathematical model for, 25:56162 (CEA-CONF-1801)
conductivity of magnetized potassium, anomalous, (E), 25:56159
confinement and turbulent heating in toroidal magnetic traps, (E), 25:56127
confinement in Q devices, electrostatic, (T), 25:56013
confinement in toroidal devices, numerical simulation with fluid model, 25:56129
diagnostics in spark discharges, temperature and electron density, (E), 25:56142
diagnostics in thermonuclear devices, temperature profile in, 25:56216 (NP-19014)
diagnostics of argon arc, spectroscopic, (E/T), 25:56139
diagnostics of argon arc, temperature distribution and thermal conductivity in, (E), 25:56140
diagnostics of discharge, electron energy distribution, (E), 25:56138
diagnostics of inhomogeneous, using electromagnetic wave probes, 25:56145
diagnostics of ionospheric, steady-state and dynamic probe characteristics in, (E), 25:56012
diagnostics of laser-produced, plane electrostatic analyzer for, (E), 25:56137
diagnostics of shock-heated, use of conical probes for, (E/T), 25:56144
diagnostics of, using ultrarapid photometric camera, 25:56132 (CEA-R-4079)
diagnostics using cylindrical Langmuir probes, response in transition regime, (E/T), 25:56136
diagnostics using Langmuir probes, effects of collisions on, 25:56135
diagnostics using selective change of optical thickness, electron density, (E), 25:56133 (INR-P-1322)
diagnostics using Thomson scattering of laser light, construction of electron distribution, 25:56143
effects of rf-activated inert gas, on bondability and critical surface tension of polydimethyl silicones and polyethylene, 25:57272 (SC-RR-710483)
electron beam injection into dense, self fields and currents from relativistic, (T), 25:56166 (NP-19012)
electron beam interactions with collisionless, dispersion relations for linear waves from, 25:56170
electron beam interactions with homogeneous, dispersion relations for linear waves from, (T), 25:56169
electron beam interactions with, Bernstein wave excitation in, (E), 25:56241
electron beam interactions with, longitudinal wave reflection in, (T), 25:56247
electron beam interactions with, longitudinal wave excitation in, (T), 25:56232 (NP-19020)
electron beam interactions with, noise levels of Langmuir oscillations from, (E), 25:56249
electron distribution function for Lorentz, (T), 25:56173
electron shielding in non-neutral, test-particle, (T), 25:56175
electron velocity distribution function for homogeneous argon, (T), 25:56186
electron--ion recombination calculations for two-component, (T), 25:56167
electron--ion recombination in cryogenic helium, (E), 25:56152(T) (SC-T-713065)
electron--ion recombination in helium, at low temperatures, (E), 25:56161
electron--ion recombination in high-temperature hydrogenic, (T), 25:56164 (LGI-71/1/E)
electron--ion recombination rate coefficients for argon, (T), 25:56182
equilibrium calculations for confining vacuum magnetic field, two-dimensional, 25:56207
expansion from spherical source into vacuum, (T), 25:56180
expansion from spherical source into vacuum, effect of partial ionization and recombination on, (T), 25:56181
flow in shock tubes, dynamics of, (E), 25:55920
heating and confinement in toroidal magnetic traps, turbulent, (E), 25:56127
heating by ion cyclotron waves in magnetic beaches, (E), 25:56231 (N-71-25439)
heating by turbulence in tokamak devices, ohmic, (E), 25:56123(R) (ORO-4087-1)
heating in tokamaks by increasing longitudinal magnetic field, (T), 25:56125
heating of electrons in magnetized, resonances in anomalous microwave, (E), 25:56124
heating of hydrogen, ion energy distribution in turbulent, (E), 25:56131
heating of inhomogeneous cosmic, density-dependent, (T), 25:56126
heating using lasers, prospects for, 25:56128
injection into 2X mirror machine, large-area high-current ion source for, 25:56212 (LBL-35)
injection into Baseball II, multi-aperture 1-kV ion source for, (E), 25:56217 (UCRL-73387)

XUM

injection into mirror machines, ion source development for, 25:56213 (LBL-327)
injection into thermonuclear devices, duoPIGatron source for, 25:56208 (CONF-711012-9)
injection of, development of intense ion and neutral sources for, 25:56218 (UCRL-73412)
ionization wave excitation in positive columns by acoustic pulses, (E), 25:56154
kinetic theory of collisionless, finite-Larmor-radius equations for, 25:56178
kinetic theory of, statistical, 25:56185
light scattering by weakly ionized, theory of Thomson, 25:56165 (N-71-27890)
magnetic field distribution in, between concentric boundaries, (T), 25:56163 (LGI-70/16/E)
models for two-dimensional, properties of Cloud-in-Cell and Nearest-Grid-Point, 25:56191
neutron emission from laser irradiated deuterated polyethylene, 25:56219
oscillations in beam--plasma system, noise levels from Stark broadening analysis, (E), 25:56249
oscillations in cold inhomogeneous, electrostatic, (T), 25:56242
oscillations in, nonlinear processes in, (E/T), 25:56229 (EUR-CEA-FC-602)
properties of microwave-excited argon, analytical and physical, (E), 25:56158
radiation in weakly inhomogeneous magnetic fields, spectral distribution of, (T), 25:56177
radiations from fast z-pinch, time--space resolved spectroscopic measurements of, (E), 25:56150 (LGI-70/14/E)
radiations from theta pinch, at 100 to 200 A, (E), 25:56149 (IPP-1/108)
shock wave formation and propagation in, multi-dimensional magnetohydrodynamic calculations for, 25:56192
shock wave propagation in collisionless magnetized, kinetic model for unstable equilibrium in, 25:56190
shock wave propagation in, models for collisionless, 25:56189
shock wave propagation in, review of collisionless, (E/T), 25:56147
simulation of microinstabilities in, using superparticle computer models, 25:56206
simulation of toroidal confinement using fluid model, 25:56129
spectra measurements of hydrogen, precision, (E), 25:56156
spectra of helium, relaxation theory of Stark broadening in, 25:56184
spectral line intensities in, effect of electron temperature variations on, 25:56171
stability in argon arcs in magnetic fields, (E/T), 25:56196(R) (N-71-25028)
stability in shallow magnetic wells as in DECA II B, MHD criteria for, (T), 25:56194 (EUR-CEA-FC-598)
stability in tokamak devices, trapped-particle, (T), 25:56195 (JAERI-Memo-4483)
stability in tokamaks, review of, 25:56198
stability of streaming, in parallel uniform magnetic fields, (T), 25:56202
stability of uniformly rotating magnetized, resistive, (T), 25:56203
stability of, electromagnetic instabilities parallel to magnetic fields, (T), 25:56204
stability of, numerical experiments on nonlinear, 25:56205
stability of, simulation of microinstabilities using superparticle computer models, 25:56206
stabilization of flute instabilities in, using integrating feedback system, (E), 25:56197
stabilization of MHD instabilities by force-free magnetic fields in cylindrical geometries, (E), 25:56201
stabilization of MHD instabilities by force-free magnetic fields, (T), 25:56199
stabilization of MHD instabilities in force-free magnetic fields in linear pinches, (E), 25:56200
thermodynamics of partially ionized, canonical transformation method in, 25:56172
transport properties of partially ionized argon, (T), 25:56183
turbulence in argon arcs in magnetic fields, (E/T), 25:56196(R) (N-71-25028)
wave absorption by, boundary for electron cyclotron and low hybrid frequency, 25:56224(T) (AEC-tr-7270)
wave coupling in inhomogeneous, electromagnetic, (E), 25:56225 (CEA-CONF-1802)
wave coupling in warm, Lagrange solutions for three nonlinear, (T), 25:56245
wave damping and growth in, nonlinear Landau, (T), 25:56234
wave damping in fully ionized, dispersion relations for electron, (T), 25:56238
wave damping in, echoes from, (E), 25:56226 (CEA-CONF-1804)
wave damping in, research on quasi-static ion cyclotron, (E), 25:56233(R) (ORO-3871-6)
wave excitation and ion heating in magnetic beaches, ion cyclotron, (E), 25:56231 (N-71-25439)
wave excitation by Cherenkov and cyclotron coupling in beam--plasma system, Bernstein, (E), 25:56241
wave excitation in beam--plasma system, longitudinal, (T), 25:56232 (NP-19020)
wave excitation in cylindrical anisotropic, traveling wave antenna for, 25:56254
wave generation in inhomogeneous, in strong magnetic field, (T), 25:55923
wave interactions in inhomogeneous magnetized, nonlinear electron and ion, (E/T), 25:56246
wave interactions with exponential density distribution, electromagnetic, (T), 25:56230 (INR-1321)
wave propagation across magnetic field in parabolic layer of, electromagnetic, (T), 25:56236
wave propagation along layer of, effect of electromagnetic field pressure on, (T), 25:56235
wave propagation and stability, effect of impurity ions on drift, (T), 25:56243
wave propagation in collisionless, weak discontinuities, (T), 25:56237
wave propagation in fully ionized collisional, ion acoustic, (T), 25:56251
wave propagation in inhomogeneous collisional, kinetic model for, 25:56248
wave propagation in slightly relativistic, electromagnetic, (T), 25:56228 (CEA-CONF-1806)
wave propagation in strongly curved configurations of, dispersion relations for, 25:56253
wave propagation in weakly ionized, strong cylindrical and spherical electromagnetic-, (T), 25:56240
wave propagation in, effects on Tonks--Dattner resonant frequencies, (T), 25:56252
wave propagation in, nonlinear solutions of Vlasov and Poisson equations for, 25:56244
wave propagation in, particle trapping in large-amplitude, (T), 25:56227 (CEA-CONF-1805)
wave reflection in beam--plasma system, longitudinal, (T), 25:56247
wave transformation and absorption in, linear, (T), 25:56250
wave-propagation in, definition of positive and negative energy, (T), 25:56239
x-ray spectra from, regularization technique for electron energy distribution function for, 25:56134 (ORNL-TM-3582)

PLASMA ACCELERATORS
current sheath structure in dense focus, (E), 25:56157
design and performance for plasma injection into toroidal octupoles, 25:56220
electrode effects on performance of, (E), 25:56153
magnetohydrodynamic calculations for dense focus, 25:56188
neutron emission from dense focus, calibration of silver activated counters for measuring, 25:56214 (LGI-70/17/E)

PLASMA JETS
flow past obstacles, transonic, (T), 25:56176
properties of induction-heated, for simulation of gas-core nuclear rockets, 25:56146 (N-71-27023)
stability in parallel uniform magnetic fields, (T), 25:56202

PLASMAPAUSE
motion of, calculations of time-dependent, 25:55972
radius determination of, from relation of magnetospheric electric-field dependence on solar-wind velocity, (T), 25:56039
structure in boundary of, evidence of corotating tail-like, (E/T), 25:56028
structure on boundary of, evidence of corotating tail-like, (E/T), 25:56028

PLATES
book:Tables for Calculating Nonstationary Temperatures of Plane Bodies During Heating by Irradiation, 25:56267
fracture mechanics of, developments in three-dimensional elastic--plastic stress analysis for, 25:55515
heating by irradiation, tables for transient temperatures from, 25:56267

PLATINUM
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
compounds with electropositive metals, formation of intermetallic, 25:54534 (ORNL-4717, pp 43-56)
conductivity at 80 to 1900°K, electric and thermal, 25:55523
determination in geochemical samples by neutron activation, 25:54484
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in lead beads, matte, and platinum-bearing ores by neutron activation and γ spectrometry, 25:54487
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
nitrogen oxide molecular beam scattering from clean and carbon coated single crystals of, 25:57237 (LBL-133)
properties for container material in alkali pyrosulfate processing of carbide fuels, 25:55376 (CONF-690452-, Paper 9)
radioinduced Frenkel defects in, effects of gold dopant on annealing of electron, 25:56284 (JUL-731-FF)
separation from rhenium by solvent extraction, 25:54401

XUM

PLATINUM ALLOYS AND SYSTEMS
Nb--Pt, niobium-93 NMR in $Nb_3Pt$, 25:56373
Pr-base--Pt, phase diagram of, 25:55567
Pr-base--Pt, phase diagram of, thermodynamic analysis of, 25:55566
PLATINUM ISOTOPES Pt-190
energy-level transitions from gold-197 decay, internal conversion coefficients for, (E), 25:56760
PLOWSHARE PROJECT
debris from Schooner Event of, radioisotope retention and excretion by peccaries following ingestion of, 25:55124
developments in, review of, 25:54828
ground motion from Rulison Event, at Tosco mine and tower stations, pseudorelative velocity spectra for, 25:54813 (PNE-R-51)
natural gas production stimulation by Rulison Event in, post-shot well test data for, 25:54817 (PNE-R-52)
research programs in, review of, 25:54830
research progress on, 25:54816 (ORNL-4682, pp 182-6)
PLUMES
diffusion in atmosphere, krypton-85 tracer studies of, 25:54908
rise of stack-released, method for calculating, (E/T), 25:54780 (CONF-710505-6)
PLUTONIUM
bibliography on, First Quarter 1971 index to, 25:55369
combustion aerosols from, retention efficiency of particulate air filters for, 25:54951 (CONF-710401-, pp 181-202)
compounds, heating of dry, fractional release during, 25:54546
content and distribution in desert soils around Nevada Test Site, 25:54755 (CONF-710401-, pp 320-7)
content on surfaces based on radiation dose to humans, decision levels for establishing, 25:55195 (CONF-710401-, pp 352-64)
determination by indirect potentiometry, 25:54411
development for nuclear uses, operation of inert atmosphere system in, 25:54945 (CONF-710401-, pp 98-105)
diffusion in sodium chloride, solid-state, 25:54758 (ORNL-4717, pp 109-15)
handling of, conference on safety in facilities for, Rocky Flats, Colo., April 13 to 16, 1971, 25:54937 (CONF-710401)
ignition in air--carbon dioxide mixtures, effects of oxygen content on, 25:54946 (CONF-710401-, pp 106-17)
ignition in air--nitrogen mixtures, effects of oxygen content on, 25:54946 (CONF-710401-, pp 106-17)
metallurgy of, health and safety support in facility for studying, 25:55204 (CONF-710401-, pp 267-79)
movement in aquatic systems, 25:55150 (CONF-710401-, pp 407-10)
oxidation of ignited, in air stream, fractional release during, 25:54546
processing facilities for, installation and performance of HEPA filters for, 25:54947 (CONF-710401-, pp 118-32)
processing facility for, administrative procedures for Rocky Flats, 25:54960 (CONF-710401-, pp 293-6)
processing in inert gas atmosphere glove boxes, effects of air in-leakage on, 25:54944 (CONF-710401-, pp 83-97)
processing of liquid waste materials of, methods and safety at Los Alamos plant for, 25:54708 (CONF-710401-, pp 369-85)
processing of scrap, safeguards capabilities of materials accounting systems in facilities for, 25:54968 (IAEA-R-878-F)
processing of, administrative methods for criticality control in, 25:54966 (CONF-710401-, pp 430-7)
processing of, design of plant using nitrogen atmosphere for, 25:54943 (CONF-710401-, pp 69-82)
processing of, effects of thermal stress on airborne particle release during, 25:54546
processing of, evaluation of shielding materials for use in, 25:54962 (CONF-710401-, pp 307-10)
processing of, operation of building ventilation system for, 25:54948 (CONF-710401-, pp 133-48)
processing of, safety criteria for design of facilities for, 25:54967 (CONF-710401-, pp 438-53)
recycle of, review on developments in, 25:57202
separation from aqueous Savannah River fuel reprocessing wastes by batch solvent extraction, 25:54739
separation from fission products by fluorination process, 25:54736
separation from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
separation from LMFBR fuels by solvent extraction using TBP, 25:54713 (ORNL-4682, pp 39-79)
solubility in soil--water environments, theoretical studies of, 25:54756 (CONF-710401-, pp 411-29)
storage of, design of safe shielded facility for, 25:54942 (CONF-710401-, pp 56-67)
PLUTONIUM ALLOYS AND SYSTEMS
C--N--O--Pu--U, preparation of carbides, carbonitrides, and hypostoichiometric oxides in, 25:55594 (ORNL-4682, pp 218-28)
Ga--Pu-base, tensile properties of, at 25 to 500°C, effects of strain rate and temperature on, 25:55427 (BNWL-1567)
Pu--Zr, phase transformations in, during quenching, effects of composition and cooling rate on epsilon, 25:55528
PLUTONIUM CARBIDES
PuC--UC, production of fuels of, development of process for, 25:55590(R) (EIR-192)
PLUTONIUM FLUORIDES $PuF_3$
solubility in molten beryllium fluoride--lithium fluoride--thorium fluoride, effects of oxide on, 25:54532 (ORNL-4717, pp 1-27)
spectra in molten beryllium fluoride--lithium fluoride--thorium fluoride, effects of oxide on, 25:54532 (ORNL-4717, pp 1-27)
PLUTONIUM ISOTOPES Pu-232
fission of, delayed, (E), 25:56744(T) (NP-tr-1936)
PLUTONIUM ISOTOPES Pu-234
fission of, delayed, (E), 25:56744(T) (NP-tr-1936)
PLUTONIUM ISOTOPES Pu-237
production by alpha reactions (α,2n) with uranium-235, 25:54674
PLUTONIUM ISOTOPES Pu-238
alpha decay of, gamma energies and absolute branching intensities for, (E), 25:56753 (UCRL-51087)
fabrication and properties of heat sources of, for SNAP-19B, 25:54893 (MLM-1736)
processing of, description of filters for glove boxes for, 25:54949 (CONF-710401-, pp 149-61)
processing of, methods and safety precautions for, 25:54707 (CONF-710401-, pp 300-6)
production of aerosols of oxides of, for inhalation studies in dogs, 25:54982
radiation dose from heat source of, in circulatory support system, (E), 25:54887(R) (BNWL-1308-6)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
use as heat source in Stirling cycle power system for implantable circulatory support system, 25:54910(P)
PLUTONIUM ISOTOPES Pu-239
alpha decay of, gamma energies and absolute branching intensities for, (E), 25:56753 (UCRL-51087)
content of marine organisms of Atlantic Ocean, 25:55161
content of Pacific seaweeds in environs of reactors in comparison to other locations, 25:55151 (CONF-710817-1)
determination in human urine in presence of enriched uranium, radiochemical method for, 25:55197
energy levels from gamma inelastic scattering, (E), 25:56738 (JINR-P15-5959)
fission of isomeric, half-life for spontaneous, (E), 25:56801
incorporation in hair of rabbits, effects of dose on rate of, 25:55116
neutron capture at 0.1 to 30 keV, ratio of cross sections for fission and radiative, (E), 25:56734(T) (BNL-tr-446)
neutron capture cross sections at 0.02 to 30 keV, (E), 25:56746 (ORNL-4707)
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
neutron fission at 0.05 to 7.20 MeV, angular anisotropy and nucleon-pairing effects in, (E), 25:56736 (FEI-233)
neutron fission at 0.1 to 30 keV, ratio of cross sections for radiative capture and, (E), 25:56734(T) (BNL-tr-446)
neutron fission cross sections at 0.02 to 30 keV, (E), 25:56746 (ORNL-4707)
neutron fission of, liquid-drop-model calculations of heavy-fragment masses in thermal, (T), 25:56787
neutron fission of, prompt neutron yield from, (E), 25:56743 (NP-18966)
neutron fission of, yields from thermal, 25:54587(R) (AECL-3909)
photofission at 53 MeV, delay time for isomeric fission in, (E), 25:56801
photon inelastic scattering by, production of spontaneously fissioning isomers in, (E), 25:56738 (JINR-P15-5959)
production of aerosols of oxides of, for inhalation studies in dogs, 25:54982
production of spontaneously fissioning isomers in gamma inelastic scattering, (E), 25:56738 (JINR-P15-5959)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
PLUTONIUM ISOTOPES Pu-240
alpha decay of, gamma energies and absolute branching intensities for, (E), 25:56753 (UCRL-51087)
energy-level transitions from neutron fission of plutonium-239 at 0.05 to 7.20 MeV, nucleon-pairing effects on, (E), 25:56736 (FEI-233)
fission of, prompt neutron yield for spontaneous, (E), 25:56743 (NP-18966)
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
PLUTONIUM ISOTOPES Pu-241
alpha decay of, gamma energies and absolute branching intensities for, (E), 25:56753 (UCRL-51087)
neutron fission of, prompt neutron yield from, (E),

XUM

25:56743 (NP-18966)
PLUTONIUM ISOTOPES Pu-242
fission of, prompt neutron yield for spontaneous, (E), 25:56743 (NP-18966)
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
PLUTONIUM ISOTOPES Pu-244
abundance in Galaxy, (T), 25:55781
PLUTONIUM NITRATES
conversion of plutonium-238-containing, to oxide, methods and safety precautions for, 25:54707 (CONF-710401-, pp 300-6)
heating of sand-bearing dried, fractional release during, 25:54546
heating of solutions of, fractional release during, 25:54546
PLUTONIUM OXIDES $PuO_2$
effects of particle size on fast reactor power transients, 25:57107
production of plutonium-238-containing, from nitrate, methods and safety precautions for, 25:54707 (CONF-710401-, pp 300-6)
production of sols of, method for, 25:55590(R) (EIR-192)
$PuO_2$--$UO_2$, brittle-to-ductile transition temperature in blended fuels of, bend tests on, 25:55610
$PuO_2$--$UO_2$, dissolution rate of pellets of, 25:54713 (ORNL-4682, pp 39-79)
$PuO_2$--$UO_2$, physical properties of solid, measurement of high temperature, 25:57069(R) (ANL-7800)
$PuO_2$--$UO_2$, preparation by sol-gel process, 25:55592 (ORNL-4682, pp 144-59)
$PuO_2$--$UO_2$, preparation of enriched fuels of, method for safe and economical, 25:55597(P)
$PuO_2$--$UO_2$, preparation of powders of, 25:54717 (ORNL-4682, pp 160-2)
$PuO_2$--$UO_2$, radiation effects on fuel spheres of, at high burnups, 25:55590(R) (EIR-192)
$PuO_2$--$UO_2$, reactions of solid solutions of, with fluorine and fluorine chlorides, kinetics of, 25:54736
PNEUMATIC SYSTEMS
design of gas gun, 25:57280 (SCL-DR-69-155)
design of low-velocity air gun, 25:57289 (UCRL-51098)
POINT BEACH POWER REACTOR, UNIT 1
effluents from, effects on environment of radioactive and thermal, 25:56947 (DOCKET-50266-55)
site for, environmental radiation and temperature survey during April to November 1970, 25:56947 (DOCKET-50266-55)
POLONIUM ISOTOPES Po-209
energy levels of, properties of multiparticle, (T), 25:56783
energy-level transitions in, analysis of E2, (T), 25:56783
POLONIUM ISOTOPES Po-210
content in river waters in Czechoslovakia, (E), 25:54774
distribution in tissues of uranium mining personnel, 25:55117
energy levels of, properties of multiparticle, (T), 25:56783
energy-level transitions in, analysis of E2, (T), 25:56783
POLONIUM ISOTOPES Po-218
effects on ion balance in atmosphere, 25:54786
POLYCRYSTALS
Moessbauer spectra of, Goldanskii--Karyagin effect of vibration anisotropy in, 25:56377
POLYMERIZATION
radioinduced, dilatometer for determination of rate in, 25:54616
POLYOXYMETHYLENE
radiation effects on, reduction of molecular weight and increase in thermal stability from, 25:54611(P)
POLYPHENYLS
corrosive effects on reactor materials, review of, 25:55394
POROSITY
evaluation of film, electrochemical method for, 25:54859(P)
POSITRONIUM
hyperfine structure of ground-state, (T), 25:55832
POSITRONS
annihilation in sodium hydroxide glassy ice, effects of radioinduced trapped electrons on, (E), 25:55835
dose distribution in water phantoms, isodose curves for 5 to 15 MeV, 25:55210
interactions $e^+ + e^- \rightarrow e^+ + e^- + \mu^+ + \mu^-$, Feynman diagram model of, 25:56460
interactions $e^+ + e^- \rightarrow \mu^+ + \mu^-$ angular and energy distributions for, (T), 25:56459
interactions $e^+ + e^-$, production of pseudoscalar mesons in, 25:56459
lifetime measurements in semiconductor single crystals, 25:56360
lifetimes in alkaline earth fluorides, empirical model for calculation of, 25:55834
production of $e^+e^-$ in electron interactions with electromagnetic field at 4 GeV/c in propane bubble chamber, direct, 25:56467
reactions with hydrogen atoms, eikonal approximation for excitation of 2s state in, 25:55874
scattering by hydrogen atoms, algebraic close-coupling approach to, 25:55854
POTASSIUM
analysis for potassium-39/potassium-41 by neutron activation, 25:54492
analysis of liquid, for oxygen by zirconium gettering-vacuum-fusion method, 25:54418
determination in feldspar by neutron activation and $\gamma$ spectrometry, 25:54494
determination of trace amounts of, in air by neutron activation and $\gamma$ spectrometry, 25:54456
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and $\gamma$ spectrometry, 25:54496
distribution in metal transfer process for fission product removal from MSBR fuel solvent, 25:54534 (ORNL-4717, pp 43-56)
effects of compounds of, on bubble formation during annealing of doped tungsten, 25:55511
effects on determination of calcium by nondestructive alpha activation, 25:54522
electric conductivity of liquid, to 300°C, 25:55527
plasma of, anomalous resistivity of magnetized, (E), 25:56159
radiation effects on excretion of, in rat urine, combined effects of open skin lesions and, 25:55332
radiation effects on metabolism of, in man following therapy of diffuse toxic goiter, iodine-131, 25:55340
POTASSIUM ALLOYS AND SYSTEMS
K--Na, electric conductivity of, to 300°C, 25:55527
K--Na, phase diagram of, 25:55527
K--Na--Rb, phase studies of, thermal methods for, 25:55524(R) (COO-1707-11)
POTASSIUM AZIDES
neutron reactions (n,p) with nitrogen-14 in, distribution of recoil carbon-14 from, 25:54687
radiolysis of crystalline, effects of additives on yields from proton and $\gamma$, 25:54638
POTASSIUM BROMATES
radiation effects on, in presence of oxygen-18, production of oxygen-18-labeled products from, 25:54633(R) (ORO-3660-4)
POTASSIUM BROMIDES
radioinduced reduction of cadmium ions in crystals of, magneto-optical study of x-,, 25:56320
radioinduced thermoluminescence of crystals of undoped and copper-doped, x-,, 25:56323
radiolysis in air, mechanism of formation of nitrate ion on crystal surface from, 25:54633(R) (ORO-3660-4)
POTASSIUM CHLORATES
radiation effects on, in presence of oxygen-18, production of oxygen-18-labeled products from, 25:54633(R) (ORO-3660-4)
POTASSIUM CHLORIDES
effects on calcium-45 uptake and release by rat brain microsomes, 25:55120
impurity location in crystals of, by axial channeling of helium ions and protons, 25:56337
radiation effects on, thermoluminescence induced by deformation and light after 2-MeV-electron, 25:56321
radioinduced reduction of cadmium ions in crystals of, magneto-optical study of x-,, 25:56320
POTASSIUM CHROMATES
radiation effects on, role of recoil reactions in ''Crossover reaction'' on thermal annealing of neutron, 25:54679
POTASSIUM FLUORIDES
$AgNO_3$--KF, radiolysis of, EPR studies on neutral silver trapping sites from $\gamma$, 25:54666
POTASSIUM HYDROXIDES
dissociation at high temperatures using flowing cell, potentiometric determination of, 25:54535 (ORNL-4717, pp 57-82)
radiation effects on aqueous solutions of, ESR studies of ozonide ion formation from $\gamma$, 25:54608
POTASSIUM IODATES
radiation effects on, in presence of oxygen-18, production of oxygen-18-labeled products from, 25:54633(R) (ORO-3660-4)
POTASSIUM IODIDES
radioinduced reduction of cadmium ions in crystals of, magneto-optical study of x-,, 25:56320
POTASSIUM IONS
reactions with tungsten, sputtering of secondary tungsten ions from, 25:55819
POTASSIUM IRON OXALATES
Moessbauer-spectral study of cobalt-57 decay effects on valence and structure of, 25:56381
POTASSIUM ISOTOPES K-39
determination of abundance of, relative to potassium-41 by neutron activation, 25:54492
helium-3 reactions (He-3,p$\gamma$) at 12 and 13 MeV, p-$\gamma$ coincidence spectra from, (E), 25:56715
POTASSIUM ISOTOPES K-40
content in sand and clay soils, performance of airborne gamma spectrometer system for measuring, 25:54768
use as standard in nuclear metrology, 25:54901
POTASSIUM ISOTOPES K-41
determination of abundance of, relative to potassium-39 by neutron activation, 25:54492
POTASSIUM NITRATES
radiation effects on, in presence of oxygen-18, production of oxygen-18-labeled products from,

XUM

25:54633(R) (ORO-3660-4)
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
POTASSIUM PERCHLORATES
radiation effects on, in presence of oxygen-18, production of oxygen-18-labeled products from, 25:54633(R) (ORO-3660-4)
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
POWDER METALLURGY
comparison with granule metallurgy, 25:55404
conference on modern developments in, New York, July 12 to 16, 1970, 25:55411
conference on modern developments in, New York, July 12 to 16, 1970, 25:55481
POWDERS
production of fine metal--metal oxide, Microgel process for, 25:55419
POWER BURST FACILITY
experimental capabilities of, liquid metal cooled fast breeder reactor safety programs, 25:57069(R) (ANL-7800)
POWER CYCLES
development of Stirling, for powering implantable plutonium-238-fueled circulatory support system, 25:54910(P)
PRAIRIE ISLAND POWER REACTOR, UNIT 1
design parameters of, revised and additional data on, 25:56953 (DOCKET-50282-40)
operations aspects of, revised and additional data on, 25:56953 (DOCKET-50282-40)
PRAIRIE ISLAND POWER REACTOR, UNIT 2
design parameters of, revised and additional data on, 25:56953 (DOCKET-50282-40)
operations aspects of, revised and additional data on, 25:56953 (DOCKET-50282-40)
PRASEODYMIUM
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in intermediate products of rare earth production by x-ray spectroscopy, 25:54417
determination of trace amounts of, in nuclear grade uranium by x-ray excited optical fluorescence, 25:54428
effects on radiolysis of crystalline potassium nitrate, 25:54638
PRASEODYMIUM ALLOYS AND SYSTEMS
Au--Pr, crystal structures and melting points of intermetallic, 25:55570
Au--Pr-base, phase diagram of, 25:55567
Au--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Ba--Pr-base, phase diagram of, 25:55567
Bi--Pr-base, phase diagram of, 25:55567
Bi--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Cs--Pr-base, phase diagram of, 25:55567
Hf--Pr-base, phase diagram of, 25:55567
Hg--Pr-base, phase diagram of, 25:55567
Hg--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Ir--Pr-base, phase diagram of, 25:55567
Ir--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Os--Pr-base, phase diagram of, 25:55567
Os--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Pb--Pr-base, phase diagram of, 25:55567
Pb--Pr-base, phase diagram of, thermodynamic analysis of, 25:55566
Pr-base--Pt, phase diagram of, 25:55567
Pr-base--Pt, phase diagram of, thermodynamic analysis of, 25:55566
Pr-base--Re, phase diagram of, 25:55567
Pr-base--Tl, phase diagram of, 25:55567
Pr-base--Tl, phase diagram of, thermodynamic analysis of, 25:55566
PRASEODYMIUM ISOTOPES Pr-141
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
PRESSURE
calculation of time-dependent, for coupled volumes, computer program for, 25:54886
PRESSURE VESSELS
cover for fast reactor, design characteristics of thermal insulated ductile pressure relieving, 25:57058(P)
design characteristics of prestressed concrete, with steel lines, 25:57203(P)
design of podded boiler types prestressed concrete, for nuclear power plants, (E/T), 25:56885
design of prestressed concrete, for heavy water moderated and cooled power reactor, 25:56989
end caps for reactor prestressed concrete, two-dimensional time-dependent deformation analysis of perforated, (E/T), 25:56985
end slabs for reactor prestressed concrete, overload and ultimate load behavior of, (E/T), 25:56986
failure testing of reactor prestressed concrete, under internal gas pressure, 25:56992
fracture in walls of, developments in three-dimensional elastic--plastic stress analysis for mechanics of, 25:55515
fracture of heavy section steel, effects of flow growth and propagation on, 25:57092(R) (ORNL-TM-3483)
mechanical properties of steel for, effects of microstructure changes on, 25:55466
nozzles for, effects of attachment configuration on stresses in, 25:57092(R) (ORNL-TM-3483)
prestressing wires for concrete reactor, fabrication and properties of steel, 25:55422
seals for liquid metal cooled reactor, design of coolant, 25:57043(P)
stress analysis in reactor prestressed concrete, (E/T), 25:56993
stress analysis of prestressed concrete, 25:56884
stress analysis of prestressed concrete, for water cooled reactors, (E/T), 25:56991
stress analysis of reactor prestressed concrete, with axial ribs, (T), 25:56990
stress calculations for reactor prestressed concrete, dynamic relaxation method for, 25:56987
stress calculations for reactor prestressed concrete, approximate method for time dependent, 25:56988
structural mechanics of prestressed concrete, 25:56882
tensile properties of concretes for, under triaxial stress, 25:55660
PRESSURIZERS
electric heater and connector assembly for, standards for, 25:57030 (RDT-E-5-2-T)
standards for electrically heated, for pressurized water reactors, 25:57029 (RDT-E-5-1-T)
PROMETHIUM
separation from aqueous Savannah River fuel reprocessing wastes by batch solvent extraction, 25:54739
separation from neodymium and samarium by displacement chromatography using [(carboxymethylimino)bis(ethylenenitrilo)]tetraacetic acid, EDTA, and nitrilotriacetic acid, 25:54723
PROMETHIUM ISOTOPES Pm-146
burnout of, (E/T), 25:54887(R) (BNWL-1308-6)
PROMETHIUM ISOTOPES Pm-147
deposition of thin films of, for use as beta source, 25:54896(P)
half-life in human bone, comparison of ICRP value and experimental data for biological, 25:55108 (BNWL-SA-3747)
metabolism in man and swine following intravenous injection, comparison of, 25:55108 (BNWL-SA-3747)
performance as beta source for neutralization of electrically charged flour, 25:54897
recovery from aqueous Savannah River fuel reprocessing wastes by batch solvent extraction, 25:54739
use as power source for electric cells, 25:54922(P)
PROMETHIUM ISOTOPES Pm-152
beta decay of isomers of, half-lives and β and γ singles and coincidence spectra from, (E), 25:56772
energy levels from neodymium-152 decay, (E), 25:56772
PROMETHIUM OXIDES
decomposition oxygen pressures over test samples of, at high temperatures and low pressures, 25:55428 (BNWL-B-108)
PROPANE, 2-BROMO-2-METHYL-
solvolysis of, Broensted correlation for effects of metal ions on, 25:54548
PROPANE, 2-CHLORO-2-METHYL-
solvolysis of, Broensted correlation for effects of metal ions on, 25:54548
PROPANE, 2-FLUORO-2-METHYL-
solvolysis of, Broensted correlation for effects of metal ions on, 25:54548
2-PROPANOL
oxidation by Fenton's reagent, effects of deuterium on, 25:54576
PROPENE
effects on reactions of nitrous oxide in γ-irradiated liquid cyclopentane, 25:54655
oxidation over gold, effects of deuterium on, 25:54569
PROPENE, 2-METHYL-
radioinduced polymerization of, comparison of molecular weight distribution of products of catalytically initiated and γ, 25:54621
PROPENE POLYMERS
radiolysis of atactic and isotactic, effects of ethylene and nitrous oxide on γ, 25:54637
PROPIONIC ACID
radioinduced telomerization of ethylene by, γ, 25:54612
PROPIOPHENONE, p-AMINO-
radioprotective effects of, on mice, fast neutron and x, 25:55266
radioprotective effects on mice, effects of dose, sex, and strain on x, 25:55257
PROTACTINIUM
precipitation of pentavalent or tetravalent, as oxide from molten beryllium fluoride--lithium fluoride--thorium fluoride, 25:54532 (ORNL-4717, pp 1-27)
separation from molten salt fuel, flow sheet for, 25:54712 (ORNL-4682, pp 1-38)
separation from MSBR fuel by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
stability of tetravalent, in molten beryllium fluoride--

XUM

lithium fluoride--thorium fluoride, 25:54532 (ORNL-4717, pp 1-27)
PROTACTINIUM ISOTOPES Pa-231
distribution in Pacific Ocean, 25:54810
energy-level transition in, nuclear current parameter for internal conversion of 84.2-keV, 25:56797
PROTEINS
radiation effects on amino acid content of, in processed foods, 25:55364
PROTON BEAMS
charge neutralization in, cross-beam technique for, 25:55816
PROTON SOURCES
development of charge-exchange, for injection into accelerators and storage rings, 25:56590(T) (LA-tr-71-46)
PROTONS
angular distributions of equatorial 30 to 300 keV, in loss cone and at large angles, (E), 25:56027
anisotropy of solar, in event of Nov. 18, 1968, (E), 25:55764
dose to tissue equivalent phantoms, Monte Carlo calculations of absorbed and equivalent 592-MeV, 25:55216
dosimetry in lens of beagle dogs, methods for, 25:55319 (UCD-472-118)
effects on crystalline alkali metal azides, bromates, and nitrates, 25:54638
effects on discontinuous tantalum films at 150 keV and 30°K, annealing of, 25:56314
effects on eyes of beagle dogs, effects of dose on pathological, 25:55319 (UCD-472-118)
effects on eyes of rabbits, effects of dose and LET on RBE for, 25:55317 (CEA-CONF-1744)
effects on impulse transmission in frog sciatic nerve, effects of LET on RBE for, 25:55215
effects on lithium amide or hydrogen--nitrogen mixtures, production of carbon-11-labeled cyanides by, 25:54683
effects on low- and high-pressure polyethylene films at 6.3 MeV, 25:54604
effects on photocurrent of n-type germanium, 25:56316
effects on silicon solar batteries at high energies, 25:55099
effects on sodium nitrate at 5 MeV, 25:56318
effects on stability of silvered and aluminized FEP teflon second-surface mirrors, 25:55656 (N-71-27736)
emission of solar, relation to microwave bursts, (E), 25:55758
emission of solar, relation to microwave bursts, (E), 25:55757
flux profiles of near-equatorial 20 to 50, and greater than 100 MeV trapped, at L = 1.15 to 1.21 in 1967, (E), 25:55957
interaction tracks in mica and extraterrestrial materials, (E), 25:55669 (N-71-26344)
interactions anti p + p → anti p + p + $\pi^0$ at 2.2 GeV/c, OPE models for, 25:56487
interactions anti p + p → anti p + p + $\pi^+$ + $\pi^-$ at 2.2 GeV/c, OPE models for, 25:56487
interactions anti p + p at rest, gauge-invariant chiral SU(3) x SU(3) symmetric Lagrangian model for two-meson production in s- and p-wave, (T), 25:56538 (ORO-3992-2)
interactions anti p + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions anti p + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
interactions e + p above second resonance, review of $\pi$ production in, (E), 25:56406 (DESY-71/35)
interactions e + p in composite model, scale invariance of structure function for deep inelastic, 25:56465
interactions e + p in e + d interactions at high energies, cross sections for inelastic, (E), 25:56405 (DESY-71/33)
interactions $\gamma$ + p → $\pi^0$ + n, Reggeized absorption model fits to, 25:56458
interactions $\gamma$ + p → $\pi^0$ + p, Reggeized absorption model fits to, 25:56458
interactions $\gamma$ + p at 4 to 36 GeV, quark model for multiple $\pi$ production in, 25:56514
interactions $\gamma$ + p in e + d interactions at high energies, cross sections for particle production in, (E), 25:56405 (DESY-71/33)
interactions K⁻ + p → anti $K^0$ + n at 1.7 to 18.2 GeV/c, Regge analysis of, (E/T), 25:56506
interactions K⁻ + p → anti $K^0$ + n at high energies, Regge pole--cut model for analysis of, 25:56505
interactions K⁻ + p → anti $K^0$ + n, secondary Regge contributions in, 25:56508
interactions K⁺ + p → $K^{*0}$(890) + p at 3.0 to 8.25 GeV/c, Veneziano model for, 25:56511
interactions K⁺ + p → $K^0$ + $\pi^0$ + $\Delta^{++}$, K$\pi$ phase shifts from Chew--Low extrapolation of, 25:56486
interactions K⁺ + p → $K^0$ + X (anything), triple-Regge hypothesis for p-Reggeon total cross section from inclusive, 25:56515
interactions K⁻ + p → K⁻ + p at high energies, Regge pole--cut model for analysis of, 25:56505
interactions K⁺ + p → K⁺ + $\pi^-$ + $\Delta^{++}$, K$\pi$ phase shifts from Chew--Low extrapolation of, 25:56486
interactions K⁻ + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions K⁺ + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions K⁺ + p at 10 GeV/c in hydrogen bubble chamber, review of K* and N* production in, (E), 25:56435
interactions K⁻ + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
interactions K⁻ + p at 3 GeV in hydrogen bubble chamber, production of K(890), K(1400) and K$\pi$ systems, upper limits for production cross sections of isospin-3/2 K*, and K + $\pi$ s-wave interactions in, (E), 25:56426 (FRNC-TH-53)
interactions n + p → 2p + $\pi^-$ at 2 to 30 GeV, Reggeized one-pion-exchange model for $\pi$ exchange and diffraction production of N(1470) and N(1688) in, (T), 25:56521 (JINR-P1-5975)
interactions n + p → d + $\gamma$, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + $\pi$, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + rho, model of intermediate nucleon isobar for, 25:56525
interactions n + p → d + sigma(310), model of intermediate nucleon isobar for, 25:56525
interactions n + p → p + n at 8 and 19 GeV/c, spark chamber study of differential cross sections and $\Delta$(1236) and N(1518) production in, (E), 25:56415 (NP-18888)
interactions n + p at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
interactions n + p at 14.1 MeV, relativistically covariant models for bremsstrahlung cross sections for, (T), 25:56526
interactions $\nu$ + p in proton electromagnetic field at 30 to 400 GeV, total cross sections for W production from, (T), 25:56473
interactions p + d → $^3$He + $\gamma$, model of intermediate nucleon isobar for, 25:56525
interactions p + d → $^3$He + sigma(310), model of intermediate nucleon isobar for, 25:56525
interactions p + p → $\Delta^{++}$ + n at 19 GeV/c in hydrogen bubble chamber, energy dependence of cross sections for, (E), 25:56418 (USIP-71-6)
interactions p + p → p + $\Delta^{++}$ + $\pi^-$, Cherenkov mechanism for cross section behavior of, (T), 25:56498 (IFA-HE-76)
interactions p + p → p + hadrons, one-photon exchange contribution to, 25:56457
interactions p + p → p + n(p) + $\pi^+$($\pi^0$) at 19 GeV/c in hydrogen bubble chamber, energy dependence of cross sections for, (E), 25:56418 (USIP-71-6)
interactions p + p → p + p at 0.5 to 1.2 GeV, polarization parameter angular distribution and phase shift analysis for, (E), 25:56412 (CEA-R-4193)
interactions p + p → p + p at 19 GeV/c in hydrogen bubble chamber, cross sections for, (E), 25:56417 (USIP-71-4)
interactions p + p → p + p(n) + $\pi^0$($\pi^+$) at 19 GeV/c in hydrogen bubble chamber, cross sections for, (E), 25:56417 (USIP-71-4)
interactions p + p and K + p, triple-Regge hypothesis for relations between cross sections for inclusive, 25:56515
interactions p + p at 10 to 17.5 GeV, polarization parameter in elastic, (E), 25:56419
interactions p + p at 19 GeV/c in hydrogen bubble chamber, total cross sections for two-prong, (E), 25:56417 (USIP-71-4)
interactions p + p at 19 GeV/c in hydrogen bubble chamber, computer program for automatic selection of kinematical hypotheses for two-prong, (T), 25:56523 (USIP-71-3)
interactions p + p at 19.20 GeV/c, breaks in differential cross sections for, 25:56528
interactions p + p at 31 to 53 GeV, slope parameter for colliding-beam elastic, (E), 25:56420
interactions p + p at 4 to 36 GeV, quark model for multiple $\pi$ production in, 25:56514
interactions p + p at 670 to 1400 MeV, one-boson-exchange models for, 25:56532
interactions p + p at low energies, separable potentials for, (T), 25:56531
interactions $\pi$ + p → $\pi$ + p at 0 to 300 MeV, review lectures on, (E/T), 25:56422 (CERN-71-14, pp 379-93)
interactions $\pi$ + p at 4 to 36 GeV, quark model for multiple $\pi$ production in, 25:56514
interactions $\pi^0$ + p → $\omega$ + p, Reggeized absorption model fits to, 25:56458
interactions $\pi^0$ + p → rho$^0$ + p, Reggeized absoption model fits to, 25:56458
interactions $\pi^-$ + p → $A_2^-$ + p, $A_2^-$ → $\pi^-$ + neutrals near threshold energy, mass spectra of $A_2$ in, (E), 25:56436
interactions $\pi^-$ + p → eta + n at 1.7 to 18.2 GeV/c, Regge analysis of (E/T), 25:56506
interactions $\pi^-$ + p → eta + n in nuclei at 7.82 GeV/c, differential cross sections for, (E), 25:56432
interactions $\pi^-$ + p → eta + n with $A_2$ exchange, K-matrix absorption model in U(6,6) x O(3,1) for, 25:56513
interactions $\pi^-$ + p → eta + n, secondary Regge contributions in, 25:56508
interactions $\pi^-$ + p → K⁺ + $\Sigma^-$, spark chamber study of $\pi^-$, K⁺, and $\Sigma^-$ decay products in, (E), 25:55048

interactions $\pi^-$ + p → $K^+$ + $\Sigma^-$, $\Sigma^-$ → n + $\pi^-$, spark chamber study of, (E), 25:55049
interactions $\pi^-$ + p → n + $\pi^+$ + $\pi^-$ at 7 GeV/c, Regge analysis of $rho^0$ production in, (E/T), 25:56431
interactions $\pi^+$ + p → p + 2$\pi^+$ + $\pi^-$ at 5 to 25 GeV/c, partial-wave analysis for 3$\pi$ system in mass region 1.0 to 2.0 GeV, (T), 25:56482 (COO-1195-224)
interactions $\pi^-$ + p → p + 2$\pi^-$ + $\pi^+$ at 5 to 25 GeV/c, partial-wave analysis for 3$\pi$ system in mass region 1.0 to 2.0 GeV, (T), 25:56482 (COO-1195-224)
interactions $\pi^-$ + p → $\pi^0$ + n at 5.9 to 18.2 GeV/c, negative-mass-squared resonance interpretation of angular distribution for, (T), 25:56499 (ORO-3992-8)
interactions $\pi^-$ + p → $\pi^0$ + n at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^-$ + p → $\pi^0$ + n at very high energies, polarization in, 25:56509
interactions $\pi^-$ + p → $\pi^0$ + n in nuclei at 7.82 GeV/c, differential cross sections for, (E), 25:56432
interactions $\pi^-$ + p → $\pi^0$ + n, secondary Regge contributions in, 25:56508
interactions $\pi^+$ + p → $\pi^+$ + p + $\omega^0$ at 3.7 GeV/c, mass and width of $\omega$ from, (E), 25:56430
interactions $\pi^-$ + p → $\pi^-$ + p at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^+$ + p → $\pi^+$ + p at high energies, Regge pole--cut model for analysis of, 25:56505
interactions $\pi^-$ + p → $\pi^-$ + p($\Delta^{++}$) + $rho^0$($\pi^-$), Cherenkov mechanism for cross section behavior of, (T), 25:56498 (IFA-HE-76)
interactions $\pi^+$ + p → $\pi^+$ + $\pi^0$($\pi^+$) + p(n) at 13.1 GeV/c in hydrogen bubble chamber, diffractive $\pi$ + $\pi$ interactions in, (E), 25:56425 (COO-1428-294)
interactions $\pi^+$ + p at 10 to 17.5 GeV/c, polarization parameter in forward elastic, (E), 25:56437
interactions $\pi^-$ + p at 10 to 17.5 GeV/c, polarization parameter in forward elastic, (E), 25:56437
interactions $\pi^-$ + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
interactions $\pi^+$ + p at 8 GeV/c in hydrogen bubble chamber, mass distributions and cross sections for resonance production and momentum and angular distributions for, (E), 25:56427 (IFA-HE-73)
interactions $\pi^+$ + p at 8 GeV/c in hydrogen bubble chamber, cross sections, kinematical behavior of secondaries, and K--anti K pairs and resonance production in four-prong, (E), 25:56428 (IFA-HE-75)
interactions with Alfven waves in magnetosphere, (T), 25:56011
mass difference (n - p), indefinite metric for electromagnetic, (T), 25:56547 (NYO-1932(2)-200)
modulation properties of solar low-energy acceleration-related, associated with propagating interplanetary shock waves, (E), 25:56020
observations of solar low-energy, during 1967 at widely separated locations, (E), 25:55956
precipitation in auroral region, simultaneous observations with auroral radar echoes, (E), 25:55963
production in four-prong $\pi^+$ + p interactions at 8 GeV/c in hydrogen bubble chamber, angular and momentum distributions for, (E), 25:56428 (IFA-HE-75)
production of low-energy, in cosmic particle reactions with nuclei above 100 GeV in emulsions, (E), 25:56429 (INP-754)
production of low-energy, in $\pi$ reactions with nuclei at 60 GeV in emulsions, (E), 25:56429 (INP-754)
radius in Bohr-like classical stochastic model of elementary particles, 25:56450
range in air, argon, nitrogen, and oxygen at 0.2 to 2.0 MeV as function of energy, (E), 25:56276
reaction with titanium, production of vanadium-48 by, 25:54677
reactions (p,2p) and (p,pn) with deuterium at 21.5 to 56.4 MeV, absolute cross sections for quasi-free scattering in, (E), 25:56640 (FRNC-CONF-8)
reactions (p,2p) with calcium-40, carbon-12, and silicon-28 at 600 MeV, distorted-wave impulse-approximation analysis of cross sections from, (E/T), 25:56711
reactions (p,2p) with calcium-40, carbon-12, silicon-28, vanadium-51, and zirconium-90 at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
reactions (p,2p) with carbon-12 at 1 GeV, Glauber multiple scattering theory for differential cross sections for quasi-free, (T), 25:56520 (IC-71/106)
reactions (p,2p) with deuterium at 28.6 MeV, differential cross section for, (E), 25:56644
reactions (p,3n$\gamma$) with lutetium-175 at 20 to 40 MeV, $\gamma$ spectra and excitation functions for, (E), 25:56796
reactions (p,4n) with manganese-55 at 65 MeV, production of iron-52 by, 25:54676
reactions (p,$\alpha$) with oxygen-18 at 500 to 750 keV, excitation function for, (E), 25:55384
reactions (p,d) with neodymium-142 and samarium-144 at 35 MeV, DWBA analysis of, (E), 25:56770
reactions (p,d) with neon-20, -21, and -22 at 40 MeV, differential cross sections for, (E), 25:56704
reactions (p,f) with radium-226 at 12.5 to 16.5 MeV, mass-yield curve for, (E), 25:56775
reactions (p,f) with radium-226 at 13 MeV, analysis using renormalized Fermi gas model and collective potential energy surface, (T), 25:56856
reactions (p,f) with thorium-232 at 20 to 85 MeV, fission yield and charge dispersion in, (E), 25:56805
reactions (p,f) with uranium at 30 to 160 MeV, yields and charge dispersion of antimony from, (E), 25:56757
reactions (p,$\gamma$) and (p,n) with carbon-14 at 2.3 to 2.6 MeV, excitation functions and gamma spectra from, (E), 25:56669
reactions (p,$\gamma$) on sodium-23, magnesium-24 photodisintegration rates from, 25:55703
reactions (p,$\gamma$) with deuterium at 0.8 to 3.2 MeV, angular distribution and cross section for, (E), 25:56645
reactions (p,n) with lithium-7 at 2 to 5.5 MeV, excitation function for, (E), 25:56752(R) (SUNI-14)
reactions (p,n$\gamma$) with zinc-66 at 6 to 6.8 MeV, $\gamma$ singles and coincidence spectra and angular distributions for, (E), 25:56732
reactions (p,xn) with uranium-238 at 750 MeV, neutron spectrum unfolding capability for, (E), 25:55038 (LA-DC-12314)
reactions with 12 < Z < 83 nuclei at 0.010 to 5 GeV, properties of low-energy nuclei from inelastic, (T), 25:56522(T) (ORNL-tr-2520)
reactions with aluminum, Mylar, nickel, and tantalum foils at 155 and 600 MeV, cross sections for electron capture in, (E), 25:55862
reactions with aluminum-27 at high energies, isobar model for analysis of meson ($\pi$) production in, 25:56530
reactions with cerium-140 at high energies, isobar model for analysis of meson ($\pi$) production in, 25:56530
reactions with chromium and vanadium, production of chromium-51 by, 25:54691
reactions with gases at 20 to 120 keV, cross sections for electron capture into n = 2 states of hydrogen in, (E), 25:55853
reactions with helium above 25 keV, excitation in, (T), 25:55842
reactions with helium and hydrogen molecules up to 5 MeV, cross sections for electron capture in, (T), 25:55837
reactions with hydrogen atoms at 10 to 2500 keV, excitation in, (T), 25:55841
reactions with hydrogen atoms at 30 and 50 eV, forced common turning-point treatment of excitation in, 25:55881
reactions with hydrogen atoms at 5 eV, cross sections for momentum transfer in, (E), 25:55840
reactions with hydrogen atoms, eikonal approximation for excitation of 2s state in, 25:55874
reactions with iron above 1.5 TeV, ionization spectrometer study of inelasticity coefficients for, (E), 25:56414 (INP-757)
reactions with lead-208 at high energies, isobar model for analysis of meson ($\pi$) production in, 25:56530
reactions with metal targets at 1.5 to 4.5 MeV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
reactions with tin-116 at high energies, isobar model for analysis of meson ($\pi$) production in, 25:56530
reactions with zirconium-90 at high energies, isobar model for analysis of meson ($\pi$) production in, 25:56530
scattering by A = 50 to 66 nuclei at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for inelastic, (E), 25:56727
scattering by barium-138, lead-208, tin-120, and tin-124 with isobaric analog excitation, shell-model analysis of elastic, (E/T), 25:56769
scattering by boron-10 at 3.5 to 5 MeV, excitation functions for inelastic, (E), 25:56679
scattering by calcium-40, carbon-12, oxygen-16, and silicon-28, phase-shift analysis of polarization effects in elastic, (T), 25:56678
scattering by chlorine-35 at 5.47 to 5.61 MeV, excitation function for inelastic, (E), 25:56752(R) (SUNI-14)
scattering by even tin isotopes at 30.4 MeV, differential cross sections for elastic, (E), 25:56764
scattering by helium-4 below 50 MeV, analysis using nonlocal separable potential, (T), 25:56852
scattering by helium-4, analysis using separable nonlocal potential, (T), 25:56642 (LYCEN-7104, C5.1-15)
scattering by iron-54 and -56 at 9.6 MeV, optical-model analysis of elastic, (E/T), 25:56699
scattering by lithium-6 and -7 at 6.868 MeV, absolute cross section for elastic, (E), 25:56670
scattering by molybdenum-92, -94, -96, -98, and -100 at 15 MeV, coupled-channel analysis of elastic and inelastic, (E), 25:56774
scattering by neon-20 and -22 at 40 MeV, differential cross sections for elastic, (E), 25:56704
scattering by neon-20, -21, and -22 at 40 MeV, differential cross sections for inelastic, (E), 25:56704
scattering by nickel-60 at 11 MeV, differential cross sections for elastic, (T), 25:56789
scattering by nuclei at medium and high energies, cross sections for summed inelastic and quasi-elastic, (T), 25:56849
scattering by s-d shell nuclei, analysis of deformation in polarized inelastic, (T), 25:56828 (LYCEN-7104, S9.1-7)
scattering by sulfur-32 at 5 to 14 MeV, analysis of reaction mechanism in elastic and inelastic, (E), 25:56694

XUM

scattering by tin-120 at 9.6 MeV, S-matrix analysis of differential cross sections for elastic, (T), 25:56789
spallation of uranium at 5.5 GeV, yields of light elements in, (E), 25:56788
PROTONS (anti p)
interactions anti p + n + $\pi^+$ + 2$\pi^-$, mass and width of rho' in rising phase shift model for, (T), 25:56485 (ORO-3992-66)
interactions anti p + p + anti p + p + $\pi^0$ at 2.2 GeV/c, OPE models for, 25:56487
interactions anti p + p + anti p + p + $\pi^+$ + $\pi^-$ at 2.2 GeV/c, OPE models for, 25:56487
interactions anti p + p at rest, gauge-invariant chiral SU(3) x SU(3) symmetric Lagrangian model for two-meson production in s- and p-wave, (T), 25:56538 (ORO-3992-2)
interactions anti p + p at 10 and 14 GeV/c, polarization parameter in forward elastic, (E), 25:56438
interactions anti p + p at 20 to 65 GeV/c, energy dependence of total cross sections for, (E), 25:56433
PROTOTYPE FAST REACTOR
components for, design and performance requirements for, 25:57011
construction of, review of planning for, 25:56998
design parameters of, 25:57013
fuel elements for, performance requirements of, 25:57064
PROTOZOA
Trypanosoma equiperdum, immune reactions of rats to, studies on radioprotective effects of endotoxins using, 25:55267
PRUSSIAN BLUE
effects on distribution of mixed cesium and strontium radioisotopes in man following ingestion, 25:55113
PSORALEN
radiosensitizing effects on bacteriophage lambda, F' episomes, and Escherichia coli inactivation, uv, 25:55361
PUERTO RICO POWER REACTOR
fuel elements for, brazing methods for superheater shell of, 25:55425
PULSARS
JP 1933, distance from 21-cm line absorption profile, (E), 25:55724
JP 1933, scintillation parameters at 1420 MHz, (E), 25:55724
NP 0532, interpretation of precursor pulse in, (E/T), 25:55719
NP 0532, radiation mechanism for, (T), 25:55729
period--age distribution of, (E/T), 25:55687
search for, associated with Cyg X-1, (E), 25:55728
PULSE DISCRIMINATORS
design and performance of integral, for pulse-height analysis, 25:55073 (INR-1315)
PULSE GENERATORS (ELECTRONICS)
design of megavolt, for accelerator tubes, 25:56583 (IAE-1980)
PUMPS
design criteria for nuclear service, development program for, 25:57092(R) (ORNL-TM-3483)
design of glandless, for reactors, 25:54857
design problems for primary, in boiling water and pressurized water reactors, 25:57038
flow characteristics for boiling water and pressurized water power reactor cooling system, 25:57039
flow characteristics for boiling water and pressurized water power reactor cooling system, 25:57009
performance in sludge aeration operation, evaluation of, 25:54903
performance limits for boiling water reactor jet, optimum, 25:57037
standard for vertical shaft-sealed, motor-driven, single-stage centrifugal, 25:54831 (RDT-E-3-3-T)
PURINES
radiolysis of, rate constants for hydrogen atom reactions following electron, 25:55132
PYCNOMETERS
development of gas, for measuring swelling of boron carbide during irradiation, 25:54599 (ORNL-4717, p 117-24)
PYRIDINIUM COMPOUNDS
properties of pyridinium oxychlorouranate, 25:54541
PYRIMIDINE
effects of dimers of, in recovery of uv-irradiated Escherichia coli mutant, 25:55360
PYRIMIDINES
radiolysis of, rate constants for hydrogen atom reactions following electron, 25:55132
PYROCHLORES
separation of niobium as oxide from, 25:54741
PYROMETERS
design based on Nyquist noise theorem for in-core use, 25:55077(T) (LA-tr-71-71)

## Q

Q DEVICES
plasma confinement by electrostatic fields from electron beams in, alkali metal, (T), 25:56013
QUAD CITIES POWER REACTOR, UNIT 1
operation of, license for, 25:56944 (DOCKET-50254-52)
technical specifications for, 25:56944 (DOCKET-50254-52)
QUANTUM ELECTRODYNAMICS
electromagnetic operator in, test for isotensor component of, 25:56839
metric for neutron--proton electromagnetic mass difference and production of heavy photons in electromagnetic interactions, indefinite, 25:56547 (NYO-1932(2)-200)
QUANTUM FIELD THEORY
fields in, equivalence of Lorentz and Foldy--Wouthuysen transformations for free spinor, 25:56554
fields in, Lagrangian formalism for neutral massive spin-3, 25:56548 (ORO-3992-1)
formalism for quantized fields associated with annulus-type medium, canonical, 25:56563
formulation of action-at-distance, for particle interactions, 25:56550 (ORO-3992-14)
formulation of finite, review of, 25:56545 (IC-71/108)
formulation of, tempered distributions and departure from superposition principle in, 25:56544 (IC-71/71)
geometric structure of parity-conserving relativistic, 25:56557
Lagrangian formalism for neutral massive spin-3 fields in, 25:56548 (ORO-3992-1)
Lagrangians in, finite and unitary theory in highest perturbation orders for nonpolynomial, 25:56546 (JINR-P2-5998)
Lagrangians in, renormalization of nonpolynomial, 25:56549 (ORO-3992-9)
Lee model in, unified treatment of V--theta and V--2theta sectors of, 25:56553
Lorentz invariance and finite self-mass in local, 25:56564
particle interactions in action-at-distance, 25:56550 (ORO-3992-14)
quantization methods for tachyon fields, 25:56560
renormalization of nonpolynomial Lagrangians in, 25:56549 (ORO-3992-9)
scattering in, lectures on relativistic, 25:56571 (CERN-71-14, pp 229-87)
vertex functions in, Wilson expansions for small-distance behavior analysis for, 25:56543 (DESY-71/39)
Yang--Mills field in, Schwinger equations for, 25:56561
Yang--Mills theories in, higher groups for divergence of massive, 25:56542 (CNRS-CPT-71/P-378)
QUANTUM MECHANICS
angular momentum in, Bargmann space calculations for, 25:56395 (BNWL-1551(Vol.2)(Pt.1), pp 108-12)
Dirac equation for free electron, reduction to nonrelativistic form, 25:56391
energy states and statistics of atomic systems, 25:56397
formalism of relativistic, canonical proper-time, 25:56555
functionals in statistical and, subsidiary conditions for generating, 25:56556
integrals having both exponential and gaussian functions in, evaluation of, 25:56399
partition functions in, bound state and continuum contributions to two-body, 25:56396
Schroedinger equation in, method for reduction to one-dimensional integral equation, 25:56398
wave equations in, two-component spherical factorization of Klein--Gordon and Kramers, 25:56559
QUARTZ
analysis of standard, for bismuth, cadmium, mercury, and thallium by neutron activation and radiochemical separation, 25:54454
QUASARS
cosmic-particle absorption by high-energy, (T), 25:55908
energy sources for, supermassive objects as, (T), 25:55798
flux densities of four, daily and hourly variations of, (E), 25:55731
gravitational radiation in, conversion into electromagnetic waves, (T), 25:55805
gravitational redshifts in, (T), 25:55808
identification of southern, optical, (E), 25:55725
optical variability of 1215 + 30, (E), 25:55726
photon emission at 3 x $10^{10}$ eV from, (T), 25:55908

## R

RABBITS
plutonium-239 incorporation in hair of, effects of dose on rate of, 25:55116
prostaglandin radioimmunoassay in blood plasma of, using tritium, 25:55144
radiation effects on pulmonary blood circulation in, acute x, 25:55327
radioinduced cataracts in eyes of, effects of dose and LET on RBE for cobalt-60 $\gamma$, 2.5 and 14 MeV neutron, and 3 GeV proton, 25:55317 (CEA-CONF-1744)
RADAR
echoes from auroral region, simultaneous observaions with proton precipitation, (E), 25:55963
RADIATION
accidents involving, proposed USA registry for, 25:55250
dose calculations for infinitely thin source situated on boundary between two media, 25:55233
dose irregularities during neutron capture therapy,

local, 25:55212
dose rates from fission products in fallout from atmospheric nuclear explosions, calculation of, 25:55231
dose to human organs, terminology for expressing, 25:55251
dose to man in vicinity of nuclear fuel reprocessing plant, estimation of, 25:55237
dose to man near nuclear power plant sites, interpretation of emergency, 25:55242
dose to man, plutonium surface contamination levels for, 25:55195 (CONF-710401-, pp 352-64)
effectiveness for therapy of human tumors, effects of cell cycle synchronization on, 25:55306
effectiveness in inducing chromosome translocations in Vicia, 25:55191
effects on amino acid content of proteins in processed food, 25:55364
effects on aqueous solutions, ESR studies of free radicals produced by fast reaction flow systems from, 25:54662
effects on barley and maize, effects of developmental stage and dose on mutagenic, 25:55190
effects on calcium metabolism in rat bones, effects of sex on, 25:55331
effects on electrolyte metabolism in rats, combined effects of open skin lesions and, 25:55332
effects on germanium at low temperatures, review, 25:56303
effects on heating of plane bodies, tables for transient temperatures from, 25:56267
effects on hematopoiesis in active bone marrow, effects of dose fractionation on, 25:55326
effects on human bones following therapy of carcinomas, treatment of necrotic, 25:55270
effects on human chromosomes, bibliography on, 25:55178
effects on human tissues, effectiveness of additional treatment with iron and steroid preparations for minimizing therapeutic, 25:55303
effects on hydrocarbon--TBP mixtures, effects of nitric acid on, 25:54644
effects on II--VI compound semiconductors, review, 25:56291
effects on inorganic molecular ions, research progress on, 25:54633(R) (ORO-3660-4)
effects on monomer and polymer impregnants in cellulose and concrete, mechanical properties of products produced by, 25:55658
effects on polyoxymethylene, reduction of molecular weight and increase in thermal stability by, 25:54611(P)
effects on respiration rate in wheat seedlings, 25:55348
effects on semiconductors, review of important unanswered questions in, 25:56332
effects on silicon, structure of multiple-vacancy (oxygen) centers induced in, 25:56312
effects on solid organic compounds, effects of electron dislocation and molecular dimensions on, 25:54635
effects on space vehicle materials, 25:55576 (N-71-25034)
effects on storage life of fish, conference on, 25:55362 (LFEN-NI.-56a)
hazards to human population from nuclear power plant effluent, evaluation of, 25:55347
hazards to man from inhalation of reactor radioisotopes following accidental release, estimation of relative, 25:55202
use for cancer therapy, methods for altering sensitivity of host and tumor tissues during, 25:55265
use for tumor therapy in mice, comparison of effects of air and carbogen atmosphere on cure rate during, 25:55302

RADIATION CHEMISTRY
conference on progress and problems in contemporary, Tenth Czechoslovak, Marianske Lazne, Czechoslovakia, June 22-25, 1970, Vol. II, 25:54592 (CONF-700652-(Vol.2))
conference on progress and problems in contemporary, Tenth Czechoslovak, Marianske Lazne, Czechoslovakia, June 22-25, 1970, Vol. III, 25:54595 (CONF-700652-(Vol.3))
conference on progress and problems in contemporary, Tenth Czechoslovak, Marianske Lazne, Czechoslovakia, June 22-25, 1970, Vol. I, 25:54588 (CONF-700652-(Vol.1))
electron--ion recombination in, 25:54591 (CONF-700652-(Vol.1), pp 221-58)
ion pair mechanisms in, concentration dependence of, 25:54670
luminescence phenomena in, 25:54598 (CONF-700652-(Vol.2), pp 423-75)
mechanisms in, use of accelerated photoelelctrons to duplicate excitation, 25:54597
particle track structure in, models for, 25:54589 (CONF-700652-(Vol.1), pp 19-49)
radical pair formation in, 25:54665
reactions in solid organic materials, role of tunnel effect in postradiation, 25:54596
review on synthesis of organic compounds in liquid nonaqueous systems in, 25:54617
trapped electron production and reactions in, 25:54593 (CONF-700652-(Vol.2), pp 261-93)
trapped electron production and reactions in, 25:54594 (CONF-700652-(Vol.2), pp 331-64)
yield predictions for, current state of a priori, 25:54590 (CONF-700652-(Vol.1), pp 51-136)

RADIATION DETECTORS
background in Weber gravitational, experiments for estimation of upper limit for muon shower signal in, 25:56566
book: Radioactivity Measurements. Practical Manual on the Uses of Nuclear Radiation, 25:55020
calibration of stack-located, for monitoring reactor off-gases, neutron activation method for, 25:54986
calibration of, thermal neutron source for, 25:54892 (LA-4745)
design and construction of self-powered, for gamma radiation, 25:55011(P)
development of secondary-electron, for electron and photon beam energy measurements above 5 GeV, 25:56609(P)
readout electronics for ν + e interaction measurements, 25:55044 (JINR-E1-5818)
response of all-solid self-powered neutron flux, correlation of reactor power density profiles to, (E), 25:57017(R) (BAW-3647-22)

RADIATION DETECTORS, ACTIVATION
calibration of silver, for use with plasma focus experiment, 25:56214 (LGI-70/17/E)
fabrication of MgO--NiO and MgO--CoO, for in-core neutron flux monitoring, 25:55019(P)
handling and readout system for in-core neutron flux measurements, 25:55008(P)

RADIATION DETECTORS, BUBBLE CHAMBER
particle tracks in, automatic measurement of, 25:55047

RADIATION DETECTORS, CHERENKOV
development for beta detection in water, 25:55031

RADIATION DETECTORS, CRYSTAL
design of diamond, with radiator foil converter for neutron detection, 25:55009(P)

RADIATION DETECTORS, DIELECTRIC TRACK
particle tracks in glass, use of photoelectric colorimeter for counting, 25:55029
particle tracks in, elastically scattered recoil nuclei, 25:54999 (N-71-26447)
particle-track formation in, enhancement by exposure to oxygen and ultraviolet light, 25:55010(P)
performance for monitoring reactor power by nitrogen-17 decay, (E), 25:57124
performance of triacetate cellulose, for alpha dosimetry and spectroscopy, 25:55026

RADIATION DETECTORS, FISSION CHAMBER
readout in hard multiplying systems, asymptotic behavior of, (T), 25:55017

RADIATION DETECTORS, IONIZATION CHAMBER
amplifiers for, design of low-level, 25:55071 (CEA-N-1433)
description of, for personnel dosimetry, 25:55051(P)
design of boron trifluoride, for neutron detection, 25:55014(P)
design of universal portable, for dosimetry, 25:55052
development of boron coated, for power reactor in-core neutron monitoring, 25:57025
response to pulsed radiation using various filling gases, 25:55015

RADIATION DETECTORS, PROPORTIONAL
data acquisition from array of position-sensitive, correction for accidental coincidences in, 25:54997 (INSJ-128)
design for low-level tritium determination in biological and environmental samples, 25:55003 (UCRL-73128)
wall effects in tissue-equivalent, for microdosimetry, 25:55058
wall effects in, theory of, 25:55002 (NYO-2740-8, pp 7-146)

RADIATION DETECTORS, SCINTILLATION
design and performance of amphibious system containing, for in situ environmental radioactivity measurements, 25:55239
design and performance of combined solar battery--, for gamma and x radiation, 25:55005
design for neutron detection, 25:55012(P)
design of liquid, for low-level tritium determination in biological and environmental samples, 25:55003 (UCRL-73128)
design optimization of crystal, for low-level gamma activity measurements, 25:55024
development of improved, for use with video radioisotope scanning systems, 25:55278
development of miniaturized thallium-activated cesium iodide, for detecting radioactivity during thyroid surgery, 25:55018
development of NE-213, for fast neutron spectroscopy using off-line gamma-ray discrimination, 25:55033 (COO-2049-6)
development of NE-213, for neutron spectroscopy in aqueous media, 25:55034 (COO-2049-7)
performance of liquid, in radiation control laboratories, 25:55217
performance of organic, for x-ray detection, 25:55030
pulse-height response of activated alkali-metal iodide, to energetic heavy ions, (T), 25:55016
response function for sodium iodide, Monte Carlo

XUM

calculation of, 25:54994 (EGG-1183-2283)
sample positioning and rotation system for liquid, 25:55027(P)
temperature effects on thallium-activated sodium iodide, at 20 to 70°C, 25:55025
RADIATION DETECTORS, SEMICONDUCTOR
design of surface-barrier, for x rays and atomic particles, 25:55007(P)
development and uses of, 25:55000 (NP-19008)
RADIATION DETECTORS, SEMICONDUCTOR (GERMANIUM)
calibration of lithium-drifted, gamma energies and intensities of radium-226 source for, 25:55041 (ORNL-TM-3509)
performance of lithium-drifted, for measurement of fuel rod average burnup, 25:57201
preparation of lithium-drifted, 25:55013
time characteristics of lithium-drifted, computer programs for calculating, 25:55001 (NP-19011)
RADIATION DETECTORS, SEMICONDUCTOR (SILICON)
fabrication of surface-barrier ΔE, 25:54998 (JINR-P13-5970)
performance of lithium-drifted, for diagnosis of skin neoplasms using phosphorus-32, 25:55273
preparation of surface-barrier, 25:55013
RADIATION DETECTORS, SPARK CHAMBER
particle tracks in, automatic measurement of, 25:55047
particle tracks in, least squares fitting of, 25:55049
particle tracks in, stringing method for analysis of, 25:55048
RADIATION DOSE
calculation following fast reactor core failure accident, 25:57113 (HEDL-TME-71-33)
calculation of annual, from nuclear power plant-released krypton-85 in atmosphere to year 2000, 25:54781(T) (JPRS-53174)
estimation of personnel, for areas around radioactive objects, 25:54987
maximum permissible, evaluation of assumptions and methods used in calculating, 25:55254
RADIATION DOSIMETERS
development at Columbia Univ, 25:55002 (NYO-2740-8, pp 7-146)
development at Sloan-Kettering Institute during July 1, 1970 to June 30, 1971, 25:55208(R) (NYO-3510-18)
RADIATION DOSIMETERS, BIOLOGICAL
chromosome aberration frequency as, in accidentally exposed man, 25:55228
RADIATION DOSIMETERS, CHEMICAL
design of solid-electrolyte, for gamma rays and relativistic charged particles based on voltage change, 25:55054(P)
performance of fluorocarbons, based on radiolytic gas production, 25:55053
RADIATION DOSIMETERS, LUMINESCENT
response of Bragg--Gray-type anthracene--gelatin, for absorbed dose measurements, 25:55056
RADIATION DOSIMETERS, THERMOLUMINESCENT
data processing for multi-sphere polyethylene-moderated, for neutron spectroscopy, 25:55036 (HASL-244)
fabrication of small-grained aluminum oxide, 25:55055(P)
performance for fast neutrons in lucite phantoms, 25:55319 (UCD-472-118)
performance of encapsulated LiF, for dosimetry in bulk grain irradiator, 25:55234
RADIATION DOSIMETRY
research at Sloan-Kettering Institute during July 1, 1970 to June 30, 1971, 25:55208(R) (NYO-3510-18)
RADIATION PROTECTION
methods for operating personnel and population near pressurized-water reactor power plant in Japan, 25:54980
programs at Battelle plutonium facility, 25:54959 (CONF-710401-, pp 280-92)
standards of, Union of South Africa, 25:55245
RADIATION SOURCES
calibration of isotopic, development of equipment for, 25:55070(R) (BHO-67-2)
calibration of, at Cadarache, France, description of facility for, 25:54851
development of, technical progress review on, 25:57127
dose function of plane infinitely thin, situated on boundary between two media, 25:55233
holder for plesiotherapy, description of, 25:54902(P)
preparation of alpha--photon, 25:54887(R) (BNWL-1308-6)
production and uses of fission product, developments in, 25:54887(R) (BNWL-1308-6)
transfer between storage containers, design of cable-actuated device for remote, 25:54983(P)
RADIATION TARGET CANS
design of instrumented, for measuring thermal conductivity of uranium dioxide pellets, 25:55088
RADIATION TARGETS
design of absorbed deuterium--tritium, for neutron generators, 25:56626(P)
failure of natural uranium, contamination and radioprotection problems resulting from, 25:56582 (CEA-R-4188)
RADIATORS
mass of space power system, effects on system total mass, 25:54916
RADIO ASTRONOMY
survey of continuum radiation at 820 MHz between -7 and +85°, (E), 25:55787
RADIO TELESCOPES
development for molecular line radio astronomy, 25:55091
RADIO WAVES
absorption of auroral cosmic, relation to auroral vlf electromagnetic-wave emission, (E/T), 25:55999
emission from solar corona, slowly varying component of, (E), 25:55754
emission from Sun, (E), 25:55736
propagation across midlatitude polar cap, proton anomaly of PCA-associated very long, (E), 25:55996
transmission in ionospheric E region, detonation-wave effect on decameter-wavelength, (E/T), 25:55970
RADIOACTIVE CONTAMINATION
biological significance of, 25:55194 (70-CNA-641)
calculations for petroleum following production stimulation by contained nuclear explosions, 25:54826(T) (UCRL-Trans-10543, pp 99-116)
control on human clothing and skin, derivation of decision levels for, 25:55196 (LA-4558)
hazards from failure of natural uranium accelerator targets, systems for protection against, 25:56582 (CEA-R-4188)
hazards from underground nuclear explosion stimulation of gas and petroleum production, evaluation of, 25:54823(T) (UCRL-Trans-10543, pp 56-69)
monitoring in laboratories, use of liquid scintillation methods for, 25:55217
RADIOACTIVE MATERIALS
handling of, design of equipment for remote, 25:54853(P)
inventories at University of Colorado Medical Center, use of timesharing computer for maintaining and updating, 25:54984
processing buildings for, design of filter plenum heat exchangers for, 25:54950 (CONF-710401-, pp 162-80)
release to environment from nuclear power plants, estimation of effects on background radiation levels of long-term, 25:55200
shipping by rail and truck in Kentucky and Tennessee in 1968, shock and vibration data for container during, 25:54974 (SC-M-710241)
shipping through Mont Blanc Tunnel, safety evaluation of, 25:54973 (RT/PROT-(71)11)
storage of, design of fire-resistant container for, 25:54977(P)
transfer in and out of containers, design of leak-tight conveyer for, 25:54988(P)
transport of, civil responsibility and insurance in maritime, 25:55252 (NP-18752)
RADIOACTIVE MINERALS
processing of, efficiency of combined lump-and-batch method for industrial, (T), 25:54847
RADIOACTIVE WASTE
analysis of, nondestructive active and passive methods for, 25:55004(R) (WCAP-7562-4)
combustion of plutonium-bearing solid, 25:54715 (ORNL-4682, pp 95-113)
compaction for shipping and storage, equipment and methods for, 25:54975 (WASH-1167)
disposal at sea, international law regarding, 25:55252 (NP-18752)
disposal by hydraulic fracturing at ORNL, facility design and safety analysis for, 25:54971 (ORNL-4665)
disposal from pressurized-water reactor power plant in Japan, 25:54980
disposal in salt beds, research progress on, 25:54715 (ORNL-4682, pp 95-113)
disposal in salt mine repository, research progress on, 25:54758 (ORNL-4717, pp 109-15)
disposal of liquid metal fast breeder reactor fuel recycle complex, 25:54754
disposal of low- and medium-level, review of methods for, 25:54985
disposal of, review of environmental effects from, 25:54784
distribution of boiling power reactor, 25:56979
dose rates from boiling power reactor, 25:56979
fission product decay in glass cylinders containing, temperatures from, 25:54726
fixation in bitumen, mixer-evaporator and plant design for, 25:54981
incorporation in polyethylene, 25:54715 (ORNL-4682, pp 95-113)
incorporation of fuel reprocessing, in glass cylinders, 25:54726
management of power reactor, procedures and policies for, 25:57001
management of, engineering, economic, and safety evaluations of, 25:54715 (ORNL-4682, pp 95-113)
processing and storage of, review of corrosion problems in, 25:55390
processing of plutonium-contaminated liquid, methods and safety at Los Alamos plant for, 25:54708 (CONF-710401-, pp 369-85)
processing of, research progress on, 25:54715 (ORNL-4682, pp 95-113)
release from power reactors, effects on environment of, 25:56981
release limits for gaseous, derivation for power reactors of, 25:56980
release of liquid and gaseous, from power reactors,

25:56978
release of liquid, from West Valley fuel reprocessing plant, 25:54753
solidification in cement for disposal in seawater, 25:54979
storage of high-level, in solids, safety of, 25:54969 (JUL-766-CT)
storage of transuranic, site operation at NRTS for, 25:54965 (CONF-710401-, pp 365-8)
storage of, consideration of national and international radiation dose standards in planning for interim and long-term, 25:55253
volume reduction process for, at Rocky Flats, Colorado, 25:54709 (CONF-710401-, pp 386-91)
RADIOACTIVITY
book: Radioactivity Measurements. Practical Manual on the Uses of Nuclear Radiation, 25:55020
decay curves for, computer program for calculating half-lives and intensities of, 25:56695
deposition, diffusion, and transport of, comparison of US and USSR methods for calculating, 25:54782 (UCRL-51054)
estimation of induced, near activated objects, 25:54987
monitoring in aquatic environment of nuclear facility, role of stable element content measurements in pre-operational, 25:55240
monitoring in atmosphere and water, review of current methods for, 25:54784
monitoring in environment in United Kingdom, derivation and use of reference levels and working limits as standards for, 25:55241
monitoring in environment of nuclear power facility, consideration of ecological factors in developing program for, 25:55238
monitoring in gases surrounding contained nuclear explosion, method for, 25:54823(T) (UCRL-Trans-10543, pp 56-69)
simulation of, mathematical model for computer, (T), 25:54441
RADIOBIOLOGY
book: Physical and Radiobiological Investigations of Artificial Satellites of the Earth, 25:55342
book: Problems in Radiobiology, 25:55134
research at Columbia Univ., July 1, 1971, 25:55205(R) (NYO-2740-8)
RADIOCHEMICAL PROCESSING PLANTS
corrosion problems in fuel and waste processing, review on, 25:55390
criticality control in plutonium, administrative methods for, 25:54966 (CONF-710401-, pp 430-7)
design of plutonium, safety criteria for, 25:54967 (CONF-710401-, pp 438-53)
design of plutonium, using nitrogen processing atmospheres, 25:54943 (CONF-710401-, pp 69-82)
environmental monitoring and research on effects of Rocky Flats, 25:54964 (CONF-710401-, pp 316-19)
equipment development for TURF, 25:54716 (ORNL-4682, pp 133-43)
exhaust system for plutonium, design of filters for, 25:54947 (CONF-710401-, pp 118-32)
off-gas treatment from, in LMFBR fuel reprocessing, 25:54713 (ORNL-4682, pp 39-79)
operation of Rocky Flats, administrative procedures for, 25:54960 (CONF-710401-, pp 293-6)
radiation dose to man in vicinity of, estimation of, 25:55237
radioactive waste from liquid metal fast breeder reactor fuel recycle complex, 25:54754
safety aspects of proposed Rocky Flats, for plutonium recovery, 25:54961 (CONF-710401-, pp 297-9)
RADIOCHEMISTRY
research at Lyon Institute of Nuclear Physics in 1970, 25:56742(R) (LYCEN-7101)
RADIOFREQUENCY OSCILLATORS
quality factor of superconducting lumped-parameter, 25:55086
RADIOGRAPHY, BIOMEDICAL
bibliography on, 25:55274
RADIOGRAPHY, INDUSTRIAL
development and uses of neutron, 25:54930
equipment for neutron, design of, 25:54931(P)
facilities for neutron, at Sandia Laboratories, review of californium-252 and annular core pulse reactor, 25:54924 (SC-DR-710178)
method for detecting cracks in light alloy samples, optimization of, 25:54929
method for jet engine inspection using iridium-192 gamma source, 25:54927
RADIOISOTOPE SCANNING
effectiveness for diagnosis of human brain tumors in comparison with angiography, 25:55293
effectiveness for diagnosis of Paget's disease in comparison to biochemical methods and radiography, 25:55294
equipment for gamma emitters, description of, 25:55590(R) (EIR-192)
methods for combined skull and ventricular, for diagnosis of infantile hydrocephalus, 25:55290
methods for human thyroid, computer storage methods for evaluation of, 25:55282
methods using video systems, development of improved detector for, 25:55278
RADIOISOTOPES
accumulation by marine organisms, mechanisms of, 25:55154
accumulation by organisms in aquatic ecosystems, effects of stable element content on, 25:55158
book: Radioactivity Measurements. Practical Manual on the Uses of Nuclear Radiation, 25:55020
content and distribution of fallout, natural, and reactor produced, in Hudson River estuary, 25:55160
content of man, comparison of ICRP and MIRD methods for calculating maximum permissible, 25:55201
content of man, evaluation of assumptions and methods used in calculating maximum permissible, 25:55254
content of natural gas supplies, use of threshold limit values in establishing standards for, 25:55198
determination in mixtures, computer-assisted method for, 25:54441
determination of naturally unstable, α-, β-, and γ-emitting, review on effects of properties on radiometric, 25:54446
determination of, in mixtures, data unfolding techniques for, 25:54436 (ORNL-TM-3463)
development of, technical progress review on, 25:57127
distribution in rocks fractured by contained nuclear explosions, 25:54826(T) (UCRL-Trans-10543, pp 99-116)
effectiveness for renography in patients with cervical carcinomas in relation to prognosis, 25:55275
gamma angular distribution from polarized, system for measuring, 25:55089
inhalation of reactor inventory, estimation of relative radiation hazards to man from, 25:55202
neutron cross sections for, thermal, 25:54692(R) (NYO-3417-15)
preparation of colloids of, effects of hydroxide solubility products on, 25:54695
production and industrial uses of, selected abstracts of world literature on, 25:54894 (ORNL-IIC-37(Pt.2))
production and uses of, research progress on, 25:54887(R) (BNWL-1308-6)
production for medical uses, design of isotope generator for, 25:54909(P)
retention and excretion by peccaries following ingestion of debris from Schooner Event, 25:55124
separation by chromatography, automation of, 25:54727
separation of parent--daughter pairs, method for calculating cross contamination in column chromatographic, 25:54701
separation of short-lived, chemical problems in on-line, 25:54672
use as tracers in life sciences research since 1946, summary of, 25:55107
uses for studying blast-furnace ironmaking operations, 25:54906
uses in medicine, trends in, 25:56983 (NP-18992)
uses in pharmacy and clinical biochemistry, conference on, 25:55255
RADIOLOGY
research at Columbia Univ., July 1, 1971, 25:55205(R) (NYO-2740-8)
RADIOOPAQUE AGENTS
effectiveness of powdered tantalum, for radiography of upper respiratory mucosa, 25:55291
RADIOTHERAPY
dose distribution calculations for cobalt-60, development of computer program for, 25:55220
dose field in man during, standardization of isodose charts for expressing, 25:55211
dose field parameters for high energy bremsstrahlung, effects of electron component of beam on, 25:55209
dose planning for human, methods using digital computer for cobalt-60 γ, 25:55221
dose planning using IBM 1130 computer for calculation of treatment fields, 25:55218
source holder for, description of, 25:54902(P)
RADIUM
content in stratified uranium deposits, location of ore boundaries from gamma measurements of, 25:54808
dose distribution around sealed linear sources of, electronic calculations for, 25:54923
effectiveness for therapy of squamous epithelial cancer of mouth in comparison with ametohepazon, beta particles, gamma radiation, and 5-fluorouracil, 25:55345
effects on survival of hamster cells, RBE of, 25:55207 (NYO-2740-8, pp 220-59)
RADIUM ISOTOPES Ra-224
distribution in tissues of mice and rats following intraperitoneal injection, dose relation for radium-226 and, 25:55115
RADIUM ISOTOPES Ra-226
content in river waters in Czechoslovakia, (E), 25:54774
content of marine phytoplankton off coast of South Africa, 25:55155
content of uveal tissue in eyes of beagle dogs, use of autoradiography to measure, 25:55319 (UCD-472-118)
deuteron fission at 16 to 19 MeV, mass-yield curve for, (E), 25:56775
distribution in tissues of mice and rats, dose relation for radium-224 and, 25:55115
effects on bones of beagle dogs, estimation of hazards to

XUM

man from model for long-term low dose, 25:55319 (UCD-472-118)
handling and storage of sources of, equipment and methods for safe, 25:54936 (BRH/DMRE-71-3)
proton fission at 12.5 to 16.5 MeV, mass-yield curve for, (E), 25:56775
proton fission at 13 MeV, analysis using renormalized Fermi gas model and collective potential energy surface, (T), 25:56856
RADIUM ISOTOPES Ra-228
beta decay of, gamma ray intensities from, (E), 25:56747(T) (ORNL-tr-2531)
RADON
content in atmosphere at Plovdiv, Bulgaria during 1966 to 1969, 25:54792
content in uranium ores, effects on gamma spectrometric well logging measurements, 25:54759
content in USSR ground waters, effects of earthquakes on, 25:54775
content in waters of Bad Brambach, Germany, dual ionization chamber measurements of, 25:54766
decay products of, in surface layer of atmosphere, stationary vertical profiles for short-lived, 25:54787
diffusion in lunar rocks and soils, 25:54440
effects on ion balance in atmosphere, 25:54786
effects on lymphocytes in vitro following inhalation by patients with kidney diseases, 25:55346
monitoring in atmosphere, electrostatic sampler and detector system for, 25:55032
washout from atmosphere, method for measuring, 25:54802
RADON ISOTOPES Rn-220
content in atmosphere at Plovdiv, Bulgaria during 1966 to 1969, 25:54792
decay products of, in surface layer of atmosphere, stationary vertical profiles for short-lived, 25:54787
RADON ISOTOPES Rn-222
content in river waters in Czechoslovakia, (E), 25:54774
RAINWATER
fallout content in Hokkaido, Japan, following Sept. 1969 Chinese nuclear explosion, (E), 25:54789
RANCHO SECO POWER REACTOR
radioactive effluent treatment system for, operation of liquid, 25:56881
RARE EARTH ALLOYS AND SYSTEMS
book: Emissive Properties of Materials (Handbook), 25:56346
Al--La--rare earths, crystal field levels, superconducting transition temperature, and exchange parameters of, (T), 25:56359
rare earths--transition metals, preparation by heat treatment of amalgams of, 25:55401(T) (RFP-Trans-87)
RARE EARTH BROMIDES
formation of, estimation of free energies of, 25:54712 (ORNL-4682, pp 1-38)
RARE EARTH CHLORIDES
formation of, estimation of free energies of, 25:54712 (ORNL-4682, pp 1-38)
nuclear quadrupole resonance in, soft sphere model for, 25:57220 (COO-1533-15)
RARE EARTH HYDROXIDES
basicities of, 25:54718 (ORNL-4682, pp 168-81)
RARE EARTH ISOTOPES
energy levels of even--even deformed, structure and spin--spin correlations for collective $1^+$, (T), 25:56819 (JINR-P4-5889)
RARE EARTHS
chemical properties of aqueous solutions of, spectrophotometric studies on, 25:54578 (ORNL-4682, pp 215-17)
compounds, electron microscopic and thermal analysis of, 25:54671 (ORNL-4682, pp 114-32)
determination by spectroscopy of prompt $\gamma$ radiation following neutron capture, 25:54451
determination in fission product mixtures by ion exchange and $\beta$ counting, 25:54449
determination in lunar fines No. 10084 from Apollo 11 by ion exchange chromatography or high-voltage electrophoresis and neutron activation, 25:54475
determination in Mesozoic dolerite dikes, 25:54476
determination in meteorites and meteoritic phases by neutron activation and radiochemical separation, 25:54477
determination in powdered residues of thermal and surface water by mass and uv absorption spectrometry, 25:54409
determination in rocks by activation and high-pressure ion exchange, 25:54463
determination in rocks, chemical methods for, 25:54403
determination in yttrium by ion exchange and neutron activation, 25:54525
determination of, use of ion exchange in methods for, 25:54397
distribution between liquid bismuth and molten lithium halides, 25:54712 (ORNL-4682, pp 1-38)
Hall resistivity of, theory of anomalous, 25:56357
preparation using countercurrent electrophoresis, 25:54742
separation by displacement chromatography, 25:54723
separation by pressurized ion exchange, 25:54718 (ORNL-4682, pp 168-81)
separation from molten manganese nitrate hexahydrate or calcium chloride hexahydrate by solvent extraction using TBP, 25:54740
separation from MSBR fuel salt by metal transfer process, 25:54712 (ORNL-4682, pp 1-38)
separation from MSBR fuel solvent by extraction with bismuth--manganese alloys, 25:54534 (ORNL-4717, pp 43-56)
separation from pegmatitic ores, leaching studies for, 25:54752
separation of fission product, from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
separation of trace amounts of, from carbonate solutions by sorption on metal hydroxides, review on, 25:54734
solubility in liquid bismuth--lithium systems, 25:54712 (ORNL-4682, pp 1-38)
RATS
brain respiratory rate in $D_2O$, 25:55121
cesium-134 distribution in conceptus of pregnant, following injection, 25:55114
metabolism of lipids and proteins following ingestion of gamma irradiated beef, 25:55367
palladium-103 distribution in, following introduction into thigh muscle, effects of carrier on, 25:55112
radiation effects on bone marrow chromosomes of, x, 25:55192
radiation effects on calcium metabolism in, effects of sex on, 25:55331
radiation effects on electrolyte metabolism in, combined effects of open skin lesions and, 25:55332
radiation effects on enzyme activity and hematopoietic tissues in bone marrow of, effects of dose on x, 25:55330
radiation effects on hexokinase activity in brain, erythrocytes, and liver of, x, 25:55140
radiation effects on immune reactions to Trypanosoma, protective effects of endotoxins against x, 25:55267
radiation effects on olfactory bulb cells of, electron microscopy of x, 25:55336
radiation effects on response to tranquilizers, whole-body mixed $\gamma$ and neutron, 25:55325
radiation effects on taste threshold in, low dose x, 25:55322
radiation effects on thymidine incorporation into DNA of cultured thymus cells of, factors affecting x, 25:55127
radioinduced genetic damage in populations of, following repeated exposure over 13 generations, x, 25:55164
radioinduced osteosarcomas in, following injection of phosphorus-32, 25:55335
radium-224 distribution in tissues of, following intraperitoneal injection, dose relation for radium-226 and, 25:55115
toxicity of products of $\gamma$-irradiated DDT to, 25:55135
REACTIVITY
determination of pulsed, analysis of area-ratio method for, (T), 25:57185
REACTOR CONTAINMENT STRUCTURES
engineered safeguards equipment in, effects of post accident environments on performance of, (E), 25:57097 (WCAP-7744)
liner plate anchors for prestressed concrete, deformation of stud and rib type, (T), 25:56995
liners for prestressed concrete, matrix displacement method for buckling analysis of, 25:56994
performance of liquid metal cooled fast breeder reactor, effects of accidents on, 25:57069(R) (ANL-7800)
performance of, effects of internal explosions and pressure waves on, (E/T), 25:57070 (CEA-CONF-1796)
stress state of concrete, evaluation of safety margin of triaxial, 25:55659
REACTOR CONTAINMENT SYSTEMS
design requirements for core melt-through accident in liquid metal cooled fast breeder reactor, 25:57093 (ORNL-TM-3504)
spray solutions for, effects of organic materials on methyl iodide production in sodium hydroxide, 25:57092(R) (ORNL-TM-3483)
transients in boiling water power reactor pressure suppression, analytical modeling methods for coolant loss accident induced, 25:57057 (NEDO-10320(Suppl.1))
REACTOR CONTROL ELEMENTS
design requirements for 1000 MW(e) liquid metal cooled fast breeder reactor, 25:57069(R) (ANL-7800)
development of 1000 MW(e) liquid metal cooled fast breeder reactor, simulation studies for, 25:57069(R) (ANL-7800)
drives for rod, description of uniform motion hydraulic, 25:57200(P)
drives for, description and use of reluctance motors for, 25:54848
neutron absorption by cadmium, effects of rod interactions on, (E), 25:57205
neutron absorption by, effects of configuration on, (E), 25:57206
position indicator for rod, description of, 25:57204(P)
REACTOR COOLANTS
fission product control in gas, system for, 25:57033
REACTOR EXPERIMENTAL FACILITIES
design for radiation testing of fuels and materials, 25:55590(R) (EIR-192)
neutron spectra from horizontal channel of WWR-C-Prague, (E), 25:57125

rabbit system for IRT-M, design of pneumatic, 25:57130
survey of, 25:57122
REACTOR FUEL ELEMENTS
analysis of, nondestructive active and passive methods for, 25:55004(R) (WCAP-7562-4)
burnup calculations for, role in nuclear materials safeguards system, 25:54935 (BNWL-1599)
burnup of rod, performance of lithium-drifted germanium detector for measurement of average, 25:57201
cladding for, effects of coolant loss accident conditions on failure of Zircaloy, 25:57092(R) (ORNL-TM-3483)
cladding leaks in, remote detection using krypton-88, 25:54904
coatings for vitroceramic, chemical composition, deposition, and properties of aluminosilicate, 25:55613
coolant conditions in assemblies of, effects of interchannel thermal mixing on, (E/T), 25:57031 (WCAP-7755)
corrosion by liquid sodium of stainless steel clad mixed oxide, 25:57109 (ANL-7771)
cutting of irradiated, design of shears for, 25:54838(P)
decladding of stainless steel-clad spent, using hydrogen fluoride--oxygen mixtures, effects of temperature on, 25:54747
design characteristics of clusters of intermixed helical fin and plain rod, 25:57198(P)
end caps for, metallic joint for maintaining leak tightness of, 25:57195(P)
explosion in liqid sodium of uranium oxide ($UO_2$), mechanical energy conversion efficiency and particle size distribution from, (E/T), 25:57068(R) (AI-AEC-13006)
extrusion of aluminum alloy-clad ceramic dispersion, core and clad flow conditions during, 25:55420
failure detection system for heavy water moderated research reactor, performance of $\gamma$ radiation monitoring method for, 25:57118 (JAERI-Memo-4157, pp 44-50)
failure detection system for heavy water moderated research reactor, design parameters and performance of, 25:57117 (JAERI-Memo-4157, pp 23-43)
failure detection system for liquid metal cooled, development of delayed neutron monitoring, 25:57055 (JAERI-Memo-4157, pp 84-8)
failure detection system for water cooled research reactor, performance of delayed neutron monitoring method for, 25:57119 (JAERI-Memo-4157, pp 51-65)
failure detection system for, performance of precipitator and gas chromatography methods for, 25:57193 (JAERI-Memo-4157, pp 66-83)
failure detection systems for liquid sodium cooled, development of, 25:57056 (JAERI-Memo-4157, pp 89-100)
failure detection systems for, development and performance of, 25:57192 (JAERI-Memo-4157)
failure of liquid sodium cooled uranium oxide ($UO_2$) pellets, 25:57069(R) (ANL-7800)
failure of liquid sodium cooled, mockup testing facility for, 25:57092(R) (ORNL-TM-3483)
failure of sodium cooled, analysis of transient, (E/T), 25:57110 (CONF-710302-(Vol.1), pp 97-101)
failure propagation characteristics of liquid sodium cooled bundle arranged pin type, 25:57069(R) (ANL-7800)
failure propagation in rod, effects of coolant--molten fuel reactions on, 25:57083 (CONF-710302-(Vol.1), pp 241-58)
fission product release and detection of failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) rod, 25:57047 (JAERI-Memo-4157, pp 2-22)
heat conduction in, computer code for transient, 25:57094 (RISO-M-1391)
heat transfer to flowing liquids at supercritical pressures, effects of dimensions on, 25:54880
heat transfer to turbulently flowing coolants, effects of surface roughness on, 25:54874 (RD/B/N-1980)
holders and spacers for, testing in high-temperature sodium, 25:55379(R) (WARD-4210-T-1-2)
inspection of plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) rod type, 25:57111(R) (GEAP-10010-29)
performance of liquid metal cooled stainless steel clad uranium oxide ($UO_2$) pin type, effects of overpower transients on, 25:57046 (GEAP-13722)
performance of liquid metal cooled Type 347 stainless steel clad plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) pin type, effects of high temperature and burnup on, 25:57045 (GEAP-10385)
radiation effects testing of heavy water moderated gas cooled, 25:57050 (UJV-2551-RT)
radioinduced reactions between cladding and fuel in pin-type, in-pile, 25:55648 (RCN-144)
repair of instrumented plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) rod type, 25:57111(R) (GEAP-10010-29)
reprocessing of HTGR, development of head-end methods in, 25:54714 (ORNL-4682, pp 80-94)
reprocessing of LMFBR, head-end processes in, 25:54713 (ORNL-4682, pp 39-79)
reprocessing of, review of corrosion problems in, 25:55390
reprocessing of, safeguards capabilities of materials accounting systems in facilities for, 25:54968 (IAEA-R-878-F)
standards for Zircaloy clad uranium oxide ($UO_2$), for pressurized water reactors, 25:57049 (RDT-E-13-15-T)
REACTOR FUELS
analysis of reprocessing solutions of, for technetium, standard for colorimetric, 25:54429
burnup of gas cooled coated particle, computer program for calculation of, 25:57021 (JAERI-Memo-4449)
cycle analysis for, CITATION code for, 25:57183 (ORNL-TM-2496(Rev.2))
cycle for fluid and molten salt, computer program for calculation of optimum, 25:57048 (ORNL-TM-3359)
cycles for fast, TRACE code for analysis of equilibrium, 25:57020 (EUR-4709)
heat transfer characteristics in liquid sodium by debris pieces of, 25:57069(R) (ANL-7800)
irradiation testing of, diffusion of cesium through pyrocarbon coatings during, 25:55647 (ORNL-4717, pp 83-90)
performance of silicon carbide (SiC) coated particle type, high temperature, (E/T), 25:57053
processing of carbide, container materials for high temperature alkali metal salt, 25:55376 (CONF-690452-, Paper 9)
production of LMFBR, 25:54717 (ORNL-4682, pp 160-2)
properties of coated particles, for use in HTGR-type reactors, 25:57052
radiation effects on Dragon coated-particle, 25:55651
radiation properties and shielding requirements of LMFBR, 25:54713 (ORNL-4682, pp 39-79)
reprocessing of LMFBR, development of aqueous methods for, 25:54713 (ORNL-4682, pp 39-79)
reprocessing of LMFBR, integrated lanthanide--actinide solvent extraction process using dibutyl butylphosphonate in, 25:54706 (BNWL-SA-3345)
reprocessing of molten salt, by reductive extraction, 25:54712 (ORNL-4682, pp 1-38)
reprocessing of, disposal of wastes from, 25:54726
reprocessing of, kinetics of fluorination in, 25:54736
transfer during processing, design of hopper feeder for, 25:54841(P)
REACTOR LOADING MACHINES
design characteristics of liquid cooled shield penetrating, 25:57197(P)
design characteristics of overhead mechanical linkage, 25:57210(P)
shielding for, description of ring shaped support, 25:57209(P)
REACTOR SAFETY
coolant combustion in fast reactors, analysis of liquid sodium, (E/T), 25:57112 (HEDL-TME-71-31)
evaluation of, acceptable risk concept for, 25:56983 (NP-18992)
hydrodynamic aspects of accident conditions, use of computer codes for analysis of, (E/T), 25:57102
research and development program during May and June 1971, 25:57092(R) (ORNL-TM-3483)
research programs on, summaries of, 25:57096 (WCAP-7722)
research progress during June 1970 through May 1971, 25:57090 (ORNL-4717, pp 91-107)
REACTOR SAFETY EXPERIMENTS
experimental capabilities of TREAT, for liquid metal cooled fast breeder reactor safety programs, 25:57069(R) (ANL-7800)
fuel pin failures in TREAT sodium coolant loop, method for analysis of, (E/T), 25:57110 (CONF-710302-(Vol.1), pp 97-101)
REACTORS
chemistry of, research progress on, 25:54531(R) (ORNL-4717)
cooling system for, design of glandless pumps for, 25:54857
development of, conference on mathematics applications for, 25:57071 (CONF-710302-(Vol.1))
development of, conference on mathematics applications for, 25:57147 (CONF-710302-(Vol.2))
dynamics of cylindrical, COSTANZA (R,Z) code for analysis of transient, 25:57187 (EUR-4673)
materials for, selection criteria and machining aspects of, 25:57207
neutron flux distribution in non-uniform lattices in, modified collision probability method for calculation of, 25:57155 (CONF-710302-(Vol.2), pp 644-54)

description of hot cell, 25:57054 (ANL-EBR-30)
design for lifting and moving radioactive material, 25:54853(P)
design for poisonous or radioactive materials, 25:54978(P)
design of sealed master-slave, 25:54990(P)
development for radium-226 storage facility, 25:54936 (BRH/DMRE-71-3)
REPTILIA
Uta stansburiana, radiation effects on genetic variation in populations of, γ, 25:55320
REPUBLIC OF SOUTH AFRICA
radiation protection regulations of, 25:55245
radium-226 content of marine phytoplankton off coast of, 25:55155
RESISTORS
radiation effects on electric properties of black silicon-carbide varistors, neutron, 25:55103
radioinduced gas desorption from black silicon-carbide varistors, gamma, 25:55102
RESPIRATION
radiation effects on human external, following therapy of malignant chest tumors, γ, 25:55339
RESPIRATORS
performance for protection against radioactive and toxic contaminants, dioctyl phthalate man tests on, 25:55243 (CONF-710401-, pp 392-406)
RESPIRATORY SYSTEM
radiography of human, radioisotope scanning method for evaluating lung perfusion following, 25:55285
RHENIUM
casting by levitation melting using magnetic field, 25:55424
conductivity at 80 to 1900°K, electric and thermal, 25:55523
creep behavior of electron-beam melted, 25:55432 (N-71-23114)
creep properties of electron beam-melted and powder metallurgy, at 2200 to 4200°F, 25:55491
determination of trace amounts of, in molybdenum, review on, 25:54399
determination of, solvent extraction methods in, 25:54401
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
electron--phonon interaction in normal and superconducting states of high-purity, 25:56097
reactions with molten lithium perchlorate, Raman spectral studies on compounds produced by, 25:54538
superconducting-energy-gap behavior of single-crystal, tunneling study of, (E/T), 25:56067
RHENIUM ALLOYS AND SYSTEMS
C--Hf--Re--W, mechanical properties of, 25:55433 (N-71-23982)
Mo--Re--W, creep properties of, at 1800 to 4000°F, effects of grain size on, 25:55431 (N-71-23110)
Os--Re-base, sound velocity at room temperature in, 25:55078(R) (NYO-3906-5)
Pr-base--Re, phase diagram of, 25:55567
Re--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Re--W, phase composition of, at 1500 to 1900°C, effects of aluminum oxide coating on, 25:55465
RHENIUM ISOTOPES Re-186
beta decay of, β-γ angular correlations and matrix elements for nonunique first-forbidden, (E), 25:56776
RHENIUM ISOTOPES Re-187
energy-level transitions in, nuclear structure effects on internal conversion of M1, 25:56756
RHODIUM
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
RHODIUM ALLOYS AND SYSTEMS
Dy--Rh, hyperfine parameters of DyRh, Moessbauer-effect study of, 25:56382
Fe-base--Ni--Rh, use as filter in polarized iron-57 Moessbauer source, 25:56366
RHODIUM ISOTOPES Rh-103
energy levels from ruthenium-103 decay, spin--parity assignments for, (E), 25:56771
energy-level transitions from ruthenium-103 decay, internal conversion coefficients and multipolarities

for, (E), 25:56771
neutron capture at 14 MeV, γ spectra and cross section for, (E), 25:56729
RHODOPHYTA
Corallina sp., radioisotope content of Pacific Ocean, in environs of reactors, 25:55151 (CONF-710817-1)
Gelidium sp., radioisotope content of Pacific Ocean, in environs of reactors, 25:55151 (CONF-710817-1)
Phyllospadix sp., radioisotope content of Pacific Ocean, in environs of reactors, 25:55151 (CONF-710817-1)
RIBONUCLEASE
radioinduced inactivation of, conformational changes associated with uv, 25:55137
RIBOSOMES
radiation effects on synthesis of RNA precursor, in yeast, uv, 25:55138
RIVERS
radioisotope content of Czechoslovakian, measurement of natural, 25:54774
thorium content of Czechoslovakian, (E), 25:54774
uranium content of Czechoslovakian, (E), 25:54774
RNA NUCLEOTIDYLTRANSFERASE
radiation effects on activity of sugar beet, effects of dose on γ, 25:55351
ROBERT E. GINNA POWER REACTOR, UNIT 1
fuel elements of, inspection and replacement of defective, 25:56940 (DOCKET-50244-78)
power increase for, safety aspects of, 25:56941 (DOCKET-50244-79)
radioactive effluents from, excessive iodine-131 release on September 27 and 28, 1971, 25:56903 (DOCKET-50244-80)
ROCKS
age of worldwide, rubidium/strontium method for estimation of, 25:54757(R) (MIT-1381-18)
analysis by 14-MeV neutron activation and γ spectrometry, review of, 25:54465
analysis by activation, comparison of other methods with, 25:54458
analysis by alpha scattering, 25:54459
analysis by fast and thermal neutron and photon activation, 25:54463
analysis by instrumental activation, gamma--gamma coincidence spectrometry in, 25:54479
analysis by instrumental neutron activation and neutron activation with radiochemical separations, 25:54461
analysis by nondestructive 14-MeV neutron activation, computer program for analyzing γ spectra in, 25:54482
analysis for beryllium by alpha activation and prompt γ counting, 25:54467
analysis for gold by neutron activation of lead alloy obtained in cupel assay, 25:54521
analysis for noble metals by neutron activation and radiochemical separations, 25:54485
analysis of basic and ultrabasic, for thorium and uranium by neutron activation, 25:54495
analysis of standard, by neutron activation and γ spectrometry, 25:54464
analysis of standard, for bismuth, cadmium, mercury, and thallium by neutron activation and radiochemical separation, 25:54454
analysis of terrestrial and nonterrestrial, by atomic absorption spectroscopy, comparison of neutron activation analysis results with those from, 25:54511
analysis of terrestrial, for noble metals by neutron activation, 25:54484
analysis of ultramafic, for trace elements by neutron activation and γ spectrometry, 25:54496
argon-40 diffusion from, (E), 25:55672
book: Chemical Methods of Rock Analysis, 25:54403
radioisotope distribution in, fractured by contained nuclear explosion, 25:54826(T) (UCRL-Trans-10543, pp 99-116)
RODS
fluid flow through bundles of, convective heat transfer in axial turbulent, 25:54866 (EIR-198)
heat transfer in slender straight, calculation of, 25:54885
RUBIDIUM
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
diffusion in glass, effects of temperature on, 25:55611
separation from MSBR fuel solvent by extraction into bismuth by reduction with lithium at 650°C, 25:54534 (ORNL-4717, pp 43-56)
sorption of fission-product, by graphite at high temperatures, 25:55623
RUBIDIUM ALLOYS AND SYSTEMS
K--Na--Rb, phase studies of, thermal methods for, 25:55524(R) (COO-1707-11)
RUBIDIUM CHLORIDES
impurity location in crystals of, by axial channeling of helium ions and protons, 25:56337
RUBIDIUM FLUORIDES
$RbBF_4$--RbF, phase diagrams for, 25:54532 (ORNL-4717, pp 1-27)
RUBIDIUM FLUOROBORATES
$RbBF_4$--RbF, phase diagrams for, 25:54532 (ORNL-4717, pp 1-27)
RUBIDIUM IONS
reactions with tungsten, sputtering of secondary tungsten ions from, 25:55819
RUBIDIUM ISOTOPES
determination in rocks, methods and standards for, 25:54757(R) (MIT-1381-18)
RUBIDIUM ISOTOPES Rb-84
beta and electron-decay of, branching ratios and half-life for, (E), 25:56697
beta decay of, β-γ angular correlations and matrix elements for nonunique first-forbidden, (E), 25:56776
RUBIDIUM ISOTOPES Rb-87
energy level scheme from krypton-87 decay, (E), 25:56703
use as standard in nuclear metrology, 25:54901
RUBIDIUM PERCHLORATES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
RUBIDIUM URANYL NITRATES
crystal growth and structure of $RbUO_2(NO_3)_3$, 25:54579
RUTHENIUM
casting by levitation melting using magnetic field, 25:55424
determination in geochemical samples by neutron activation, 25:54484
determination in geological sample by neutron activation and radiochemical separations, 25:54485
determination in presence of osmium, spectrophotometric, 25:54412
determination in silicate rocks and rock-forming minerals by neutron activation and radiochemical separations, 25:54486
determination of, use of ion exchange in methods for, 25:54397
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation from iridium, palladium, or platinum on titanium tungstate papers by electrochromatography, 25:54744
separation from rhenium by solvent extraction, 25:54401
RUTHENIUM ALLOYS AND SYSTEMS
C--Ru--Th, phase studies of, 25:55640
Ce--Gd--Ru, critical magnetic field in superconducting, (E), 25:56074
Ce--Nd--Ru, critical magnetic field in superconducting, (E), 25:56074
Ce--Ru, critical magnetic field in superconducting intermetallic $CeRu_2$, (E/T), 25:56074
Ce--Ru--Y, critical magnetic field in superconducting, (E), 25:56074
Nb--Ru, diffusion in, effects of composition on mutual, 25:55452
Ru--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Ru--Ta, thermionic properties of, relations with ruthenium content, 25:56350
Ru--V, phase transition of near-equiatomic, x-ray diffraction study of cubic--tetragonal, 25:55532
Ru--Zr, diffusion in, effects of composition on mutual, 25:55452
RUTHENIUM ISOTOPES Ru-103
beta decay of, conversion electron spectra and γ--γ angular correlations for, (E), 25:56771
RUTHENIUM ISOTOPES Ru-106
content in liquid radioactive waste effluents from Nuclear Fuel Services West Valley reprocessing plant, 25:54753
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)

## S

SACLAY PROTON SYNCHROTRON (SATURNE)
experimental facilities at, nuclear spectrometry, 25:56593 (LYCEN-7104, S7.1-2)
research on polarized proton reactions, 25:56688 (LYCEN-7104, S6.1-2)
SACLAY REACTORS (OSIRIS)
loop for, description of high-temperature in-pile, 25:54840
SAFETY
programs at Oarai Research Establishment in Japan during October through December 1970, 25:55247(R) (JAERI-Memo-4353)
SALICYLALDEHYDE
complexes with thorium, uranium, and/or yttrium, preparation and spectral properties of, 25:54539
SALIVA
analysis for iodine by neutron activation and radiochemical separation, 25:54509
SALT DEPOSITS
cavity excavation in underground, feasibility study of nuclear methods for storage, (E), 25:54824(T) (UCRL-Trans-10543, pp 70-80)
gas flow and diffusion in unconsolidated beds of, 25:54758 (ORNL-4717, pp 109-15)
radioactive waste disposal in German Asse, methods for low- and medium-level, 25:54985

XUM

radioactive waste storage in, safety of high-level, 25:54969 (JUL-766-CT)
SALTS
radiolysis of aqueous solutions of, 25:54758 (ORNL-4717, pp 109-15)
SAMARIUM
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in nuclear grade uranium by x-ray excited optical fluorescence, 25:54428
mechanical properties at 78 to 600°K of polycrystalline, 25:55520
separation from aqueous solutions by solvent extraction using TTA, synergistic effects of 2,4-pentanedione on, 25:54731
separation from gadolinium and neodymium by liquid--liquid chromatography using bis(2-ethylhexyl) phosphate and sulfuric acid, 25:54745
separation from promethium by displacement chromatography using [(carboxymethylimino)bis(ethylenenitrilo)]tetraacetic acid, EDTA, and nitrilotriacetic acid, 25:54723
SAMARIUM ALLOYS AND SYSTEMS
Au--Sm, crystal structures and melting points of intermetallic, 25:55570
Fe--Sm, phase diagram and intermetallic compounds, 25:55569
SAMARIUM BORIDES
preparation and stoichiometry of $SmB_6$, 25:55601
SAMARIUM ISOTOPES Sm-139
beta decay of, half-life for, (E), 25:56761
energy levels from isomeric transition in, (E), 25:56761
energy-level transitions in, branching ratios, internal conversion coefficients, and multipolarities for, (E), 25:56761
isomeric transition in, half-life for, (E), 25:56761
SAMARIUM ISOTOPES Sm-143
energy levels from samarium-144 (p,d) reactions, neutron-hole structure of, (E), 25:56770
SAMARIUM ISOTOPES Sm-144
proton reactions (p,α) at 35 MeV, DWBA analysis of, (E), 25:56770
SAMARIUM ISOTOPES Sm-147
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
SAMARIUM ISOTOPES Sm-149
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
SAMARIUM ISOTOPES Sm-152
energy-level scheme from promethium-152 decay, (E), 25:56772
energy-level transitions from europium-152 decay, multipole mixing of, (E), 25:56777
SAMARIUM ISOTOPES Sm-153
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)
SAMARIUM ISOTOPES Sm-154
energy-level scheme from neutron inelastic scattering, (E), 25:56752(R) (SUNI-14)
neutron inelastic scattering at 1.5 MeV, γ spectra from, (E), 25:56752(R) (SUNI-14)
SAMARIUM ISOTOPES Sm-155
energy levels of, model analysis for ΔN = 2 mixing in, (T), 25:56737 (JINR-E4-5877)
SAMPLING
methods for environmental samples, evaluation of, 25:54779 (CONF-710401-, pp 347-51)
SAN ONOFRE POWER REACTOR, UNIT 1
core burnup limit for, revised Cycle 2, 25:56898 (DOCKET-50206-124)
emergency core cooling system for, improved performance and reliability of, 25:56936 (DOCKET-50206-125)
SANDS
moisture content of, radiometric gage for measuring, 25:55064(P)
SATURN (PLANET)
luminosity of, relation to solar activity, (T), 25:55766
SAXTON POWER REACTOR
cooling system for, inspection and leak detection procedures for, 25:56934 (DOCKET-50146-92)
fuel element assemblies for, revised technical specifications for plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$), 25:56933 (DOCKET-50146-91)
SCANDIUM
abundance in solar atmosphere, (E/T), 25:55750
alpha reactions with, production of vanadium-48 by, 25:54677
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in rocks, chemical methods for, 25:54403
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
effects on determination of calcium by nondestructive alpha activation, 25:54522
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
lattice parameters of, effects of hydrogen on, 25:55549
phonon spectrum of, inelastic neutron scattering study of, (E/T), 25:56342
separation of trace amounts of, from carbonate solutions by sorption on metal hydroxides, review on, 25:54734
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
SCANDIUM HYDROXIDES
preparation of ScOOH, high-pressure hydrothermal method for, 25:55602
SCANDIUM ISOTOPES Sc-48
energy-level scheme from calcium-48 (p,n) reactions, (E), 25:56752(R) (SUNI-14)
SCANDIUM OXIDES
properties at high temperatures, electric, mechanical, and thermal, 25:55620
SCATTERING
amplitudes in Regge pole model, analytic form of multiple, 25:56578
amplitudes of elastic, at extremely high energies, properties of, 25:56574
amplitudes of, relativistic expansions for, 25:56577
bounds for three-body, evaluation of upper and lower, using Hilbert-space results, 25:55876
description of elastic, using nonlocal separable potentials, 25:56852
elastic nuclear Coulomb, polarization forces in, (T), 25:56573
perturbation theory of inelastic, conservation of particle flux in, (T), 25:55877
phase shifts for one-dimensional, additivity of, 25:56576
potential, angular dependence of impact parameter for nonmonotonic, 25:56572
potential, approximate evaluation of relativistic correction in, 25:55846
quantum field theory of relativistic, lectures on, 25:56571 (CERN-71-14, pp 229-87)
theory for nonrelativistic three-body, Faddeev approach for, 25:56575
variational principle for multichannel, quasi-minimum, 25:55878
SCHEELITE
analysis of, from East Alps deposits by monstandard activation method, 25:54490
SCHIZOMYCOTA
Bacillus subtilis, radioinduced adenine auxotrophic mutations in, effects of aminopterin on uv, 25:55189
Bacillus subtilis, radiosensitivity of, mechanism of relation of dark-repair to uv, 25:55356
Escherichia coli B/8, radiosensitivity of, mechanism of relation of dark-repair to uv, 25:55356
Escherichia coli, radiation effects on donor ability of recA and recA+ strains of, γ, 25:55358
Escherichia coli, radiation effects on survival of mutant, temperature dependence of recovery from uv, 25:55360
Escherichia coli, radiation effects on survival of, effects of 2,4-dinitrophenol on recovery from x, 25:55355
Escherichia coli, radiation effects on thymineless death and liquid holding recovery in, synergistic uv and phosphorus-32, 25:55359
Escherichia coli, radioinduced adenine auxotrophic mutations in, effects of streptomycin on uv, 25:55189
Escherichia coli, radioinduced inactivation of, role of DNA cross-links in sensitizing effects of psoralen on uv, 25:55361
Mycobacterium phlei, mutation induction by 1-methyl-1-nitrosourea for pigment formation in, 25:55171
Mycobacterium phlei, radioinduced mutations for pigment formation in, uv, 25:55171
Salmonella sp., radiation effects on survival of, in smoked lake whitefish, effects of dose on γ, 25:55365
Vibrio sp., radioisotope accumulation by, 25:55154
SEALS AND GLANDS
design for sealing objects inside pressure tubes, 25:54845(P)
design of liquid metal cooled reactor pressure vessel coolant, 25:57043(P)
design of metallic, to maintain leak tightness of fuel element end caps, 25:57195(P)
SEAS
radioisotope uptake by organisms in, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
SEAWATER
analysis for lanthanides by neutron activation and radiochemical separation, 25:54504
analysis for radioactive iodine as iodide and iodate by isotope exchange and scintillation counting, 25:54442
cerium content of, role of adsorption processes in,

XUM

25:54811
radioactive waste disposal in, solidification in cement for, 25:54979
separation of molybdenum from, by rapid adsorbing colloid flotation method, 25:54743
separation of uranium from, by adsorbing colloid flotation, 25:54738
uranium isotope distribution in, 25:54810
SEED
radioinduced chromosome aberrations in barley, method for metaphase analysis of x, 25:55175
radioinduced chromosome aberrations in wheat, effects of prolonged storage on repeated-exposure x, 25:55169
radioinduced inhibition of germination in radish, effects of very high dose rate on RBE for x, 25:55350
radioinduced mutations in barley and wheat, effects of ethylenimine on x, 25:55261
radioinduced mutations in Crepis capillaris, effects of water content on γ and x, 25:55167
radioinduced premutational oxygen-sensitive changes in chromosomes of Crepis capillaris, γ, 25:55168
strontium-90 content of hybrid wheat, in relation to phenotype, 25:55223
SEISMIC WAVES
ground motions from Rulison-produced, at Tosco mine and tower stations, 25:54813 (PNE-R-51)
polarization angles of S, from underground nuclear explosions, effects on earthquake occurrence, 25:54814
propagation in Sahara granite surrounding Monique nuclear explosion, (E), 25:54820(T) (UCRL-Trans-10543, pp 4-35)
spectra of San Fernando earthquake-generated, predictions for Glendale area, 25:54812 (NVO-1163-TM-30)
SELENIUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
analysis for chlorides, photometric, 25:54407
separation from tellurium by solvent extraction using Bismuthiol II, 25:54724
SELENIUM ISOTOPES Se-75
effectiveness of selenomethionine-incorporated, for scintiscanning of human pancreas, 25:55271(T) (LB/G-3059)
SEMICONDUCTORS
diffusion in, data tabulations on, 25:55509
electron transport theory using Monte Carlo methods, 25:56362
ion implantation in, review of analysis of lattice disorder in, 25:56304
positron lifetime measurements in single crystals of, 25:56360
radiation damage in II--VI compounds, review, 25:56291
radiation effects on, review of important unanswered questions in, 25:56332
SENA POWER REACTOR
fuel inventory for December 1970, 25:56918 (TID-25806)
fuel inventory for February 1971, 25:56920 (TID-25808)
fuel inventory for January 1971, 25:56919 (TID-25807)
fuel inventory for June 1971, 25:56923 (TID-25811)
fuel inventory for March 1971, 25:56921 (TID-25809)
fuel inventory for May 1971, 25:56922 (TID-25810)
fuel inventory for November 1970, 25:56917 (TID-25805)
maintenance during December 1970, 25:56918 (TID-25806)
maintenance during February 1971, 25:56920 (TID-25808)
maintenance during January 1971, 25:56919 (TID-25807)
maintenance during June 1971, 25:56923 (TID-25811)
maintenance during March 1971, 25:56921 (TID-25809)
maintenance during May 1971, 25:56922 (TID-25810)
maintenance during November 1970, 25:56917 (TID-25805)
operation during November 1970, 25:56917 (TID-25805)
operations during December 1970, 25:56918 (TID-25806)
operations during February 1971, 25:56920 (TID-25808)
operations during January 1971, 25:56919 (TID-25807)
operations during June 1971, 25:56923 (TID-25811)
operations during March 1971, 25:56921 (TID-25809)
operations during May 1971, 25:56922 (TID-25810)
SEPARATION PROCESSES
efficiency of combined lump-and-batch, for processing radioactive ores, (T), 25:54847
research progress on, 25:54718 (ORNL-4682, pp 168-81)
SEROTONIN
effects on sensitivity of guinea pigs and mice to transverse acceleration, 25:55264
radioprotective effects of, on mice, fast neutron and x, 25:55266
radioprotective effects on mice, effects of dose, sex, and strain on x, 25:55257
SERPUKHOV SYNCHROTRON
experimental facility for π + e interactions, readout electronics for multi-detector, 25:55044 (JINR-E1-5818)
SEWAGE
aeration of, evaluation of radiokrypton as indicator for oxygen mass transfer during, 25:54903
disposal of solid, description of BNL system for, 25:54843
SEWAGE SYSTEMS
description of pilot plant for nonpolluting operation, 25:54843
SEX
effects on radiosensitivity of rat bones, calcium metabolism studies on, 25:55331
SEYFERT GALAXIES
gravitational radiation in, conversion into electromagnetic waves, (T), 25:55805
SF MATERIALS ACCOUNTING
systems in uranium and plutonium scrap processing facilities, safeguards capabilities of, 25:54968 (IAEA-R-878-F)
SHEARON HARRIS POWER REACTOR, UNIT 1
construction of, permit application for, 25:56974 (DOCKET-50400-1)
operation of, license application for, 25:56974 (DOCKET-50400-1)
SHEARON HARRIS POWER REACTOR, UNIT 2
construction of, permit application for, 25:56974 (DOCKET-50400-1)
operation of, license application for, 25:56974 (DOCKET-50400-1)
SHEARON HARRIS POWER REACTOR, UNIT 3
construction of, permit application for, 25:56974 (DOCKET-50400-1)
operation of, license application for, 25:56974 (DOCKET-50400-1)
SHEARON HARRIS POWER REACTOR, UNIT 4
construction of, permit application for, 25:56974 (DOCKET-50400-1)
operation of, license application for, 25:56974 (DOCKET-50400-1)
SHEEP
iodine-125 and -131 transport across placenta in pregnant, 25:55319 (UCD-472-118)
SHELTERS
design of fallout, environmental factors in, 25:54933
SHIELDED CONTAINERS
design of fire-resistant, for radioactive materials, 25:54977(P)
design of pressure-relief plugged, for hazardous liquids, 25:54989(P)
development for safe handling and storage of radium-226 sources, 25:54936 (BRH/DMRE-71-3)
development for shipping irradiated LMFBR fuel, 25:54713 (ORNL-4682, pp 39-79)
safety evaluation of Types A and B, for shipping radioactive materials through Mont Blanc Tunnel, 25:54973 (RT/PROT-(71)11)
safety evaluation of, for shipping spent LMFBR fuel elements, 25:54972 (ORNL-TM-2723)
shock and vibration during rail and truck transport of radioactive materials, data tabulation on, 25:54974 (SC-M-710241)
testing of 10-ton cylindrical P-type, for shipping uranium hexafluoride, 25:54970 (KY-631)
SHIELDING
bremsstrahlung buildup factor, dependence on position between source and detector, 25:56280
calculations for lithium hydride and tungsten, for SNAP zirconium hydride reactor, 25:57133 (ORNL-TM-3366)
calculations for reactor multiregion slab, RAGA code for Monte Carlo, 25:57026 (RCN-146)
computer code for, Monte Carlo general purpose, 25:56262 (N-71-22378)
design characteristics of removable, for reactor access wells, 25:57199(P)
design characteristics of ring shaped, for reactor loading machine support, 25:57209(P)
design for radioactive areas in Battelle plutonium facility, 25:54959 (CONF-710401-, pp 280-92)
discrete ordinates method for anisotropically scattering multiplying particles in subcritical slab, convergence of, 25:56264 (ORNL-TM-3553)
gamma transport method for calculations of, three-dimensional stochastic, (T), 25:56273
neutron transport equation for slab geometry in, nonhomogeneous boundary-value problem for linear, (T), 25:56621
neutron transport in slabs of, orders-of-scattering method for fast-, 25:56258 (COO-2049-9)
neutron transport in, S/sub n/ discrete ordinate sets for deep-penetration, 25:57153 (CONF-710302-(Vol.2), pp 617-24)
radiation transport studies for, (E/T), 25:56255(R) (AD-721388)
SHIELDING MATERIALS
design of layered rubber--lead, for attenuation of streaming radiation, 25:55657(P)
evaluation of high boron and hydrogen content Cheatree, for neutrons, 25:54962 (CONF-710401-, pp 307-10)
SHIPPING
effects of rail and truck, on radioactive material shipping container, shock and vibration, (E), 25:54974 (SC-M-710241)
equipment and methods for spent LMFBR fuel elements, safety evaluation of, 25:54972 (ORNL-TM-2723)
regulations for overland, of sealed gamma sources for radiography, description of French, 25:54976
safety evaluation of radioactive material, through Mont Blanc Tunnel, 25:54973 (RT/PROT-(71)11)
SHIPPINGPORT PRESSURIZED-WATER REACTOR
maintenance during April through June 1971, 25:56894(R) (DLCS-5000271)
operation during April through June 1971, 25:56894(R)

XUM

(DLCS-5000271)
SHOCK WAVES
calculations for multi-dimensional magnetohydrodynamic, computer code for, 25:56192
effects on refractory nitride powders, 25:55618
magnetic-field microfluctuations on front of, model of, (E), 25:56009
models for collisionless, comparison of, 25:56189
particle velocity behind, use of magnetic field to measure, 25:57233 (LA-4545)
physical quantities behind, approximative method for calculation of, 25:57290(T) (UCRL-Trans-10539)
position indicator for, development of isotopic, 25:55065
propagation in collisionless magnetized plasma, kinetic model for unstable equilibrium, 25:56190
propagation in interplanetary space, association with directional and temporal properties of solar low-energy protons, (E), 25:56020
propagation in plasma, review of collisionless, (E/T), 25:56147
propagation of relativistic, astrophysical implications of, (T), 25:55668
SILANE
He--methane--$SiH_4$, radiation effects on, reactions of recoil tritium from neutron, 25:54678
SILICATE ROCKS
analysis for iridium, osmium, and ruthenium by neutron activation and radiochemical separations, 25:54486
analysis for trace bismuth, cadmium, mercury, and thallium by neutron activation and radiochemical separations, 25:54489
SILICIDES
diffusion in, data tabulations on, 25:55509
SILICON
abundance in B-type stars, (E), 25:55701
abundance in primary cosmic radiation, (E), 25:55911
alpha reactions at 160 MeV, cross sections and fission mechanism for lithium-9, carbon-16, and nitrogen-17 production in, (E/T), 25:56685 (FRNC-TH-48)
alpha reactions at 70 to 160 MeV, cross sections and fission mechanism for production of stable and neutron deficient nuclei in, (E/T), 25:56685 (FRNC-TH-48)
analysis for oxygen by helium-3 activation and γ spectrometry, 25:54502
analysis of pure, for calcium by nondestructive alpha activation, 25:54522
analysis of semiconductor, for boron and oxygen by alpha or proton activation, 25:54528
burning in stars, (E), 25:55703
determination in Australian tektites by 14-MeV neutron activation, 25:54478
determination in steel by fast neutron activation, 25:54519
effects of compounds of, on bubble formation during annealing of doped tungsten, 25:55511
ion implantation damage in, lateral-stress study of 220-keV, 25:56285 (SC-RR-710424)
radiation damage in carbon-doped, infrared absorption spectra of 130°K 2-MeV-electron, 25:56325
radiation damage in lithium-doped n-type, EPR study of lithium--defect interactions in 1-1.5-MeV electron, 25:56310
radiation damage in n- and p-type, EPR study of fast-neutron, 25:56324
radiation effects on cobalt-doped, iron-57 Moessbauer-effect study of fast-neutron, 25:56326
radioinduced defects in germanium-, oxygen-, and carbon-doped, infrared absorption spectral study of 90°K 2.8-MeV electron, 25:56297
radioinduced defects in lithium-compensated boron-doped, annealing of γ-, 25:56293
radioinduced defects in lithium-diffused n-type, 30-MeV-electron and fission-neutron, 25:56309
radioinduced defects in p-type, photoconductivity spectral study of 1.2-MeV-electron, 25:56308
radioinduced defects in, EPR study of structure of multiple-vacancy (oxygen), 25:56312
radioinduced divacancies in, absorption spectral study of growth and annealing of neutron-, at 76°K, 25:56311
radioinduced infrared absorption bands at 78°K, effects of uniaxial stress on fast-neutron, 25:56296
radioinduced luminescence spectra of, effects of annealing and lithium impurity on 3-MeV electron, 25:56294
radioinduced luminescence spectra of, effects of uniaxial stress and temperature on 2.5-MeV electron, 25:56295
separation from niobium by vacuum melting, 25:55403
surface wetting of molten, on boron nitride, mechanisms of, 25:55469
SILICON CARBIDES
properties of metal fiber reinforced composites of, review on, 25:55608(T) (LB/G-3074)
radiation effects on electric properties of varistors of black, neutron, 25:55103
radioinduced gas desorption from varistors of black, gamma, 25:55102
C--$HfB_2$--SiC, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--SiC--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
SiC--$HfB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
SiC--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
SILICON ISOTOPES Si-28
alpha elastic and inelastic scattering at 104 MeV, nuclear deformation study from differential cross sections for, (E), 25:56687 (KFK-1397)
alpha reactions (α,C-12) and (α,O-16) at 42 MeV, cross sections for, (E), 25:56659
alpha reactions (α,γ), at 1.4 to 2.75 MeV and at (0.3 to 3) x 10⁹ °K, rates for, (E/T), 25:55704
deuteron reactions (d,p) at 13.8 MeV, vector analyzing power for polarized, (E), 25:56724
electron inelastic scattering by, form-factor calculations using isotensor dipole sum rules, (T), 25:56868
helium-3 reactions (He-3,2p) and (He-3,d) at 40 MeV, DWBA analysis of angular distributions and spectra from, (E), 25:56713
nuclear deformation of, differential cross sections for alpha elastic and inelastic scattering by silicon-28 for determining, (E), 25:56687 (KFK-1397)
proton elastic scattering by, phase-shift analysis of polarization effects in, (T), 25:56678
proton reactions (p,2p) at 600 MeV, distorted-wave impulse-approximation analysis of cross sections from, (E/T), 25:56711
proton reactions (p,2p) at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
SILICON ISOTOPES Si-29
alpha reactions (α,n) at 2.8 to 4.1 MeV, excitation function for, (E), 25:56752(R) (SUNI-14)
SILICON JUNCTIONS
growth of n-type layers on p-type substrates, use of partially ionized vapor deposition method of epitaxial, 25:56347
radiation effects on junction capacitance of $n^+ - p - p^+$ power diode, fast-neutron, 25:55097 (N-71-25389)
radiation effects on p--n, gamma and neutron, (E/T), 25:55095(R) (COO-1624-41)
radiation effects on volt--ampere characteristics of diode, neutron, 25:55100
radioinduced currents in p--n diodes, minority carrier lifetime measurement using flash x-, 25:56336
SILICON NITRIDES
shock compression effects on powdered, x-ray-diffraction study of, 25:55618
SILICON OXIDES
carbon deposition on surfaces of, effects of chemical reactivity on pyrolytic, 25:55604
properties of metal fiber reinforced composites of, review on, 25:55608(T) (LB/G-3074)
SILICON SYSTEMS
Al--Si, analysis of standard, by neutron activation, 25:54455
C--Ca--Ce--Mg--Si, analysis for tellurium by gravimetry, 25:54416
C--Si, radioinduced dimensional changes in codeposited coatings of isotropic, fast neutron, 25:55652
Cu--Si, superconductivity in hcp phases of, (E), 25:56096
Fe-base--Si, magnetic properties at cryogenic temperatures, 25:56361
Ge--Si, fabrication of thermoelements of, hot pressing method for, 25:57267 (SC-DR-710438)
Hf--Si, properties of, thermochemical and thermophysical, 25:55644
Si--Zr, inflammability correlation of powdered, 25:55473
SILOXANES
radioprotective effects of poly-, uv, 25:55263
SILTS
analysis by fast and thermal neutron and photon activation, 25:54463
analysis of Alaskan, for gold by neutron activation, 25:54488
analysis of ocean, by nondestructive 14-MeV neutron activation, computer program for analyzing γ spectra in, 25:54482
analysis of Rhine basin, for metals by x-ray fluorescence, 25:54408
analysis of terrestrial, for noble metals by neutron activation, 25:54484
effects of lake bottom, on cesium-137 uptake by rainbow trout, 25:55159
SILVER
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
deposition on sodium fluoride, effects of electron irradiation on epitaxy of, 25:56322
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
electron reactions at 0.5 to 15 keV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
proton reactions at 1.5 to 4.5 MeV, optical radiation from, (E), 25:55813 (JINR-P4-5957)

XUM

SILVER ALLOYS AND SYSTEMS
Ag--Al, diffusion in, 25:57238 (MLM-OP-71003)
Ag--Al, superconductivity in hcp phases of, (E), 25:56096
Ag--Cd, oxidation at 600 to 800°C, mechanisms of internal, 25:55381
Ag--Cd, search for superconductivity in fcc phases of, (E), 25:56096
Ag--Dy, hyperfine parameters in DyAg, Moessbauer-effect study of, 25:56382
Ag--In, search for superconductivity in fcc phases of, (E), 25:56096
Ag--Sb, superconductivity in hcp phases of, (E), 25:56096
Ag--Sn, superconductivity in hcp phases of, (E), 25:56096
Ag--Zn, diffusion in, 25:57238 (MLM-OP-71003)
SILVER ISOTOPES Ag-105
effectiveness for diagnosis of human inflammations, 25:55286
SILVER ISOTOPES Ag-108
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
SILVER ISOTOPES Ag-110
content of metastable, in Pacific seaweeds in environs of reactors in comparison to other locations, 25:55151 (CONF-710817-1)
SILVER NITRATES
radiation effects on, on porous glass or silica gel surfaces, ESR studies of γ, 25:54607
radiation effects on, on porous glass or silica gel surfaces, ESR studies of γ, 25:54606
radiolysis of ices of, EPR studies on neutral silver trapping sites from γ, 25:54666
$AgNO_3$--KF, radiolysis of, EPR studies on neutral silver trapping sites from γ, 25:54666
SILVER OXALATES
radiolysis of crystalline, effects of cadmium on proton and γ, 25:54638
SKIN
radiation effects on human, following therapy of bone sarcomas, high energy bremsstrahlung, 25:55338
radioisotope contamination of human, derivation of decision levels for control of, 25:55196 (LA-4558)
SLURRIES
analysis of ore, by neutron activation, irradiator for on-stream, 25:54506
SNOW
density and thickness measurement of, development of airborne radiometric system for, 25:55065
strontium-90 content of Antarctic, 1955 and 1964 measurements of, 25:54788
SODIUM
abundance in primary cosmic radiation, (E), 25:55911
analysis for carbon and oxygen, development of meters for, 25:55379(R) (WARD-4210-T-1-2)
analysis of liquid, for oxygen by zirconium gettering-vacuum-fusion method, 25:54418
boiling in liquid metal cooled fast breeder reactor, detection and stability analysis of, 25:57069(R) (ANL-7800)
boiling in reactor cores, initiation and thermal hydraulics aspects of, (E/T), 25:57068(R) (AI-AEC-13006)
boiling of, effects of heat exchanger material and surface roughness on incipient, (E), 25:54868(T) (EURFNR-897)
combustion in fast test reactor, characteristics of, (E/T), 25:57112 (HEDL-TME-71-31)
combustion in reactor accidents, release and transport of aerosols and energy from, (E/T), 25:57068(R) (AI-AEC-13006)
content of diseased and normal human bones, neutron activation determination of, 25:55106
corrosive effects on niobium at 600°C, effects of oxygen on, 25:55386
corrosive effects on steels and stainless steels of liquid, 25:57109 (ANL-7771)
corrosive reactions with irradiated stainless steel, radioisotope deposition and transport from, 25:55370 (BNWL-SA-2335)
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in feldspar by neutron activation and γ spectrometry, 25:54494
determination in glass, by simultaneous measurement of scattered α particles and prompt protons, 25:56752(R) (SUNI-14)
determination in tourmaline, by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in ultramafic rocks by thermal neutron activation and γ spectrometry, 25:54496
diffusion in glass, effects of temperature on, 25:55611
diffusion in membranes and membrane model solutions, radiometric porous-frit method for measurement of self-, 25:54535 (ORNL-4717, pp 57-82)
distribution in metal transfer process for fission product removal from MSBR fuel solvent, 25:54534 (ORNL-4717, pp 43-56)
flow and pressure drop in multiple channels, effects of channel geometry on, 25:54863 (AI-AEC-13010)
heat transfer characteristics of debris pieces of reactor fuels in liquid, 25:57069(R) (ANL-7800)
impurities in liquid, calibration of devices for monitoring, 25:55069 (ANL-7804)
radiation effects on excretion of, in rat urine, combined effects of open skin lesions and, 25:55332
radiation effects on metabolism of, in man following therapy of diffuse toxic goiter, iodine-131, 25:55340
reactions of liquid, with acetylene, 25:54537
reactions with molten uranium oxide ($UO_2$) of liquid, 25:57069(R) (ANL-7800)
reactions with reactor materials, description of facility for studies of, 25:54839
separation, deactivation, and disposal of liquid, present with spent LMFBR fuels, 25:54713 (ORNL-4682, pp 39-79)
solvent properties of liquid, for argon and helium at 330 to 550°C, 25:54583
SODIUM ACETATES
radiolysis of crystals of, ESR studies on trapped $CH_2CO^-$ radicals produced by γ, 25:54652
SODIUM ACETYLIDES
equilibrium between $NaHC_2$ and $Na_2C$ in reactions of sodium with acetylene, 25:54537
SODIUM ALLOYS AND SYSTEMS
Ba--Na, phase diagram of, 25:55526
K--Na, electric conductivity of, to 300°C, 25:55527
K--Na, phase diagram of, 25:55527
K--Na--Rb, phase studies of, thermal methods for, 25:55524(R) (COO-1707-11)
SODIUM AZIDES
radiolysis of crystalline, effects of additives on yields from proton and γ, 25:54638
SODIUM CHLORIDES
diffusion of oxides on surface of, 25:54758 (ORNL-4717, pp 109-15)
effects on calcium-45 uptake and release by rat brain microsomes, 25:55120
effects on corrosion of superalloys by molten vanadium oxide, 25:55375 (CONF-690452-, Paper 8)
effects on separation of europium or lanthanum from acid solutions by solvent extraction using acidic esters of aminophosphonic acids, 25:54732
ion scattering by crystals of, channeling in, 25:54587(R) (AECL-3909)
plutonium diffusion in sodium chloride, 25:54758 (ORNL-4717, pp 109-15)
radioinduced reduction of cadmium ions in crystals of, magneto-optical study of x-,, 25:56320
SODIUM FLUORIDES
lattice sites of vanadium and manganese ions in crystals of, calculation and x-irradiation effects on, 25:56384
radiation effects on surfaces and deposit epitaxy of, electron, 25:56322
$BeF_2$--NaF, electric conductivity of molten, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--NaF, glass transition temperatures of molten, 25:54532 (ORNL-4717, pp 1-27)
LiF--NaF--$ThF_4$,, phase equilibria in, high-temperature, 25:54532 (ORNL-4717, pp 1-27)
$NaBF_4$--NaF, potentiometric studies of euctectics of, 25:54532 (ORNL-4717, pp 1-27)
$NaBF_4$--NaF, solvent properties for hydrogen fluoride, 25:54532 (ORNL-4717, pp 1-27)
SODIUM FLUOROBORATES
$NaBF_4$--NaF, potentiometric studies of euctectics of, 25:54532 (ORNL-4717, pp 1-27)
$NaBF_4$--NaF, solvent properties for hydrogen fluoride, 25:54532 (ORNL-4717, pp 1-27)
SODIUM HYDROXIDES
positron annihilation in glassy ice of, effects of radioinduced trapped electrons on, (E), 25:55835
radiation effects on aqueous solutions of, ESR studies of ozonide ion formation from γ, 25:54608
SODIUM HYDROXYFLUOROBORATES
preparation by reaction of boron trifluoride gas and sodium hydrogen carbonate, 25:54532 (ORNL-4717, pp 1-27)
SODIUM IONS
reactions with oxygen ions ($O^-$) at 0.1 to 7 eV, merged-beam measurement of total cross sections for charge exchange in, 25:55859
reactions with tungsten, sputtering of secondary tungsten ions from, 25:55819
reactions with tungsten, sputtering of secondary tungsten ions from, 25:55819
SODIUM ISOTOPES Na-22
abundance in lunar materials, (E), 25:55772
SODIUM ISOTOPES Na-23
energy levels from neon-22 (p,γ) reactions, γ branching ratios for, (E), 25:56752(R) (SUNI-14)
neutron total cross sections for, transmission of fission spectra through thick samples for evaluation of minima in, (E), 25:56650 (COO-2049-5)
proton reactions (p,γ), magnesium-24 photodisintegration rates from, 25:55703

XUM

SODIUM NITRATES
radiation effects on dissociation of polycrystalline, 5-MeV proton and 20-MeV alpha, 25:56318
radiolysis of acetic acid solutions of, effects of diazo reagents on γ, 25:54657
radiolysis of crystalline, effect of adsorbed water on γ, 25:54649
radiolysis of, comparison of Ceric and Shinn methods for determining yield of nitrite ions from, 25:54633(R) (ORO-3660-4)
SODIUM OXIDES
effects on corrosion of superalloys by molten vanadium oxide, 25:55375 (CONF-690452-, Paper 8)
SODIUM SULFATES
effects on corrosion of superalloys by molten vanadium oxide, 25:55375 (CONF-690452-, Paper 8)
SODIUM TELLURATES
tellurium-125 Moessbauer spectral study of recoil effects in $Na_2H_4TeO_6$, 25:56381
SOILS
moisture measurements of, passive radiometric gage using cosmic ray neutrons for, 25:55061(P)
moisture--density of surface, tabulation of US state highway departments' uses of radiometric gages for measuring, 25:54907
photon reflection by, Monte Carlo calculation of effect of subterranean perturbations on, (T), 25:56274
plutonium content of desert, around Nevada Test Site, 25:54755 (CONF-710401-, pp 320-7)
radiation monitoring in environs of Ames Research Reactor during 1971, 25:55152 (IS-2658)
radioisotope content of clay and sandy, performance of airborne gamma spectrometer for measuring bismuth-214, potassium-40, and thallium-208, 25:54768
sorptive properties for calcium and strontium, effects of soil exchange sites on differential, 25:54778
sorptive properties of wet, for plutonium, theoretical studies of, 25:54756 (CONF-710401-, pp 411-29)
SOL-GEL PROCESS
development of, microcolumn studies on, 25:55590(R) (EIR-192)
microsphere production in, 25:54719 (ORNL-4682, pp 229-39)
research progress on, 25:55592 (ORNL-4682, pp 144-59)
sol droplet dehydration in, 25:54719 (ORNL-4682, pp 229-39)
SOLAR ACTIVE REGIONS
evolution of, Jan. 14--June 1, 1969, (E), 25:55753
magnetic-field strengths over, (E/T), 25:55755
relation to sector structure of interplanetary magnetic field, (E/T), 25:55765
SOLAR CELLS
performance in combination with scintillators for gamma and x-ray detection, 25:55005
radiation effects on silicon, high-energy proton, 25:55099
radiation effects on, spacecraft experiment for studying, 25:55098(R) (N-71-26389)
SOLAR CORONA
element abundances in, (E/T), 25:55750
magnetic loop systems in, rotation of, (E/T), 25:55743
model for, current sheet magnetic, (T), 25:55733 (N-71-23433)
radio emission from filaments and active streamers in, (E), 25:55754
radio-wave propagation in, (E/T), 25:55755
spectra of, identification of 417-A line in extreme-ultraviolet, (E), 25:55767
streamers in, morphological model for, (E), 25:55754
SOLAR FLARES
anisotropy during proton event of Nov. 18, 1968, (E), 25:55764
charged-particle emission mechanisms for, (T), 25:55769
development of, model using magnetic-energy conversion for, (T), 25:55773
effect of 2B, on electron-density enhancements in E and F regions in ionosphere, (E/T), 25:56035
effect of Dec. 27, 1968 chromospheric, on ionospheric parameters, (E/T), 25:55982
electron acceleration in, due to quasistatic electric fields, (T), 25:55760
emission from active regions during Jan. 14--June 1, 1969, (E), 25:55753
emissions during, relation of radio and x-ray, (E), 25:55759
gamma flux from, (T), 25:55762
history of, from study of aluminum-26 and sodium-22 in luner samples, (E), 25:55772
magnetohydrodynamic flow calculations for, 25:55940
neutron flux from, (T), 25:55761
particle propagation and density in interplanetary space from, effect of solar boundary conditions on, (T), 25:55738
physical processes in, (T), 25:55769
proton flux from July 7, 1966, Proton-3 measurement of, (E), 25:55991
radio emission from, (T), 25:55769
solar-particle anisotropy as function evolution of, (E/T), 25:55763
x-ray emission during Oct. 1969, Intercosmos-1 detection of polarization of, E), 25:55771
x-ray emission during, (E), 25:55737
x-ray emission during, flux, spectrum composition, and structure of regions of, (E), 25:55770
SOLAR GRANULES
intensity fluctuations of, rms, (E), 25:55744
SOLAR PARTICLES
anisotropy of low-energy, as function of solar-flare evolution, (E/T), 25:55763
anisotropy of, during proton event of Nov. 18, 1968, (E), 25:55764
emission of protons in relation to microwave bursts, (E), 25:55758
emission of protons in relations to microwave bursts, (E), 25:55757
energy dissipation of PCA-associated, in ionosphere, (T), 25:56005
observations of low-energy 0.3 MeV or greater, during 1967 at widely separated locations, (E), 25:55956
SOLAR PROMINENCES
formation of loop, thermal effects in, (T), 25:55752
SOLAR RADIO BURSTS
emission during solar flares, (E), 25:55737
emission of Type-III, association with interplanetary electrons and protons, (E/T), 25:55778
relation of Type-I, to polarity distribution in interplanetry magnetic field, (E/T), 25:55765
relation to proton emission, (E), 25:55757
relation to proton emission, (E), 25:55758
relation to x-ray bursts, (E), 25:55759
spectra of, (E/T), 25:55755
SOLAR SPICULES
position along limb of groups of, regularity in, (E), 25:55747
relation to disk structures, (E), 25:55746
SOLAR SYSTEM
cosmic-particle modulation by, Z = 20 to 30 primary, (E), 25:55909
cosmic-ray modulation by, step-like changes in long-term primary, (E), 25:55912
formation of, (T), 25:55781
interplanetary electron and proton association with Type-III solar radio bursts, (E/T), 25:55778
isotope abundance in targets aboard Soyuz space probes, helium-3 and tritium, (E), 25:55902
magnetic-field measurement in interplanetary space, north--south component of, (E), 25:55779
plasma observation by Vela 3 in interplanetary space, correlation with simultaneous Imp 3 interplanetary magnetic-field data, (E), 25:55780
SOLAR WIND
cosmic-ray modulation by, dimensions of region of, (E/T), 25:55901
effects on planetary luminosities, (T), 25:55766
interaction with geomagnetic field, dipole model of, (E), 25:56009
interactions with magnetosphere, simulation of, 25:55976
interactions with Moon, (E), 25:55810
kinetic energy in, conversion of magnetic-field energy into, (T), 25:55775
parameters of, relation with Pc-type steady Earth-current pulsations, (E/T), 25:56004
plasma instabilities with parallel magnetic fields, electromagnetic, (T), 25:56204
plasma penetration by Earth-associated electron beams, wave-generation mechanism of, (E/T), 25:56019
proton observations on Vela 3, correlation with simultaneous Imp-3 magnetic-field data, (E), 25:55780
shock waves in, reverse and forward slow, (E/T), 25:55735 (N-71-24166)
velocity of, estimate of magnetospheric electric-field dependence on, (T), 25:56039
SOLAR X-RAY BURSTS
emission during solar flares, (E), 25:55737
relation to microwave bursts, (E), 25:55759
spectra of, OSO-V experiment for, (E), 25:55734 (N-71-23434)
SOLID SOLUTIONS
interstitial solubility limit in, use of measured lattice parameter for determination of, 25:55568
SOLIDS
book:Tables for Calculating Nonstationary Temperatures of Plane Bodies During Heating by Irradiation, 25:56267
diffusion in, research progress on, 25:54587(R) (AECL-3909)
photoionization of nonpolar, properties of trapped electrons from, 25:54594 (CONF-700652-(Vol.2), pp 331-64)
temperature distribution in, finite element method for calculation of, 25:54882
thermal expansion to 2500°C, method and equipment for measurement of, 25:55493
SOLUTIONS
radiolysis of aqueous, ESR studies of free radicals produced by fast reaction flow systems in, 25:54662
radiolysis of glasses of alkaline, electron trapping in γ, 25:54627 (CONF-700652-(Vol.2), pp 295-330)
SOLVENT EXTRACTION PROCESSES
development of Lacex, for irradiated LMFBR fuel reprocessing using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
research progress on, 25:54718 (ORNL-4682, pp 168-81)

SOUND
velocity in osmium--rhenium alloys at room temperature, extensional, 25:55078(R) (NYO-3906-5)
SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR
experimental capabilities of, liquid metal cooled fast breeder reactor safety programs, 25:57069(R) (ANL-7800)
fuel elements for, inspection of plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) rod type, 25:57111(R) (GEAP-10010-29)
fuel elements for, repair of instrumented, 25:57111(R) (GEAP-10010-29)
maintenance during May to July 1971, 25:57111(R) (GEAP-10010-29)
operations during May to July 1971, 25:57111(R) (GEAP-10010-29)
physics measurements for plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) fueled, (E/T), 25:57111(R) (GEAP-10010-29)
pressure vessel for, installation of backup seal for head of, 25:57111(R) (GEAP-10010-29)
startup testing of plutonium oxide ($PuO_2$)--uranium oxide ($UO_2$) fueled, 25:57111(R) (GEAP-10010-29)
SOVIET UNION
nuclear explosions in, for petroleum production stimulation, 25:54822(T) (UCRL-Trans-10543, pp 42-55)
nuclear explosions in, review of program on possible peaceful uses of contained, 25:54821(T) (UCRL-Trans-10543, pp 36-41)
SPACE
cosmic-ray propagation through interstellar, to Earth, path-length determination for, (E/T), 25:55903
interplanetary, solar-flare particles propagation and density in, effect of solar boundary conditions on, (T), 25:55738
magnetic-field intensity in interplanetary, correlation with geomagnetic-field activity, (E), 25:56007
parameter variations of interplanetary, during solar cycle, 1959-1967, (E), 25:55992
SPACE FLIGHT
book: Physical and Radiobiological Investigations of Artificial Satellites of the Earth, 25:55342
planetary quarantine program for, 25:57283(R) (TID-25790)
SPACE VEHICLES
book: Physical and Radiobiological Investigations of Artificial Satellites of the Earth, 25:55342
materials for, effects of nuclear and space radiation on structural, 25:55576 (N-71-25034)
power supplies for, calculations for optimum economic heat pipe cooled fast thermionic reactor for, 25:57134
SPECTROMETERS
design of magnetic, first- and second-order matrix theory for, 25:56598 (SLAC-75(Rev.2))
performance and testing of electrostatic electron, 25:55083
pulse-height spectra unfolding for, computer program for, 25:55042 (RD/B/N-1963)
resolution of magnetic charged-particle, optimization of, 25:55037 (JUL-737-FF)
spectra from charged-particle electrostatic, method for evaluation of, 25:55082
SPECTROPHOTOMETRY
research progress on, 25:54578 (ORNL-4682, pp 215-17)
SPECTROSCOPY
Lie groups in atomic, survey of, 25:55882 (NYO-1447-64)
research progress on, 25:54587(R) (AECL-3909)
sources for electron, preparation of high-purity carrier-free cesium-131, 25:54889 (INR-P-1325)
SPERM
radiation effects on mouse, 25:55207 (NYO-2740-8, pp 220-59)
radiation effects on quality of bull, tonometer measurements on x, 25:55337
SPERMATOGONIA
radioinduced chromosome translocations in mouse, RBE for gamma, 25:55182
radioinduced recessive sex-linked lethal mutations in mouse, x, 25:55184
SPHERES
energy tensor of Einstein linear gravitational field theory for resting liquid, phenomenological, (T), 25:56565
heat transfer in small, calculation of, 25:54885
SPORES
radiation effects on survival of bacterial, parameters for heavy ion, 25:55313
STABLE ISOTOPES
content of aquatic environment, role of, in pre-operational environmental monitoring for nuclear facility, 25:55240
effects on radioisotope accumulation by organisms in aquatic ecosystems, 25:55158
production for research uses, review of, 25:54899
STACK DISPOSAL
plume rise from, method for calculating, (E/T), 25:54780 (CONF-710505-6)
STAINLESS STEEL
brazing for Bonus Reactor superheater shell, 25:55425
compatibility with uranium carbide, evaluation by carbon transfer measurements, 25:55589 (JAERI-Memo-4438)
corrosion by liquid sodium of Type 304 and Type 347, 25:57109 (ANL-7771)
corrosion of irradiated cladding of, by sodium, radioisotope deposition and transport from, 25:55370 (BNWL-SA-2335)
radiation effects on adhesion of epoxy cemented specimen couples of, gamma, 25:55666
radiation effects on creep in Type 316, at 750°C, relations of injected helium content with alpha, 25:55574 (JAERI-Memo-4408)
radioinduced reactions with uranium dioxide fuel pins, in-pile, 25:55648 (RCN-144)
radioinduced swelling of Types 304 and 316, relations of dose and temperature with fast neutron, 25:55572 (BLG-457)
radioinduced swelling of, fast neutron, 25:55581
reactions with sodium at 1000 to 1300°F, carbon and nitrogen mass transfer in, 25:55379(R) (WARD-4210-T-1-2)
sensitization by LACBWR cooling water, failure parameters from intergranular, 25:55378 (SWRI-1228-P-7-40)
testing of fuel tubes of, ultrasonic method for, 25:54926
welds in thin-wall tubes of Type 316, ultrasonic inspection of butt, 25:54928
STANDARDS
calculation of MPC and MPD, evaluation of assumptions and methods used in, 25:55254
Colorimetric Determination of Technetium in Aqueous Solutions ASTM-E417-70T, 25:54429
design and performance of air-cooled heat exchangers for nuclear steam-supplied systems, 25:54833 (RDT-E-4-18-T)
electric heat and connector assembly for pressurizer for pressurized water reactors, 25:57030 (RDT-E-5-2-T)
establishment for radioisotope content of natural gas supplies, use of threshold limit values in, 25:55198
fabrication and acceptance of shell and tube water-to-water heat exchangers, 25:54832 (RDT-E-4-17-T)
fuel assemblies for pressurized water reactors, 25:57049 (RDT-E-13-15-T)
listing of national and international nuclear, 25:57091 (ORNL-NSIC-94)
Measuring Fast Neutron Flux for Analysis for Barium-140 Produced by Uranium-238 Fission, ASTM E393-69T, 25:54444
pressurizer for pressurized water reactors, 25:57029 (RDT-E-5-1-T)
radiation protection, of Union of South Africa, 25:55245
radioactivity monitoring, derivation and use of reference levels and working limits as UK environmental, 25:55241
review of Moessbauer-spectroscopy, 25:56365
Selection of Neutron Activation Detector Materials, ASTM E419-70T, 25:54510
Specifications for Deuterium Oxide, ASTM D2032-68, 25:54529
strength and pressure integrity of vertical, shaft-sealed, motor-driven, single-stage centrifugal pump, 25:54831 (RDT-E-3-3-T)
Test for Consumption of Potassium Permanganate by Impurities in Deuterium Oxide, ASTM D2033-68, 25:54405
Test for Radioactive Tritium in Water, ASTM D2476-70, 25:54447
Testing Deuterium Oxide, ASTM D2184-68, 25:54430
STANFORD LINEAR ACCELERATOR
development and operation of, April 1--June 30, 1971, 25:56599(R) (SLAC-136)
development and operation, 1970, 25:56600(R) (TID-25781)
research at, 1970, high-energy physics, 25:56600(R) (TID-25781)
STAR CLUSTERS
tidal effects on small, (T), 25:55683
STARS
angular separation and position angle of close binary, (E), 25:55693
atmosphere analysis and abundance determinations for B-type, model, (E), 25:55701
atmospheres of O and B, model, (T), 25:55673
atmospheres of pole-on Be, Hα line profiles for model, (E/T), 25:55709
atmospheres of, computations for model, (T), 25:55713
atmospheres of, X and Y functions of radiative transfer, (T), 25:55676
book: Methods of Investigating Variable Stars, (T), 25:55674
book: Model Atmospheres for O and B Stars, (T), 25:55673
composition of horizontal-branch, (E/T), 25:55708
condensation of solid hydrogen in proto-, (T), 25:55785
convection in atmospheres of, asymptotic solutions in nonlinear thermal, (T), 25:55694
convection in atmospheres of, nonlinear thermal, (T), 25:55695
convection zones in, effects of metal abundance on structure of, (T), 25:55679
core structure of, Tolman's solutions of field equations for, (T), 25:55696
distribution in Cygnus, (E), 25:55790
element abundances in atmospheres of beta Cephei, (E/T), 25:55711
evolution of early-type close binary, (T), 25:55690
evolutionary models for 15- and 30-solar-mass, (T), 25:55691

XUM

evolutionary track for HD 49798, (E), 25:55682
existence of supermassive, evidence of, (T), 25:55798
formation of, importance of internal velocity field in, (T), 25:55706
gas motions in convective envelopes of, (T), 25:55707
helium burning in 15- and 30-solar-mass, (T), 25:55691
hydrogen-shell burning in open-cluster, (T), 25:55684
light variations in supergiant, in LMC, (E), 25:55705
luminosity of horizontal-branch, (E/T), 25:55708
luminosity of variable, (T), 25:55674
magnitudes of three new VV Cephei, absolute, (E), 25:55680
mass exchange in early-type close binary, (T), 25:55690
mass losses in hot, radiation-pressure effects on, (T), 25:55712
mass of horizontal-branch, (E/T), 25:55708
metal abundances in R Cyg and HD 35155, iron-group and heavy, (E), 25:55699
model for Cepheids, radiative-transfer, (T), 25:55710
model for IRC + 10216, (E), 25:55686
models for β Cephei, (T), 25:55688
nuclear reaction rates in, $^{28}Si(\alpha,\gamma)$ and $^{16}O(\alpha,\gamma)$, (E), 25:55704
observations of variable, (T), 25:55674
opacity in, (T), 25:55685
period of eclipsing binary TY Puppis, (E), 25:55675
period of variable, (T), 25:55674
photometry and spectral classification of OB, in region LF 5, (E), 25:55788
photometry of central, in bright condensation in NGC 2175, (E), 25:55681
physical characteristics of B-type, (E), 25:55701
pulsations of β Cephei, nuclear-energized, (T), 25:55688
radiative processes in, (T), 25:55685
rotation of, effects on Schoenberg--Chandrasekhar limit, (T), 25:55684
silicon burning in, (E), 25:55703
spectra of late-type, infrared, (E/T), 25:55698
spectra of three new VV Cephei, emission, (E), 25:55680
spectra of, interstellar absorption lines in, (E), 25:55717
spectral analysis of HD 49798, (E), 25:55682
spectral redshifts in superdense, 25:55808
velocities of 85 southern O and B, radial, (E), 25:55697

STEAM
corrosive effects on graphite, 25:57092(R) (ORNL-TM-3483)
$H_2O$--steam, density in tubular channels under adiabatic and heated conditions, (E), 25:57032
$H_2O$--steam, flow and heat transfer characteristics of, in multirod coolant channels, (E), 25:54870(R) (GEAP-10347)

STEAM POWER PLANTS
cost estimates for single unit, computer program for calculation of conceptual, 25:57063 (ORNL-TM-3276)
environmental effects of, estimate of potential, 25:57098

STEEL
analysis for silicon by fast neutron activation, 25:54519
corrosion by liquid sodium of tool, 25:57109 (ANL-7771)
crack arrest toughness of A533B, at -70 to 100°F, 25:55513
fracture of A533B, gross strain crack tolerance studies on, 25:55514
fracture of thick-section ASTM A533B, effects of mechanical constraint on, 25:55512
fracture toughness of A302B and A533, relations between stress intensity and microscopic strength, (T), 25:55503
fracture toughness of ASTM A533B, to 550°F, 25:55517
fracture toughness properties of heavy-section plates and arc weldments of A533B class 1, 25:55516
mechanical properties of pressure vessel, effects of microstructure changes on, 25:55466
neutron reflection from 6-in.-thick slab of, orders-of-scattering calculation of collimated polyenergetic fast-, 25:56257 (COO-2049-8)
neutron reflection from shielding slabs of, fast-, (E/T), 25:56258 (COO-2049-9)
properties of prestressing wires of, for use in concrete reactor pressure vessels, 25:55422
radiation effects on adhesion of epoxy cemented specimen couples of, gamma, 25:55666
radiation effects on Charpy-V performance and dynamic tear of plates and weld deposits of ASTM A533B, neutron, 25:55586
radiation effects on ductile-to-brittle transition temperature of thick-wall pressure vessel, neutron, 25:55588
radiation effects on fracture and tensile properties of A533B pressure vessel, fast neutron, 25:55587
radioinduced embrittlement of Types A302B and A533B, effects of impurity copper and phosphorus on neutron, 25:55577 (NRL-7310)
role of short fine wires of, for reinforcing concrete, 25:55662
welds in thin-walled tubes of, ultrasonic inspection of butt, 25:54928
Mn--Mo--Ni--steel, radiation effects on brittleness and strength of heavy-section plates and welds of, fast neutron, 25:55585

STELLAR WIND
radiation pressure effects in, (T), 25:55712

STEROIDS
effectiveness of nandrolon decanoate, combined with radiation for treatment of human tumors, 25:55303

STORAGE RINGS
beam collisions and crossings in Orsay, space charge effects in, 25:56592 (LAL-RT-43-70)
beam injection into, charge-exchange method for proton, 25:56590(T) (LA-tr-71-46)
development and operation of ACO, Sept. 1970, 25:56591 (LAL-RT-42-70)

STREPTOMYCIN
effects on mutation induction in uv irradiated Escherichia coli, 25:55189

STRESS
conference on analysis of, Fourth International, Cambridge, Eng., April 6 to 10, 1970, 25:54846
relaxation in in-pile materials, deformation model for analysis of uniaxial, 25:55579 (WAPD-TM-943)

STRONTIUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
determination in barium minerals by atomic absorption spectroscopy, 25:54413
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in rocks, chemical methods for, 25:54403
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination of trace amounts of, in high-purity acids by emission spectrography, 25:54431
diffusion in glass, effects of temperature on, 25:55611
effects on radiolysis of crystalline potassium nitrate, 25:54638
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)
preparation using countercurrent electrophoresis, 25:54742
release from bonded beds of BISO-coated uranium dioxide particles during post irradiation annealing at 1250°C, 25:55647 (ORNL-4717, pp 83-90)
separation from magnesium on titanium tungstate papers by electrochromatography, 25:54744
separation from milk, double-bed ion exchange process for, 25:54722
separation from other alkaline earths by ionophoresis on filter paper and poly(vinyl alcohol), 25:54725
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
sorption by soils, effects of soil exchange sites on differential, 25:54778
sorption on cation exchanger from strong acid in presence of iron, calculation of kinetics of, 25:54720 (UJV-2550-Ch)

STRONTIUM FLUORIDES
positron lifetimes in, empirical model for calculation of, 25:55834

STRONTIUM HAFNATES
thermal conductivity at high temperatures, 25:55637

STRONTIUM ISOTOPES
determination in rocks, methods and standards for, 25:54757(R) (MIT-1381-18)

STRONTIUM ISOTOPES Sr-85
decay of isomeric, beta--gamma branching ratio for, (E), 25:56722
effectiveness for diagnosis of human hypertrophic osteoarthropathy, 25:55298
effectiveness for scanning human sacroiliac joints in ankylosing spondylitis, 25:55287
energy levels from yttrium-85 decay, spin--parity assignments for, (E), 25:56722
metabolism in man following intravenous and oral administration, effects of calcium intake on, 25:55109 (COO-1231-67)
sorption by man, effects of lactose, lysine, stable strontium, and vitamin D on, 25:55109 (COO-1231-67)

STRONTIUM ISOTOPES Sr-87
alpha reactions (α,d) at 25 MeV, angular distributions for, (E), 25:56779
effectiveness of metastable, for diagnosis of human hypertrophic osteoarthropathy, 25:55298
helium-3 reactions (He-3,d) at 18 MeV, angular distributions for, (E), 25:56779

STRONTIUM ISOTOPES Sr-88
helium-3 reaction (He-3,t) at 23 MeV, analysis for reaction mechanism in, (E), 25:56779
shell-model analysis of isovector excitations in, (T), 25:56827 (LYCEN-7104, S8.1-10)

STRONTIUM ISOTOPES Sr-89
content in petroleum, following production stimulation by contained nuclear explosion, (E/T), 25:54826(T) (UCRL-Trans-10543, pp 99-116)
content ratio to strontium-90 in fallout, method for determining, 25:54803
distribution in man following ingestion, effects of calcium phosphate, methionine, Prussian blue, and sodium alginate on, 25:55113
effects on mice following chronic ingestion, tumorigenic, 25:55319 (UCD-472-118)

STRONTIUM ISOTOPES Sr-90
content in Antarctic snow cores, 1955 and 1964 measurements of, 25:54788
content in liquid radioactive waste effluents from Nuclear Fuel Services West Valley reprocessing plant, 25:54753
content of blood plasma in beagle dogs following prolonged ingestion, 25:55319 (UCD-472-118)
content of fish in Sweden, calculation of, 25:55156
content of hybrid wheat seeds in relation to phenotype, 25:55223
content ratio to strontium-89 in fallout, method for determining, 25:54803
determination of, use of ion exchange in methods for, 25:54397
distribution in man following ingestion, effects of calcium phosphate, methionine, Prussian blue, and sodium alginate on, 25:55113
effects on erythrocytes of beagle dogs, protective effects of hydrogen peroxide against, 25:55319 (UCD-472-118)
performance as beta source for neutralization of electrically charged flour, 25:54897
sorption by man, effects of calcium on, 25:55109 (COO-1231-67)
toxicity to animals, extrapolation to man of data for long-term, 25:55319 (UCD-472-118)
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
uses as radiation source, development of market for, 25:54887(R) (BNWL-1308-6)
STRONTIUM PHOSPHATES
radioinduced paramagnetic centers in doped crystals of, EPR and annealing of gamma, 25:56339
STRONTIUM SULFATES
radioinduced paramagnetic centers in doped crystals of, EPR and annealing of gamma, 25:56339
STRONTIUM ZIRCONATES
thermal conductivity at high temperatures, 25:55637
STRUCTURAL BEAMS
creep strains in concrete, time-temperature extrapolation analysis of, 25:55663
STRUCTURES
fluid containment between walls of, design of device for, 25:54860(P)
STYRENE POLYMERS
preparation of blocks of, to correct for surface irregularities during tumor radiotherapy, 25:55244
radioinduced graft polymerization with lignin, γ, 25:54614
SUCCINATE DEHYDROGENASE
radiation effects on activity of in vitro rat liver, x, 25:55128
SUCROSE
effects on calcium-45 uptake and release by rat brain microsomes, 25:55120
SUGARS
radiation effects on content in processed garlic bulbs, γ, 25:55354
radiolysis of, rate constants for hydrogen atom reactions following electron, 25:55132
SULFATES
determination in water by precipitation with barium-133, radiometric, 25:54443
effects on corrosion of transition metals in alkali metal sulfate melts, 25:55373 (CONF-690452-, Paper 6)
effects on radiolysis of crystalline potassium nitrate, 25:54638
SULFUR FLUORIDES
effects on yields from radiolysis of butane, 25:54659
SULFUR IONS
implantation in gallium phosphide, gallium arsenide, and germanium at 20 and 40 keV, 25:56288
SULFUR ISOTOPES
determination of abundance of, in sulfur compounds, 25:56752(R) (SUNI-14)
SULFUR ISOTOPES S-32
deuteron reactions (d,p) at 13.8 MeV, vector analyzing power for polarized, (E), 25:56724
helium-3 reactions (He-3,pγ) at 8.00 to 9.00 MeV, proton spectrum and p--γ angular correlations in, (E), 25:56712
proton elastic and inelastic scattering at 5 to 14 MeV, analysis of reaction mechanism in, (E), 25:56694
SULFUR ISOTOPES S-33
deuteron reaction (d,p) at 12 MeV, angular distributions and Q-value for, (E), 25:56730
energy levels from phosphorus-31 (He-3,p) reactions, γ decay properties of isobaric analog, (E), 25:56715
energy levels from resonances in silicon-29 (α,n) reactions, spin assignments for, (E), 25:56752(R) (SUNI-14)
SULFUR ISOTOPES S-34
energy levels from sulfur-33 (d,p) reactions, spectroscopic factors for, (E), 25:56730
SULFUR ISOTOPES S-35
radioactivity of, liquid scintillators for absolute measurement of, 25:54697
SULFUR ISOTOPES S-37
energy levels from argon-40 (n,α) reactions, (E), 25:56718
SULFURIC ACID
proton transfer reactions in aqueous, effects of deuterium on, 25:54564
radiolysis of sulfuric acid solutions of, reactivity of tetravalent cerium from γ, 25:54647
SUN
activity of, effects on geophysical parameters of upper atmosphere, (E), 25:55981
boundary conditions at, effect on solar flare particles propagation and density in interplanetary space, (T), 25:55738
constant of, compilation of recent measurements, (T), 25:55742
cycle of 1959-1967, variations of interplanetary-space parameters during, (E), 25:55992
eclipse of Sept. 22, 1968, effect on ionosphere as observed at two stations, (E), 25:56000
helium abundance of, (E/T), 25:55751
neutrino production in, (E/T), 25:55741
radio emission at 2980 MHz, absolute calibration of flux density of, (E), 25:55756
radio emission from, (E), 25:55736
rotation of, streamlines from Doppler velocities in differential, (T), 25:55745
spectra between 12 and 24 μ, (E), 25:55739
spectra of, classification of highly ionized iron and nickel lines in euV, (E), 25:55774
spectra of, high-resolution extreme-ultraviolet, (E), 25:55740
spectral analysis of, (E/T), 25:55750
temperature of, effective, (T), 25:55742
x-ray emission from, (E), 25:55736
SUNSPOTS
fibrils near, topology of filaments and chromospheric, (E), 25:55749
SUPERCONDUCTIVITY
magnetic flux line heat transport and core fermion polarization, 25:56088
SUPERCONDUCTORS
cavity--vortex interaction in Type-II, (T), 25:56091
cooling of hollow, supercritical helium, (E/T), 25:56122
critical current of perfect Type-II, in mixed state, 25:56092
current of Type-II, maximum normalizing, (T), 25:56069
current-induced intermediate state in Type-I, structure of, (E/T), 25:56102
electron--phonon coupling parameter lambda for, model calculation of, 25:56106
fluxon motion and nucleation in, single, (E/T), 25:56098
hysteresis losses in hard, polygonal-section, 25:56101
magnetic flux line profiles derived from Tewordt's generalized Ginzburg--Landau functional, oscillatory, (T), 25:56070
nucleation field H/sub c4/ of, angular dependence of, (T), 25:56065
order parameter near T/sub c/ in, healing length of, (T), 25:56080
performance in lumped-parameter oscillator circuit, 25:55086
preparation by granule metallurgy, evaluation of, 25:55404
properties of micro-junctions near critical temperature, effect of external fluctuations on, 25:56090
relaxation processes in, kinetic equations for, 25:56093
sound excitation in Josephson junction, (T), 25:56089
theory of inhomogeneous, near T/sub c/, 25:56083
transitions at H/sub c1/ and H/sub c2/ in Type-II, first-order, (T), 25:56082
uses for energy storage and switching, 25:56110 (LA-DC-12990)
uses in electric power systems, 25:56114
uses in high-energy physics, 25:56116
uses of, in British industry, 25:56115
vortex flow in, with paramagnetic impurities, 25:56086
vortex interactions in Type-II, near T/sub c/, (T), 25:56081
SUPERFLUIDITY
Bose--Einstein condensation in one and two dimensions, possible existence of, 25:56049
energy gap of $^3P_2$ pairing in neutron-star matter, properties of anisotropic, (T), 25:55714
hydrodynamics of Bose fluid in terms of action-angle variables in quantum statistics, 25:56051
SUPERNOVA REMNANTS
W44, absorption of OH in direction of, (E), 25:55716
SURFACE WATERS
plutonium movement in, 25:55150 (CONF-710401-, pp 407-10)
SURFACES
chemistry of, research progress on, 25:54587(R) (AECL-3909)
effects of artificially roughened, on incipient boiling of sodium, (E), 25:54868(T) (EURFNR-897)
friction factor for rough, estimation from pressure distribution measurements in flow around roughness element, 25:54873 (RD/B/N-1967)
plutonium contamination levels for, based on radiation dose to humans, 25:55195 (CONF-710401-, pp 352-64)
SURRY POWER REACTOR, UNIT 1
buildings and structures for, safety analysis of earthquake stresses on, 25:56949 (DOCKET-50280-46)
construction of, request for continuing permit for,

XUM

25:56952 (DOCKET-50280-49)
coolant loss accident conditions in, safety analysis of, 25:56949 (DOCKET-50280-46)
cooling system for, inspection of Type 304 and Type 316 stainless steel weld joints in, 25:56948 (DOCKET-50280-45)
operations incidents in, response characteristics during, 25:56951 (DOCKET-50280-48)
piping systems of, performance of stainless steel welds in, 25:56950 (DOCKET-50280-47)
piping systems of, safety analysis of earthquake stresses on, 25:56949 (DOCKET-50280-46)
pumps for, qualification test of prototype vertical induction motor for containment recirculation spray, 25:56949 (DOCKET-50280-46)
SURRY POWER REACTOR, UNIT 2
buildings and structures for, safety analysis of earthquake stresses on, 25:56949 (DOCKET-50280-46)
construction of, request for continuing permit for, 25:56952 (DOCKET-50280-49)
coolant loss accident conditions in, safety analysis of, 25:56949 (DOCKET-50280-46)
operations incidents in, response characteristics during, 25:56951 (DOCKET-50280-48)
piping systems of, performance of stainless steel welds in, 25:56950 (DOCKET-50280-47)
piping systems of, safety analysis of earthquake stresses on, 25:56949 (DOCKET-50280-46)
pumps for, qualification test of prototype vertical induction motor for containment recirculation spray, 25:56949 (DOCKET-50280-46)
SWEDEN
strontium-90 content of fish in, calculation of, 25:55156
SWINE
promethium-147 metabolism in, in comparison to metabolism in man, 25:55108 (BNWL-SA-3747)
radiation effects on survival of, following bilateral and unilateral exposures, comparison of LD-50 for mixed fission neutron and γ, 25:55334
radioisotope retention and excretion by preccaries, following ingestion of debris from Schooner Event, 25:55124
SWITCHES
properties of superconducting, 25:56110 (LA-DC-12990)
SWITZERLAND
radiation monitoring in atmosphere of, 1969, 25:54791
SYMMETRY GROUPS
nuclear structure in, lectures on, 25:56838 (UR-875-350)
SL(2,C), representations as functions of eigenvalues of Casimir operators for, 25:56534 (KFKI-71-38)
SU(3) x SU(3) chiral breaking in phenomenological Lagrangians for meson interactions, 25:56533 (IFA-FT-85)
SU(3) x SU(3) chiral breaking terms in effective Lagrangian model for form factors of K → π + l + ν decay, 25:56537 (JINR-E2-5996)
SU(3) x SU(3) chiral Lagrangian model for two-meson production in anti p + p s- and p-wave interactions at rest, gauge-invariant, 25:56538 (ORO-3992-2)
SU(3) x SU(3) chiral, breaking parameter in hard-meson current algebraic tree-graph theory for, 25:56535 (ORO-3992-7)
SU(3) x SU(3), scalar meson masses in broken chiral, 25:56539 (ORO-3992-11)
SU(n), para-Fermi operators of order n for construction of generators of, 25:56536
Yang--Mills theories in higher, divergences of massive, 25:56542 (CNRS-CPT-71/P-378)
SYMMETRY GROUPS SU(3)
mass formulas in, classification of heavy octet hyperons from, 25:56540
mass formulas in, prediction of Ξ properties from, 25:56540
SYNCHROCYCLOTRONS
beam shape in center of, effects of acceleration voltage and magnetic field decay on, 25:56585 (JINR-P9-5945)
data acquisition system for Harwell, direct-access multi-user computer, 25:56612
experimental facility for 660-MeV, collector system for isotope separator, 25:56584 (JINR-P6-5888)
SYNCHROTRONS
beam injection system for JINR proton, performance of debuncher in, 25:56586 (JINR-P9-5956)
control system for proton, computer-based high-voltage, 25:56597 (SJC-A-71-3)
experimental facility at ITEP proton, for radiation therapy, 25:56581(T) (BNL-tr-442)
synchrotron radiation from Bonn 2.5-GeV electron, 25:56587 (JUL-748-PP)
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP)
design parameters for 600 kW(t) zirconium hydride moderated, reference, 25:57132 (AI-AEC-Memo-12715(Del.))
shielding for zirconium hydride reactor, Monte Carlo calculations for lithium hydride and tungsten, 25:57133 (ORNL-TM-3366)
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-19)
heat sources for, design and fabrication of plutonium-238, 25:54893 (MLM-1736)
thermoelectric generator for, design and parametric safety studies of, 25:54895 (SC-RR-710353)

# T

T-111 (TANTALUM ALLOY)
corrosion by mercury at 1200°F, 25:55377 (N-71-26947)
TACHYONS
mass and width of complex-spin negative-mass-squared, in angular distributions of π + N charge-exchange interactions at 5.9 to 18.2 GeV/c, (T), 25:56500 (ORO-3992-18)
mass and width of negative-mass-squared, in π⁻ + p → π⁰ + n interactions at 5.9 to 18.2 GeV/c, (T), 25:56499 (ORO-3992-8)
production of complex-spin negative-mass-squared, in angular distributions of π + N charge-exchange interactions at 5.9 to 18.2 GeV/c, (T), 25:56500 (ORO-3992-18)
production of negative-mass-squared, in π⁻ + p → π⁰ + n interactions at 5.9 to 18.2 GeV/c, interpretation of angular distribution for, (T), 25:56499 (ORO-3992-8)
quantum field theory for, 25:56560
TANTALUM
analysis for nitrogen by fast neutron activation, 25:54501
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
casting by levitation melting using magnetic field, 25:55424
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
determination in rocks, chemical methods for, 25:54403
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
deuteron reactions at 80 MeV with foils of, cross sections for electron capture in, (E), 25:55862
effectiveness of powdered, as contrast medium for radiography of upper respiratory mucosa, 25:55291
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
emissivity at 4000 to 40000 A and 1200 to 2400°K, spectral, 25:55495
proton reactions at 155 and 600 MeV with foils of, cross sections for electron capture in, (E), 25:55862
radiation damage in discontinuous films of, electric conductivity and annealing of 30°K 150-keV proton, 25:56314
separation from pegmatitic ores, leaching studies for, 25:54752
sorptive properties for carbon monoxide, flash--mass spectrometric study of, 25:55441
thermal capacity at 1900 to 3000°K, pulse-heating method for measurement of, 25:55494
thermoelastic response of, Grueneisen coefficient for, 25:55436 (SC-RR-710314)
TANTALUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
Fe--Ta, thermodynamic properties of intermetallic $TaFe_2$, 25:55508
Hf--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Hf--Ta-base, oxidation behavior of polycrystals and single crystals of, at 750 to 1050°C, 25:55397
Mo--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Mo--Ta--Ti, phase studies of, 25:55565
N--Ta, electric conductivity of films of, effects of glow discharge on, 25:55519
Nb--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Re--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Ru--Ta, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Ru--Ta, thermionic properties of, relations with ruthenium content, 25:56350
Ta--Ti, elastic properties of, effects of composition and phase characteristics on, 25:55446
Ta--W, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Ta--W, oxidation of single and polycrystals of, at 850 to 1100°C, 25:55385
TANTALUM BORIDES
stability in acids, 25:54543
TANTALUM CARBIDES
grain growth in liquid-phase sintering of, 25:55642
physical properties and stability to nitrogen, 25:55629
wetting by copper, effects of electronic structure on, 25:55643
TANTALUM IONS
effects on void production in vanadium at 7.5 MeV, 25:55573 (BNWL-SA-3962)
TANTALUM ISOTOPES Ta-181
energy-level transition in, calculation of γ circular polarization using parity-nonconserving potential, (T), 25:56768
energy-level transition in, nuclear current parameter for internal conversion of 6.21-keV, 25:56797
neutron elastic scattering at 7 MeV, S-matrix analysis of

XUM

differential cross sections for, (T), 25:56789
TANTALUM NITRIDES
physical properties of, 25:55629
TANTALUM OXIDES
ion implantation in anodic, 25:54587(R) (AECL-3909)
TARAPUR POWER REACTOR
radioactive effluents from, distribution of, 25:56978
TASTE
radiation effects on threshold of rat, low dose x, 25:55322
TD-NICKEL
mechanical properties of, at high temperatures, 25:55483
oxidation reactions of, kinetic studies on, 25:55387
strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487
strengthening of, effects of substructure domain on dispersion, 25:55492
tensile strength at 1093°C, effects of thermomechanical processing on, 25:55486
TD-NICKEL CHROMIUM
production and properties of, for use in space shuttle, literature survey on, 25:55399 (N-71-27008)
strengthening of, effects of substructure domain on dispersion, 25:55492
TECHNETIUM
abundance in R Cyg and HD 35155, (E), 25:55699
determination in aqueous solutions from fuel reprocessing, standard for colorimetric, 25:54429
reactions with molten lithium perchlorate, Raman spectral studies on compounds produced by, 25:54538
TECHNETIUM ISOTOPES Tc-93
energy levels from molybdenum-92 (d,n) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:56766
TECHNETIUM ISOTOPES Tc-95
energy levels from molybdenum-94 (d,n) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:56766
TECHNETIUM ISOTOPES Tc-99
effectiveness of albumen-incorporated metastable, for scanning pulmonary arteries in patients with pulmonary hypertension, 25:55284
effectiveness of macroaggregated human serum albumin- and sulfur colloid-incorporated metastable, in combination with gamma camera for diagnosis of human lung embolism, 25:55296
effectiveness of sulfide-incorporated metastable, for diagnosis of human pericardial effusion, 25:55295
effects of metastable, on thyroid antibody production in children, immunofluorescent tests on, 25:55292
preparation of sulfur colloid macroaggregate-incorporated metastable, for human lung scanning, method for, 25:55297
production of metastable, by beta decay of molybdenum-99 and solvent extraction, 25:54675
use of metastable, for brain scanning in diagnosis of neurological disorders, role of prescanning cerebral angiography and pneumography in, 25:55281
use of metastable, for estimating late x radiation effects on circulation in brain, liver, lungs, and skin of rats, 25:55328
TEETH
radiography of human, clinical effectiveness of neutron, 25:55277
TEKTITES
analysis for tin by neutron activation using 40-min tin-123, 25:54480
analysis of Australian, by neutron activation, 25:54478
TELEMETERING SYSTEMS
design for wildlife research, 25:57266 (RLO-1929-16)
TELLURIC ACID
neutron reactions (n,γ) with tellurium-128 in, iodine-129 Moessbauer studies of recoil tellurium-129 reactions in, 25:54704
tellurium-125 Moessbauer spectral study of recoil effects in, 25:56381
tellurium-129m isomeric transition in, iodine-129 Moessbauer studies of chemical effects in, 25:54704
TELLURIUM
alpha fission at 167 MeV, angular distributions and particle track lengths for, (E), 25:56806
analysis for chlorides, photometric, 25:54407
analysis for trace amounts of copper by complexing with Bengal Rose and phenanthroline, spectrophotometric, 25:54414
determination by ultraviolet spectrophotometry, 25:54400
determination in fission product mixtures by ion exchange and polarography or β counting, 25:54449
determination in magnesium--silicon master alloys by gravimetry, 25:54416
determination in rocks, chemical methods for, 25:54403
neutron reactions (n,γ) with tellurium-128 in, iodine-129 Moessbauer studies of recoil tellurium-129 reactions in, 25:54704
radiation damage in, annealing recovery of 10°K 0.6- and 1-MeV-electron,, 25:56306
separation from selenium by solvent extraction using Bismuthiol II, 25:54724
sorption on nickel, 25:54587(R) (AECL-3909)
tellurium-129m isomeric transition in, iodine-129 Moessbauer studies of chemical effects in, 25:54704
TELLURIUM ISOTOPES Te-123
neutron reactions (n,α) at resonance energies, α widths and resonance spin assignments for, (E/T), 25:56754(T) (UCRL-Trans-10541)
TELLURIUM ISOTOPES Te-124
energy levels at 1156 and 2020 keV from iodine-124 decay, 0+, (E), 25:56781
energy-level transitions from iodine-124 decay, K-conversion coefficients and multipolarities for, (E), 25:56781
TELLURIUM ISOTOPES Te-125
Moessbauer spectra in telluric acid and sodium hydrogen tellurate, 25:56381
TELLURIUM ISOTOPES Te-126
energy levels at 1396 and 1685 keV from iodine-126 decay, 0+, (E), 25:56781
energy-level transitions from iodine-126 decay, K-conversion coefficients and multipolarities for, (E), 25:56781
TELLURIUM ISOTOPES Te-129
chemical state of recoil, in solid tellurium--oxygen compounds, iodine-129 Moessbauer studies of, 25:54704
isomeric transition in tellurium--oxygen compounds, iodine-129 Moessbauer studies of chemical effects of, 25:54704
TELLURIUM OXIDES
neutron reactions (n,γ) with tellurium-128 in, iodine-129 Moessbauer studies of recoil tellurium-129 reactions in, 25:54704
tellurium-129m isomeric transition in, iodine-129 Moessbauer studies of chemical effects in, 25:54704
TEMPERATURE
book:Tables for Calculating Nonstationary Temperatures of Plane Bodies During Heating by Irradiation, 25:56267
distribution in semi-infinite medium under transient thermal conditions, methods for calculating space--time, 25:54876 (RT/ING-(71)11)
measurement of, by x-ray diffraction analysis of defect annealing in irradiated diamonds, 25:55104
TERBIUM
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
lattice parameters of, effects of hydrogen on, 25:55549
TERBIUM ALLOYS AND SYSTEMS
Au--Tb, crystal structures and melting points of intermetallic, 25:55570
TERBIUM ISOTOPES Tb-159
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
TERPHENYL
boiling of high-boiling-point, critical heat transfer in, 25:54879
TESTES
radiation effects on function of bull, tonometer measurements on x, 25:55337
TEXAS
uranium deposits in, occurrence of, 25:54804
THALLIUM
determination by radiometric oxidimetric titration, 25:54448
determination in isoquinoline formate by polarography, 25:54421
determination in standard rocks and quartzes by neutron activation and radiochemical separation, 25:54454
determination of trace amounts of, in silicate rocks by neutron activation and radiochemical separations, 25:54489
effects of vapors of, on hydrogen isotope exchange at 300 to 500°C, 25:54552
effects on radiolysis of crystalline potassium nitrate, 25:54638
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
neutron resonance absorption in, self-shielding of, (E/T), 25:57196
THALLIUM ALLOYS AND SYSTEMS
La--Tl, magnetic impurities effect on superconducting intermetallic $LaTl_3$, 25:56109
Pr-base--Tl, phase diagram of, 25:55567
Pr-base--Tl, phase diagram of, thermodynamic analysis of, 25:55566
THALLIUM BROMIDES
krypton-atom reactions with, crossed-beam measurements of cross sections for dissociative ionization in, 25:55879
xenon-atom reactions with, crossed-beam measurements of cross sections for dissociative ionization in, 25:55879
THALLIUM ISOTOPES Tl-208
content in sand and clay soils, performance of airborne gamma spectrometer system for measuring, 25:54768
THALLIUM SULFATES
radiolysis of, yields of hydrogen peroxide from γ, 25:54646

XUM

THERMAL INSULATION
performance in helium atmosphere of metallic, 25:56890
THERMAL PROPERTIES
conference on thermophysical properties, fifth, Boston, Mass., Sept. 30 to Oct. 2, 1970, 25:55624
THERMIONIC CONVERTERS
book: Emissive Properties of Materials (Handbook), 25:56346
design of radioisotope-fueled, for lunar base power supply, 25:54905(P)
design parameters of heat pipe cooled fast reactor powered, for space vehicle power supplies, 25:57134
insulators for, radiation effects on trilayer sheath, 25:55096 (N-71-24635)
THERMODYNAMIC PROPERTIES
tables of, for metals during oxidation and chlorination, 25:54586
THERMODYNAMICS
conference on thermophysical properties, fifth, Boston, Mass., Sept. 30 to Oct. 2, 1970, 25:55624
THERMOELECTRIC CONVERTERS
design and parametric safety studies of SNAP-19, for Nimbus B/Agena system, 25:54895 (SC-RR-710353)
THERMOLUMINESCENCE
method for estimating age of ancient pottery, principles and uses of, 25:54764
THERMOMETERS
development of ultrasonic, for LMFBR systems, 25:55078(R) (NYO-3906-5)
THERMONUCLEAR EXPLOSIONS
fuel burnup in, fractional, 25:54827
THERMONUCLEAR REACTORS
design of toroidal traps R-0 and RT-2 with steady and hf magnetic fields, 25:56221
energy balance calculations for, 25:56222
fuel balance calculations for, deuterium--helium-3, 25:56215 (N-71-25526)
magnetic configurations with helical magnetic axis in toroidal, resonance effects in, (T), 25:56209(T) (CTO-764)
magnetic fields for, energy storage and switching with superconductors for, 25:56110 (LA-DC-12990)
plasma confinement and turbulent heating in toroidal, (E), 25:56127
plasma temperature profiles in D--T fueled, 25:56216 (NP-19014)
THERMOSPHERE
hydrogen content from June 1966 to Jan. 1967 in, temporal variations from in situ, (E), 25:55973
parameters of, ground-based and satellite observations of solar-activity effects on geophysical, (E), 25:55981
THICKNESS GAGES
calibration of radiometric, frequency-response, 25:55060(P)
design of radiometric, for measuring uniformity of wires, 25:55062(P)
development of airborne radiometric, for snow, 25:55065
THORITES
effects on geochemistry of thorium and uranium deposits in Vosges Mountains, 25:54807
THORIUM
complexes with salicylaldehyde, preparation and spectral properties of, 25:54539
compounds, analysis for trace impurities by neutron activation, separation processes, and γ spectrometry, 25:54518
content in river waters in Czechoslovakia, (E), 25:54774
deposition on stainless steel from ammonium sulfate solutions, 25:54673
determination in Australian tektites by neutron activation and gamma spectrometry, 25:54478
determination in basic and ultrabasic rocks by neutron activation, 25:54495
determination in rocks, chemical methods for, 25:54403
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
distribution between bismuth--lead eutectic and MSBR fuel solvent, reductive extraction, 25:54534 (ORNL-4717, pp 43-56)
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
electron band structure of, calculations for 5f states, 25:56388
fuel cycle for high temperature pebble bed reactor, analysis of multizone core configuration for optimum economic, 25:57060 (JUL-736-RG)
magnetic impurities effect on superconducting, 25:56109
preparation of sources of, for alpha spectrometry, 25:54673
separation from cerium and zirconium by reverse-phase partition chromatography on TTA-impregnated paper, 25:54746
separation from rare earth phosphors by precipitation as iodates, 25:54749(P)
separation of trace amounts of, from carbonate solutions by sorption on metal hydroxides, review on, 25:54734
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
solubility in liquid bismuth--lithium systems, 25:54712 (ORNL-4682, pp 1-38)
THORIUM ALLOYS AND SYSTEMS
C--Ru--Th, phase studies of, 25:55640
Cu--Th, phase diagram and intermetallic compounds, 25:55571
THORIUM BROMIDES $ThBr_4$
complexes with N-substituted ureas, preparation and properties of, 25:54536
THORIUM CHLORIDES $ThCl_4$
complexes with N-substituted ureas, preparation and properties of, 25:54536
THORIUM DEPOSITS
geochemistry of Vosges Mountain, effects of thorite and zircon on, 25:54807
THORIUM FLUORIDES $ThF_4$
$BeF_2$--LiF--$ThF_4$, liquidus temperature of, 25:54534 (ORNL-4717, pp 43-56)
$BeF_2$--LiF--$ThF_4$, plutonium trifluoride solubility and absorption spectra in molten, effects of oxide on, 25:54532 (ORNL-4717, pp 1-27)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of protactinium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of uranium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$CeF_3$--$ThF_4$, phase studies in, 25:54532 (ORNL-4717, pp 1-27)
LiF--NaF--$ThF_4$, phase equilibria in, high-temperature, 25:54532 (ORNL-4717, pp 1-27)
THORIUM HIGH-TEMPERATURE REACTOR
pressure vessel for, design and stress analysis for, 25:56884
pressure vessel for, effects of helium on thermal insulation of, (E), 25:56890
pressure vessel for, elastic stresses near penetrations in, (E/T), 25:56887
pressure vessel for, stress load testing of models of, 25:56888
THORIUM ISOTOPES Th-222
photofission at 90 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
THORIUM ISOTOPES Th-228
energy level transitions from actinium-228 beta decay, (E), 25:56747(T) (ORNL-tr-2531)
THORIUM ISOTOPES Th-230
alpha fission at 25.7 and 29.5 MeV, analysis using renormalized Fermi gas model and collective potential energy surface, (T), 25:56856
content ratio to uranium-234 in fossil corals, accuracy of age estimates from, 25:54776
distribution in Pacific Ocean, 25:54810
THORIUM ISOTOPES Th-232
abundance in Galaxy, (T), 25:55781
alpha fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
alpha fission at 26.4 MeV, liquid-drop analysis of, (E/T), 25:56786
content in fossil corals, effects on accuracy of thorium-230/uranium-234 method for age estimation, 25:54776
heavy-ion reactions with, light-element yields from, (E), 25:56788
helium-3 fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
neutron fission at 14 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
neutron fission at 14.1 MeV, angular distributions for, (E), 25:56804
proton fission at 20 to 85 MeV, fission yield and charge dispersion in, (E), 25:56805
THORIUM OXALATES
thermal decomposition of hexahydrate of, thermogravimetric and differential thermal analysis studies of, 25:54544
THORIUM OXIDES $ThO_2$
analysis for uranium using Arsenazo III, spectrophotometric, 25:54420
defects in single crystals of, thermoluminescence study of electronic, 25:56315
desintering of sol-gel, 25:55594 (ORNL-4682, pp 218-28)
electric conductivity of yttrium oxide-doped solid electrolytes of, at 1200 to 1400°K, 25:56335
neptunium ion EPR spectrum in single crystals of, 25:56383
preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
radiation effects on thermoluminescence of, 25:54587(R) (AECL-3909)
spectra of, color center identification in, 25:54587(R) (AECL-3909)
$ThO_2$--$UO_3$, preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
Cu--$ThO_2$, production of plates, rods, sheets, and wires of high-conductivity high-strength, description of process for, 25:55417
Mo--Ni-base--$ThO_2$, tensile strength at 1093°C, effects of thermomechanical processing on, 25:55486
Ni--$ThO_2$, production of fine powders of, Microgel process for, 25:55419
$P_2O_5$--$ThO_2$--$ZrO_2$, phase studies on subsolidus equilibrium in, 25:55638
$ThO_2$--$UO_2$, preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
THULIUM
determination in river water and seawater by neutron

XUM

activation and radiochemical separation, 25:54504
lattice parameters of, effects of hydrogen on, 25:55549
THULIUM ALLOYS AND SYSTEMS
Al--La--Tm, crystal field levels of La/sub 1-x/Tm/sub x/Al$_2$, (E), 25:56359
Au--Tm, crystal structures and melting points of intermetallic, 25:55570
THULIUM ISOTOPES Tm-167
use for bone scanning, 25:55279
THULIUM ISOTOPES Tm-170
beta decay of, β-γ angular correlations and matrix elements for nonunique first-forbidden, (E), 25:56776
THULIUM OXIDES
analysis for calcium by nondestructive alpha activation, 25:54522
THYMIDINE
effects of tritium-labeled, on cell renewal patterns of rat liver cells and spleen lymphocytes, 25:55110(R) (TID-25801)
radiation effects on incorporation of, into DNA of cultured rat thymus cells, factors affecting x, 25:55127
THYMINE
radioinduced free radicals in single crystals of, γ, 25:55130
THYROID GLAND
effects of functional state of, on strontium-85 sorption by man, 25:55109 (COO-1231-67)
radioinduced carcinoma in human, following iodine-131 therapy, 25:55343
radioisotope detection in, during surgery, miniaturized scintillation detector for, 25:55018
scanning of young human, using technetium-99m, immunofluorescent tests on antibody production following, 25:55292
scintiscanning of human, computer method for quantitative evaluation of, 25:55282
TIN
determination in geochemical and cosmochemical material by neutron activation using 40-min tin-123, 25:54480
determination in yttrium oxide by emission spectrometry, 25:54419
magnetic flux states of superconducting cylinders of, quantized, (E), 25:56064
phonon generation in superconducting, by ac Josephson effect, (E), 25:56073
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
superconducting Josephson junctions of, generalized weak links in externally shunted, (E/T), 25:56094
superconducting transition temperature and effective interaction strength in, volume dependence, 25:56103
TIN ALLOYS AND SYSTEMS
Ag--Sn, superconductivity in hcp phases of, (E), 25:56096
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Mo--Sn--Ti-base--Zr, welding of, properties of joints produced by friction, 25:55409
Al--Mo--Sn--U-base, tensile properties of dilute, at 23 to 600°C, 25:55429 (CEA-R-4177)
Al--Sn--Ti, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Au--Sn, superconductivity in hcp phases of, (E), 25:56096
Bi--Cd--Sn, electric transport of tin isotopes in 300°C melts of, 25:56349
In--Sn, phase diagrams of, relations with property--composition diagrams, 25:55546
La--Sn, magnetic impurities effect on superconducting intermetallic LaSn$_3$, 25:56109
La--Sn, magnetic properties of LaSn$_3$, NMR and susceptibility, 25:56353
Nb--Sn, fabrication of laminated superconducting Nb$_3$Sn, 25:56079(P)
Nb--Sn, niobium-93 in Nb$_3$Sn, 25:56373
Nb--Sn, phase transition in Nb$_3$Sn, neutron-scattering study of lattice-dynamical, 25:55545
Nb--Sn, phonon frequencies and susceptibility of Nb$_3$Sn, (T), 25:56344
Nb--Sn, superconducting critical current of intermetallic Nb$_3$Sn, effect of carbon on, 25:56084
Sn--Zn, diffusion in molten, kinetics of mutual, 25:55449
TIN ISOTOPES
electric transport in tin--bismuth--cadmium melts at 300°C, 25:56349
TIN ISOTOPES Sn-112
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
TIN ISOTOPES Sn-114
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
TIN ISOTOPES Sn-116
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
proton reactions at high energies, isobar model for analysis of meson (π) production in, 25:56530
TIN ISOTOPES Sn-118
deuteron elastic and inelastic scattering at 13.6 MeV, strong-coupling analysis of, (T), 25:56780
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
TIN ISOTOPES Sn-119
nuclear magnetic resonance in LaSn$_3$, 25:56353
TIN ISOTOPES Sn-120
neutron elastic scattering at 7 MeV, S-matrix analysis of differential cross sections for, (T), 25:56789
proton elastic scattering at 9.6 MeV, S-matrix analysis of differential cross sections for, (T), 25:56789
proton elastic scattering with isobaric analog excitation, shell-model analysis of, (E/T), 25:56769
TIN ISOTOPES Sn-122
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
TIN ISOTOPES Sn-124
proton elastic scattering at 30.4 MeV, differential cross sections for, (E), 25:56764
proton elastic scattering with isobaric analog excitation, shell-model analysis of, (E/T), 25:56769
TISSUES
alpha-particle energy loss and straggling in tissue-equivalent gas, (E/T), 25:56279
analysis for trace metals by neutron activation, development of nonmetallic tools for sampling in, 25:54450 (TID-25773)
analysis of animal, for aluminum by separation and neutron activation, 25:54514
analysis of rat adipose, for chlorobiphenyl by neutron activation and radiochemical separation, 25:54500
effectiveness of γ-irradiated bovine fascia, for transplantation in dog brains for filling of defects in dura mater, 25:55148
radiation dosimetry of pelvic, for standardization of pendular cobalt-60 γ therapy, 25:55222
radiation effects on human, use of additional treatment with iron and steroid preparations for reducing therapeutic, 25:55303
radiation injuries to goat, pathology of γ, 25:55318(T) (LB/G-2995)
radioisotope distribution in, of uranium mining personnel, 25:55117
radiosensitivity of host and tumor, methods for altering, 25:55265
TITANIUM
abundance in solar atmosphere, (E/T), 25:55750
alpha reactions with, production of chromium-51 by, 25:54691
alpha reactions with, production of vanadium-48 by, 25:54677
analysis for nitrogen by fast neutron activation, 25:54501
casting by levitation melting using magnetic field, 25:55424
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
determination in stony meteorites by proton activation, 25:54466
deuteron reactions with, production of vanadium-48 by, 25:54677
diffusion of carbon in solid solutions of beta, 25:55479
diffusion of hydrogen in, at 450 to 600°F, effects of stress on, 25:55476
distribution coefficient of impurity of, in zirconium, measurement of, 25:55502
effects on properties and sintering of tungsten at 1000 to 2000°C, 25:55453
electric conductivity of, temperature dependence of, 25:55445
fabrication and tensile properties of composites, parts, and preforms of powder metallurgy, 25:55415
neutron reactions with, secondary gamma radiation in shielding from, 25:56277
proton reactions with, production of vanadium-48 by, 25:54677
separation from niobium by vacuum melting, 25:55403
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
surface wetting of molten, on boron nitride, mechanisms of, 25:55469
thermoelectric properties of, at 0 to 1000°C, 25:56351
TITANIUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
porosity of, effects of annealing and crystallization on micro-, 25:55462
preparation by granule metallurgy, evaluation of, 25:55404
Al--Co--Cr--Mo--Ni-base--Ti, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
Al--Cr--Ni-base--Ti, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Al--Cr--Ni-base--Ti, mechanical properties of dispersion-strengthened, at high temperatures, 25:55483
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Fe--Ti, mechanical properties at 550 to 1100°C, 25:55501

XUM

Al--Fe--Ti, phase studies of, 25:55501
Al--Mo--Sn--Ti-base--Zr, welding of, properties of joints produced by friction, 25:55409
Al--Mo--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Mo--Ti--V, diffusion of hydrogen in, at 450 to 600°F, effects of stress on, 25:55476
Al--Mo--Ti-base, embrittlement of two-phase, mechanisms of, 25:55450
Al--Sn--Ti, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Al--Ti, inflammability correlation of powdered, 25:55473
Al--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Ti--V, fabrication and tensile properties of composites, parts, and preforms of powder metallurgy, 25:55415
Al--Ti--V, mechanical properties at 550 to 1100°C, 25:55501
Al--Ti--V, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Al--Ti--V, microstructure and properties of pressure-sintered powders of, 25:55413
Al--Ti--V, phase equilibria and properties along TiAl--$V_3Al_2$ section, 25:55537
Al--Ti--V, phase studies of, 25:55501
Al--Ti--V, properties of thin-film diffusion brazed joints in, corrosion, mechanical, and metallurgical, 25:55477
Al--Ti--V, sintering of powdered, electrically-activated pressure method for, 25:55413
Al--Ti-base--V, tensile properties of, effects of oxygen additions on, 25:55471
Al--Ti-base--V, welding of, properties of joints produced by friction, 25:55409
C--Co-base--Ti--W, mechanical properties of heat-treated, 25:55497
Cr--Ti-base, superconductivity and constitution of, 25:56108
Fe-base--Ti, stability of aluminum oxide dispersions in, at high temperatures, 25:55485
H--Ti--Zr, inflammability correlation of powdered, 25:55473
Hf--Nb--Ti--Zr, superconducting properties of, with, 25:56104
Mn--Ti, inflammability correlation of powdered, 25:55473
Mo--Ta--Ti, phase studies of, 25:55565
Mo--Ti, deformation mechanisms in, effects of temperature on, 25:55455
Mo--Ti-base, deformation of, effects of strain rate and temperature on, 25:55459
Nb--Ti, strengthening by step-aging, relations with microstructure, 25:55490
Nb--Ti--W--Zr, solidus volume of, simplex-lattice method for prediction of, 25:55529
Nb--Ti--Zr, phase studies of, 25:55564
Nb--Ti-base, superconductivity and constitution of, 25:56108
Nb--Ti-base, superconductivity of, relations with crystal structure, 25:55541
Nb-base--O--Ti, structure and tensile properties of, 25:55521
Nb-base--Ti, magnetization properties of superconducting, transporting sinusoidal alternating current in longitudinal magnetic field, (E/T), 25:56085
Ta--Ti, elastic properties of, effects of composition and phase characteristics on, 25:55446
Ti--V, tensile properties of, effects of oxygen additions on, 25:55471
Ti--V, thermodynamic interaction parameters in solid solutions of, Knudsen effusion--mass spectrometric study of, 25:55489
Ti--Zr, inflammability correlation of powdered, 25:55473
Ti-base--V, superconductivity and constitution of, 25:56108

TITANIUM BORIDES
stability in acids, 25:54543
wear resistance of deposited, on steels, 25:55619

TITANIUM CARBIDES
physical properties and stability to nitrogen, 25:55629
wetting by copper, effects of electronic structure on, 25:55643
Ni--TiC, grain growth in liquid-phase sintering of, 25:55642

TITANIUM CARBONITRIDES
preparation and properties of cemented, 25:55629

TITANIUM CHLORIDES
titanium nitride preparation from, chemical reactions for pyrolytic, 25:55605

TITANIUM ISOTOPES Ti-45
energy levels from phosphorus-31 (O-16,pnγ) reactions, lifetimes and transition probabilities for, (E), 25:56693
energy-level transitions from scandium-45 (p,nγ) reactions, internal conversion coefficients for, (E), 25:56693

TITANIUM ISOTOPES Ti-46
electron elastic scattering at 60 to 120 MeV, differential cross section for, (E), 25:56701
nuclear charge density from electron elastic scattering, (E), 25:56701

TITANIUM ISOTOPES Ti-48
deuteron elastic and inelastic scattering at 13.6 MeV, strong-coupling analysis of, (T), 25:56786
deuteron elastic scattering at 13.6 MeV, optical-model analysis of angular distributions from, (T), 25:56725
deuteron reactions (d,p) at 13.6 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56725
electron elastic scattering at 60 to 120 MeV, differential cross section for, (E), 25:56701
nuclear charge density from electron elastic scattering, (E), 25:56701

TITANIUM ISOTOPES Ti-49
energy levels from titanium-48 (d,p) reactions, spectroscopic factors for, (T), 25:56725

TITANIUM ISOTOPES Ti-50
electron elastic scattering at 60 to 120 MeV, differential cross section for, (E), 25:56701
nuclear charge density from electron elastic scattering, (E), 25:56701

TITANIUM NITRIDES
physical properties of, 25:55629
production from titanium tetrachloride, chemical reactions for pyrolytic, 25:55605

TITANIUM OXIDES
abundance in atmospheres of late-type stars, (E/T), 25:55698

TOKAMAK DEVICES
design with superposed multipole magnetic fields, (T), 25:56211 (IPP-III-2)
plasma conductivity in T-3, mathematical model for, 25:56162 (CEA-CONF-1801)
plasma heating by increasing longitudinal magnetic field, (T), 25:56125
plasma heating by turbulence in, research on ohmic, (E), 25:56123(R) (ORO-4087-1)
plasma instabilities in, review of, 25:56198
plasma instabilities in, trapped-particle, (T), 25:56195 (JAERI-Memo-4483)

TOKAMAK MODEL ST
magnetic fields in, spatial determination of direction of, 25:56223
plasma conductivity in, mathematical model for, 25:56162 (CEA-CONF-1801)

TOURMALINES
analysis for aluminum, calcium, iron, lithium, magnesium, manganese, and sodium by deuteron activation analysis and γ counting, 25:56752(R) (SUNI-14)
analysis for boron in, by measurement of prompt proton spectra from (d,p) reactions, 25:56752(R) (SUNI-14)

TRACE ELEMENTS
uptake by organisms in marine food chains, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)

TRACER TECHNIQUES
summary of life sciences, since 1946, 25:55107
use of phosphorus-32, for measuring velocity of moving thread, 25:54900
uses of krypton-85, for studying atmospheric diffusion of plumes and puffs, 25:54908

TRANSACTINIDE ELEMENTS
production by nuclear reactions, chemical problems in, 25:54672

TRANSFERASES
reactions with pyridoxal-5-phosphate, fluorescence properties of products of, 25:57264(R) (ORO-3553-17)

TRANSITION METAL ALLOYS AND SYSTEMS
bond forces in d-intermetallic compounds, (T), 25:56386
Ga--transition metals--V, properties of ternary phases of, 25:55500
rare earths--transition metals, preparation by heat treatment of amalgams of, 25:55401(T) (RFP-Trans-87)

TRANSITION METAL CARBIDES
physical properties and stability to nitrogen, 25:55629
solubility and solid-phase reactions with copper and nickel at 1000 to 1200°C, 25:55464

TRANSITION METAL NITRIDES
physical properties of, 25:55629

TRANSITION METALS
binding energies of 5d atoms adsorbed on 5d, tight-binding calculations, 25:56385
corrosion by eutectic alkali metal sulfates, effects of polarization on, 25:55373 (CONF-690452-, Paper 6)

TRANSPORT THEORY
Boltzmann equation in spherical geometry and spherical symmetry, method for numerical solution of linear position-dependent, 25:56617 (JUL-765-RG)
discrete ordinates calculations in, quadrature variations in, 25:56278
discrete ordinates method for anisotropically scattering multiplying particles in subcritical slab, convergence of, 25:56264 (ORNL-TM-3553)
radiative transfer in, computational method for X and Y functions in, (T), 25:55676
radiative transfer, analytically solvable problems in, 25:56270

TRANSURANIUM ELEMENTS
bibliography on, First Quarter 1971 index to, 25:55369
purification of TRU product, 25:54671 (ORNL-4682, pp 114-32)
storage of waste, site operation at NRTS for, 25:54965 (CONF-710401-, pp 365-8)

TRANSURANIUM PROCESSING PLANT
operation of, 25:54671 (ORNL-4682, pp 114-32)
TRIBENZYLAMINE
solvent properties for antimony, arsenic, and gold, 25:54515
TRIFLUPROMAZINE
effects on whole-body mixed gamma and neutron irradiated rats, 25:55325
TRITIUM
abundance in targets aboard Soyuz space probes, (E), 25:55902
accumulation by marine phytoplankton, mechanisms of, 25:55154
content in liquid radioactive waste effluents from Nuclear Fuel Services West Valley reprocessing plant, 25:54753
content in moderator graphite from MSRE core, 25:54533 (ORNL-4717, pp 29-41)
decay to helium for studies of radiation effects in metals, 25:55575 (LA-DC-12996)
determination in biological and environmental samples, facility for low-level, 25:55003 (UCRL-73128)
determination in water by scintillation counting, standard for, 25:54447
distribution in neuronal and glial-enriched fractions of brain following in vitro and in vivo administration of leucine-incorporated, 25:55119
effects of thymidine-incorporated, on cell renewal patterns of rat liver cells and spleen lymphocytes, 25:55110(R) (TID-25801)
effects on benzene synthesis by water reaction with calcium carbide, 25:54735
exchange in molten fluoroborates, 25:54534 (ORNL-4717, pp 43-56)
exchange with deuterium between m-carborane and tert-butanol, ethanol, or liquid ammonia in metal alkoxide-catalyzed reactions, primary kinetic isotope effects in, 25:54555
helium-3 reactions (He-3,γ) at 0.5 to 20 MeV, angular distributions for, (E), 25:56646
helium-3 reactions (He-3,γ) at 9 to 26 MeV, differential cross section for, (E), 25:56664
incorporation in polypeptides, development of catalytic method for, 25:54693(P)
injection into metals, design of cathode for, 25:54858
radiation effects on exchange reactions of, with ethane, 25:54727
reactions of recoil atoms of, with cyclohexane, yields of alkanes from, 25:54685
reactions of recoil atoms of, with gaseous ethane, deuterated methane, and neon, kinetics of, 25:54684
reactions of recoil, with methane and silane system, 25:54678
use for radioimmunoassay of prostaglandins in blood plasma of rabbits, 25:55144
TRITIUM SYSTEMS
D--T, burnup in thermonuclear explosions, fractional, 25:54827
D--T, energy balance calculations for fusion reactor conditions, 25:56222
TRITONS
binding energy of, calculation using boundary-condition model, 25:56851
binding energy of, effect on singlet effective-range parameters in calculations using Mongan separable potential, (T), 25:56859
TROJAN POWER REACTOR, UNIT 1
construction of, effects on environment of, 25:56963 (DOCKET-50344-22)
operation of, effects on environment of, 25:56963 (DOCKET-50344-22)
TUBES
catalog of, tested at ORNL for use in water desalination equipment, 25:57247 (ORNL-TM-2713(Rev.1))
fluid flow through, convective heat transfer in axial turbulent, 25:54866 (EIR-198)
heat transfer in metal, containing boiling water, effects of pressure and surface roughness on, 25:54872 (JUL-740-RB)
heat transfer in slender straight, calculation of, 25:54885
TUNGSTEN
bubble formation in annealed, doped with aluminum, potassium, or silicon compounds, mechanisms and kinetics of, 25:55511
casting by levitation melting using magnetic field, 25:55424
crystallization of polycrystalline, effects of dislocation structure and deformation temperature on resistance to, 25:55558
deformation at 900 to 1700°K, effects of electrostatic fields on, 25:55451
determination in rocks, chemical methods for, 25:54403
effects on oxidation of niobium at 1500 to 2000°C and low pressures, 25:55380
electron reactions at 0.5 to 15 keV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
erosion of sintered, in oil, design of equipment for measuring arc, 25:55454
impurity decomposition in, along grain boundaries, mechanisms of solid-solution, 25:55444
ion sputtering reactions with, secondary emission of W+ from alkali-metals, (E), 25:55819
mechanical properties of chemical vapor deposited rings of, design of apparatus for testing, 25:55440
microstructure of fracture surfaces in cast, effects of annealing and cold working on, 25:55542
neutron reactions at 10 to 30 GeV/c, total cross sections for, (E), 25:56421
oxidation at low pressures and high temperatures, steady-state nonequilibrium studies of, 25:55396
physical properties of plasma-sprayed spherical powders of, 25:55467
production of powdered, development of chloride process for, 25:55412
properties of powdered, produced from chloride process, 25:55412
properties of, effects of transition metal additions on, 25:55453
proton reactions at 1.5 to 4.5 MeV, optical radiation from, (E), 25:55813 (JINR-P4-5957)
separation from rhenium by solvent extraction, 25:54401
sintering at 1000 to 2000°C, effects of transition metal additions on, 25:55453
solubility in copper--nickel solid solutions in copper--nickel--tungsten alloys, limits of, 25:55447
sorptive properties for carbon monoxide, time-of-flight study of electron-stimulated, 25:55435 (RLO-2221-T-7-4)
sorptive properties for neodymium and ytterbium, heat of desorption of ions, 25:55533
welding of, evaluation and review of methods for, 25:55410
LiH--W, shielding properties of, calculation of, 25:57133 (ORNL-TM-3366)
TUNGSTEN ALLOYS AND SYSTEMS
welding of, evaluation and review of methods for, 25:55410
Al--Co--Cr--Mo--Ti--W, stress relaxation and surface hardening in, effects of high temperatures on, 25:55439
Al--Cr--Mo--Ni-base--W, fabrication of powdered, powder metallurgy and thermomechanical processes for, 25:55416
C--Co-base--Ti--W, mechanical properties of heat-treated, 25:55497
C--Co-base--W, mechanical properties of heat-treated, 25:55497
C--Hf--Re--W, mechanical properties of, 25:55433 (N-71-23982)
C--W, superconductivity of phases of, 25:56087
Co--Cr--Ni--W, physical properties of, effects of atomization media and consolidation methods on, 25:55480
Co--Fe--W, hardening of, kinetics of dispersion, 25:55423
Co-base--Cr--Mo--Nb--Ni--W, corrosion by molten vanadium oxide, effects of chlorides, oxides, and sulfides of sodium on, 25:55375 (CONF-690452-, Paper 8)
Cu--Ni--W, tungsten solubility in copper--nickel solid solutions of, limits of, 25:55447
Cu--W, preparation of composites of, by diffusion welding, 25:55405
Cu--W, thermal expansion of infiltrated pseudoalloys of, up to 1500°C, (E/T), 25:55468
Mo--Re--W, creep properties of, at 1800 to 4000°F, effects of grain size on, 25:55431 (N-71-23110)
Nb--Ti--W--Zr, solidus volume of, simplex-lattice method for prediction of, 25:55529
Ni--W-base, sintering of powdered dilute, effects of nickel content on, 25:55426
Re--W, phase composition of, at 1500 to 1900°C, effects of aluminum oxide coating on, 25:55465
Ta--W, hardening in monocrystals of, at 77 to 2000°K, solid-solution, 25:55457
Ta--W, oxidation of single and polycrystals of, at 850 to 1100°C, 25:55385
TUNGSTEN BORIDES
wear resistance of deposited, on steels, 25:55619
TUNGSTEN CARBIDES
production of cemented, from tungsten powders, 25:55412
properties of cemented, produced from tungsten powders, 25:55412
wetting by copper, effects of electronic structure on, 25:55643
Co--WC, composition and tensile properties of binder phase in, 25:55630
Co--WC, preparation of fine powdered mixtures of, using ultrasonic vibrations, 25:55598
Fe--Ni--WC, phase relations and tensile properties of sintered, 25:55631
Fe--WC, phase relations and tensile properties of sintered, 25:55631
TUNGSTEN ISOTOPES W-181
content in ground-level atmosphere in north Germany and north Norway during 1970 and 1971, (E), 25:54785
TUNGSTEN ISOTOPES W-182
Moessbauer effect in tungsten metal following Coulomb excitation by alpha particles, 25:56369
TUNGSTEN ISOTOPES W-183
Moessbauer effect in tungsten metal following Coulomb excitation by alpha particles, 25:56369

XUM

TUNGSTEN ISOTOPES W-184
Moessbauer effect in tungsten metal following Coulomb excitation by alpha particles, 25:56369
TUNGSTEN ISOTOPES W-186
Moessbauer effect in tungsten metal following Coulomb excitation by alpha particles, 25:56369
TUNNELS
planning and execution of Mt. Enasan, 25:57252(T) (ORNL-tr-2525)
TURBINES
design of carbon dioxide gas, for use with power reactor, 25:54856(P)
TZM (MOLYBDENUM ALLOY)
forgeability and tensile properties of powder metallurgy fabricated, 25:55418
radioinduced void production in, 5-MeV nickel ion, 25:55573 (BNWL-SA-3962)
Mo--TZM, deformation mechanisms in, effects of temperature on, 25:55455

## U

UDIMET 700
mechanical properties of sintered powder of, with particle boundary morphology, 25:55484
ULTRASONIC TESTING
method for inspection of butt welds in thin-walled tubes, 25:54928
method for pressure vessel nozzles, 25:54925
method for stainless steel and Zircaloy fuel cladding tubes, 25:54926
ULTRAVIOLET RADIATION
effects of solar extreme, on planetary luminosities, (T), 25:55766
effects on activity of ribonuclease, conformational changes associated with inhibitory, 25:55137
effects on bacteria in vacuo, mechanism of relation of dark repair to, 25:55356
effects on bacteriophage lambda, F' episomes, and Escherichia coli, role of DNA cross-links in sensitizing effects of psoralen on, 25:55361
effects on bacteriophage T4, recombination in mutant crosses following mutagenic, 25:55173
effects on branched alkane glasses, identification of free radicals from, 25:54648
effects on chemical, molecular biology, and physical processes in DNA, mechanism of, 25:55136
effects on Chlorella vulgaris, capacity for photoreactivation following mutagenic, 25:55172
effects on DNA and RNA synthesis in mouse kidney cells synchronized by medium change, 25:55129
effects on Escherichia coli, effects of 2,4-dinitrophenol on recovery from lethal, 25:55355
effects on HeLa cells following exposure of cytoplasm, nucleus, and whole cells, comparison of, 25:55312
effects on human skin, protective effects of polysiloxanes against, 25:55263
effects on incidence of adenine auxotrophic mutants in Bacillus subtilis, effects of aminopterin on, 25:55189
effects on incidence of adenine auxotrophic mutants in Escherichia coli, effects of streptomycin on, 25:55189
effects on incidence of dome mutants in Schizophyllum (mushroom), 25:55186
effects on Mycobacterium phlei, mutagenic, 25:55171
effects on N-acetylglycine in the presence of ammonia, 25:54650
effects on single- and double-strand breaks in DNA, mechanism of, 25:55308
effects on spontaneous recombination frequency of chromosomes of diploid yeast, 25:55180
effects on stability of silvered and aluminized FEP tefion second-surface mirrors, 25:55656 (N-71-27736)
effects on survival of Escherichia coli mutant, temperature dependence of recovery from, 25:55360
effects on survival of Escherichia coli, effects of dark-repair inhibitors and temperature on, 25:55357
effects on survival of yeast, effects of dehydration and vapor pressure on, 25:55183
effects on synthesis, of ribosomal precursor RNA in yeast, 25:55138
effects on thoria single crystals, electronic defects induced in, 25:56315
effects on thymineless death and liquid holding recovery in Escherichia coli, synergistic effects of phosphorus-32 on, 25:55359
effects on yeast, gene control of mutagenic, 25:55187
spectra of solar extreme-, (E), 25:55740
UNITED KINGDOM
irradiation facilities for commercial processing in, development of gamma, 25:55363
radioactivity monitoring in, derivation and use of reference levels and working limits as standards for, 25:55241
UNITED STATES
radiation accidents in, proposed registry for, 25:55250
UNIVERSE
gas density in, (E/T), 25:55806
gravitational instability in expanding, nonlinear theory of, (T), 25:55799
gravitational waves in closed, (T), 25:56570
opacity to high-energy cosmic photons, (T), 25:55908
structure of closed, detection of, (T), 25:55804
structure of, space--time, (T), 25:55802
URACIL, 5-BROMO-
radiosensitizing effects on Escherichia coli, effects of temperature on uv and x, 25:55357
URACIL, 5-FLUORO-
use for tumor cell cycle synchronization for improved efficiency of radiotherapy, 25:55306
URANIUM
analysis for hydrogen, design of instrument for, 25:54424
analysis of natural, for uranium-235 using hollow cathode discharge tube, spectrographic, 25:54435
analysis of nuclear grade, for rare earths at part per giga level by x-ray excited optical fluorescence, 25:54428
complexes with salicylaldehyde, preparation and spectral properties of, 25:54539
content in Japanese obsidian, (E), 25:54773
content in ores containing radon, gamma spectrometric measurements of, 25:54759
content in river waters in Czechoslovakia, (E), 25:54774
content in sand and clay soils, performance of airborne gamma spectrometer system for measuring, 25:54768
content in stratified uranium deposits, area-ratio method for determining, 25:54808
content in uranium deposits from Mizusawa area in Japan, (E), 25:54806
deposition on stainless steel from ammonium sulfate solutions, 25:54673
determination by controlled potential coulometry using rotated mercury cell, 25:54427
determination by dichrometric titration using triphenylmethane dyes as redox indicators, 25:54410
determination in basic and ultrabasic rocks by neutron activation, 25:54495
determination in isoquinoline formate by polarography, 25:54421
determination in rocks, chemical methods for, 25:54403
determination in thorium dioxide using Arsenazo III, spectrophotometric, 25:54420
determination in uranium minerals, γ spectrometric studies on uranium disintegration products following chemical treatment in, 25:54445
determination of, use of ion exchange in methods for, 25:54397
determination using benzoylacetanilide, spectrophotometric, 25:54423
determination using derivatography, extraction-photometric, and neutron activation methods, review on, 25:54734
diffusion in beta-zirconium films, 25:55498
oxidation of tetravalent to hexavalent, in hydrochloric acid, kinetic study of photosensitized, 25:54618
precipitation from molten halides using molten zinc cathode, 25:54580
preparation of sources of, for alpha spectrometry, 25:54673
preparation of trivalent, in hydrochloric, perchloric, and sulfuric acid solutions, 25:54540
processing of scrap, safeguards capabilities of materials accounting systems in facilities for, 25:54968 (IAEA-R-878-F)
production of enriched, Swedish studies on economics of, 25:54921
production of, corrosion of structural materials in, 25:55389
proton fission at 30 to 160 MeV, yields and charge dispersion of antimony from, (E), 25:56757
proton spallation at 5.5 GeV, yields of light elements in, (E), 25:56788
reactions in uranium nitrides in relation with nitrogen pressure and phase composition, vapor pressure studies on, 25:55617
reactions of tetravalent, with acetic acid or formic acid in aqueous benzene solutions, stability constants for complex ions produced by, 25:54581
separation from aqueous solutions as uranyl by solvent extraction using TTA, 25:54751
separation from bismuth on titanium tungstate papers by electrochromatography, 25:54744
separation from chromium, molybdenum, and tungsten by reverse-phase partition chromatography using TTA-impregnated paper, 25:54746
separation from fission products by fluorination process, 25:54736
separation from irradiated LMFBR fuel by solvent extraction using dibutyl butylphosphonate, 25:54706 (BNWL-SA-3345)
separation from MSBR fuel salt by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
separation from other metals in methyl sulfoxide by cation exchange chromatography, 25:54728
separation from pegmatitic ores, leaching studies for, 25:54752
separation from phosphoric acid by solvent extraction, 25:54718 (ORNL-4682, pp 168-81)
separation from rhenium by solvent extraction, 25:54401
separation from seawater by adsorbing colloid flotation, 25:54738
separation of trace amounts of, from carbonate solutions

XUM

by sorption on metal hydroxides, review on, 25:54734
solidification of ingots of, mechanisms of, 25:55400 (NLCO-1077)
spectra of trivalent, in hydrochloric, perchloric, and sulfuric acid solutions, absorption, 25:54540
thermoelastic response of, Grueneisen coefficient for, 25:55436 (SC-RR-710314)

URANIUM ALLOYS AND SYSTEMS
analysis for hydrogen, design of instrument for, 25:54424
tensile properties of Sicral $F_1$, at 23 to 600°C, 25:55429 (CEA-R-4177)
Al--Mo--Sn--U-base, tensile properties of dilute, at 23 to 600°C, 25:55429 (CEA-R-4177)
C--N--O--Pu--U, preparation of carbides, carbonitrides, and hypostoichiometric oxides in, 25:55594 (ORNL-4682, pp 218-28)
C--Nb--U, phase diagram at 1000°C, carbide composition in, 25:55547
C--U--Zr, phase diagram at 950°C, carbide composition in, 25:55547
C--U--Zr, thermodynamic properties of, 25:55614
Mo--U, thermoelastic response of, Grueneisen coefficient for, 25:55436 (SC-RR-710314)

URANIUM BORIDES
physical properties of $UB_{12}$, 25:55622

URANIUM BROMIDES $UBr_4$
complexes with N-substituted ureas, preparation and properties of, 25:54536

URANIUM CARBIDES
compatibility with Type 304 stainless steel, evaluation by carbon transfer measurements, 25:55589 (JAERI-Memo-4438)
phase studies of, 25:55590(R) (EIR-192)
thermal capacity at 25 to 2790°C, 25:55626
PuC--UC, production of fuels of, development of process for, 25:55590(R) (EIR-192)

URANIUM CHLORIDES $UCl_4$
complexes with N-substituted ureas, preparation and properties of, 25:54536

URANIUM DEPOSITS
book: Essays on the Geology and Geochemistry of Ore Deposits, 25:54763
book: Prospecting for Uranium Deposits in Mountainous Taiga, 25:54805
distribution and formation of Mizusawa area, Japan, 25:54806
geochemistry of Vosges Mountain, effects of thorite and zircon on, 25:54807
occurrence in Texas, 25:54804
radium content of stratified, location of ore boundaries from gamma measurements of, 25:54808
uranium content of stratified, area-ratio method for determining, 25:54808

URANIUM FLUORIDES $UF_3$
disproportionation equilibria for dilute solutions of, in beryllium fluoride--lithium fluoride contained in graphite, 25:54532 (ORNL-4717, pp 1-27)

URANIUM FLUORIDES $UF_4$
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of protactinium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)
$BeF_2$--LiF--$ThF_4$--$UF_4$, separation of uranium from molten, by oxide precipitation, 25:54712 (ORNL-4682, pp 1-38)

URANIUM FLUORIDES $UF_6$
equation of state of, at 99.1 to 320.3°C, use of constant-volume piezometric method for studying, 25:54582
shipping of, drop testing of 10-ton cylindrical containers for, 25:54970 (KY-631)

URANIUM ISOTOPES
content in USSR ground waters, effects of earthquakes on, 25:54775
separation of, review of new methods for, 25:54919

URANIUM ISOTOPES U-233
alpha decay of aligned, analysis of α angular distributions for, (E/T), 25:56749 (RCN-142)
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
neutron fission of aligned, analysis of angular distributions for slow, (E/T), 25:56749 (RCN-142)
neutron fission of, liquid-drop-model calculations of heavy-fragment masses in thermal, (T), 25:56787
neutron fission of, prompt neutron yield from, (E), 25:56743 (NP-18966)
neutron fission of, yields from thermal, 25:54587(R) (AECL-3909)
storage and distribution of, 25:54716 (ORNL-4682, pp 133-43)

URANIUM ISOTOPES U-234
content ratio to thorium-230 in fossil corals, accuracy of age estimates from, 25:54776
distribution in seawater, 25:54810
energy levels from plutonium-238 alpha decay, (E), 25:56753 (UCRL-51087)

URANIUM ISOTOPES U-235
abundance in Galaxy, (T), 25:55781
alpha decay of aligned, analysis of α angular distributions for, (E/T), 25:56749 (RCN-142)
alpha reactions (α,2n) with, production of plutonium-237 by, 25:54674
content in highly enriched material, development of equipment for measuring, 25:55070(R) (BHO-67-2)
determination in human urine in presence of plutonium-239, radiochemical method for, 25:55197
determination in natural uranium using hollow cathode discharge tube, spectrographic, 25:54435
energy levels from plutonium-239 alpha decay, (E), 25:56753 (UCRL-51087)
neutron capture at 0.25 to 4 MeV with fission isomer excitation, excitation function for, (E), 25:56793
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
neutron fission at 2 and 15 MeV, mass chain yield for, (T), 25:56816 (JAERI-Memo-4383)
neutron fission at 30 keV, time analysis of compound-nucleus decays in, (E), 25:56752(R) (SUNI-14)
neutron fission of aligned, analysis of angular distributions for slow, (E/T), 25:56749 (RCN-142)
neutron fission of, liquid-drop-model calculations of heavy-fragment masses in thermal, (T), 25:56787
neutron fission of, prompt neutron yield from, (E), 25:56743 (NP-18966)
neutron fission of, yields of light elements in thermal, (E), 25:56788
neutron reactions with, total γ spectrum above 1 MeV from, (E), 25:56745 (ORNL-4691)

URANIUM ISOTOPES U-236
energy levels from plutonium-240 alpha decay, (E), 25:56753 (UCRL-51087)

URANIUM ISOTOPES U-237
energy levels from plutonium-241 alpha decay, (E), 25:56753 (UCRL-51087)

URANIUM ISOTOPES U-238
abundance in Galaxy, (T), 25:55781
alpha fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
content in fossil corals, effects on accuracy of thorium-230/uranium-234 method for age estimation, 25:54776
content in highly enriched material, development of equipment for measuring, 25:55070(R) (BHO-67-2)
distribution in seawater, 25:54810
fission of isomeric, half-life for spontaneous, (E), 25:56801
fission of, delayed, (E), 25:56744(T) (NP-tr-1936)
helium-3 fission at 20 to 34 MeV, cross section and delayed neutron yields for, (E), 25:56803
ion elastic scattering in wide energy range, phase shift analysis of angular distributions for, (E), 25:56740 (JINR-P7-5884)
neutron capture below 600 eV, γ spectra and distribution of partial radiation widths in, (E), 25:56790
neutron capture-to-fission ratios for, effects of EBR-II core position on, (E), 25:56982 (ANL-7791)
neutron fission at 14 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
neutron fission at 14.1 MeV, angular distributions for, (E), 25:56804
neutron reactions with, total γ spectrum above 1 MeV from, (E), 25:56745 (ORNL-4691)
photofission at 35 MeV, liquid-drop-model calculations of heavy-fragment masses in, (T), 25:56787
photofission at 53 MeV, delay time for isomeric fission in, (E), 25:56801
proton reactions (p,xn) at 750 MeV, neutron spectrum unfolding capability for, (E), 25:55038 (LA-DC-12314)

URANIUM ISOTOPES U-239
energy levels from uranium-238 neutron capture, partial radiation widths for compound-nucleus, (E), 25:56790

URANIUM MINERALS
analysis for uranium, γ spectrometric studies on uranium disintegration products following chemical treatment in, 25:54445
distribution in igneous cumulates, use as indicator of mesostasis, 25:54809

URANIUM NITRIDES
photon reactions at 0 to 74 eV with UN, optical constants from, (E/T), 25:56345
reactions of uranium in, relations with nitrogen pressure and phase composition, vapor pressure studies on, 25:55617
thermal capacity at 25 to 2620°C, 25:55626

URANIUM ORE PROCESSING PLANTS
corrosion in, review of, 25:55389

URANIUM ORES
uranium content of, from Mizusawa area, Japan, (E), 25:54806

URANIUM OXIDES $UO_2$
mechanical properties of sintered, at room temperature, 25:55437(R) (TID-25784)
microstructure of sintered, 25:55437(R) (TID-25784)
physical properties of molten, measurement of high temperature, 25:57069(R) (ANL-7800)
preparation of sols of, by CUSP process, 25:55592 (ORNL-4682, pp 144-59)
preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
preparation of uranium-233-enriched, process development and flowsheets for, 25:55593 (ORNL-4682, pp 163-7)
production of pellets of, relations of powder properties and process variables for, 25:55603
production of sols of, method for, 25:55590(R) (EIR-192)
radiation effects on bubble nucleation and re-solution

in, at high temperatures, fission and thermal neutron, 25:55649
radiation effects on fission gas release and swelling of clad pin-type fuels of, in-pile, 25:55648 (RCN-144)
radiation effects testing of BISO-coated particles of, release of cesium and strontium during annealing following, 25:55647 (ORNL-4717, pp 83-90)
radioinduced reactions with stainless steel, in-pile, 25:55648 (RCN-144)
reactions with fluorine and fluorine chlorides, kinetics of, 25:54736
reactions with liquid sodium of molten, 25:57069(R) (ANL-7800)
sorptive properties for nitric acid, 25:55594 (ORNL-4682, pp 218-28)
surface energy of, at 1500°C, 25:55616
thermal capacity at 25 to 3090°C, 25:55626
thermal conductivity during irradiation of, measurements of, 25:55647 (ORNL-4717, pp 83-90)
thermal conductivity of sintered pellets of, instrumented radiation target can for measuring, 25:55088
$Al_2O_3$--$Dy_2O_3$--$UO_2$, temperature distribution in irradiated fuels of, use of eutectic isotherm for monitoring, (E), 25:57194
Cu--$UO_2$, properties of, effects of stereometric microstructure on, 25:55628
Ni--$UO_2$, surface energy of, at 1500°C, 25:55616
$PuO_2$--$UO_2$, brittle-to-ductile transition temperature in blended fuels of, bend tests on, 25:55610
$PuO_2$--$UO_2$, dissolution rate of pellets of, 25:54713 (ORNL-4682, pp 39-79)
$PuO_2$--$UO_2$, physical properties of solid, measurement of high temperature, 25:57069(R) (ANL-7800)
$PuO_2$--$UO_2$, preparation by sol-gel process, 25:55592 (ORNL-4682, pp 144-59)
$PuO_2$--$UO_2$, preparation of enriched fuels of, method for safe and economical, 25:55597(P)
$PuO_2$--$UO_2$, preparation of powders of, 25:54717 (ORNL-4682, pp 160-2)
$PuO_2$--$UO_2$, radiation effects on fuel spheres of, at high burnups, 25:55590(R) (EIR-192)
$PuO_2$--$UO_2$, reactions of solid solutions of, with fluorine and fluorine chlorides, kinetics of, 25:54736
$ThO_2$--$UO_2$, preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
URANIUM OXIDES $UO_3$
$ThO_2$--$UO_3$, preparation of spheres of, by sol-gel process, 25:54716 (ORNL-4682, pp 133-43)
URANIUM OXIDES $U_3O_8$
reactions with aluminum at 450°C, identification of phases in, 25:55609(T) (ORNL-tr-2456)
URANIUM SULFIDES
thermal capacity at 25 to 2725°C, 25:55626
thermodynamic properties of US, high-temperature, 25:54584
URANUS (PLANET)
luminosity of, relation to solar activity, (T), 25:55766
URANYL IONS
reduction in perchloric acid, disproportionation and ECE kinetics in, 25:54585
URANYL NITRATES
analysis for free acids, effects of solution age on, 25:54402
ion-exchange behavior of, effects of solution age on, 25:54402
UREA
complexes of N-substituted, with thorium and uranium tetrahalides, preparation and properties of, 25:54536
UREA, 1-METHYL-1-NITROSO-
effects on Mycobacterium phlei, mutagenic, 25:55171
URIDINE, 5-BROMO-2'-DEOXY-
effects on x radiosensitivity of synchronized cultures of Chinese hamster cells, 25:55258
URIDINE, 2'-DEOXY-5-IODO-
effects on renewal patterns of normal and tumor cells, 25:55110(R) (TID-25801)
URINE
americium-241 excretion in, of man following inhalation as oxide, effects of DTPA on, 25:55118
analysis for iodine by neutron activation and radiochemical separation, 25:54509
analysis for plutonium-239 and uranium-235 simultaneously, radiochemical method for, 25:55197
water recovery from human, design of spacecraft-carried radioisotope-heated distillation system for, 25:54911(P)

## V

VACUUM
measurement of ultrahigh, calibration of instruments for, 25:54992
VACUUM GAGES
development of hot-cathode ion, for use in magnetic fields, 25:56141
VALVES
design criteria for nuclear service, development program for, 25:57092(R) (ORNL-TM-3483)
design for Japanese boiling water reactors, 25:54842
VAN ALLEN RADIATION BELTS
electron intensity in outer, correlation patterns of magnetic activity and auroral activity with, (E/T), 25:55979
electron intensity of various energies and on different L shells in, exponential decrease of, (E), 25:55978
electron-flux profiles of pre-midnight asymmetry in outer, 40-keV, (E), 25:56045
formation of, from acceleration of near-Earth charged-particle bunches, (E/T), 25:56008
proton flux profiles near equator at L = 1.15 to 1.21 in 1967, 20 to 50, and greater than 100 MeV, (E), 25:55957
VAN DE GRAAFF ACCELERATORS
development and operation of RARAF, for radiological research, 25:55002 (NYO-2740-8, pp 7-146)
research and development at SUNI 5.5 MV, 25:56752(R) (SUNI-14)
VANADIUM
abundance in solar atmosphere, (E/T), 25:55750
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
de Haas--van Alphen frequencies for fields in (001) plane of single crystals of, (E/T), 25:56356
determination in magnetite by activation method, 25:54483
determination in rocks by activation and radiochemical separation, 25:54463
determination of trace amounts of, in high-purity acids by emission spectrography, 25:54431
deuteron reactions with, production of chromium-51 by, 25:54691
diffusion and internal friction of deuterium and hydrogen in, calculation from redistribution in periodic stress gradient, 25:55458
diffusion of carbon in solid solutions of, 25:55479
effects of additions of, on mechanical properties of ferritic iron and iron--vanadium alloys, 25:55478
preparation of high-purity, by molten salt electrorefining from carbothermic reduction of vanadium pentoxide, 25:55408
proton reactions with, production of chromium-51 by, 25:54691
radioinduced vacancies in, aggregate formation from laser-beam, 25:56313
radioinduced void production in, 7.5-MeV tantalum ion, 25:55573 (BNWL-SA-3962)
separation from rhenium by solvent extraction, 25:54401
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
solvent properties for nitrogen at 300 to 1000°C, 25:55475
structure of thin films of, deposited on sapphire, epitaxy in, 25:55530
VANADIUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
thermoelectric properties of, at 0 to 1000°C, 25:56351
Al--Cu--Fe--Sn--Ti-base--V, development and evaluation of high-strength, 25:55421
Al--Ge--V, phase formation in $V_3Al/sub\ x/Ge/sub\ 1-x/$ with A15 structure, 25:55539
Al--Mo--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Mo--Ti--V, diffusion of hydrogen in, at 450 to 600°F, effects of stress on, 25:55476
Al--Ni--V, phase equilibria in intermetallic compounds of, 25:55562
Al--Ti--V, corrosion cracking of, review on methods and problem of hot-salt stress, 25:55383
Al--Ti--V, fabrication and tensile properties of composites, parts, and preforms of powder metallurgy, 25:55415
Al--Ti--V, mechanical properties at 550 to 1100°C, 25:55501
Al--Ti--V, mechanical properties of hot pressed powders of, for cryogenic uses, 25:55482
Al--Ti--V, microstructure and properties of pressure-sintered powders of, 25:55413
Al--Ti--V, phase equilibria and properties along TiAl--$V_3Al_8$ section, 25:55537
Al--Ti--V, phase studies of, 25:55501
Al--Ti--V, properties of thin-film diffusion brazed joints in, corrosion, mechanical, and metallurgical, 25:55477
Al--Ti--V, sintering of powdered, electrically-activated pressure method for, 25:55413
Al--Ti-base--V, tensile properties of, effects of oxygen additions on, 25:55471
Al--Ti-base--V, welding of, properties of joints produced by friction, 25:55409
Au--V, magnetic properties of, 25:56358
Co--Fe--V, magnetic properties at cryogenic temperatures, 25:56361
Fe-base--V, deformation and fracture at low temperatures, effects of vanadium content on, 25:55478
Ga--transition metals--V, properties of ternary phases of, 25:55500
Ga--V-base, properties of deformed superconducting, 25:56100
Hf--V, thermal capacity of superconducting intermetallic $HfV_2$, (E), 25:56072
Ru--V, phase transition of near-equiatomic, x-ray

XUM

diffraction study of cubic--tetragonal, 25:55532
Ti--V, tensile properties of, effects of oxygen additions on, 25:55471
Ti--V, thermodynamic interaction parameters in solid solutions of, Knudsen effusion--mass spectrometric study of, 25:55489
Ti-base--V, superconductivity and constitution of, 25:56108
V--Zr, thermal capacity of superconducting intermetallic $ZrV_2$, (E), 25:56072
VANADIUM BORIDES
stability in acids, 25:54543
VANADIUM CARBIDES
grain growth in liquid-phase sintering of, 25:55642
physical properties and stability to nitrogen, 25:55629
VANADIUM IONS
lattice sites in lithium fluoride and sodium fluoride crystals, calculation and x-irradiation effects, 25:56384
VANADIUM ISOTOPES V-48
production in cyclotron by α, deuteron, and proton reactions with chromium, scandium, or titanium, 25:54677
VANADIUM ISOTOPES V-51
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
proton reactions (p,2p) at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
VANADIUM NITRIDES
physical properties of, 25:55629
VANADIUM OXIDES
abundance in atmospheres of late-type stars, (E/T), 25:55698
corrosive effects of melts of, on metals, relations with polarization, 25:55373 (CONF-690452-, Paper 6)
corrosive effects of molten, on nickel, mechanisms of, 25:55374 (CONF-690452-, Paper 7)
corrosive effects of molten, on superalloys, 25:55375 (CONF-690452-, Paper 8)
reduction of $V_2O_5$, to prepare high-purity vanadium, carbothermic, 25:55408
VANADIUM SILICIDES
magnetic susceptibility of $V_3Si$, (T), 25:56344
phonon frequencies of $V_3Si$, (T), 25:56344
VEGETABLES
potatoes, radiation processing of, equipment for gamma, 25:54837(P)
VESSELS
development of contactor, for reductive extraction reprocessing of molten salt fuels, 25:54712 (ORNL-4682, pp 1-38)
development of pulsed-clone contactor, 25:54719 (ORNL-4682, pp 229-39)
VITAMIN B GROUP
radioprotective effects on growth and survival of mice, x, 25:55268
VITAMIN D GROUP
effects on strontium-85 sorption by man, 25:55109 (COO-1231-67)
VOLCANIC ASH
analysis for trace elements by neutron activation and γ spectrometry, 25:54513

## W

WATER
abundance in atmospheres of late-type stars, (E/T), 25:55698
analysis for lanthanides by neutron activation and radiochemical separation, 25:54504
analysis for phosphorus-32 by Cherenkov radiation counting using liquid scintillation spectrometer, 25:54438
analysis for radioactive iodine as iodide and iodate by isotope exchange and scintillation counting, 25:54442
analysis for sulfates by precipitation with barium-133, 25:54443
analysis for tritium by scintillation counting, standard for, 25:54447
analysis of powdered residues of, by mass and uv absorption spectrometry, 25:54409
demineralization of reactor, by ion exchange, calculation and optimization of, 25:54737
diffusion in heated concrete, effects of pore pressure on, 25:55665
effects on plutonium sorption and reactions with soils, theoretical studies of, 25:54756 (CONF-710401-, pp 411-29)
effects on radiation chemical stability of crystalline sodium nitrate, 25:54649
electron reactions with, dependence of generalized oscillator strengths on momentum transfer in, (E), 25:55880
heat transfer by boiling, in metallic tubes, effects of pressure and surface roughness on, 25:54872 (JUL-740-RB)
heat transfer to high-pressure boiling, design and operation of loop for measuring, 25:54867 (EUR-4683)
mass transfer from sol droplets, 25:54719 (ORNL-4682, pp 229-39)
neutron diffusion constant and cooling coefficient for, calculation using modified classical monatomic gas model, (T), 25:56631
neutron reactions with, secondary gamma radiation in shielding from, 25:56277
neutron reflection from shielding slabs of, fast-, (E/T), 25:56258 (COO-2049-9)
neutron scattering in, computer program for analysis of thermal, 25:56638
radiation effects on distribution and permeability in frog muscle cells, x, 25:55323
radiation monitoring in environs of Ames Research Reactor during 1971, 25:55152 (IS-2658)
radioactivity monitoring in, review of current methods for, 25:54784
radiolysis of supercooled, yields from γ, 25:54663
radiolysis of, effects of temperature on absorption spectrum of hydrated electrons from electron, 25:54658
recovery from human urine, design of spacecraft-carried radioisotope-heated distillation system for, 25:54911(P)
separation of beryllium-7 from, by countercurrent electrophoresis, 25:54742
$D_2O$--$H_2O$, radiolysis of, isotopic separation factor for electron pulse, 25:54587(R) (AECL-3909)
$H_2O$--steam, density in tubular channels under adiabatic and heated conditions, (E), 25:57032
$H_2O$--steam, flow and heat transfer characteristics of, in multirod coolant channels, (E), 25:54870(R) (GEAP-10347)
WATER-$d_2$
analysis for hydrogen isotopes by specific gravity measurements, standard for, 25:54430
analysis for impurities by titration using potassium permanganate, standard for, 25:54405
effects on respiratory rate of rat brain slices, 25:55121
neutron diffusion constant and cooling coefficient for, calculation using modified classical monatomic gas model, (T), 25:56631
neutron scattering in, computer program for analysis of thermal, 25:56638
production by dual temperature process, stripping hydrogen sulfide from effluents for recycle in, 25:54918(P)
production by isotope exchange between ammonia and hydrogen, 25:54748
specifications for, as reactor moderator, standard for, 25:54529
thermal behavior of saturated, adiabatic calorimeter for studying, 25:55092
$D_2O$--$H_2O$, radiolysis of, isotopic separation factor for electron pulse, 25:54587(R) (AECL-3909)
WATER-t
analysis for tritium by scintillation counting, standard for, 25:54447
WATER-$t_2$
analysis for tritium by scintillation counting, standard for, 25:54447
monitoring in air, molecular sieve sampling method for, 25:54798
WATER VAPOR
effects on radioinduced reactions between carbon dioxide and graphite, 25:55654
WEISWEILER POWER REACTOR
development of, summary of program for, 25:57016
WELL LOGGING
equipment and method for gamma, for locating coal deposits, 25:54772
equipment and method for measuring neutron properties of material surrounding well bores, design of, 25:54769(P)
WELLS
control of runaway gas field, using contained underground nuclear explosions, 25:54825(T) (UCRL-Trans-10543, pp 81-98)
WEST VALLEY PROCESSING PLANT
design modifications of, seismic studies for, 25:54710 (DOCKET-50201-86)
operation for reprocessing of LMFBR fuel, feasibility of, 25:54713 (ORNL-4682, pp 39-79)
radioactive waste from, measurement of liquid, 25:54753
WHISTLERS
emission of magnetospheric triggered, effect of whistler-wave interaction with related resonating particles on, (E/T), 25:56038
relation of characteristics of, to spread F, (E), 25:55997
spectra of multicomponent and diffuse, associated with topside ionosphere ionization irregularities, (E), 25:55997
WHOLE-BODY COUNTERS
design and performance of Juelich, 25:55023
performance for determination of cesium-137 content of man, 25:55225
WINDOWS
materials for glove box, development of, 25:54939 (CONF-710401-, pp 17-25)
WIRES
thickness measurement of, radiometric gage for, 25:55062(P)

XUM

WYLFA REACTORS
pressure vessels for, prestressing and proof pressure testing of, (E/T), 25:56883
pressure vessels for, stresses in thermal insulation of, (E), 25:56889

# X

X RADIATION
detection of solar, OSO-V experiment for, (E), 25:55734 (N-71-23434)
detection of, design and performance of combined solar battery--scintillation detector for, 25:55005
detection of, performance of organic scintillators for, 25:55030
detection of, surface-barrier detector for, 25:55007(P)
dose distribution in man during radiography using single- and three-phase equipment, comparison of, 25:55227
dose to bone and muscle phantoms, use of tissue-equivalent organic scintillators in measurement of, 25:55213
dose to man in Japan from external occupational exposures, estimation of genetically significant equivalent, 25:55230
dose to medical personnel during cardiac catheterization procedure, 25:55226
dosimetry of 25- and 42-MV, in relation to tissue-maximum ratio, 25:55219
dosimetry using tissue-equivalent wall-less proportional detectors, 25:55002 (NYO-2740-8, pp 7-146)
effects on activity of NADP-dependent glyceraldehyde phosphate dehydrogenase in algae, effects of light on, 25:55353
effects on antigen retention system of mice, effects of injections of bone marrow, peritoneal exudate, spleen, or thymus cells on recovery from, 25:55147
effects on aqueous 2',4',5',7'-tetraiodofluorescein, 25:54664
effects on aqueous erythrosin, reaction mechanisms for lytic, 25:55139
effects on barley and wheat seeds, effects of ethylenimine on mutagenic, 25:55261
effects on cadmium ions in doped alkali-metal halide crystals, magneto-optical study of, 25:56320
effects on cardiovascular development in chick embryos, additive effects of hypothermia on, 25:55333
effects on cells of rat olfactory bulb, electron microscopy of, 25:55336
effects on cells, theory of dual action of, 25:55206 (NYO-2740-8, pp 147-219)
effects on chiasma frequency in grasshoppers, 25:55176
effects on chromosomes and mitoses in bone marrow of rats, single 800 R dose, 25:55192
effects on chromosomes in seeds of Crepis capillaris, effects of time of administration on additive or protective effects of ethylenimine on aberrant, 25:55260
effects on chromosomes of barley seeds, method for metaphase analysis of aberrant, 25:55175
effects on chromosomes of wheat seeds, effects of prolonged storage on aberrant, 25:55169
effects on circulation in brain, liver, lungs, and skin of rats following local exposure, use of radioisotopes for estimating late, 25:55328
effects on citrus fruits and peanuts, improved agricultural qualities in mutagenic, 25:55181
effects on compact traits of apples and pears, mutagenic, 25:55174
effects on cultured cells from hamster lung, daughter cell repair of lethal, 25:55311
effects on deuterated and normal glycine monocrystals at low temperature, ESR studies on, 25:54653
effects on developing ovaries of beagle dogs and monkeys following exposure in utero, effects of dose fractionation on sterilizing, 25:55319 (UCD-472-118)
effects on diploid yeast cells, lethal, 25:55165
effects on electrophoretic mobility of human lymphocytes, effects of phytohemagglutinin on, 25:55310
effects on enzyme activity and hematopoietic tissues in rat bone marrow, effects of dose on, 25:55330
effects on Escherichia coli, effects of 2,4-dinitrophenol on recovery from lethal, 25:55355
effects on function of bull testes, tonometer measurements on, 25:55337
effects on gastrointestinal tract of mice, effects of strain on protective effects of S-2-[3-aminopropylamino]ethylphosphorothioic acid against, 25:55259
effects on germination of radish seeds, effects of very high dose rate on RBE for inhibitory, 25:55350
effects on growth and survival of mice, protective effects of tetrahydrofolic acid against, 25:55268
effects on heredity of rats following repeated exposure over 13 generations, persistence of, 25:55164
effects on hexokinase activity in brain, erythrocytes, and liver of tumor-bearing rats, 25:55140
effects on immune reactions of rats to Trypanosoma, effects of endotoxins on, 25:55267
effects on impulse transmission in frog sciatic nerve, effects of LET on, 25:55215
effects on incidence of dominant lethal mutations in Drosophila, 25:55206 (NYO-2740-8, pp 147-219)
effects on incidence of recessive sex-linked lethal mutants in germ cells of mice, 25:55184
effects on L-penicillamine hydrochloride single crystals, ESR studies of, 25:54605
effects on lattice sites of vanadium and manganese ions in lithium and sodium fluorides, 25:56384
effects on lead azides, topography of evolution of products from, 25:54642
effects on leukosis and Rous sarcoma frequency in chickens, 25:55329
effects on life span of Habrobracon, mutagenic, 25:55185
effects on life span of mice, protective effects of AET, cysteamine, PAPP, and serotonin against, 25:55257
effects on mice, effects of radioprotective compounds on, 25:55266
effects on opacity of lens of mice, effects of dose fractionation on, 25:55206 (NYO-2740-8, pp 147-219)
effects on p--n silicon diodes of flash, currents induced in, 25:56336
effects on positron lifetimes in semiconductor single crystals, 25:56360
effects on potassium bromide crystals with and without copper dopant, thermoluminescent, 25:56323
effects on potassium hydrogen malonate monocrystals at 4.2°K, ESR spectral studies on production of radicals by, 25:54654
effects on pulmonary blood circulation in rabbits, acute, 25:55327
effects on seeds of Crepis capillaris, effects of water content on mutagenic, 25:55167
effects on single crystals of copper acetate monohydrate at 80 and 290°K, ESR studies on, 25:54610
effects on succinate dehydrogenase activity in rat liver in vitro, 25:55128
effects on survival of Escherichia coli, effects of dark-repair inhibitors and temperature on, 25:55357
effects on survival of hamster cells, 25:55207 (NYO-2740-8, pp 220-59)
effects on survival of synchronized L cells, effects of age on, 25:55309
effects on synchronized cultures of Chinese hamster cells, sensitizing effects of 5-bromodeoxyuridine on, 25:55258
effects on taste threshold in rats, low dose, 25:55322
effects on thymidine incorporation into DNA of cultured rat thymus cells, factors affecting, 25:55127
effects on water distribution and permeability in frog muscle cells, 25:55323
effects on yeast mutants, gene control of, 25:55187
emission from Coma Cluster, cosmological implications of, (E/T), 25:55806
emission from solar flares during Oct. 1969, detection of polarization of, (E), 25:55771
emission from solar flares, flux, spectrum composition, and structure of regions of, (E), 25:55770
emission from Sun, (E), 25:55736
emission of pulsed, from Cyg X-1, (E), 25:55727
reflection by soils at 70 to 200 keV, Monte Carlo calculation of effect of subterranean perturbations on, (T), 25:56274
scattering by three- and four-electron atoms and ions, form factors and scattering functions for coherent and incoherent, 25:56259 (EGG-1183-1479)
shielding for electrostatic accelerators, development of, 25:56603(P)
spectra of cosmic background, intensity and spatial, (E), 25:55734 (N-71-23434)
use for therapy of lymphogranulomatosis of bones, 25:55301
use for tumor therapy, preparation of Styrofoam compensators to correct for surface irregularities during, 25:55244
X-RAY FLUORESCENCE ANALYSIS
methods and standards for, of rocks, 25:54757(R) (MIT-1381-18)
XENON
gold-198 ranges in, from gold-197(n,γ) recoil, 25:56269
reactions with thallium bromides, crossed-beam measurements of cross sections for dissociative ionization in, 25:55879
uses of purified fission-product, evaluation of large-scale, 25:54887(R) (BNWL-1308-6)
XENON IONS
effects on silicon at 220 keV, lateral-stress study of damage produced in, 25:56285 (SC-RR-710424)
implantation in gallium arsenide at 151 keV, lattice disorder induced in, 25:56289
XENON ISOTOPES
abundance in meteorites, (E/T), 25:55670
nucleosynthesis in solar system, (E/T), 25:55670
XENON ISOTOPES Xe-126
energy-level transitions from iodine-126 decay, K-conversion coefficients and multipolarities for, (E), 25:56781
XENON ISOTOPES Xe-133
diffusion in cesium fluoride and iodide single crystals, effects of surface properties and structure on, 25:55633
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp

2-22)
use for estimating late x radiation effects on circulation in brain, liver, lungs, and skin of rats, 25:55328
use for lung scanning, health physics aspects of, 25:55248
use in hepatic blood flow measurement in dogs, 25:55123
XENON ISOTOPES Xe-135
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)
XENON ISOTOPES Xe-138
release from failed water cooled Zircaloy 2 clad uranium oxide ($UO_2$) fuel rods, 25:57047 (JAERI-Memo-4157, pp 2-22)

# Y

YANKEE POWER REACTOR
operations during August 1971, 25:56897 (DOCKET-50029-158)
YTTERBIUM
desorption from tungsten, heat of, 25:55533
determination in river water and seawater by neutron activation and radiochemical separation, 25:54504
determination in volcanic ash by neutron activation and γ spectrometry, 25:54513
YTTERBIUM ALLOYS AND SYSTEMS
Au--Yb, crystal structures and melting points of intermetallic, 25:55570
YTTERBIUM ISOTOPES Yb-169
use of EDTA-incorporated, for brain and kidney scanning, 25:55272
YTTERBIUM ISOTOPES Yb-170
neutron capture at 8.1 to 73 eV, γ spectra from, (E), 25:56802
YTTERBIUM ISOTOPES Yb-171
energy levels from ytterbium-170 neutron capture, partial widths for, (E), 25:56802
YTTERBIUM ISOTOPES Yb-172
neutron capture at 140 to 202 eV, γ spectra from, (E), 25:56802
YTTERBIUM ISOTOPES Yb-173
energy levels from ytterbium-172 neutron capture, partial widths for, (E), 25:56802
YTTRIUM
analysis for rare earth impurities by ion exchange and neutron activation, 25:54525
complexes with salicylaldehyde, preparation and spectral properties of, 25:54539
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in rocks, chemical methods for, 25:54403
determination of, use of ion exchange in methods for, 25:54397
diffusion of interstitial carbon, nitrogen, and oxygen in, at 20 to 300°C, effects of dislocations on, 25:55461
lattice parameters of, effects of hydrogen on, 25:55549
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation from cerium by extraction with bis(2-ethylhexyl) phosphate, 25:54750(P)
tensile properties of, relations with grain boundary twist, 25:55430 (IS-T-459)
YTTRIUM ALLOYS AND SYSTEMS
Al--Cu--Y, phase studies of, 25:55561
Ce--Ru--Y, critical magnetic field in superconducting, (E), 25:56074
YTTRIUM ISOTOPES Y-85
beta and electron-capture decay of ground-state and isomeric, branching ratios, gamma spectra, and log-ft values for, (E), 25:56722
YTTRIUM ISOTOPES Y-87
energy levels from zirconium-87 decay, spin--parity assignments for, (E), 25:56723
energy-level transitions from zirconium-87 decay, branching ratios for, (E), 25:56723
YTTRIUM ISOTOPES Y-88
energy levels from yttrium-89 (He-3,α) and zirconium-90 (d,α) reactions, spectroscopic factors for, (E), 25:56778
energy-level scheme, (E), 25:56779
YTTRIUM ISOTOPES Y-89
alpha elastic scattering at 20 MeV, angular distribution for, (E), 25:56778
energy levels from zirconium-89 decay, spin--parity assignments for, (E), 25:56723
energy-level transitions from zirconium-89 decay, branching ratios for, (E), 25:56723
helium-3 elastic scattering at 15 and 20 MeV, angular distributions for, (E), 25:56778
helium-3 reactions (He-3,α) at 15 MeV, DWBA analysis of, (E), 25:56778
helium-3 reactions (He-3,α) at 25 MeV, angular distributions for, (E), 25:56779
YTTRIUM OXIDES
analysis for calcium by nondestructive alpha activation, 25:54522
analysis for non-rare earth elements by emission spectrometry, 25:54419
preparation of dense ceramic, by sintering, 25:55606
properties of sintered, electric, mechanical, and physical, 25:55606
$CaO$--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
$HfO_2$--$Y_2O_3$, thermal conductivity of solid solutions of, at high temperatures, 25:55637
$HfO_2$-base--$Y_2O_3$, properties as electrolyte, 25:56355
$MgO$--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
$Y_2O_3$--Zr, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487

# Z

ZINC
argon-ion reactions at 30 keV with surfaces of, charge states and kinetic energies of scattered and recoil ions from, (E), 25:55818
determination in epitaxial films of gallium arsenide by neutron activation and radiochemical separation, 25:54512
determination in fission product mixtures by ion exchange and polarography or β counting, 25:54449
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination in standard aluminum--silicon system by neutron activation, 25:54455
determination of trace amounts of, in air by neutron activation and γ spectrometry, 25:54456
determination of trace amounts of, in thorium and zirconium compounds by neutron activation, separation processes, and γ spectrometry, 25:54518
effects of vapors of, on hydrogen isotope exchange at 300 to 500°C, 25:54552
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
potential for, method for modeling 1 = 2 component of, 25:56387
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
ZINC ALLOYS AND SYSTEMS
preparation by granule metallurgy, evaluation of, 25:55404
Ag--Zn, diffusion in, 25:57238 (MLM-OP-71003)
Au--Zn, search for superconductivity in fcc phases of, (E), 25:56096
Ce--Zn-base, thermodynamics of molten, at 700 to 1000°K, emf studies of, 25:55442
Cu--Zn, search for superconductivity in fcc phases of, (E), 25:56096
Dy--Zn, hyperfine parameters of DyZn, Moessbauer-effect study of, 25:56382
Nb--Zn, phase and intermetallic compound formation in, 25:55534
Sn--Zn, diffusion in molten, kinetics of mutual, 25:55449
ZINC IONS
implantation in gallium arsenide at 140 keV, lattice disorder induced in, 25:56289
ZINC ISOTOPES Zn-60
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
energy levels of, shell-model calculation with Reid and Yale potentials, 25:56857
ZINC ISOTOPES Zn-62
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
ZINC ISOTOPES Zn-64
alpha elastic and inelastic scattering at 27.2 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56726
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
energy-level transitions from alpha inelastic scattering, distorted-wave calculation of probabilities for, (T), 25:56726
neutron reactions (n,α) at 281 and 2637 eV, α widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727
ZINC ISOTOPES Zn-65
uptake by organisms of marine food chain, effects of physico-chemical form on, 25:55149 (BNWL-SA-4048)
uptake by shell and soft tissues of oysters, effects of cobalt, iron, and species on, 25:55153
ZINC ISOTOPES Zn-66
alpha elastic and inelastic scattering at 27.2 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56726
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720

XUM

energy-level transitions from alpha inelastic scattering, distorted-wave calculation of probabilities for, (T), 25:56726
proton inelastic scattering at 6.9 MeV, distorted-wave analysis of differential and integrated cross sections for, (E), 25:56727
proton reactions (p,nγ) at 6 to 6.8 MeV, γ singles and coincidence spectra and angular distributions for, (E), 25:56732
ZINC ISOTOPES Zn-67
neutron reactions (n,α) at 1548 eV, α widths of levels in search for, (E), 25:56686 (JINR-P3-5875)
ZINC ISOTOPES Zn-68
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
neutron capture at 2.9 MeV, cross section for, (E), 25:56696
ZINC ISOTOPES Zn-70
alpha elastic and inelastic scattering at 27.2 MeV, distorted-wave analysis of differential cross sections for, (T), 25:56726
binding energy, deformation, and single-particle spectra for, self-consistent calculation using Yukawa and Kuo-Brown matrix elements, (T), 25:56720
energy-level transitions from alpha inelastic scattering, distorted-wave calculation of probabilities for, (T), 25:56726
ZINC SELENIDES
defects in wurtzite single crystals of, studies of growth and radioinduced, 25:56286
ZINC SULFIDES
defects in wurtzite single crystals of, studies of growth and radioinduced, 25:56286
ZION POWER REACTOR, UNIT 1
design parameters of, revised and additional data on, 25:56954 (DOCKET-50295-30)
operations aspects of, revised and additional data on, 25:56954 (DOCKET-50295-30)
ZION POWER REACTOR, UNIT 2
design parameters of, revised and additional data on, 25:56954 (DOCKET-50295-30)
operations aspects of, revised and additional data on, 25:56954 (DOCKET-50295-30)
ZIRCALOY
embrittlement of, effects of coolant loss accident conditions on, 25:57092(R) (ORNL-TM-3483)
testing of fuel tubes of, ultrasonic method for, 25:54926
ZIRCALOY-2
oxidation of, effects of coatings on high-temperature, 25:54587(R) (AECL-3909)
ZIRCONIUM
casting by levitation melting using magnetic field, 25:55424
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
compounds, analysis for trace impurities by neutron activation, separation processes, and γ spectrometry, 25:54518
deformation of alpha-phase, relations of aging with oxygen diffusion in, 25:55551
determination in fission product mixtures by ion exchange and β counting, 25:54449
determination in rocks, chemical methods for, 25:54403
determination in sediments of Rhine River basin by x-ray fluorescence, 25:54408
determination of trace amounts of, in high-purity acids by emission spectrography, 25:54431
diffusion of uranium in films of beta-, 25:55498
effects on oxidation of niobium at 1500 to 2000°C and low pressures, 25:55380
effects on solvolysis of tert-butyl halides, Broensted correlation for, 25:54548
electric conductivity of, temperature dependence of, 25:55445
iron impurity distribution in electric arc zone melted, measurement of coefficient of, 25:55502
oxidation of monocrystalline, effects of orientation on formation of monoclinic zirconium oxide in, 25:55540
preparation and uses of, newsletter on, 25:55406
properties and structure of, produced by sintering using systematic thermal fluctuations, 25:55414
properties of aerosols of, produced from solutions at high temperatures, chemical and physical, 25:54545
separation from cerium and thorium by reverse-phase partition chromatography on TTA-impregnated paper, 25:54746
separation from niobium by vacuum melting, 25:55403
separation of trace amounts of, from carbonate solutions by sorption on metal hydroxides, review on, 25:54734
separation of uranium from, in methyl sulfoxide by cation exchange chromatography, 25:54728
sorptive properties for nitrogen and oxygen at low pressures and high temperatures, 25:55463
titanium impurity distribution in electric arc zone melted, measurement of coefficient of, 25:55502
ZIRCONIUM ALLOYS AND SYSTEMS
coating with zinc-plated aluminum silicide, corrosion protection by, 25:55398(P)
corrosion studies on, 25:54587(R) (AECL-3909)
porosity of, effects of annealing and crystallization on micro-, 25:55462
preparation and uses of, newsletter on, 25:55406
thermoelectric properties of, at 0 to 1000°C, 25:56351
Al--Mg--Zr, cracking and mechanical properties of welded joints of, effects of long-term heating at 70°C on, 25:55470
Al--Mo--Sn--Ti-base--Zr, welding of, properties of joints produced by friction, 25:55409
Al--Zr, crystal structure of solidified, effects of cooling rate and supercooling on, 25:55550
Al-base--Zr, thermal expansion of quenched, 25:55499
C--Hf--Zr, thermodynamic properties of, 25:55614
C--Nb--Zr, thermodynamic properties of, relations with composition, 25:55615
C--U--Zr, phase diagram at 950°C, carbide composition in, 25:55547
C--U--Zr, thermodynamic properties of, 25:55614
Cr--Mo--Zr, phase diagram at 1150°C, 25:55538
Cu-base--Zr, microstructure of, potentiostatic studies on, 25:55555
H--Ti--Zr, inflammability correlation of powdered, 25:55473
Hf--Nb--Ti--Zr, superconducting properties of, with, 25:56104
Hf--Nb--Zr, superconducting properties of, 25:56105
Mg-base--Zr, oxidation above 400°C in presence of carbon dioxide, mechanisms of internal, 25:55382
Mg-base--Zr, structure of sintered, following high-temperature annealing, optical and electron microscopy studies of changes in, 25:55548
Nb--Ti--W--Zr, solidus volume of, simplex-lattice method for prediction of, 25:55529
Nb--Ti--Zr, phase studies of, 25:55564
Nb--Zr, microstructure of, isothermal omega transformation in, 25:55557
Nb--Zr-base, superconductivity of, relations with crystal structure, 25:55541
Nb-base--O--Zr, structure and tensile properties of, 25:55522
Nb-base--Zr, corrosion by mercury at 1200°F, 25:55377 (N-71-26947)
Nb-base--Zr, magnetization properties of superconducting, transporting sinusoidal alternating current in longitudinal magnetic field, (E/T), 25:56085
Nb-base--Zr, oxygen solubility limits in, lattice parameter measurements of, 25:55568
Nb-base--Zr, superconducting transition temperature of, effect of deformation on, (E/T), 25:56099
Pu--Zr, phase transformations in, during quenching, effects of composition and cooling rate on epsilon, 25:55528
Ru--Zr, diffusion in, effects of composition on mutual, 25:55452
Si--Zr, inflammability correlation of powdered, 25:55473
Ti--Zr, inflammability correlation of powdered, 25:55473
V--Zr, thermal capacity of superconducting intermetallic $ZrV_2$, (E), 25:56072
$Y_2O_3$--Zr, strength of powder shapes of, effects of dispersion-, grain boundary-, and solid solution-hardening on, 25:55487
ZIRCONIUM BORIDES
conductivity at 300 to 1300°K, electric and thermal, 25:55627
preparation and uses of, newsletter on, 25:55406
stability in acids, 25:54543
C--SiC--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
C--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
SiC--$ZrB_2$, electric and thermal conductivity at 300 to 1300°K, 25:55627
ZIRCONIUM CARBIDES
physical properties and stability to nitrogen, 25:55629
physical properties and structure of, review on effects of composition on, 25:55632
preparation and uses of, newsletter on, 25:55406
wetting by copper, effects of electronic structure on, 25:55643
NbC--ZrC, physical properties and structure of, review on effects of composition on, 25:55632
NbC--ZrC, wetting by copper at 1100°C, effects of electronic structure on, 25:55643
ZrC--ZrN, wetting by copper at 1100°C, effects of electronic structure on, 25:55643
ZIRCONIUM CHLORIDES
zirconium nitride preparation from, chemical reactions for pyrolytic, 25:55605
ZIRCONIUM HYDRIDES
neutron downscattering spectra of, effects of stoichiometry on structure in, 25:56343
neutron total cross section at subthermal energies, (E), 25:56623
ZIRCONIUM ISOTOPES Zr-87
beta decay of, branching ratios, gamma spectra, and log-ft and Q values for, (E), 25:56723
electron-capture decay of, branching ratios, gamma spectra, and log-ft and Q values for, (E), 25:56723
ZIRCONIUM ISOTOPES Zr-89
beta decay of ground-state and isomeric, branching ratios, gamma spectra, and log-ft values for, (E), 25:56723

electron-capture decay of ground-state and isomeric, branching ratios, gamma spectra, and log-ft values for, (E), 25:56723
ZIRCONIUM ISOTOPES Zr-90
deuteron reactions (d,α) at 15 MeV, DWBA analysis of, (E), 25:56778
energy levels from niobium-90 decay, spin--parity assignments for, (E), 25:56791
energy-level transitions from niobium-90 decay, K-conversion coefficients and multipolarities from, (E), 25:56791
helium-3 reactions (He-3,p) at 16.5 and 18 MeV, proton spectra and angular distributions for, (E), 25:56758
neutron elastic scattering at 7 MeV, S-matrix analysis of differential cross sections for, (T), 25:56789
proton reactions (p,2p) at 600 MeV, separation-energy spectra and momentum distributions of residual nuclei from, (E), 25:56706
proton reactions at high energies, isobar model for analysis of meson (π) production in, 25:56530
ZIRCONIUM ISOTOPES Zr-95
content in atmosphere during 1969, (E), 25:54803
distribution in mice following inhalation, effects of chemical form on, 25:55125
ZIRCONIUM NITRIDES
physical properties of, 25:55629
preparation and uses of, newsletter on, 25:55406
preparation of spheres of, for nitrogen diffusion studies, 25:55595
production from zirconium tetrachloride, chemical reactions for pyrolytic, 25:55605
shock compression effects on powdered, x-ray-diffraction study of, 25:55618
structure of spheres of, 25:55595
use in preparation of zirconium oxide microspheres using nitrogen plasma spraying, 25:55407
ZrC--ZrN, wetting by copper at 1100°C, effects of electronic structure on, 25:55643
ZIRCONIUM OXIDES
crystal structure of $ZrO_2$, polymorphic transformations in,, 25:55641
densification of hot pressing, 25:55600
particles of radioisotope-labeled, Coulter-type instrument for counting 10 μ-diameter, 25:55090
preparation and uses of, newsletter on, 25:55406
preparation of calcium oxide-stabilized electrolyte films of, by sintering for use in high-temperature fuel cells, 25:55596
preparation of hollow microspheres of, using nitrogen plasma spraying, 25:55407
production of monoclinic, by oxidation of single-crystal zirconium, 25:55540
properties of magnesium oxide-strengthened refractories of, mechanical and thermal, 25:55621
properties of sintered electrolyte films of, for use in high-temperature fuel cells, 25:55596
thermal conductivity at high temperatures, 25:55637
CaO--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
CaO--$ZrO_2$, crystal structure of, polymorphic transformations in, 25:55641
CaO--$ZrO_2$, densification by hot pressing, 25:55600
$CaZrO_3$--$ZrO_2$, crystal structure of, polymorphic transformations in, 25:55641
MgO--$Y_2O_3$--$ZrO_2$-base, thermal stability of solid solutions of, effects of yttrium oxide content on, 25:55636
$P_2O_5$--$ThO_2$--$ZrO_2$, phase studies on subsolidus equilibrium in, 25:55638
ZIRCONIUM SILICIDES
preparation and uses of, newsletter on, 25:55406
ZIRCONS
analysis for hafnium by neutron activation and γ spectrometry of hafnium-179m, 25:54491
effects on geochemistry of thorium and uranium deposits in Vosges Mountains, 25:54807
properties of refractories of, mechanical and thermal, 25:55621

# REPORT NUMBER INDEX

Reports, conference papers and proceedings, numbered translations, and patents are included in this index. Each item is listed by report number; this is followed by the abstract number and a brief notation regarding public availability. The index entries show which reports are on file in the institutions listed on the back of the front cover (Dep.), which reports have been published in open-literature journals (journal citation), and which reports can be purchased (source and price). Whenever a report is identified by more than one number, the availability is given under the primary number, and a cross reference is given under the secondary report number.

The report number codes apply to USAEC reports unless designated otherwise. Non-USAEC reports are identified by parenthetical notes after the report codes; e.g., (non-AEC), (British), (Canadian), (French). The note (Misc.) identifies the codes used for both USAEC and non-USAEC reports. Patents are listed under the heading "PATENTS"; the country of origin is included in parentheses.

A comprehensive list of both USAEC and non-USAEC report codes is contained in the latest revision of TID-85, *Report Number Series Used by the Division of Technical Information in Cataloging Reports.* This information is also included in the Cumulative Report Number Index (issued annually).

## Availability of USAEC Reports

All USAEC Reports abstracted in *Nuclear Science Abstracts* are available through one or more of the following sources:

(1) University and public libraries in the United States. A list of these organizations appears on the inside front cover of each issue of *NSA*.

(2) NCR Microcard Editions in Microcard and micronegative form. Orders and inquiries should be sent to: Order Processing Department, 365 South Oak Street, West Salem, Wisconsin 54669.

(3) National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151.

(4) Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(5) Microsurance, Inc., P. O. Box 3522, Oak Ridge, Tenn. 37830, in micronegative form. Purchase details available on request.

## Availability of Non-USAEC Reports

**U. S. Reports.** Reports of U. S. Government agencies are available to the public from the National Technical Information Service (NTIS). If specific availability is not shown, inquiries may be directed to NTIS.

**Non-U. S. Reports.** Reports of atomic energy organizations of other countries are available from NTIS for U. S. sale only. Specific availability in the country of origin is shown, when known, at the report number entry. Otherwise, inquiries should be made to the organizations listed below:

### AUSTRALIA

**Australian Atomic Energy Commission Research Establishment.** Available upon request from the Library, Australian Atomic Research Establishment, Private Mail Bag, Sutherland, New South Wales, Australia.

### BELGIUM

**Centre d'Étude de l'Energie Nucléaire.** Available upon request to individuals and organizations from the Centre d'Etude de l'Energie Nucléaire (C.E.N.), Studiecentrum voor Kernenergie (S.C.K.), Technical Information Dept., MOL-DONK (Belgium).

### CERN

**CERN European Organization for Nuclear Research.** Available without charge from CERN European Organization for Nuclear Research, Geneva 23, Switzerland. Copies are deposited in libraries throughout the world.

### FRANCE

**Commissariat à l'Energie Atomique.** Inquiries for reports numbered 1-2199 should be addressed to Service Central de Documentation du C.E.A., Centre d'Etudes Nucléaires de Saclay, Boîte postale n° 2, 91. GIF-sur-YVETTE, FRANCE. Reports numbered 2200 and above are available from La Documentation Française, 31 quai Voltaire, 75, PARIS (7e), FRANCE.

**Service Central de Protection contre les Rayonnements Ionisants.** Copies are available from Ministère de la Santé Publique, Service Central de Protection contre les Rayonnements Ionisants, B.P. n° 78 Le Vesinet (France) Telex 25667.

### GERMANY

**Deutsches Elektronen-Synchrotron DESY.** Copies are available from Deutsches Elektronen-Synchrotron DESY, Dokumentation, 2000 Hamburg 52, Notkestieg 1, Germany.

**Gesellschaft für Kernforschung mbH (KFK).** Copies are available from Gesellschaft für Kernforschung mbH, 75 Karlsruhe, Postfach 947, Germany. Copies are also deposited in many national nuclear centers in the world.

**Kernforschungsanlage.** Copies may be ordered from Zentralbibliothek der Kernforschungsanlage Jülich, Jülich, Bundesrepublik Deutschland.

**Hahn-Meitner-Institute für Kernforschung.** Available without charge from Hahn-Meitner-Institute für Kernforschung Ber-

XUM

lin, Bibliothek, Glienicker Strasse 100, 1 Berlin 39, Germany. Copies are deposited in many national nuclear centers in the world.

**Johann-Wolfgang-Goethe Universität, Frankfurt Am Main, Institut für Kernphysik, (IKF).** Copies are available from Gmelin Institut, 40–42 Varrentrappstrasse, Frankfurt (Main), West Germany.

**ISRAEL**

**Israel Atomic Energy Commission.** Available without charge from Israel Atomic Energy Commission, Soreq Nuclear Research Centre, Yavne, Israel.

**ITALY**

**Centro Informazioni Studi Esperienze (CISE).** For sale at CISE Press Office, Casella Postale 3986, Milano, Italy. Copies are deposited in the libraries of various nuclear centers in Italy and abroad.

**Comitato Nazionale per l'Energia Nucleare.** Copies are available from Comitato Nazionale per l'Energia Nucleare, Divisione Affari Internazionali e Studi Economici, Ufficio Pubblicazioni, Via Belisario, 15, Roma, Italy.

**JAPAN**

**Japan Atomic Energy Research Institute (JAERI).** Available from the Staff Supply Cooperative of Japan Atomic Energy Research Institute (JAERI), Tokai-mura, Naka-gun, Ibaraki-ken, Japan. Copies are deposited in depositories in Tokyo, Nagoya, and Osaka.

**Nagoya University.** Copies are available from Research Information Center, Institute of Plasma Physics, Nagoya University, Nagoya, Japan.

**University of Tokyo.** Available free of charge from Institute for Nuclear Study, University of Tokyo, Tanashi-Machi, Kitatama-gun, Tokyo, Japan.

**NETHERLANDS**

**Reactor Centrum Nederland.** For sale by Reactor Centrum Nederland, 112 Scheveningseweg, 's-Gravenhage, The Netherlands. Copies are deposited in university libraries in Holland and in many national nuclear centers in the world.

**NEW ZEALAND**

**Institute of Nuclear Sciences.** Copies are available from Librarian, N. Z. Institute of Nuclear Sciences, D.S.I.R., Private Bag, Lower Hutt, New Zealand. Copies are deposited in other countries.

**PAKISTAN**

**Atomic Energy Center.** Copies are available from Atomic Energy Center, P. O. Box 658, Lahore, (West Pakistan).

**POLAND**

Reports of the Polish nuclear institutes are published by the Nuclear Energy Information Center of the Government Commissioner for Use of Nuclear Energy. Copies are available free of charge from Nuclear Energy Information Center, Palace of Culture and Science, Warsaw, Poland.

**SPAIN**

**Junta de Energia Nuclear.** "JEN" reports are available without charge from Servicio de Documentation, Junta de Energia Nuclear, Ciudad Universitaria, Madrid (3), España.

**SWITZERLAND**

**Eidgenössisches Institut für Reaktorforschung.** "EIR" reports are available from Eidgenössisches Institut für Reaktorforschung, c/o Bibliothek, 5303 Würenlingen/Switzerland.

**TURKEY**

**Turkish Atomic Energy Commission.** Copies are available free of charge from T.A.E.C., Çekmece Nuclear Research Center, P. O. Box 1, Airport, Istanbul, Turkey.

## Conferences

Published conference proceedings as well as individual unpublished papers from conferences are included in this index. A CONF number is assigned to the conference if published proceedings are received and also if only a single paper is received. The base number used is year-month-sequence. Thus, the number CONF-650101 indicates that the conference was held in 1965, in January, and that this was the first January 1965 conference so received. This number would be assigned to complete published proceedings. If individual papers are received, the base number is extended to include a paper number, e.g., CONF-650101-1. As additional papers are received, they will be assigned consecutive numbers in the series, CONF-650101-1, CONF-650101-2, etc. This numbering system ensures that all papers received from a conference will be associated with that conference in this index.

If published proceedings are received after the receipt of individual papers, the complete proceedings will be abstracted and the abstract number will appear in this index with the base CONF number.

## Abbreviations Used in Availability Column

| | |
|---|---|
| AECL | Reports of the Atomic Energy of Canada Limited are for sale by the Scientific Document Distribution Office, Atomic Energy of Canada Limited, Chalk River, Ontario, Canada. |
| CFSTI | See NTIS |
| DENM | Reports of the Atomic Energy Commission Research Establishment, Risö, are available on exchange from the Library, Danish Atomic Energy Commission, Risö, Roskilde, Denmark. Also for sale at the price shown from Jul. Gjellerup, Booksellers, 87 Sölvgade, Kobenhavn K., Denmark.<br>Reports of Danatom are available on loan from Research Establishment, Risö, Roskilde, Denmark. Copies are available from Danatom, Aurehojvej 2, Hellerup, Denmark. |
| Dep. | AEC reports so designated are maintained in the organizations listed on the inside front cover of *NSA*. Prior to July 1, 1965, reports were deposited either in printed copy form or in microform. After that time, all reports have been in the form of micronegatives.<br>Reports from other countries so designated are available in the United States at the organizations listed on the inside front cover of *NSA*. |

XUM

DTIE — Available from the U. S. Atomic Energy Commission, Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830. (Conference papers are available on loan only.)

EM — Blueline prints of AEC engineering drawings are available from NTIS, U. S. Department of Commerce, Springfield, Virginia 22151. Current prices of the CAPE-packages may be obtained from this address. TID-4100, available from the Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830, contains information on all the CAPE-packages for sale.

EUR — For sale by Centrale de vente des publications des Communautés européennes 37, rue Glesener-Luxembourg.

GPO — For sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

IAEA — Available from the International Atomic Energy Agency, Vienna, Austria, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each STI/DOC and STI/PUB publication.

INIS — Available on microfiche at $0.65 per document from INIS Section, International Atomic Energy Agency, P. O. Box 590 A-1011, Vienna, Austria

LMEC — Available *only to requesters within the United States* from the Liquid Metal Engineering Center, P. O. Box 1449, Canoga Park, CA 91304

NORW — Reports from Forsvarets Forskningsinstitutt are available from Norwegian Defense Research Establishment, Library, P. O. Box 25, Kjeller, Norway.
"KR" reports are available on an exchange basis from the Library, Institutt for Atomenergi, Box 40, Kjeller, Norway.
Reports of the Norwegian Reactor School are available from the Library, Institutt for Atomenergi, P. O. Box 40, Kjeller, Norway.

NRC — For sale by the National Research Council of Canada, Ottawa, Ontario, Canada.

NTIS — For sale by the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151 at the following prices for eye legible copy:

| | |
|---|---|
| 1–300 pages | $3.00 |
| 301–600 pages | $6.00 |
| 601–900 pages | $9.00 |

Documents over 900 pages have special prices which may be obtained from NTIS.
Microfiche copy of each separately bound document can be purchased for $0.95.
Reports issued by organizations outside the United States will be sold by NTIS *only to purchasers within the United States.*
Purchasers outside the United States may acquire such reports from the sources described elsewhere in these columns.

OECD — Available from O. E. C. D., Publications 2, rue, André-Pascal, 75 Paris 16$^{e}$, France, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each OECD publication.

RSO — Available *only to requesters within the United States* from the Reactor Standards Office, Oak Ridge National Laboratory, P. O. Box X, Oak Ridge, TN 37830

SWED — "AE" reports are for sale from Aktiebolaget Atomenergi, Library Section, Box 43041, Stockholm 43, Sweden. Microcopy of these reports is available from the International Documentation Center, Turnba, Sweden.
Reports of the VDDIT-series may be obtained from Aktiebolaget Atomenergi, Information Office, Scientific and Technical Information, Box 43041, Stockholm 43, Sweden.
Other series are not generally available to the public. Organizations in the Atomic Energy field may obtain copies from Aktiebolaget Atomenergi.

UK — United Kingdom Atomic Energy Authority reports generally may be purchased from Her Majesty's Stationery Office, P. O. Box 569, London S.E.1. Copies of many UKAEA reports (particularly earlier ones) may be purchased in microcopy form from Micro Methods Ltd., East Ardsley, Wakefield, Yorkshire, England. Copies of UKAEA reports are deposited with the National Lending Library for Science and Technology and 10 public libraries in England; with the USAEC and (through USAEC) with NTIS; and in most national nuclear centers throughout the world. In the USA, UKAEA reports are available on a subscription basis, by subject category, from UNIPUB, Inc., P. O. Box 433, New York, NY 10016, USA; and from Pendragon House, Inc., 1093 Charter Avenue, Redwood City, CA 94063, USA.

UN — Mail orders should be directed to the Sales Section, Room 1059, United Nations Headquarters, New York, New York 10017.

ZAED — Available from Zentralstelle für Atomkernenergie Dokumentation, 6000 Frankfurt/Main 90, P. O. Box 901069, Westendstr. 21, West Germany

# nuclear-explosion seismology

AEC Critical Review Series

**Howard C. Rodean**
Seismic/Evasion Research
Lawrence Livermore Laboratory

September 1971
166 pages, 49 illustrations, 7 x 9¾ in.
Library of Congress Card Number: 73-170333

Mr. Rodean investigates the generation of seismic signals by underground nuclear explosions, including decoupling and low-coupling phenomena that minimize these signals. Careful throughout to define terms and avoid ambiguities, he describes the effects of rock-property variations on seismic-signal strength and summarizes principles of elastic-wave theory for compressional, shear, and Rayleigh waves. Theoretical compressional wave solutions are given for both ground motion and seismometer response to this motion. Available seismic-magnitude data are presented as a function of explosion yield and environment. Mr. Rodean concludes with a summary of what is and is not known about seismic-signal generation by underground nuclear explosions.

CONTENTS

Inelastic Response to Nuclear Explosions
Distribution of Energy from Underground Nuclear Explosions
Linear Elastic (Seismic) Waves from Explosions
Anelastic Attenuation of Seismic Signals
Seismometer Characteristics and Operating Environment
Distant Seismic Signals from Underground Nuclear Explosions
Techniques to Minimize Seismic Signals
References
Author and Subject Indexes
